said. "He's a significant talent. There are obviously issues we'd have to deal with with him and the public to see how that could fit. We're open to having that conversation with him. We've not closed the door to having him on Newsmax TV."

- Meanwhile, Sinclair Media Group isn't trying to land O'Reilly despite speculation the company might attempt to build a national Fox News rival. "We get approached by people all the time, which is probably where these reports were coming from," Sinclair CEO Chris Ripley told analysts on Wednesday's earnings call. "He did approach us. We do not have any interest in hiring him."

MEGYN KELLY'S RATINGS SURGE WITH HARASSMENT COVERAGE: Variety's Brian Steinberg writes: "After a rocky early start that has drawn scrutiny, Kelly's recent focus on matters of sexual harassment and gender inequality has drawn viewers to the fold. In recent days, she has nabbed exclusive interviews with victims making allegations about Bill O'Reilly, Harvey Weinstein, and Mark Halperin." Kelly's demo ratings rose 11 percent for the week ending Oct. 23 over the previous one; total viewership jumped 2.34 million.

BEHIND NYT'S DIGITAL SUCCESS: Recode's Edmund Lee and Rani Molla write: "The Times' digital business (advertising and subscriptions) jumped 30 percent through September of this year. That's a startling expansion, especially considering its online sales had been growing at an average clip of about 16 percent prior to 2017. If the paper keeps pace, it'll hit about $579 million in digital revenue this year. You can (partly) thank Trump for that."

TONIGHT: President Trump is sitting down with Laura Ingraham for an interview airing at 10 p.m. Topics will include tax reform, the president's upcoming trip to Asia and Tuesday's terrorist attack in New York City, the network announced. The interview will be Trump's 19th on a Fox network since becoming president.

HANNITY TOPPED CABLE NEWS LAST MONTH: The Associated Press reports: "After the summer of Rachel Maddow, Fox News Channel's Sean Hannity has ascended to the top of the cable news mountain. Hannity's move to the 9 p.m. time slot paid immediate dividends for the network. The Nielsen company said that President Donald Trump's biggest cable news backer averaged 3.2 million viewers in October, topping Maddow's 2.5 million. Fox's Tucker Carlson had 2.8 million viewers in an earlier time slot."

BREITBART ON FASHION: The Times' Ruth La Ferla profiles Breitbart fashion critic John Binder, a man who by his own account is uniquely cut out for the job." She writes: "Binder has been following his twin passions, fashion and politics, since his student days at Southeastern Louisiana University in Hammond, La. His professors were all too predictably liberal, he said in a phone conversation last week. Which left Mr. Binder, a contrarian by nature, to take an opposing position. 'The university turned me into a total right-winger,' he said."

- "One of our governing principles is that culture is upstream from politics," editor-in-chief Alex Marlow told The Times. "Meaning that the culture in influencing our political climate more than our political climate is influencing the culture."

WHEN IS A DEADLY ATTACK 'TERRORISM'? The Times' Max Fisher and Amanda Taub examine when horrific events, like last month's mass shooting in Las Vegas and Tuesday's truck attack in New York City, are - or are not - quickly and broadly defined as terrorism. "More than 16 years after the Sept. 11 attacks, many Americans, particularly on the left, are questioning the readiness with which lone Muslims are defined as terrorists while lone non-Muslims are deemed 'mass shooters,'" they wrote. "Even if the label fits in individual cases, they say, the inconsistency suggests a tendency to see Muslims as part of a hostile fifth column and white male killers as exceptions."

- Related: In April, I wrote about how shootings in the same California city were covered: "Two Tragic San Bernardino Shootings, Two Very Different Media Responses."

REVOLVING DOOR

Anton Troianovski, most recently with The Wall Street Journal, has been named The Washington Post's Moscow bureau chief.

Jeff Stein is leaving Vox to join The Washington Post's "Wonkblog" as a policy reporter.

EXTRAS:

- Jake Tapper accuses Fox News of misrepresenting his comments in a "disgusting" way.

- Trump called The Times to push back against a Washington Post characterization of him being "angry at everybody."

- CJR finds the "Weinstein effect" isn't just hitting the U.S. media industry, but is also having global repercussions.

- Twitter wanted Kremlin-backed RT "to spend big ahead of the 2016 US election," BuzzFeed reports.

U.S. Finds Isolated Climate Change Stance at G-7 Talks

Posted June 12, 2017, 12:52 P.M. ET

By Chiara Albanese and Jessica Shankleman (Bloomberg), and Eric J. Lyman (Bloomberg BNA)

Two days of talks among Group of Seven environment ministers confirmed a crack between the world's other leading industrial nations and the U.S. over climate change issues.

The ministers were unable to find common ground on climate measures, according to a communique from delegations from the G-7 countries and the European Commission in Bologna, Italy, June 12.

The U.S. representative, Environmental Protection Agency Administrator Scott Pruitt, left the summit just hours after arriving. The U.S. was then represented by acting Environmental Protection Agency Assistant Administrator Jane Nishida.

The White House said Pruitt returned to Washington to attend a Cabinet meeting.

U.S. 'Does Not Join Those Sections'

The climate-related language in the final document gave strong backing to the Paris Agreement, reiterating the goal of keeping global warming "well below 2 degrees" Celsius (3.6 degrees Fahrenheit) compared to pre-industrial levels, and "pursuing efforts to limit the increase to 1.5 degrees" Celsius (2.7 degrees Fahrenheit). It also reaffirmed the goal of "mobilizing $100 billion annually by 2020" to help poor countries adapt to the impacts of climate change.

But in a footnote, the U.S. made clear that it does "not join those sections ... on climate" and climate change finance. The footnote did say the U.S. would "continue to engage with key international partners" on climate issues.

"We are resetting the dialogue to say Paris is not the only way forward to making progress," Pruitt said in statement the EPA issued after the talks. "Respective of the importance to engage with longstanding allies and key international partners, we approached the climate discussions head on from a position of strength and clarity."

President Donald Trump announced June 1 that the U.S. would withdraw from the Paris climate

accord. Syria, Nicaragua, and the U.S. are now the only nations not participating in the accord.

Trump's offer to renegotiate a more favorable deal for the U.S. has been rebuffed by the leaders of Germany, France, and Italy. Environmental officials from Canada, France, Germany, Italy, Japan, the U.K., and the U.S. met for the June 11–12 talks.

'Irreversible, Not Negotiable'

The U.S. withdrawal will take years to unfold as the earliest it can formally exit is Nov. 4, 2020—the day after the next presidential election. But Trump's decision has already left it isolated. No other nation has said it will follow suit, and even coal-reliant India announced it will seek to exceed the Paris targets.

In closing remarks, Gian Luca Galletti, minister of environment for host Italy, said he hoped the U.S. might one day change its stance on the Paris Agreement, but in the meantime, the two-year-old Paris document remained "irreversible, not negotiable, and the only global instrument for confronting climate change."

Catherine McKenna, Canada's minister of environment and host of the 2018 edition of the G-7 environment ministerial talks, said she was hopeful the U.S. would rethink its stance: "We remain open to a partnership with the U.S. on climate," McKenna said.

EPA Head Blamed Obama for Paris Deal at G-7 Climate Summit

Posted June 12, 2017, 10:02 A.M. ET

By Brian Parkin and Chiara Albanese

Environmental Protection Agency chief Scott Pruitt blamed former President Barack Obama for forging a bad Paris climate deal, leaving the U.S. with the job of extricating itself, the German environment minister said.

In a catalog of complaints, Pruitt blasted Obama for failing to sign off with Congress for $3 billion in financing for the international Green Climate fund, German Environment Minister Barbara Hendricks said in an interview. She cited bilateral talks with Pruitt at a two-day Group of Seven climate summit held in Bologna, Italy on Sunday and Monday, which both officials left early.

The EPA chief's "line of argument was purely domestic," Hendricks said by phone June 12 from Berlin. Pruitt said "bluntly" that the accord is not in U.S. interests, she said. Hendricks said she responded to his comments on Congress by arguing that Germany must seek parliamentary approval for annual payments to the Green Fund.

The summit has left Germany and its G-7 partners baffled as to how President Donald Trump plans to sustain climate protection in the international arena, Hendricks said.

"Pruitt didn't say one word on how he envisages the future of international climate policy and the role of the U.S. in it," she said.

Having helped forge the Paris treaty text in 2015 that now has attracted about 200 signatory nations,

Hendricks said she felt a "personal affront to her honor" from Trump's assertion that the accord was created to harm the U.S.

U.S. Says It Has Seat at Climate Talks—But Is It at Kids' Table?

Posted June 12, 2017, 6:01 A.M. ET

By Dean Scott

The White House is insisting it will still have a seat at the table at the next United Nations climate summit just before Thanksgiving in Bonn—but President Donald Trump's exit from the Paris climate pact may mean the U.S. won't be sitting at the adults' table. Administration officials, including Secretary of State Rex Tillerson and EPA Administrator Scott Pruitt, insisted the U.S. still has a voice in climate negotiations, noting Trump stopped short of pulling out of the parent treaty to the 2015 Paris deal, the 1992 United Nations Framework Convention on Climate Change.

The U.S. is "going to continue engagement" in global efforts to cut carbon pollution, Pruitt said June 6 on MSNBC's "Morning Joe" show. "We're part of the UNFCCC, as you know," Pruitt said, and the U.S. would remain engaged in international cooperation that includes exporting "innovation and technology to Russia and China."

Senate Democrats who pushed Trump to stay in the Paris deal said arguments that the administration plans to be engaged in those debates ring hollow, given the president's skepticism of global climate efforts.

"It is absolutely misleading to say we're still there. We're not," Sen. Ben Cardin (D-Md.), the top Democrat on the Senate Foreign Relations Committee, told Bloomberg BNA.

But even if it technically remains in the UN framework convention, it's unclear whether the Trump administration will roll up its sleeves in those talks. Even if it does, some issues—from verifying climate actions taken by countries to forest emissions—are to be specifically addressed in the Paris deal. Bonn will host the next high-level UN climate summit Nov. 6-17.

Little Leverage to Prod China, India

More specifically, exiting the deal means the U.S. will have far less influence in pushing China, India and other other developing nations to agree to tough reporting and verification to see whether they are making good on the actions they pledged to address their emissions.

The U.S. also won't be at the table to push those same rapidly developing nations to ratchet up their actions around 2020, when parties are to offer new, more ambitious pledges under the Paris Agreement.

Trump can't withdraw from the pact immediately—the U.S. must wait four years from when the pact went into force on Nov. 4, 2016, to withdraw. In the meantime, the U.S. is still a member of the Paris deal, and thus nothing bars it from still sitting in on those talks to implement it. By contrast, the Bush administration was relegated to observer status after it essentially withdrew from the Kyoto Protocol in 2001.

Thus for now, the U.S. remains "a full member" in the Paris pact, according to Alden Meyer, who tracks climate negotiations for the Union of Concerned Scientists.

"My assumption is they will remain relatively passive in those negotiations and basically be observing," he told Bloomberg BNA. "And if they ultimately are seen as actively intervening or trying to shape the decisions, I think they would get a pretty ferocious blowback from other countries." Within the broader U.N. framework convention, the U.S. could still debate some key technical issues being negotiated there, including the hotly debated issue of loss and damage compensation for vulnerable countries already suffering climate impacts. The U.S. also could wield influence in two subsidiary bodies of experts launched under the 1992 framework: the Subsidiary Body for Scientific and Technological Advice (SBSTA) and the Subsidiary Body for Implementation (SBI).

Among those issues, agriculture stands out as a crucial climate-related issue essentially left out of the Paris pact but still negotiated within the UN framework convention where the U.S. still has a seat, according to Pipa Elias, who tracks agriculture and forestry issues for the Nature Conservancy.

Seeking Engagement?

Tillerson brushed aside suggestions that the U.S. has alienated allies or had become an unpredictable international partner. But the secretary offered few specifics on ways the U.S. could remain engaged on climate action in the wake of Trump's Paris announcement.

"So, we do believe that engagement globally continues to be important on the issue of climate change, and we will be seeking ways to remain engaged" through the U.N. Intergovernmental Panel on Climate Change, as well as various economic and trade forums, he said at a June 6 news conference with New Zealand Prime Minister Bill English.

The IPCC's next detailed global report on the latest climate science is due in 2021 or 2022.

Vow to Renegotiate Questioned

Cardin and other Democrats were particularly incensed over Trump's suggestion that he would be open to renegotiating the Paris deal—"on terms that are fair to the United States," Trump said—ignoring the fact that largely voluntary pact took more than 20 grueling years of talks to complete.

"To say that the president's actions just mean we want to negotiate a better agreement and we're still at the table—that is just inaccurate," Cardin said. "And our credibility has been badly damaged. Our seat is not there."

Sen. Chris Murphy (D-Conn.), who also sits on the Foreign Relations panel, scoffed at the notion that Trump would work to renegotiate the deal or his adminsitration will wield its influence in talks under the broader U.N. climate convention.

"If you want to still be part of that conversation, you should have stayed at the table" and remained in the Paris pact, Murphy told Bloomberg BNA.

Under the Paris Agreement, developed and developing nations alike vowed to take action to keep average temperatures from rising more than 2 degrees Celsius (3.6 degrees Fahrenheit) since the pre-industrial era and make best efforts to hold the line at a 1.5 degree Celsius increase (2.7 degrees Fahrenheit) this century.

U.S. Negotiators Still Expected in Bonn

The next round of talks in Bonn, known as the 23rd Conference of the Parties to the UNFCCC, or COP-23, will be focused primarily on implementing a sort of rulebook for the Paris deal, including how to verify that nations are actually making good on their climate pledges under the pact.

A total of 197 parties reached the deal in Paris in 2015. Of those, 148 parties either have ratified or formally joined the agreement. It is the 148 parties that will be at the table in those talks, launched last year in Marrakech, Morocco, as the Conference of the Parties to the Paris Agreement or CMA. Nations that haven't ratified the deal in time for the Bonn talks will still be able to observe the negotiations.

But the U.S. will likely send a small delegation of negotiators to Bonn, given that it remains in the 1992 convention, Andrew Light, a former Obama administration climate negotiator, told Bloomberg BNA.

Fewer negotiators would blunt the ability of the U.S. to shape any debate even if it stays at the table within the U.N. climate convention, according to Light, now a senior fellow in the World Resources Institute's global climate program.

"The size alone limits the ability to participate in all the conversations" which, in years past, have been held simultaneously and in rooms scattered across the Bonn summit site, he said.

Most in GOP Applaud Exit

Republican senators were in two camps. Most of them opposed President Barack Obama signing the U.S. onto the climate pact without Senate ratification. But a few, including Senate Foreign Relations Committee Chairman Bob Corker (R-Tenn.), had hoped to convince Trump that the pact was largely a non-binding deal and that the costs of withdrawal outweighed any benefit.

"I had four conversations with him last week, to explore ways of staying within it but still meeting U.S. objectives," Corker told reporters June 6. Sen. John McCain (R-Ariz.) also was disappointed. "I would have liked to fix the problems rather than junk the whole thing," he told Bloomberg BNA.

Vow to `Cease all Implementation'

In announcing his exit from the Paris accord, Trump by contrast made it clear the U.S. will disengage from international climate efforts and argued that other countries had gotten the better of the Obama administration in negotiating the agreement. In announcing the U.S. exit June 1, Trump said the U.S "will cease all implementation" of the Paris Agreement as well as "the implementation of the nationally determined contribution"—the U.S. pledge under which it vowed to cut emissions 26 percent to 28 percent from 2005 levels by 2025.

But world leaders haven't exactly been taking Trump up on his offer. Former Secretary of State John Kerry, who helped lead Obama's efforts on the Paris deal, also ridiculed Trump's negotiation offer.

"He is going to go out and find a better deal? That's like—I mean, that's like O.J. Simpson saying he's going to go out and find the real killer," Kerry said. "Everybody knows he isn't going to do that."

Big Oil's Clean Energy Ambitions Face Limits, Consultant Says

Posted June 12, 2017, 10:04 A.M. ET

By Rakteem Katakey

The world's biggest oil companies probably won't become renewable energy majors, according to industry consultant Wood Mackenzie Ltd.

The largest drillers would need to spend $350 billion by 2035 to replicate the 12 percent market share they hold of global oil and gas production, Wood Mackenzie said in a June 12 report. Even that spending would mean renewables only account for 6.5 percent of their total energy output in 20 years with oil and gas still dominating, according to the report.

Royal Dutch Shell Plc is expanding in wind energy, while Total SA is buying solar projects as Big Oil acknowledges the role of renewables in future energy supply. Still, that spending remains small compared with the trillions of dollars sunk into oil and gas infrastructure. Those investments will continue as oil producers expect a majority of cars will be fueled by gasoline and diesel for years to come.

"The scale of the opportunity is simply not there on our forecasts for solar and wind, at least not in the next 20 years," Tom Ellacott, senior vice-president for research and corporate analysis at Wood Mackenzie, said in the report. "Companies are only just starting to sow the seeds for the radical changes that lie ahead."

Still, energy companies will increasingly divert funds from oil production to build more wind and solar capacity, with over one-fifth of total capital allocated to renewables after 2030, Wood Mackenzie said. Only a small proportion of their total budget is currently spent on clean energy. The world's five biggest non-state oil companies together plan capital expenditure of more than $80 billion this year.

Cash Flow

Shareholders have increasingly been demanding oil company bosses raise investments in renewables and cut down on oil and gas. Shell Chief Executive Officer Ben Van Beurden told investors at a meeting last year that although the company is expanding its presence in renewables, it's still oil and natural gas that will drive revenue and fund dividend payouts.

Wood Mackenzie said wind and solar projects are competitive compared with some long-life oil and gas projects. Renewables projects operate for many years and provide steady cash flows, which can support dividend payments, according to the consultants.

Subject: Murkowski: Trump Interior budget unlikely 'to become a reality'

By Annie Snider

06/20/2017 11:00 AM EDT

The Trump administration's proposal to slash the Interior Department's budget by 13 percent is likely to hit a brick wall on Capitol Hill, top Republican and Democratic senators said today.

Senate Energy and Natural Resources Committee Chairwoman Lisa Murkowski told Interior Secretary Ryan Zinke that her panel "will be reviewing all of the cuts that this budget proposes very, very carefully."

"I don't expect many of them to become a reality, especially those that target popular programs," she said during a budget hearing this morning.

Murkowski, who also chairs the Appropriations subcommittee with jurisdiction over the Interior budget, said she appreciates that the budget avoids budget gimmicks and said that "the positives outweigh the negatives." She pointed to the extension of the Payments In Lieu of Taxes program as a good sign, while she said that the budget's move to eliminate offshore revenue sharing was a negative.

"Frankly, I don't see that proposal going anywhere," Murkowski said of cuts to revenue sharing. The move would be a blow to the states of Alabama, Louisiana, Mississippi and Texas, whose coastal waters are home to the vast majority of the nation's offshore energy production, and who are eligible for up to $350 million a year in oil and gas royalty payments under the Gulf of Mexico Energy Security Act of 2006.

Sen. Maria Cantwell, the panel's top Democrat, was harshly critical of the budget proposal, saying it would be "devastating" to the country's national parks and public lands and "is a betrayal of our trust responsibility to tribes."

WHAT'S NEXT: Zinke will also present the Trump administration's budget to Senate appropriators and the House Natural Resources Committee later this week. Congressional appropriators are expected to draft spending measures later this summer.

July 6, 2017

Today on Climate Beat . . .

. . . we went to Germany, where Chancellor Angela Merkel may be seeking some common ground on climate change at this week's G-20 summit, though it may come at the price of weakening some of the language on climate efforts and the Paris Agreement.

Out on the grid, the Energy Information Administration reports that utility-scale renewable energy surpassed the amount of nuclear generation in the United States in March and April for the first time since 1984, with the agency citing growth in renewables and maintenance of nuclear plants.

And in Congress, House Appropriations Committee Chairman Rodney Frelinghuysen (R-NJ) is facing home-state pressure to reject the Trump administration's proposed budget cuts for EPA in fiscal year 2018 and boost the agency's revenues.

Subject: EPA proposes trimming advanced biofuel volumes for 2018

By Eric Wolff

07/05/2017 04:09 PM EDT

EPA today proposed reducing its volume mandate for use of advanced biofuels under the Renewable Fuel Standard next year, but kept the requirements for ethanol at the maximum level set under the law.

The agency put the overall 2018 biofuel volume mandate at 19.24 billion gallons, with 15 billion gallons of that in conventional biofuels, or ethanol, and 4.24 billion gallons in advanced biofuels. That put the reduction in advanced fuels at 40 million barrels from the level set for this year.

"Increased fuel security is an important component of the path toward American energy dominance," EPA Administrator Scott Pruitt said in a statement. "We are proposing new volumes consistent with market realities focused on actual production and consumer demand while being cognizant of the challenges that exist in bringing advanced biofuels into the marketplace."

The mandate for cellulosic ethanol, which is included in the advanced biofuel figure, was cut to 228 million gallons, down 23 percent from 2017.

Volumes for advanced biodiesel, also an advanced biofuel, were previously set at 2.1 billion gallons for 2018 and would stay at that level in 2019.

An executive summary attached to the Renewable Volume Obligations said the reduction in advanced biofuels was a move to enhance domestic production at the expense of foreign.

Pruitt also reiterated his promise to get the final rule out by Nov. 30.

WHAT'S NEXT: The agency will take public comment and then try to finalize the rule before the Nov. 30 statutory deadline.

Trump Told Iowa He'd Save Ethanol. His EPA Chief Has Other Ideas

Posted September 29, 2017, 8:57 A.M. ET

By Jennifer A. Dlouhy and Mario Parker

As he sought votes during last year's Iowa caucuses, candidate Donald Trump courted farmers with praise for ethanol and promises that he would boost the home-grown fuel.

Now those farmers and other biofuel supporters say the people President Trump has put in charge of the issue in Washington are instead boosting their fossil-fuel rivals.

"This seems like a bait-and-switch," Iowa's senior senator, Chuck Grassley (R), said on the Senate floor this week. "Big Oil and oil refineries are prevailing, despite assurances to the contrary."

The issue is politically precarious for Trump, as it pits the oil industry against Midwest voters who helped elect him. Trump repeatedly vowed to "protect" ethanol. But he loaded his cabinet with allies of the oil industry, which views the Renewable Fuel Standard that mandates biofuel use as costly and burdensome.

Ethanol producers are most vexed by Scott Pruitt, the head of the Environmental Protection Agency. His agency has pursued a series of changes that would help the oil industry at the expense of farmers.

"The White House needs to rein in the EPA before the agency tramples the president's rural base—and his promises to voters," said Brooke Coleman, executive director of the Advanced Biofuels Business Council. "I would be surprised if those in the White House realize the depth of his attacks on the Renewable Fuel Standard."

Support for Fossil Fuels

Pruitt hails from oil-rich Oklahoma, and backing refiners and oil producers could aid any future political campaign in his home state, including a possible bid for the Senate seat that would open up if Republican Jim Inhofe retires in 2020. Pruitt has not announced plans to seek that seat or any other political office. While serving as Oklahoma's attorney general, Pruitt dubbed the quotas "unworkable" and a "flawed program."

Now at the EPA, Pruitt has gone "rogue," said Michael McAdams, president of the Advanced Biofuels Association.

"His job is to implement the vision of the president who says he supports biofuels," he said. Pruitt's actions don't "support biofuels in any shape or form."

Representatives of Pruitt declined to respond to questions about his ties to the oil industry. "EPA is currently seeking input from all stakeholders involved. Nothing has been finalized at this time," the agency said in a statement.

Despite the president's high-profile pledges of support, the intricate details of biofuel policy are being decided by administration officials with no allegiance to the sector, said Monte Shaw, executive director of the Iowa Renewable Fuels Association.

For instance, Trump's Energy Secretary is Rick Perry, who as Texas governor asked the EPA to waive half of the conventional renewable fuel quota in 2008. And Trump's Agriculture Department is led by Sonny Perdue, who previously was governor of Georgia, the nation's top poultry producer. Livestock producers have linked arms with the oil industry to fight the biofuel mandate, arguing it drives up feed costs.

Trump also tapped billionaire refinery owner Carl Icahn, a critic of the biofuel mandate, as special adviser on regulations. Icahn has since left that role.

In the latest policy move, the EPA this week issued a notice opening the door to potential reductions in annual quotas for biodiesel and ethanol. The action followed heavy lobbying by oil industry leaders seeking lower biofuel targets.

The 14-page "notice of data availability" that set those potential changes in motion explicitly invokes arguments by refiner Valero Energy Corp. or top oil trade groups nine times, with the EPA echoing the industry's assertions that imported biofuels jeopardize U.S. energy independence.

What's missing? Any reference to the counter arguments from the other side—biodiesel producers or corn farmers.

The EPA had already proposed lowering the amount of advanced biofuel that would be required next year, after Pruitt forced a last-minute rewrite of the agency's initial slate of renewable fuel quotas. EPA officials initially wanted to require 384 million gallons of cellulosic ethanol to be used next year—up 19 percent from this year's 311 million gallon quota—according to documents released by the Office of Management and Budget.

Corn Belt

But after lobbyists for refiners raised concerns about relying on imported biofuel to meet the targets, Pruitt directed EPA staff to recalculate the figures. The resulting proposal aims to lower the cellulosic ethanol requirement for the first time—to 238 million gallons next year.

Separately, the agency is mulling a change to allow exported biofuel to count toward compliance with the annual quotas—a move that would lower compliance costs for refiners while decreasing the premium some ethanol producers collect for selling the fuel domestically.

Oil industry leaders say Pruitt is making good on his pledge to get the RFS back on track, by

establishing biofuel quotas ahead of legal deadlines.

The EPA is advancing "Congress's stated purpose of bolstering America's energy independence," the American Fuel and Petrochemical Manufacturers said in an emailed statement. "American drivers shouldn't have to shoulder more costs to help foreign biofuel producers."

Biofuel boosters are reminding Trump of his promises now.

"It is my hope that your EPA has not forgotten about the pledges that were made to my constituents and to farmers across the country," Senator Joni Ernst, a Republican from Iowa, told the president in a letter this week.

Trump's 1970s-Era Oil Comes at Right Time to Feed Asia's Thirst

Posted September 29, 2017, 9:11 A.M. ET

By Robert Tuttle

When President Donald Trump's Energy Department was lining up buyers a month ago to dump 14 million barrels of crude into the market, it might have seemed like bad news.

But as all that oil from the Strategic Petroleum Reserve starts hitting the market next week, the timing turned out to be pretty good.

Here's what changed: crude got out of its funk and entered a bull market, the outlook for global consumption suddenly looks a lot brighter, compliance with OPEC-led cuts improved, the shale boom is waning and, most importantly, sales to Asia have led U.S. exports to record levels. So, America doesn't look so incurably awash in oil after all.

"You'll see a lot of it get exported right away," said Dominic Haywood, an analyst at consultant Energy Aspects Ltd. in London. "There's good demand for it."

To get an idea of the size of the sale, deliveries spread over two months will add an average 233,000 barrels a day of crude that's been stashed in salt caverns in Texas and Louisiana since the wake of the Arab oil embargo in the late 1970s. That's more than either Kuwait or the United Arab Emirates have cut so far this year under the OPEC-led accord, data compiled by Bloomberg show.

That seemed worrying when the DOE was taking bids in early September and futures in New York were stuck below $50 a barrel. Hurricane Harvey had knocked out more than a fifth of U.S. refining capacity, the summer driving season had just ended and stockpiles were rising again.

But with the global Brent benchmark nearing $60 a barrel, West Texas Intermediate seems like a steal even after it surpassed $52 for the first time since April this week.

The type of oil coming out of the caverns, sour crude, also happens to be in particularly high demand because that's the kind OPEC has cut the most. Bonito Sour, for instance, sold at a $3.75-a barrel premium to WTI on Sept. 22, the widest since May 2015, data compiled by Bloomberg show.

"Sour crude differentials are on a tear," Haywood said. "Definitely it's a good time."

For the government, getting rid of the oil hoard from another era has become a priority because maintaining the facilities is a cash drain. Trump wants to slash it by half. In recent years, Congress has ordered small sales to fill government budget holes.

At a time when U.S. fields gush increasing amounts of crude, there has been growing support for making some cash out of the reserve, or even get rid of it altogether—specially because it'll cost about $2 billion to upgrade it.

By statute, the Energy Department needs to conduct two sales of oil from the Strategic Petroleum Reserve for fiscal year 2018, according to an agency spokeswoman. The timing is based on factors including the volume of oil, the potential delivery periods for each sale and how sales integrate with maintenance and operations at storage sites. The agency doesn't try to time it based on forecast commodity prices, she said.

Senate Republicans Want to Allow Drilling in Alaska Refuge

Posted September 29, 2017, 01:07 P.M. ET

By Ari Natter and Erik Wasson

Senate Republicans set the stage for using the budget to end the 37-year ban on oil and gas drilling in Alaska's pristine Arctic National Wildlife Refuge.

A provision in the budget resolution, released Sept. 29, tells the Senate Energy and Natural Resources Committee to come up with $1 billion in savings over 10 years. That mandate is the first legislative step necessary for Congress to approve drilling in the preserve, known as ANWR, without the threat of a Democratic filibuster.

"You know me, I'm always trying to advance ANWR," Alaska Republican Senator Lisa Murkowski, the chairman of that committee, said on Sept. 26.

Murkowski and fellow Alaska Republican Senator Dan Sullivan have previously backed legislation that would allow oil and gas development on as much as 2,000 acres (809 hectares) of the refuge, and pressed to get this provision included in the budget.

Fossil fuel development in the 19-million-acre wilderness area has been prohibited since 1980.

If the budget is adopted by both the House and the Senate, a bill conforming to the instruction can be brought up in the Senate and could pass with 50 votes plus Vice President Mike Pence's tie-breaker, rather than the usual 60 votes need to end debate.

Royalties to Flow

Republicans plan to use the budget resolution to allow fast-track consideration of a tax overhaul plan.

Royalties from oil and gas production in the wildlife reserve would be a revenue-raiser that could help offset some of the tax cuts Republicans are proposing. President Donald Trump earlier this year proposed raising $1.8 billion over the next decade by opening up parts of the refuge for oil and gas development, a change that would require congressional action.

Energy production in the wildlife refuge, which is estimated to contain as much as 12 billion barrels of oil, has been debated for more than 50 years, with major oil companies such as ConocoPhillips, Alaska's biggest oil producer, interested in exploring for oil in the area. Environmentalists, meanwhile, have argued for making the refuge's coastal plain permanently off -limit to drilling, noting the area's fragile ecosystem is home to polar bears, caribou, musk oxen and more than 200 species of migratory birds.

"It would be a sin against the environment," Senator Ed Markey, a Massachusetts Democrat, said in an interview. "We should not be doing that for the oil industry. We don't need to set up a gas station on top of the ANWR."

Fuel Prices

Proponents of opening up the area to energy development argue it's needed to help keep domestic fuel prices low and generate government revenue, including funds for Alaska, which has seen its economy and state government coffers hit hard by a decline in oil prices.

In addition to Democrats, Republicans Senators such as Susan Collins of Maine and John McCain of Arizona have in the past voted against efforts to open the refuge to drilling. Asked how she might vote this time around, Collins said she was open to reconsidering.

"I am told that there is a new kind of horizontal drilling that is far safer, but I don't know enough about it to have looked into yet," Collins said in an interview. Still, she added, "I voted against it consistently in the past."

Southern's Nuclear Plant Gets $3.7 Billion More in U.S. Aid

Posted September 29, 2017, 12:55 P.M. ET

By Ari Natter and Mark Chediak

Southern Co.'s troubled nuclear reactor project in Georgia is in line to get additional government support after the Energy Department announced Sept. 29 it offered $3.7 billion in additional loan guarantees.

Georgia Power Co. and its partners constructing the Vogtle plant—the only new nuclear power project in the U.S.—were already recipients of $8.3 billion in federally-backed loan guarantees, but asked the Trump administration to come to their aid amid ballooning costs and delays.

The project represents the last, best hope for a much-hyped nuclear renaissance that has failed to materialize in the U.S. following Japan's Fukushima accident and persistently weak wholesale electricity prices.

"I believe the future of nuclear energy in the United States is bright and look forward to expanding

American leadership in innovative nuclear technologies," Energy Secretary Rick Perry said in a statement announcing the additional aid.

The proposed aid comes after the Trump administration proposed ending the loan guarantee program, which has been under fire from conservative critics since it famously backed a half-billion-dollar loan guarantee to failed solar-panel maker Solyndra LLC.

Project Costs Soar

The new federal financing comes as Southern seeks Georgia regulators' approval to continue building two reactors at its Vogtle nuclear facility. Costs for the project have soared to more than $25 billion amid construction delays, caused in part by the bankruptcy of contractor Westinghouse Electric Co.

The Energy Department announced conditional loan guarantees of $1.67 billion to Georgia Power, a subsidiary of Southern; $1.6 billion to Oglethorpe Power Corporation; and $415 million to three subsidiaries of Municipal Electric Authority of Georgia.

Securing the additional money will help the Atlanta-based company make its case to Georgia regulators who must now weigh Southern's recommendation to continue against concerns from environmental groups and consumer advocates.

The additional loan "will help us continue to reduce our financing costs," said Paul Bowers, president of Georgia Power. With more than $5 billion in loan guarantees promised to Southern, the utility owner says its customers will get $500 million in "benefits" for its customers.

Georgia's public service commission will likely give its OK to the Vogtle project if Southern and its partners receive about $3.7 billion in payments from Westinghouse's parent Toshiba Corp., Tim Echols, a member of the Georgia Public Service Commission, said last week.

"The additional loan guarantee money, monetizing the Toshiba payment, and tax credit extension are music to my ears," Echols said. "Without these it will be difficult to finish our Vogtle reactors and I hope the U.S. Senate knows that."

Perry Moves to Aid Coal, Nuclear Generators with Pricing Rule

Posted September 29, 2017, 9:58 A.M. ET

By Catherine Traywick

U.S. Energy Secretary Rick Perry is doubling down on coal and nuclear power.

The Energy Department proposed a rule Sept. 29 aimed at helping coal and nuclear power plants compete within wholesale power markets by allowing them to recover their costs at "a fair rate of return," according to the agency's website. Generators with a 90-day supply of fuel on site are eligible.

While they provide reliable, base-load power, coal, and nuclear plants are costly to run, so grid operators usually don't call on them until after all renewable and natural gas resources have been exhausted. Meanwhile, low cost gas, wind and solar power have lowered electricity prices to the point that coal plants, when needed, often aren't paid enough to cover operating costs.

"Ensuring a reliable and resilient electric supply and corresponding supply chain are vital to national security," Perry said in a letter to the Federal Energy Regulatory Commission, which will consider the proposal. The letter touts the agency's recent grid study, which made the case for preserving base-load power, a term typically used to describe coal and nuclear plants that can run all the time.

Perry's proposal may have a friend in Neil Chatterjee, who was tapped by President Donald Trump to temporarily lead the energy commission. Chatterjee has repeatedly argued that coal-fired plants are a crucial part of America's energy mix that needed to be "properly compensated to recognize the value they provide."

But grid operators may find implementing such a rule to be "difficult or problematic," Christi Tezak, managing director at ClearView Energy Partners in Washington, wrote in a research note. Still, a pricing rule of some kind may be formalized by as soon as spring 2018, she said.

'Major Retreat'

Rob Gramlich, founder of the clean energy consultancy Grid Strategies LLC, characterized the proposal as "a major retreat from competition."

The Federal Energy Regulatory Commission, an independent agency under the Energy Department, has authority over power markets, though the energy secretary may propose rules to the commission. Perry is seeking final action within 60 days.

The proposal follows the agency's controversial grid study, which argued that base-load power is critical to grid resilience and called for changes to how wholesale electricity is traded. The report cautioned that "market designs may be inadequate" to keep "traditional" power generation online.

Pennsylvania Nuns to Appeal Transco Pipeline Decision

Posted September 29, 2017, 04:01 P.M. ET

By Leslie A. Pappas

Nuns who sued on religious grounds to stop a pipeline from traversing their property in Pennsylvania say they will appeal a judge's decision to dismiss the case.

The sisters of the Adorers of the Blood of Christ in July sued the Federal Energy Regulatory Commission (FERC) and Transcontinental Gas Pipe Line Co. LLC (Transco) to stop construction of the Atlantic Sunrise pipeline on land they own in Lancaster County.

The group said the pipeline would violate their freedom of religion under the Religious Freedom Restoration Act (RFRA), echoing religious arguments made by the Standing Rock Sioux Tribe and

others in their quest to stop the Dakota Access Pipeline in North and South Dakota.

Judge Jeffrey L. Schmehl denied the nuns' motion for a preliminary injunction to stop the pipeline, and granted the company and FERC's motions to dismiss the case, in an order filed Sept. 28 in U.S. District Court for the Eastern District of Pennsylvania (Adorers of the Blood of Christ v. FERC, E.D. Pa., No. 5:17-cv-03163-JLS, 9/28/17). Schmehl said that the nuns needed to challenge the pipeline under procedures laid out in the Natural Gas Act (NGA).

"No matter how sweeping RFRA may be, plaintiffs simply may not bypass the specific procedure established by Congress in the NGA by bringing a RFRA suit against FERC in this Court," Schmehl wrote in his opinion.

Chris Stockton, a spokesman for Williams Companies, Inc., which owns the Transco pipeline system, said the company was "pleased with the court's well-reasoned decision to dismiss" and said the company remains "open to constructive dialogue with the landowner to find an amicable resolution of our differences."

'Sacredness of Earth'

The nuns maintain that the 42-inch pipeline, which would be used to transport natural gas from hydraulic fracturing operations, violates their belief in "the sacredness of Earth."

The pipeline would go through several Pennsylvania counties, carrying gas to markets like the Cove Point liquefied natural gas export terminal on the Chesapeake Bay.

"While the Adorers respect the District Court's conclusion that the Adorers could only raise their religious freedom claims during FERC's administrative proceedings, the issues and rights involved in this case are so important that the Adorers believe additional judicial review is warranted," the nuns said in a statement emailed to Bloomberg BNA Sept. 29. "The Sisters believe that God calls humans to treasure land as a gift of beauty and sustenance that should not be used in an excessive or harmful way."

Transco applied in March for authorization to construct the pipeline, and on Feb. 3, FERC gave the company the right to take private property along the pipeline route by eminent domain, the ruling says.

After the nuns refused to allow the pipeline onto their property, the company sued for access, and on Aug. 23, the court granted a portion of the nun's property to Transco.

The nuns said they plan to appeal the decision to the Third Circuit Court of Appeals in Philadelphia.

Electric Scooter Taxes to Drop as Taiwan Boosts Green Vehicles

Posted September 29, 2017, 01:41 P.M. ET

By Yu-Tzu Chiu

Electric scooter owners in Taiwan could see a tax break as the country aims to boost clean transportation and its domestic electric vehicle industry by extending licensing incentives through 2021.

Only 929 car buyers have taken advantage of the existing automobiles license tax waiver for electric cars, and Taiwan hopes dropping the fees for electric scooters will encourage more buyers to consider eco-friendly vehicles. The proposal Taiwan approved Sept. 28, which still must be approved by the legislature, would extend the existing waiver on the license tax for electric vehicles through the end of 2021. The tax break was set to expire Jan. 5, 2018.

Currently, the vehicle license tax rate in Taiwan for electric scooters under 12 horsepower is zero; electric scooters with 45 horsepower or more pay a vehicle license tax of 1,620 Taiwanese dollar ($53) annually.

Deputy Finance Minister Tzu-hsin Wu said at a news conference that revising tax codes is one of the government's strategies to encourage the development of domestic electric vehicle industries. As European countries such as Norway consider banning gasoline and diesel cars, Wu said it's important for Taiwan to catch up.

Taiwan projects that the extended tax breaks eventually will put 5,795 electric cars on the road by 2021and more than double the number of electric scooters to 171,000. The extended tax incentives would help the government gain an additional 800 million Taiwan dollars in revenue, Wu said.

During a recent meeting discussing the tax exemption proposal, Premier Lai Ching-te said the incentives are designed to both encourage green consumption and help boost the development of domestic electric vehicle industries, according to Kuo-yung Hsu, a spokesman for the Taiwan Cabinet.

Industry Hopes for Boost

Taiwan's automakers praised the tax incentives but suggested cash rebates, such as those used in the U.S., could encourage even more buyers to consider an electric vehicle. In Taiwan, cash incentives are offered to buyers of electric scooters as one of the government's pollution control measures. Taiwan wants to ban smoky two-stroke scooters by 2020.

Wen-yi Lo, a spokesman for Taiwan-based Yulon Motor Co Ltd., said the company has invested more than 3 billion Taiwanese dollars ($99 million) in the past decade to develop electric cars. Taiwan's electric vehicle charging network has expanded with the support of government policies, and by late 2017 three kinds of electric cars produced by Yulon will be available in Taiwan, he said.

Yen-yang Chen, marketing manager of Gogoro, a Taiwan-based company selling electric scooters, said it's encouraging that the electric vehicle license tax exemption would expand to electric scooters.

"More buyers will choose electric scooters because supportive policies have been seen here," Chen told Bloomberg BNA.

Gogoro started selling its electric scooters in Taiwan in 2015. By 2016, Gogoro's sales comprised two-thirds of the total 20,000 electric scooters sold in Taiwan, according to government statistics.

Foreign electric automakers also see opportunities in Taiwan. In late January, U.S.-based Tesla Motors delivered its first batch of products to Taiwanese customers and opened its first supercharging station in Taipei.

Local media reported that, after the end of the waiver in 2021, drivers of a Tesla model with 700 horsepower will have to pay an annual license tax of 117,000 Taiwanese dollar ($3,900), about four times that on some nonelectric super cars.

Tesla Taiwan declined to comment on the Cabinet's tax revision proposal.

Subject: POLITICO's Morning Score: Trump nonprofit warns GOP senators to get in line — Koch network leader calls health fight 'humbling' — DeWine announces Ohio governor run

By Elena Schneider | 06/26/2017 10:00 AM EDT

With Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

WARNING SHOTS - "Pro-Trump group's health care offensive warns GOP senators to get in line," by POLITICO's Alex Isenstadt: "A new campaign by top White House allies targeting the GOP's most vulnerable senator over health care sends a loud message to those resistant to the Trump agenda: We're coming after you. America First Policies, a White House-backed outside group led by the president's top campaign advisers, has launched a $1 million attack against Sen. Dean Heller (R-Nev.), who on Friday announced that he opposed the Senate's recently unveiled Obamacare repeal plan. ...The offensive is aimed at both punishing Heller and at swaying his vote, and it is a stunning act of political retaliation against a member of the president's own party - one who faces a perilous path to re-election in 2018. Senior Republicans, many of whom are deeply worried about Heller's political standing and increasingly nervous about the midterms, were shocked and spent the weekend measuring the possible fallout." **Full story.**

HONEST FEEDBACK - "Koch-backed group calls health fight in Congress 'humbling,'" by Campaign Pro's Kevin Robillard: "The head of the the Koch brothers-backed Americans for Prosperity admitted to donors on Sunday that the group was caught 'flat-footed' by the fight in Congress to replace Obamacare, as the group seeks to influence Republican proposals it says do not go far enough to repeal the 2010 law." **Full story.**

THIS WEEK ON THE HILL - "Senate Republicans skeptical Obamacare repeal can pass this week," by POLITICO's Elana Schor and Seung Min Kim: "Senate Republicans are casting doubt on their leaders' plans to vote this week on repealing Obamacare, with lawmakers from all wings of the party so far withholding support from the massive reshaping of the health care law that they campaigned on for seven years. Majority Leader Mitch McConnell of Kentucky faces problems from seemingly every corner of his conference, and - from wary moderates to conservatives and even leadership allies - few Republicans were willing Sunday to predict the Senate repeal bill could pass this week, before lawmakers leave Washington for a weeklong July 4 recess." **Full story.**

2018 WATCH - "Ohio AG Mike DeWine announces 2018 run for governor," Associated Press: "In the era before President Donald Trump, Republican Mike DeWine's status as an easy favorite to win Ohio's governor's race would have been assured. The 70-year-old attorney

general, who announced his long-anticipated bid Sunday, is one of the state's most familiar and high-profile public figures, a former U.S. senator and lieutenant governor with a big wholesome-looking family, an extensive political network and $2.5 million already in the bank. But it remains to be seen how DeWine's traditional political profile will play in a national political climate that's been upended by President Donald Trump." **Full story.**

COLORADO SPRINGS CHRONICLES - Abbott warns GOP donors about Texas turning blue: Texas Gov. Greg Abbott doesn't have a clear Democratic opponent, and his approval ratings are strong. But he still told GOP donors at the Koch network's annual seminar at the Broadmoor Resort in Colorado Springs that they should fret about Democrats gaining ground in his home state. "People really take Texas for granted," he told the crowd, noting billionaire Democratic donor George Soros had recently invested heavily in the Harris County District Attorney's race and Texas was one of just a handful of states where Hillary Clinton did better in 2016 than Barack Obama did in 2012. "If Texas, California and New York are all blue, then Bernie Sanders will be a middle-of-the-road type candidate," Abbott said. He said his campaign has already hired field organizers, and plans on investing heavily in the ground game.

- Kochs warn of energized left: At a strategy session in front of about 400 donors, Freedom Partners official Emily Seidel warned that Democratic enthusiasm would make for the hardest midterm cycle Republicans have faced in recent memory. "This midterm election cycle is far more difficult than in recent years," Seidel said. She said liberal political groups were seeing donations booming, and had growing budgets to match the network's largesse. "We are facing a reinvigorated left."

HOT DOC - Democracy Corps recommends attacking health bill over process, focus on pre-existing conditions: A new memo from Democracy Corps summarizing surveys for Women's Voices. Women Vote Action Fund has recommendations on how Democrats should best attack an already-unpopular health care bill. The memo recommends focusing on the provisions making it more difficult to get insurance if you have a pre-existing conditions, since that attack was the most effective in getting bill supporters to change their minds. It also says attacking the bill for backroom deals was effective at moving swing voters. **Read the full memo here.**

NEW PAC ALERT - Two veteran Democratic strategists, longtime Ted Kennedy aide Steve Kerrigan and former Colorado Democratic Party chair Rick Palacio, are launching Stronger States, a new federal PAC focused on state and local races that will work on "strengthening state

and local party committees, providing results-driven resources to Democratic candidates, and partnering with candidates, state parties, and progressive allied organizations."

EXPANDING THE PROFILE - Dem megadonor Tom Steyer adds health care to his brand, by POLITICO California's Victoria Colliver: "California billionaire activist Tom Steyer made his name as an environmental activist, worked with Democratic groups to register a million new voters and redefined green politics with high-profile campaigns on climate change and clean energy. Now as he weighs a run for public office, he's adding health care - specifically drug prices - to his brand. ...The former hedge fund executive, 59, is backing a California effort to force drug manufacturers to give notice of price increases, a move Steyer sees as a first step to reining in drug costs and curbing the power of corporate interests." **Full story.**

CAMPAIGN FINANCE GOING LOCAL - "Milwaukee donor funded more than one-third of Virginia transgender candidate's primary victory," by Campaign Pro's Maggie Severns: "Danica Roem, a transgender Virginia House candidate, got major help to beat out three other Democrats to win her party's nomination during last week's primary - from Milwaukee. More than one-third of the money Roem has raised for the race - as of the most recent filing deadline - comes from Milwaukee County Executive Chris Abele, who also chairs the board for the pro-LGBT Victory Fund. Though they're both connected through the Victory Fund, Roem says she can't recall ever meeting Abele, who has twice wired eye-popping donations to her small-dollar state government race - to the tune of $10,000 and $15,000. Abele, who is not gay or transgender, said he was drawn to her race because it has symbolic significance." **Full story.**

- "Christie donors gave more to Murphy than to Guadagno and Ciattarelli combined," by POLITICO New Jersey's Matt Freidman and Brendan Cheney: "In the race for New Jersey governor, Democratic nominee Phil Murphy is casting Republican Kim Guadagno's candidacy as a third term for Gov. Chris Christie. But ... [a] POLITICO New Jersey analysis of the most recent campaign finance data available found that the donors who gave to Christie's gubernatorial campaigns contributed just short of $464,000 to Murphy - about 10 percent of the roughly $4 million raised from donors. Murphy, a former Goldman Sachs executive and U.S. ambassador to Germany, self-funded his $20 million primary campaign ... Despite serving as Christie's second-in-command for the past 7 1/2 years, Guadagno, the GOP gubernatorial nominee, received significantly less from those who gave to Christie, taking in about $311,000 from them during the primary. Ciattarelli, the Republican runner-up, received just over $143,000 from Christie doors." **Full story.**

- "Bloomberg's Next Anti-Washington Move: $200 Million Program for Mayors," by The New York Times' Alexander Burns: "Michael R. Bloomberg will throw his financial might into helping beleaguered American mayors, creating a $200 million philanthropic program aimed at backing inventive policies at the city level and giving mayors a stronger hand in national politics. Mr. Bloomberg intends to announce the initiative on Monday in a speech to the United States Conference of Mayors in Miami Beach, where he will castigate federal officials and state governments around the country for undermining cities. He plans to describe the program, called the American Cities Initiative, as a method of shoring up the global influence of the United States despite turmoil in Washington." **Full story.**

YOUR (FINAL?) DAILY GEORGIA - "The GOP's one-man fire brigade," by POLITICO's Eliana Johnson: "Karen Handel wasn't the only big winner in Tuesday's special election. Republican operative Corry Bliss, who heads the super PAC officially blessed by House GOP leadership, arguably had just as much riding on the outcome." **Full story.**

- "Destroying Jon Ossoff: the adman's view," by Axios' Jonathan Swan speaking to Republican operative Bob Honold, runs through the ad-by-ad progression of the NRCC TV campaign against Ossoff in GA-06. **Full story.**

CODA - QUOTE OF THE DAY: "I didn't come here to ride the back bench and get a fancy business card." - GOP Rep. Jason Chaffetz, who's departing Congress on Friday, to The Salt Lake Tribune.

EHS Federal Regulatory Alert

September 12, 2017 - Number 175

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
California SIP/Placer and Ventura County Air Pollution Control Districts
AIR

Proposed rule of the EPA would approve revisions to the Placer and Ventura County air pollution control districts (APCD) portions of the California SIP. The rule would approve a Placer County APCD rule concerning emissions of nitrogen oxides from incinerators. The rule also would approve a Ventura County APCD rule addressing previously unregulated types of fuel burning equipment, including kilns, dryers, and ovens. Comments are due Oct. 12, 2017. Contact: Kevin Gong; EPA Region 9; 415-972-3073; Gong.Kevin@epa.gov. Citations: 40 CFR 52

82 FR 42765 (09/12/2017)

Regulatory Update

AIR
Delaware SIP/2008 Eight-Hour Ozone NAAQS
AIR

Proposed rule of the EPA would approve a revision to the Delaware SIP regarding reasonably available control technology (RACT) requirements under the 2008 eight-hour ozone NAAQS. The revision includes a certification that for certain categories of sources, previously adopted nitrogen oxide (NOx) and volatile organic compound (VOC) RACT controls approved under the 1979 one-hour and 1997 eight-hour ozone NAAQS are based on the currently available technically and economically feasible controls and continue to represent RACT for implementation of the 2008 eight-hour ozone NAAQS. The revision also addresses the adoption of new or more stringent standards or controls that represent RACT control levels for certain categories of sources. In addition, the revision includes a negative declaration that control technique guidelines (CTG) or non-CTG major sources of VOC and NOx sources do not exist in the state. A revision relating to startup, shutdown, and maintenance will be addressed in a separate action. Comments are due Oct. 12, 2017. Contact: Leslie Doherty; EPA Region 3; 215- 814-3409; jones.leslie@epa.gov. Citations: 40 CFR 52

82 FR 42767 (09/12/2017)

Regulatory Update

AIR
Idaho SIP/PM-2.5 NAAQS Infrastructure Requirements
AIR

Proposed rule of the EPA would approve revisions to the Idaho SIP regarding the infrastructure requirements for the 2012 annual fine particulate matter (PM-2.5) NAAQS. The rule would not approve or disapprove state provisions regarding excess emissions during startup, shutdown, or malfunction of operations at a facility or any provisions involving state director discretion or variance. Comments are due Oct. 12, 2017. Contact: Matthew Jentgen; EPA Region 10, Air Planning Unit; 206-553-0340; jentgen.matthew@epa.gov. Citations: 40 CFR 52

82 FR 42772 (09/12/2017)

Regulatory Update

AIR
Kentucky SIP/Ambient Air Quality Standards
AIR

Final rule of the EPA approves revisions to the Kentucky SIP that update the state's ambient air quality standards to reflect the historical and current NAAQS for carbon monoxide, lead, nitrogen dioxide, ozone, particulate matter (PM-10 and PM-2.5), and sulfur dioxide. The revisions also update and reformat an ambient air quality standards table. The rule does not approve revisions regarding state air quality standards for hydrogen sulfide, fluorides, and odor. The rule is effective Oct. 12, 2017. Contact: Madolyn Sanchez; EPA Region 4, Air Planning and Implementation Branch; 404-562-9644; sanchez.madolyn@epa.gov. Citations: 40 CFR 52.920

AIR
Montana FIP/Regional Haze
AIR

Final rule of the EPA revises the Montana regional haze federal implementation plan (FIP). The revisions increase the best available retrofit technology (BART) nitrogen oxides emission limit for the Trident cement kiln in Three Forks to 7.6 pounds per ton clinker as a 30-day rolling average. The revisions also correct the reasonable progress determination for the Blaine County #1 Compressor Station and the instructions for compliance determinations for particulate matter BART emission limits at electrical generating units and cement kilns. Portions of the FIP addressing the Colstrip and Corette power plants that have been vacated and remanded by the appeals court will be addressed in a separate action. The rule is effective Oct. 12, 2017. Contact: Jaslyn Dobrahner; EPA Region 8, Air Program; 303-312-6252; dobrahner.jaslyn@epa.gov. Citations: 40 CFR 52.1396

AIR
West Virginia/Clean Air Act Consent Decree
AIR

Notice of the Department of Justice announces a proposed modification to a consent decree in United States v. Bayer CropScience LP (Civil Action No. 2:15-cv-13331), lodged on Aug. 31, 2017, with the U.S. District Court for the Southern District of West Virginia. The original consent decree (80 FR 57873; 09/25/2015) addressed alleged violations of the Clean Air Act related to a 2008 explosion at a methomyl production unit in Institute, W.Va., and required the defendant to pay a civil penalty of $975,000; to perform injunctive relief to reduce the likelihood of future accidents at the Institute plant and several other chemical processing plants; and to perform supplemental environmental projects valued collectively at $4.23 million. The proposed modification would replace one of the supplemental environmental projects that involved expanding a wastewater sump with another project to purchase emergency response equipment, reducing the total cost of the supplemental environmental projects to $3.05 million. Comments are due Oct. 12, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

GENERAL ENVIRONMENT AND SAFETY
Age, Race and Ethnicity Data in Medical Device Clinical Studies
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a final guidance for industry concerning the evaluation and reporting of age, race, and ethnicity data in medical device clinical studies. The guidance is intended to encourage the collection and consideration of age, race, ethnicity, and associated covariates during the study design stage; to provide recommended analyses of study subgroup data with a framework for considering demographic data when interpreting overall study outcomes; and to specify the FDA's recommendations for reporting age, race, and ethnicity-specific information in summaries and labeling for approved or cleared medical devices. The guidance also extends the policy established in the agency's guidance for evaluation of sex-specific data in medical device clinical studies to additional demographic subgroups. Comments may be submitted at any time. Contact: Katheryn O'Callaghan; FDA, Center for Devices and Radiological Health; 301-796-6349

GENERAL ENVIRONMENT AND SAFETY
Oral Rabies Vaccine Trial
GENERAL ENVIRONMENT AND SAFETY

Notice of the Animal and Plant Health Inspection Service announces the availability of a supplemental environmental assessment and finding of no significant impact for an oral rabies vaccination (ORV) field trial in New Hampshire, New York, Ohio, Vermont, and West Virginia. The supplemental assessment analyzed potential effects of the ORV for wildlife in the specified states and the geographic shift of the ORV zone in Ohio and the addition of 17 counties in West Virginia so that baits could be applied to the western edge of the ORV zone in West Virginia. The finding of no significant impact is based on the EA and the 2013, 2015, and 2017 supplements to the EA and reflects the agency's determination that the distribution of the experimental wildlife rabies vaccine will not have a significant impact on the quality of the human environment. Petition for Enforcement Action/Defective Safety Components and Falsified Quality Assurance
GENERAL ENVIRONMENT AND SAFETY

Notice of the NRC announces the receipt of a petition from Paul Gunter, on behalf of Beyond Nuclear and representing numerous public interest groups, requesting that the NRC take action on licensees of plants that currently rely on potentially defective safety-related components and potentially falsified quality assurance documentation supplied by AREVA-Le Creusot Forge and its subcontractor, Japan Casting and Forging Corp. The petitioner provided expert review that identified significant irregularities and anomalies in the manufacturing process and quality assurance documentation of large reactor components manufactured by the AREVA-Le Creusot Forge for French reactors and reactors in other countries. Supplements to the petition are also being considered in evaluating the petitioners' request for enforcement action. The request for enforcement action meets the criteria for review under the 10 CFR 2.206 process, but the request concerning potentially falsified quality assurance documentation will be referred to another NRC process for appropriate action. Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Examinations of Working Places in Metal and Nonmetal Mines
OCCUPATIONAL SAFETY AND HEALTH

Proposed rule of the Mine Safety and Health Administration would further delay until March 2, 2018, the effective date of a Jan. 23, 2017, final rule (82 FR 7680) that updated standards for the examination of working places in metal and nonmetal mines. The rule requires operators to promptly notify miners of any conditions found that may adversely affect their safety or health, and requires operators to promptly take corrective action. The rule also requires the examination record to include the name of the examiner, examination date, location of areas examined, a description of adverse conditions found, and the date of corrective action. In addition, the rule requires operators to make the examination record available to authorized representatives of the secretary of Labor and miners' representatives and to provide a copy upon request. MSHA previously delayed the effective date to assure that mine operators and miners affected by the rule have the required training and compliance assistance (82 FR 15173; 03/27/2017) and to allow additional time for the agency to provide stakeholders training and compliance assistance (82 FR 23139; 05/22/2017). The current action would allow additional time for MSHA to provide stakeholders training and compliance assistance and provide more time to train inspectors. A concurrent proposed rule would make limited changes to the final rule concerning working place examinations and reopens the comment period and announces a series of hearings concerning the limited changes. Comments on the delay of effective date are due Sept. 26, 2017. Contact: Sheila McConnell; MSHA, Office of Standards, Regulations, and Variances; 202-693-9440; mcconnell.sheila.a@dol.gov. 30 CFR 56.18002, 57.18002

Subject: Today on Climate Beat

June 30, 2017

Today on Climate Beat . . .

. . . we went on the road, reporting that Volkswagen has submitted a supplemental plan to California air officials to spend $200 million over the next 30 months on projects to advance zero-emission vehicles, bolstering spending in disadvantaged communities and outlining its longer-term funding strategy.

Over at EPA, our daily news roundup noted that after weeks of publicly backing a "red team, blue team" approach to refine climate science, EPA Administrator Scott Pruitt is launching such an effort, and at least some in the coal sector are taking it as a sign that he will move to challenge EPA's greenhouse gas endangerment finding.

At the White House, representatives of the Natural Resources Defense Council in a recent meeting with administration officials launched a push to persuade them to keep EPA's Clean Power Plan regulation to cut greenhouse gases from the power sector.

In Congress, House and Senate Republicans are re-introducing legislation that would bar EPA and several other agencies from using the social cost of carbon and related metrics for more-potent GHGs in cost-benefit reviews of regulations that curb emissions.

And we also highlighted some must-read stories from the past week, including analysis on EPA's efforts to delay climate rules, congressional discussions on vehicle emissions standards, as well as cap-and-trade news out of California and the Northeast.

Good Tuesday morning. Today is the 73rd anniversary of D-Day.

IN CASE YOU DIDN'T GET THE POINT MONDAY MORNING, another statement from President Donald Trump on Twitter at 9:20 p.m. last night: "That's right, we need a TRAVEL BAN for certain DANGEROUS countries, not some politically correct term that won't help us protect our people!"

JEN HABERKORN and **BURGESS EVERETT** scoop that Senate Majority Leader Mitch McConnell (R-Ky.) wants to vote on replacing Obamacare by the July 4 recess. We even hear that Senate Republicans are starting to send pieces of what might end up in their plan to the Congressional Budget Office.

SURE, A VOTE CAN HAPPEN, but listen to the quotes Burgess and Jen got from Republican senators, and tell us if you hear confidence or skepticism that a bill will pass: **SEN ROY BLUNT (R-MO.):** "I don't think this gets better over time. So my personal view is we've got until now and the Fourth of July to decide if the votes are there or not. And I hope they are." **SEN. SUSAN COLLINS (R-MAINE):** "Just listening to the debate over the past few weeks, I think cobbling together a bill that could get 50 votes is going to be a challenge, but you never know." **A PERSON FAMILIAR WITH THE NEGOTIATIONS:** "[McConnell] wants to be done with this one way or the other." ***Read Jen and Burgess's great story*** http://politi.co/2rOT6mH

FYI -- There are, at most, 19 legislative days between now and the July 4 recess.

IMPORTANT READ -- SEUNG MIN KIM -- "How Trump is stalling his own nominees": "Trump tapped Kevin McAleenan on March 30 to lead Customs and Border Protection, a critical position for his drive to revamp U.S. immigration policy. But the White House didn't formally submit his nomination to the Senate for confirmation until May 22, nearly eight weeks later. ... Trump's two nominees for the Export-Import Bank board -- ex-GOP Reps. Scott Garrett and Spencer Bachus -- haven't been submitted to the Senate, despite being named April 14. Trump rolled out a batch of 10 judicial nominations to much fanfare on May 8, but two of them have yet to arrive on Capitol Hill. And Dan Brouillette, nominated by Trump to be Rick Perry's chief deputy at the Energy Department, was announced on April 3, yet his nomination wasn't sent by the White House until May 16." http://politi.co/2rGV9Y9

NYT'S PETER BAKER and **MAGGIE HABERMAN -- "Trump Grows Discontented With Attorney General Jeff Sessions":** "Few Republicans were quicker to embrace President Trump's campaign last year than Jeff Sessions, and his reward was one of the most prestigious jobs in America. But more than four months into his presidency, Mr. Trump has grown sour on Mr. Sessions, now his attorney general, blaming him for various troubles that have plagued the White House. ...

"[Trump] has intermittently fumed for months over Mr. Sessions's decision to recuse himself from the investigation into Russian meddling in last year's election, according to people close to Mr. Trump who insisted on anonymity to describe internal conversations. In Mr. Trump's view, they said, it was that recusal that eventually led to the appointment of a special counsel who took over the investigation." http://nyti.ms/2r1d7m6

-- IMAGINE IF YOU'RE SESSIONS and gave up a safe Senate seat you held for 20 years -- and could've held for 20 more -- only to work for a president who became frustrated with you after five months on the job.

BRUTAL WSJ EDITORIAL -- "The Buck Stops Everywhere Else: Trump undermines his own travel ban and Justice Department": "Some people with a propensity for self-destructive behavior can't seem to help themselves, President Trump apparently among them. Over the weekend and into Monday he indulged in another cycle of Twitter outbursts and pointless personal feuding that may damage his agenda and the powers of the Presidency. ...

"In other words, in 140-character increments, Mr. Trump diminished his own standing by causing a minor international incident, demonstrated that the loyalty he demands of the people who work for him isn't reciprocal, set back his policy goals and wasted time that he could have devoted to health care, tax reform or 'infrastructure week.' Mark it all down as further evidence that the most effective opponent of the Trump Presidency is Donald J. Trump." http://on.wsj.com/2qSeSTv

NOT WELCOME -- THE GUARDIAN: "Cancel Donald Trump state visit, says Sadiq

Khan, after London attack tweets: London mayor says US president is wrong about many things and that state visit to Britain should not go ahead": "Appearing on Channel 4 News on Monday evening, Khan said Trump was wrong about 'many things' and that his state visit should not go ahead.

"'I don't think we should roll out the red carpet to the president of the USA in the circumstances where his policies go against everything we stand for,' he said. 'When you have a special relationship it is no different from when you have got a close mate. You stand with them in times of adversity but you call them out when they are wrong. There are many things about which Donald Trump is wrong.'" http://bit.ly/2sbLLy4

THE RUNDOWN -- WHAT TV WILL LOOK LIKE THURSDAY FOR THE COMEY HEARING -- Nearly every network is taking the Jim Comey hearing Thursday morning live. **CBS:** Charlie Rose, Gayle King and Norah O'Donnell with John Dickerson and Jan Crawford. **ABC:** George Stephanopoulos (h/t Morning Media). **FOX NEWS:** Bill Hemmer and Shannon Bream. **CNN:** Wolf Blitzer and Anderson Cooper. (CNN.com will also livestream Comey's testimony without requiring a log-in to a cable provider.)

#THISTOWN -- @marincogan: "Shaw's Tavern, a bar in DC, is opening early Thursday morning to carry live coverage of the Comey hearing:" http://bit.ly/2rw8xQ9

RUSSIA WATCH -- "Top-secret NSA report details Russian hacking effort days before 2016 election," by the Intercept's Matthew Cole, Richard Esposito, Sam Biddle and Ryan Grim: "Russian military intelligence executed a cyberattack on at least one U.S. voting software supplier and sent spear-phishing emails to more than 100 local election officials just days before last November's presidential election, according to a highly classified intelligence report obtained by The Intercept. The top-secret National Security Agency document, which was provided anonymously to The Intercept and independently authenticated, analyzes intelligence very recently acquired by the agency about a months-long Russian intelligence cyber effort against elements of the U.S. election and voting infrastructure.

"The report, dated May 5, 2017, is the most detailed U.S. government account of Russian interference in the election that has yet come to light. While the document provides a rare window into the NSA's understanding of the mechanics of Russian hacking, it does not show the underlying 'raw' intelligence on which the analysis is based. A U.S. intelligence officer who declined to be identified cautioned against drawing too big a conclusion from the document because a single analysis is not necessarily definitive." http://bit.ly/2syN2Nm

-- "Contractor charged in NSA document leak case," by WaPo's Devlin Barrett: "A 25-year-old government contractor has been charged with mishandling classified information after authorities say she gave a top-secret National Security Agency document to a news -organization. Reality Leigh Winner was accused of gathering, transmitting or losing defense information - the first criminal charge filed in a leak investigation during the Trump administration." http://wapo.st/2sMI1jt

-- **@RonaldKlain:** "Fair to condemn the leak. But also fair to ask: Was the admin going to tell us that NSA had proof of Russian hack of voting systems?"

****** **A message from Samsung:** Samsung has announced more than $10 Billion in US Growth since 2016, including our March 2017 acquisition of HARMAN International, a commitment of $1.2 Billion in U.S.-based IoT Investment and R&D, and a $1B expansion of our Austin, TX Semiconductor Manufacturing Facility. Visit Samsung.com/VisionForTomorrow for more. ******

TELL US HOW YOU REALLY FEEL! -- " Trump's legislative director acknowledges Russia is overwhelming his agenda," by Matt Nussbaum and John Bresnahan: "'There's no doubt that keeping members focused on investigations detracts from our legislative agenda, detracts from what we're trying to deliver for the American people,' said Marc Short, Trump's director of legislative affairs, in a briefing with reporters on Monday night." http://politi.co/2r0Tomv

WAR ROOM, WHAT WAR ROOM? -- "White House ices Russia war room idea," by Tara Palmeri, Josh Dawsey, and Eliana Johnson: "The White House's Russia investigation 'war room' may have been killed before the battle. Just days before former FBI director James Comey's Senate testimony about his firing, President Donald Trump decided that all inquiries related to the scandals engulfing his administration should be handled by his outside lawyer in New York instead of by a team based inside the White House, according to four advisors close to Trump." http://politi.co/2sbW5pR

GOOD EAR -- "In Trump's White House, Everything's Coming in 'Two Weeks,'" by Bloomberg's Toluse Olorunnipa: "President Donald Trump has a plan. It'll be ready in two weeks. From overhauling the tax code to releasing an infrastructure package to making decisions on NAFTA and the Paris climate agreement, Trump has a common refrain: A big announcement is coming in just 'two weeks.' It rarely does. On February 9, Trump boasted that his administration was 'way ahead of schedule' on a tax overhaul. 'We're going to be announcing something I would say over the next two or three weeks that will be phenomenal in terms of tax and developing our aviation infrastructure,' Trump said while meeting with airline executives. Eleven weeks elapsed before the White House released a one-page outline of the tax plan.

"In an April 29 interview on 'CBS This Morning' Trump said of his promised $1 trillion infrastructure construction program: 'We've got the plan largely completed and we'll be filing over the next two or three weeks - maybe sooner,' Trump said. No legislation has been filed. ... Trump's habit of self-imposing -- then missing -- two-week deadlines for major announcements has become a staple of his administration as it's struggled to amass policy wins. The president has used two-week timelines to sidestep questions from reporters or brag to CEOs at the White House. But his pronouncements have also flummoxed investors, Congress and occasionally even members of his staff." https://bloom.bg/2rP1hja

THIS IS FASCINATING -- NYT'S STEVE EDER and BEN PROTESS -- "Trump Organization to Go Budget Friendly With 'American Idea' Hotel Chain": "The Trump Organization is expected to announce plans for a new three-star hotel chain with a patriotic flair, echoing President Trump's campaign slogan about putting America first and reflecting the organization's promise to enter into new deals only in the United States. The intention is to differentiate the chain, called American Idea, by featuring artifacts of American culture in the hotels, such as an old Coca-Cola machine in the lobby or American-made sundries in the rooms.

"And while the Trump Organization and its business partner say the down-market move is not about politics, the president's business is inherently viewed through that lens: The chain will make its debut in little-known towns in Mississippi, a state in the heart of Trump country that favored him over Hillary Clinton by a margin of 18 percentage points. The organization's business partner in Mississippi is a family-owned hotel company whose co-owner met Mr. Trump at a campaign event last summer and donated to his campaign." http://nyti.ms/2rMLbXa

FIRST IN PLAYBOOK -- SNEAK PEEK OF ISAAC DOVERE'S "OFF MESSAGE" -- SBA'S MCMAHON BLAMES WEST WING FOR HIRING 'BOTTLENECK' -- While President Trump is back to complaining about Democrats somehow are holding up his nominees, his longtime friend and Small Business Administrator Linda McMahon says she's been dealing with a "bottleneck" in the West Wing that's kept her from staffing up and slowed down her work. "We're not even staffed up to where we need to be or where we were, to do a lot of our regular activities," McMahon told Isaac in Tuesday's episode of the "Off Message" podcast.

"Some of them are filled with acting people who are here and who are doing a good job," McMahon said. "But until you have that leader in that position who can really manage and evaluate the work that's been done, you do have a little bit of a time gap there." McMahon, who says in the podcast that the job she originally wanted was Commerce secretary, said she's probably done with running for office, but she's also probably still going to keep writing big checks to Republicans and GOP causes-as much as the ethics rules allow her to.

And on the political future of one of her old employees -Dovere asked her if there was a world she could imagine in which there's a President The Rock? "Listen, there are worlds that I think happen and you wouldn't imagine that they had happened," McMahon said. "But it's not one I think about. I'm in current day. I'm very happy with the president that we have, and I want to do everything I can to help him be successful." http://politi.co/2rP2tCZ

COMING ATTRACTIONS -- "Senate prods Trump to move Israeli embassy to Jerusalem," by Elana Schor: "The Senate overwhelmingly agreed on Monday night to nudge President Donald Trump to move the U.S. embassy in Israel from Tel Aviv to Jerusalem, a campaign promise that he punted on last week. The Senate voted 90-0 on a resolution marking the 50th anniversary of Jerusalem's reunification. The measure

includes language that 'calls upon the president and all United States officials to abide by' a 1995 law that urged then-President Bill Clinton to move the U.S. embassy to Jerusalem." http://politi.co/2rG7Q5n

THE JUICE ...

-- THE NATIONAL ASSOCIATION OF MANUFACTURERS is playing host to Vice President Mike Pence, House Speaker Paul Ryan and House Majority Leader Kevin McCarthy June 20-21 for its annual fly in.

-- SPOTTED: ROGER STONE at the Watergate Hotel Monday, just days before the 45th anniversary of the Watergate break-in June 17.

-- ABC'S TOM LLAMAS' interview with Eric and Donald Trump Jr. will run on "Good Morning America" this morning. Look for the Trumps to discuss their father's tweets about London Mayor Sadiq Khan.

THREE PLAYBOOK FIRST LOOKS -- Members of Congress & Bad News Babes Walk-Up Songs Contest for the Congressional Women's Softball Game (CWSG) have selected their own walk-up song for their at-bat during the game. Some notable walk-up song selections include: Rep. Mia Love (R-Utah) with Pour Some Sugar On Me by Def Leppard; Rep. Cheri Bustos (D-Ill.) with Bo$$ by Fifth Harmony; Vice News' Shawna Thomas with Flawless by Beyonce; Cook Political Report's Amy Walter with All I Do Is Win by DJ Khaled, Feat. T-Pain. Ludacris; and NBC's Kasie Hunt with Enter Sandman by Metallica. For the next two weeks fans will vote on who has the better Spotify playlist of walk up songs. http://bit.ly/2sbTEE1

--REPUBLICAN KAREN HANDEL is out with a tough new 30-second ad in the Georgia special election with a veteran on-camera saying "I fought for our country. Jon Ossoff hired a film crew." It also dings Ossoff for allegedly exaggerating his security clearance and says he "is not fit to serve in Congress." They say they are spending $500,000 plus on the ad, titled "Front Line." ***See the ad*** http://bit.ly/2rGMTqW

-- MICHAEL MOORE is launching a new secure website called TrumpiLeaks. He writes in a letter being sent this morning: "Patriotic Americans in government, law enforcement or the private sector with knowledge of crimes, breaches of public trust and misconduct committed by Donald J. Trump and his associates are needed to blow the whistle in the name of protecting the United States of America from tyranny." Last month, the Weinstein Company announced they were teaming up with Moore again to release a new film by him: "Fahrenheit 11/9," referring to the day Trump was officially declared the next president. ***The site*** http://bit.ly/2syY59a ... ***The letter*** http://politi.co/2qSHwnn

TRUMP'S TUESDAY -- The president is meeting first with National Security Adviser H.R. McMaster, then House and Senate leadership and then he'll have a dinner with members of Congress tonight. ***Our scoop on the dinner guests*** http://politi.co/2rGXFh5

SHOW ME THE MONEY -- "Ryan ramps up fundraising to protect the House after healthcare vote," by Rachael Bade: "Speaker Paul Ryan, eager to protect his House majority in what's expected to be a politically volatile election cycle, is stepping up his fundraising following the chamber's vote to repeal and replace Obamacare. The Wisconsin Republican's political team on Tuesday morning will announce that Ryan has raised $22 million for House Republicans in the first five months of 2017, setting him on track to far outpace his 2016 fundraising haul. Over the same period last year, an election year, Ryan hauled in $16.5 million." http://politi.co/2rZ13GZ

WHO'S ON MUELLER'S TEAM, from Darren Samuelsohn. http://politi.co/2rP3tqW

WEST COAST WATCH -- "California's new top cop has to make some big policing decisions soon. No one knows what he'll do," by L.A. Times' Liam Dillon: http://lat.ms/2sMk3Vp

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years, and we announced more than $10 Billion in US Growth since 2016. This year, we're proud to have added HARMAN International and its 3,500 U.S. employees to the Samsung workforce in America, and just as enthusiastic about our common vision, the similarities in our culture of innovation, and the added value we can create for customers. Learn more about our partnership at Samsung.com/VisionForTomorrow for more. ******

MEDIAWATCH -- "WSJ Ends Google Users' Free Ride, Then Fades in Search Results," by Bloomberg's Gerry Smith: "After blocking Google users from reading free articles in February, the Wall Street Journal's subscription business soared, with a fourfold increase in the rate of visitors converting into paying customers. But there was a trade-off: Traffic from Google plummeted 44 percent. The reason: Google search results are based on an algorithm that scans the internet for free content. After the Journal's free articles went behind a paywall, Google's bot only saw the first few paragraphs and started ranking them lower, limiting the Journal's viewership. Executives at the Journal, owned by Rupert Murdoch's News Corp., argue that Google's policy is unfairly punishing them for trying to attract more digital subscribers. They want Google to treat their articles equally in search rankings, despite being behind a paywall." https://bloom.bg/2sbPknW

- "Led by Rachel Maddow, MSNBC Surges to Unfamiliar Spot: No. 1 in Prime Time," by NYT's Mike Grynbaum: "The last time that MSNBC was No. 1 in prime-time cable news, Bill Clinton was president, Madonna led the Billboard charts and 'Friends' still ran new episodes on TV. Seventeen years and a few rebrandings later, the network is back on top - buoyed by a surge of interest in news and the channel's stable of reliably liberal anchors, like Rachel Maddow, who have found their groove amid a time of intense anxiety for the political left. The MSNBC resurgence -- in May, it beat its rivals for the highest prime-time viewership on weeknights in the critical 25-to-54 age demographic, up an astounding 118 percent from a year earlier -- is part of a newly shifting landscape in television news, and within the channel itself." http://nyti.ms/2rGykE1

-- DANA BASH'S NEW PROJECT: CNN'S BADASS WOMEN OF WASHINGTON -- From Dana: "I was sitting at lunch with colleagues in early 2017 discussing the election, Hillary Clinton's loss and what that meant for women. That conversation inspired what became a project I am incredibly proud of - CNN's Badass Women of Washington. Women all across this city are breaking barriers, shattering glass ceilings and making a difference in government. Today, we are launching this inspirational series about seven powerhouse women: Sen. Dianne Feinstein, Transportation Sec. Elaine Chao, Rep. Jaime Herrera Beutler, Sen. Jeanne Shaheen, RNC Chairman Ronna Romney McDaniel, Sen. Catherine Cortez Masto, and Army Surgeon General, Lt. Gen. Nadja West. I hope you take some time to watch uplifting stories about and lessons from these women." ***The project*** http://cnn.it/2rOk1z5

HAPPENING TONIGHT -- PLAYBOOK UNIVERSITY with **D.C. MAYOR MURIEL BOWSER --** Join us tonight for our inaugural Playbook University event with the mayor of Washington. We'll talk about the changing face of D.C., the city's politics and Washington in the era of Donald Trump. The event is at IN3, the Inclusive Innovation Incubator at 2301 Georgia Avenue, NW. ***RSVP*** http://bit.ly/2ruwqbl

Playbookers

SPOTTED -- Ivanka Trump and Jared Kushner, Rep. John Delaney (D-Md.), Sen. Dick Durbin (D-Ill.) and Christine Brennan last night at the Kennedy Center for a Night of Laughter & Song benefitting the David Lynch Foundation.

SPOTTED at Al Franken's book party yesterday evening in Georgetown at Mandy Grunwald's home to celebrate "Al Franken, Giant of the Senate": Sens. Amy Klobuchar (D-Minn.), Elizabeth Warren (D-Mass.), Maggie Hassan (D-N.H.), Bill Nelson (D-Fla.), Richard Blumenthal (D-Conn.), and Sheldon Whitehouse (D-R.I.), Norm Ornstein,

Howard Fineman, Andrea Mitchell, Kasie Hunt and Mark Leibovich. ***$17.09 on Amazon*** http://amzn.to/2rOKhtf

--POOL REPORT FROM TONY COEHLO's 75th BIRTHDAY: "Former U.S. Congressman, DCCC chair, House Majority Whip and Gore 2000 campaign chairman, Tony Coelho (D-Calif.), celebrated his 75th birthday last night with friends, his DCCC and Congressional family which included a toast from Rep. Jim Costa (D-Calif.), a former Coelho intern. Coehlo was DCCC chair following his freshman year term in the House and won back 26 seats for the House Democrats in 1982, saving Tip O'Neil's speakership (MSNBC's Chris Matthews, Virginia Governor Terry McAuliffe and former Deputy Sec. of State Tom Nides are staff alumni of Coelho's DCCC days). Coelho told the story of meeting real estate developer Donald Trump on a fundraising swing through New York City and getting a $5,000 contribution from Trump for the House Democrats' campaign committee that year."

SPOTTED: Fred Hatfield, Marty Franks, Vic Fazio, Rep. Jim Costa, Tom O'Donnell, Ed Berger, Tom King, Stan Brand, Melissa Maxman, John Boland, Barbara Merrill, Jim Free, Ron Wick, Jonathan Young, Brad Triebsch, Michael Fraioli, Michael LaRosa, Joyce Bender, Mary Brougher and many others.

AT THE WATERGATE -- The Atlantic's Steve Clemons hosted a dinner last night on what it takes to get the "right healthy balance between players in an economy" in the glass-surrounded Library of the Watergate Hotel. **SPOTTED:** Laura Tyson, Grover Norquist, Josh Eastright, Tara McKelvey, Craig Gordon, Richard Vague, Steve Glickman, Marilyn Geewax, Kathleen Biden, Rep. Debbie Dingell (D-Mich.), John Lettieri, Javier Palomarez, Brian Fung, Shilpi Niyogi, Eleanor Clift, Peter Morici, former Rep. Barton Gordon, Joseph Gagnon, Andy Green, Allan Mendelowitz, Kristin Sharp, Jeff Carneal and Christopher Colford.

TRANSITIONS - OBAMA ALUMNI -- Daniel Watson has joined the Glover Park Group as a VP, working primarily on the financial services team. He most recently served as deputy assistant secretary for public affairs at Treasury. http://politi.co/2qWXcdv ... **Nihal Krishan** has joined Global Competition Review to cover the world of antitrust via the FTC, DOJ and the courts. He was previously a political correspondent for Sinclair Broadcast Group's Circa News and a Washington Correspondent for PBS Arizona.

... **Kurt Pickhardt** has joined Go Big Media as VP for digital strategies. He worked the 2016 cycle as the director of client strategy at Targeted Victory. **Ashley Harvey** has joined the firm as manager of client accounts. She most recently was director of operations for direct mail firm Direct Edge Campaigns.

WEEKEND WEDDINGS -- Sarah Peck, communications director for Sen. Tim Kaine (D-Va.), and **Jonathan Elsasser** , who's joining Hogan Lovells in D.C. this fall, got married at the University of Virginia Chapel in Charlottesville this weekend. Pool report from Amy Dudley: "Sarah and Jonathan met as undergrads at UVA and Jonathan just graduated from UVA Law. During the ceremony, Sen. Tim Kaine read a passage from

Paul's letter to the Romans ['Love must be sincere']. The reception was held at Panorama Farms, with a cocktail hour overlooking the Blue Ridge Mountains and dancing in a barn to a Motown band. They capped off the night with an afterparty featuring DC's favorite 90's band White Ford Bronco." ***Pics*** http://bit.ly/2rG5x21 ... http://bit.ly/2qWHvCO ... http://bit.ly/2sMOpqT

SPOTTED: Tim Kaine, Kip Wainscott, Brandi Hoffine Barr, Lily Adams, Kate McCarroll, John Harris and Ann O'Hanlon.

-- Shripal Shah married **Megan Kudchadkar** on Saturday in Hauppauge, New York, which is very close to the bride's hometown of Bayport on the south shore of Long Island. Shah is the vice president of American Bridge 21st Century, a Democratic super PAC, and Kudchadkar is a second-grade science teacher at KIPP DC's Heights Academy in Anacostia. ***Instapics*** h/t @DameEdwards, the couple's photographer: http://bit.ly/2rvX57g ... http://bit.ly/2r0REcY **SPOTTED:** Parita Shah and Pete Selfridge, Jon Davidson, Amanda Anderson and Matt McNally, Maya Rao and Michael Schrum, Robert Diznoff, Brian McKeon and Harrell Kirstein and Emily Cashman.

BIRTHDAY OF THE DAY: former House Majority Leader **Eric Cantor,** now vice chairman and managing director with investment bank Moelis, is 54, celebrating on a business trip in Singapore. He's currently reading "American Lion: Andrew Jackson in the White House," by Jon Meacham. "Appropriate for the times," he told us. Read his Playbook Plus Q&A: http://politi.co/2rGwJOw

BIRTHWEEK (was yesterday): Bob Kraft turned 76 (hat tip: Jewish Insider)

BIRTHDAYS: Sarah Klein ... "Today" show's Natalie Morales is 45 ... Michael Goldfarb of Orion Strategies, celebrating on D-Day ... No Labels senior adviser Margaret Kimbrell (hat tips: Dennis Craig and Jon Haber) ... Max Docksey, political director at the Ohio GOP ... Bloomberg White House reporter Justin Sink is 3-0 (h/ts Josh Lederman and Roberta Rampton) ... Christopher Rowland, Washington bureau chief for the Boston Globe, member of Gridiron (h/ts Annie Linskey and Nancy Cook) ... Carlie, daughter of Mika Brzezinski ... documentarian Abby Ginzberg ... Rep. Marsha Blackburn (R-Tenn.) is 65 ... Anna Epstein, senior director at Black Rock Group, a Carly and RNC alum and the pride of Tulane, is 26 (h/t Carla Frank) ... former Rep. David Bonior (D-Mich.) is 72 ... Matt Heinz ... Ariel Edwards-Levy, polling director for HuffPost (h/ts John Celock) ... Regina LaBelle ... Meredith Barnett, celebrating with Daniel and the kids in NYC (h/ts Teddy, Connor, and Blair) ... Jocelyn White Martin ... Heritage's Rob Kuhlman ... Eli Broad, billionaire, art collector and philanthropist and the only person to create two Fortune 500 companies in two industries, is 84 (h/t Jewish Insider) ... Kelly Polce ... Felicia Sonmez, a WSJ, AFP and WashPost alum now a Blakemore fellow studying Chinese at Tsinghua University ... NBC News PR's Farrin Jay (h/t Rachel Zuckerman) ... AIPAC's Allie Freedman ...

... Chris Pack, comms director for American Crossroads and SLF. "He is a huge Buffalo Bills fan even though it's a great source of stress in his life." (h/t Katie Martin) ... Heather

McGhee, president of progressive think tank Demos (h/t Kelley McCormick) ... Politico alum Jay Westcott, now a photojournalist for the News & Advance in Lynchburg, Va. ... Josh Taylor ... Sarah Gadsden, associate at Eagle Hill Consulting and an NBC News alum ... ABC News' Katherine Faulders ... Jonathan Kopp, managing director and chief interactive strategist at Glover Park Group ... Subject: BREAKING NEWS: Trump bans transgender individuals from U.S. military service

The U.S. military will no longer allow transgender individuals to serve "in any capacity," President Donald Trump announced on Twitter Wednesday morning.

"After consultation with my Generals and military experts, please be advised that the United States Government will not accept or allow Transgender individuals to serve in any capacity in the U.S. Military," Trump wrote online, breaking his message up into multiple posts. "Our military must be focused on decisive and overwhelming victory and cannot be burdened with the tremendous medical costs and disruption that transgender in the military would entail. Thank you."

The announcement represents a reversal of an Obama-era policy established last June by former Defense Secretary Ash Carter, who shifted Pentagon policy to allow transgender troops to serve openly. Last month, Defense Secretary James Mattis announced that the Pentagon would delay his predecessor's order through the remainder of 2017 in order to review the impact of the shift.

Subject: BREAKING NEWS: Senate GOP plan to repeal Obamacare without replacement meets fatal opposition

Three Senate Republicans said Tuesday they will vote against a key procedural motion to take up a measure to repeal Obamacare without a replacement, dooming Senate Majority Leader Mitch McConnell's latest plans to salvage a GOP health bill.

The opposition from GOP Sens. Shelley Moore Capito, Lisa Murkowski and Susan Collins came a day after Senate Republicans' bill to repeal and replace Obamacare collapsed.

McConnell said Tuesday that he would still move to hold a vote soon, which would put senators on the record.

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

July 12, 2017

Latest News

House Bill Would Cut EPA's FY18 Funds, But Far Less Than Trump Sought

House appropriators are proposing to provide EPA with $7.5 billion in fiscal year 2018, a reduction of $528 million below the fiscal year 2017 level and $1.9 billion above the Trump administration's request -- but the measure is drawing criticism from environmentalists over the cuts and policy riders, including one that would postpone until 2026 mandates for states to submit ozone control plans.

EPA Cites Public Input To Justify Air Law Authority For RMP Policy Delay

EPA is claiming broad Clean Air Act authority for its final rule that significantly delays implementation of Obama-era revisions to the agency's facility safety policy, saying its decision to first seek public comment on the delay shields it from the legal uncertainty that led an appellate court to recently vacate a stay of an unrelated air rule.

Methane NSPS Supporters Say EPA Recall Bid Would 'Nullify' Court Ruling

Environmentalists and a group of Democratic state officials are urging a federal appellate court to reject EPA's motion to further delay implementing Obama-era oil and gas methane limits the agency had sought to stay, charging that its request "distorts" the court mandate requiring officials to immediately lift the stay and, if granted, would "effectively nullify" its ruling vacating EPA's stay.

Ash Recyclers Press EPA To Revive Bush-Era Voluntary Reuse Program

Coal ash recyclers are pressing the Trump administration to revive a controversial George W. Bush-era program through which EPA and other agencies worked with the sector to promote beneficial reuse of ash, but environmentalists are warning that the program could undermine EPA restrictions on using ash as structural fill material.

Utilities Seek Swift Issuance Of EPA Coal Ash Guide For Permit Certainty

The power sector is pressing Trump administration officials to quickly release EPA's draft guidance for states on crafting permit programs to govern coal ash disposal,

saying release of the federal guidance is vital to give state officials certainty on what the federal procedures will be for reviewing and approving states' ash permitting efforts.

TSCA Reform Supporters Tout Fee Rule To Help Offset EPA Budget Cuts

EPA's acting toxics chief and supporters of the agency's efforts to reform the Toxic Substances Control Act (TSCA) say the pending draft rule imposing fees on the chemical sector could help to offset proposed EPA funding cuts in fiscal year 2018 that environmentalists and others have warned might risk hindering implementation of the law.

Former Officials Seek To Clarify EPA Risk Practices, Strengthen Rule Reviews

Two former Bush administration regulatory review officials are urging the Trump administration to overhaul EPA and other agencies' regulatory risk assessment and management process to make them more transparent and to further strengthen regulatory review requirements, measures they say will bolster review of rules' impacts, but which also seem likely to further slow the regulatory process and benefit regulated entities.

Daily Feed

EPA prepares to overhaul NSR rules

Draft air office program guidance for FY18-19 includes language pledging to reform NSR rules.

Pruitt's climate strategy: televised science debate, Congress acts on risks

Pruitt says there could be a legal basis to challenge EPA's greenhouse gas endangerment finding though he would rather Congress address the issue. He added that his planned debate on climate science, which could be televised, is not intended to target the finding.

EPA moves to withdraw Pebble Mine 'veto' proposal

EPA is following through on its settlement agreement with the Pebble Mine developer to withdraw its novel proposal for a preemptive “veto” of the planned mine.

Senate confirms Rao as OIRA chief

Rao has drawn fire over her support for the so-called “non-delegation doctrine,” though opposition from Democrats and environmentalists never really gained steam.

California officials unveil latest cap-and-trade package

Lawmakers are slated to vote as soon as July 13 two bills: one to extend the GHG

program and a second that strengthens monitoring requirements and penalties.

Ewire: Trump deregulatory teams have 'deep industry ties'

From today's Ewire: An investigation identifies the officials rolling back regulations at EPA and other agencies and their potential conflicts of interest. Plus: Trump officials struggle to roll back methane rules.

New Jersey legislators seek to ban chlorpyrifos

New Jersey legislators are seeking to ban chlorpyrifos after the Trump EPA reversed the Obama administration's plan to ban use of the common pesticide on food.

Subject: Playbook Power Briefing, presented by Postmates: TRUMP meets PUTIN -- What the Hill thinks of CRUZ and MIKE LEE -- Job growth speeds up in June

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Postmates

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BEHIND THE SCENES -- WHAT MANY THINK OF TED CRUZ AND MIKE LEE -- In Playbook this morning we talked about Ted Cruz's Obamacare plan, which is to allow insurers to sell non-Obamacare compliant plans (the details: http://politi.co/2sNfAX0). Top Senate Republican sources are truly pessimistic about this working. They tell us they believe this bill would practically end pre-existing condition coverage -- which would make the measure a nonstarter for many in the conference. But they're letting this play out, so conservatives can't say they were screwed in the process.

NYT's JENNIFER STEINHAUER (NOTE: THIS IS REALLY FUN) -- SENATORS' HOBBIES -- "Beekeeper, Baker, Photographer ... Senator?" "PATRICK J. TOOMEY, REPUBLICAN OF PENNSYLVANIA Beekeeper ... JONI ERNST, REPUBLICAN OF IOWA Ruck Marching ... SUSAN COLLINS, REPUBLICAN OF MAINE Perfecting the Blueberry Muffin ... ANGUS KING, INDEPENDENT OF MAINE Amateur Photographer ... HEIDI HEITKAMP, DEMOCRAT OF NORTH DAKOTA Certified Pilates Instructor ... CHRIS COONS, DEMOCRAT OF DELAWARE Performing Wedding Ceremonies ... DEBBIE STABENOW, DEMOCRAT OF MICHIGAN Pianist" http://nyti.ms/2tUJHvd

Good Friday afternoon. THE NEWS OUT OF THE PUTIN-TRUMP BILAT -- "HAMBURG, Germany (AP) - AP sources: US, Russia prepared to announce cease-fire in southwest Syria starting Sunday."

SPEAKING OF THE MEETING ... It lasted for more than two hours. **PUTIN** and **TRUMP** briefly addressed reporters before their meeting today at the G20. Trump's comments, per pooler Abby Phillip of WaPo: "President Putin and I have been discussing various things and I think it's going very well. ... We look forward to a lot of very positive things happening for Russia, and for the United States and for everybody concerned. And it's an honor to be with you." Putin also spoke through a translator: "We spoke over the phone with you several times on a very important bilateral ... But phone conversations are never enough definitely. ... I'm delighted to be able to meet you personally Mr. President. And I hope, as you have said, our meeting will yield positive result."

The pair shook hands and President Trump ignored questions from reporters on if he would address Russia's meddling in the election during the bilateral meeting. More details, from Abby: "As the pool left the room, Trump leaned in and said something to Putin, who chuckled."

MORE FROM THE G20 SUMMIT -- "Trump says Mexico should 'absolutely' pay for border wall," by Jake Lahut: "Mexico should 'absolutely' pay for the border wall between the United States and its southern neighbor, President Donald Trump said Friday during his meeting with his Mexican counterpart, Enrique Peña Nieto. On the sidelines of the G-20 summit in Hamburg, Germany, an Associated Press reporter asked Trump, "Do you still want Mexico to pay for the wall?"

"The president responded, 'absolutely,' according to a pool report. Trump praised Nieto as his 'friend,' despite the Mexican president canceling what was supposed to be one of the administration's first White House guest visits. ... Through a translator, Nieto said he hopes Mexico and the United States will have a 'flowing dialogue.'" http://politi.co/2tUtshu

-- "Trump: 'Everyone' at G-20 talking about Podesta not giving server to authorities," by Louis Nelson: "At this week's G-20 summit in Germany, one subject the world's most powerful leaders are discussing is why Democrat Hillary Clinton's campaign chairman did not cooperate with U.S. intelligence and law enforcement officials as they investigated cyberattacks against the [DNC], President Donald Trump wrote on Twitter Friday morning. 'Everyone here is talking about why John Podesta refused to give the DNC server to the FBI and the CIA. Disgraceful!' Trump wrote on Twitter Friday morning. He did not explain why Podesta, who did not work for the DNC, would have been responsible for its email server."

PODESTA, who wrote on Twitter, that he was on a cross-country road trip with his wife, responded to Trump later Friday morning in a series of posts to his own account.

-- "Pulled in for a pit stop in E. Fairmont W. Va. to see that our whack job POTUS @realDonaldTrump is tweeting about me at the G20....Get a grip man, the Russians committed a crime when they stole my emails to help get you elected President.... Maybe you might try to find a way to mention that to President Putin ... BTW, I had nothing to do with the DNC. ... God only knows what you'll be raving about on twitter by the time we get to Utah. ... Dude, get your head in the game. You're representing the US at the G20." http://politi.co/2tULCQI

JOBS BUMP -- "Job growth sped up in June," by Marianne LeVine and Timothy

Noah: "Job growth rebounded in June, giving a boost to President Donald Trump and momentarily soothing worries that the economy might be slowing down. The economy added 222,000 jobs in June, the Labor Department reported Friday, up from 152,000 in May, an upward revision from the previous estimate of 138,000.

"Labor Secretary Alexander Acosta hailed 'this month's robust job creation' in a written statement and noted there was 'moderate wage growth,' striking a more cautious note on the economy than Trump has of late. Average hourly private-sector earnings, at $26.25, were up 2.5 percent over the year. The strong job growth number comes as forecasters have been fretting about slowing GDP growth, a weakening dollar, and falling auto sales. Balanced against these have been strong performance by the stock market and low gas prices. A slight uptick in the unemployment rate in June to 4.4 percent, up from May's 4.3 percent, was too small to be significant. Labor force participation, at 62.8 percent, was essentially unchanged and remains low by historic measures." http://politi.co/2tTSxsY

2020 ALREADY? -- "How not to primary Donald Trump," by McClatchy DC's Katie Glueck: "If there's a path for a Republican to challenge Donald Trump, it doesn't run through Iowa. Sen. Ben Sasse's foray this weekend into the first-in-the-nation caucus state has already sparked chatter about a potential 2020 GOP primary to unseat Trump. But Iowa's top operatives say there's no appetite, today, to see any Republican take on the president. ...

"That hasn't stopped Sasse, and his possible ambitions, from attracting attention in Iowa and nationwide, notably as Trump's disapproval rating hovers around 60 percent and a smattering of Republicans around the country speak openly of their hopes for a run from someone like the Nebraska senator. ... Yet despite Trump's myriad challenges and the angst his Twitter account causes in Washington, he remains so strong in conservative corners of Trump-friendly states, including Iowa, that party leaders, operatives and grassroots activists say there is no serious on-the-ground discussion of a 2020 challenge at this point." http://bit.ly/2uS4n4c

AFTERNOON READ -- JAMES FALLOWS' LATEST -- "How American Presidents Used to Speak Overseas," in The Atlantic: "Is America an idea? Or is it a specific "people" or ethnic group? On the diverging answers to that question turn some of the biggest disputes in U.S. history. Our current president began his trip to Europe with a speech in Poland that minimized the role of ideals in American identity, and maximized the importance of what he called 'civilization' but which boils down to ties of ethnicity and blood.

"From Donald Trump this cannot be a great surprise, given the support he has courted and the American groups he has derogated during his time on the public stage. But for a president of the United States it still counts as a notable, even shocking departure. A president's role when traveling has, until now, been to speak for the American idea. ... At least when speaking to the world, American presidents have emphasized an expanded 'us.' All men are created equal. Every man is a German. Ich

bin ein Berliner. Our realities in America have always been flawed, but our idea is in principle limitless. Give me your tired, your poor, your huddled masses yearning to breathe free.Trump gave grace-note nods to goals of liberty and free expression. Mainly, though, he spoke not about an expanded us but instead about us and them." http://theatln.tc/2tUCDOY

Pruitt Delays Chemical Plant Regulation Changes to 2019

Posted June 12, 2017, 12:06 P.M. ET

By Sam Pearson

Chemical companies will see a reprieve from an Obama administration regulation that would have imposed new safety requirements, the Environmental Protection Agency said.

EPA Administrator Scott Pruitt signed a final rule June 12 delaying a final rule amending the risk management program regulations (RIN:2050-AG82) to Feb. 19, 2019, the agency said.

The 20-month delay of the regulation's effective date will allow the EPA's new leadership to review two industry petitions for reconsideration and public comments, as well as to "consider other issues that may benefit from additional public input," Pruitt said in a statement.

The decision caps a process launched in late March, when Pruitt announced the delay would be considered. EPA subsequently heard from industry and chemical safety groups at a public meeting April 19 and accepted written comments through May 19.

Pruitt criticized the proposed rule in 2016 as Oklahoma attorney general, writing a letter to EPA assailing the plan as harmful to chemical plants' security.

U.S. Finds Isolated Climate Change Stance at G-7 Talks

Posted June 12, 2017, 12:52 P.M. ET

By Chiara Albanese and Jessica Shankleman (Bloomberg), and Eric J. Lyman (Bloomberg BNA)

Two days of talks among Group of Seven environment ministers confirmed a crack between the world's other leading industrial nations and the U.S. over climate change issues.

The ministers were unable to find common ground on climate measures, according to a

communique from delegations from the G-7 countries and the European Commission in Bologna, Italy, June 12.

The U.S. representative, Environmental Protection Agency Administrator Scott Pruitt, left the summit just hours after arriving. The U.S. was then represented by acting Environmental Protection Agency Assistant Administrator Jane Nishida.

The White House said Pruitt returned to Washington to attend a Cabinet meeting.

U.S. 'Does Not Join Those Sections'

The climate-related language in the final document gave strong backing to the Paris Agreement, reiterating the goal of keeping global warming "well below 2 degrees" Celsius (3.6 degrees Fahrenheit) compared to pre-industrial levels, and "pursuing efforts to limit the increase to 1.5 degrees" Celsius (2.7 degrees Fahrenheit). It also reaffirmed the goal of "mobilizing $100 billion annually by 2020" to help poor countries adapt to the impacts of climate change.

But in a footnote, the U.S. made clear that it does "not join those sections ... on climate" and climate change finance. The footnote did say the U.S. would "continue to engage with key international partners" on climate issues.

"We are resetting the dialogue to say Paris is not the only way forward to making progress," Pruitt said in statement the EPA issued after the talks. "Respective of the importance to engage with longstanding allies and key international partners, we approached the climate discussions head on from a position of strength and clarity."

President Donald Trump announced June 1 that the U.S. would withdraw from the Paris climate accord. Syria, Nicaragua, and the U.S. are now the only nations not participating in the accord.

Trump's offer to renegotiate a more favorable deal for the U.S. has been rebuffed by the leaders of Germany, France, and Italy. Environmental officials from Canada, France, Germany, Italy, Japan, the U.K., and the U.S. met for the June 11–12 talks.

'Irreversible, Not Negotiable'

The U.S. withdrawal will take years to unfold as the earliest it can formally exit is Nov. 4, 2020—the day after the next presidential election. But Trump's decision has already left it isolated. No other nation has said it will follow suit, and even coal-reliant India announced it will seek to exceed the Paris targets.

In closing remarks, Gian Luca Galletti, minister of environment for host Italy, said he hoped the U.S. might one day change its stance on the Paris Agreement, but in the meantime, the two-year-old Paris document remained "irreversible, not negotiable, and the only global instrument for confronting climate change."

Catherine McKenna, Canada's minister of environment and host of the 2018 edition of the G-7 environment ministerial talks, said she was hopeful the U.S. would rethink its stance: "We remain open to a partnership with the U.S. on climate," McKenna said.

EPA Head Blamed Obama for Paris Deal at G-7 Climate Summit

Posted June 12, 2017, 10:02 A.M. ET

By Brian Parkin and Chiara Albanese

Environmental Protection Agency chief Scott Pruitt blamed former President Barack Obama for forging a bad Paris climate deal, leaving the U.S. with the job of extricating itself, the German environment minister said.

In a catalog of complaints, Pruitt blasted Obama for failing to sign off with Congress for $3 billion in financing for the international Green Climate fund, German Environment Minister Barbara Hendricks said in an interview. She cited bilateral talks with Pruitt at a two-day Group of Seven climate summit held in Bologna, Italy on Sunday and Monday, which both officials left early.

The EPA chief's "line of argument was purely domestic," Hendricks said by phone June 12 from Berlin. Pruitt said "bluntly" that the accord is not in U.S. interests, she said. Hendricks said she responded to his comments on Congress by arguing that Germany must seek parliamentary approval for annual payments to the Green Fund.

The summit has left Germany and its G-7 partners baffled as to how President Donald Trump plans to sustain climate protection in the international arena, Hendricks said.

"Pruitt didn't say one word on how he envisages the future of international climate policy and the role of the U.S. in it," she said.

Having helped forge the Paris treaty text in 2015 that now has attracted about 200 signatory nations, Hendricks said she felt a "personal affront to her honor" from Trump's assertion that the accord was created to harm the U.S.

U.S. Says It Has Seat at Climate Talks—But Is It at Kids' Table?

Posted June 12, 2017, 6:01 A.M. ET

By Dean Scott

The White House is insisting it will still have a seat at the table at the next United Nations climate summit just before Thanksgiving in Bonn—but President Donald Trump's exit from the Paris climate pact may mean the U.S. won't be sitting at the adults' table. Administration officials, including Secretary of State Rex Tillerson and EPA Administrator Scott Pruitt, insisted the U.S. still has a voice in climate negotiations, noting Trump stopped short of pulling out of the parent treaty to the 2015 Paris deal, the 1992 United Nations Framework Convention on Climate Change.

The U.S. is "going to continue engagement" in global efforts to cut carbon pollution, Pruitt said June 6 on MSNBC's "Morning Joe" show. "We're part of the UNFCCC, as you know," Pruitt said, and the U.S. would remain engaged in international cooperation that includes exporting "innovation and technology to Russia and China."

Senate Democrats who pushed Trump to stay in the Paris deal said arguments that the

administration plans to be engaged in those debates ring hollow, given the president's skepticism of global climate efforts.

"It is absolutely misleading to say we're still there. We're not," Sen. Ben Cardin (D-Md.), the top Democrat on the Senate Foreign Relations Committee, told Bloomberg BNA.

But even if it technically remains in the UN framework convention, it's unclear whether the Trump administration will roll up its sleeves in those talks. Even if it does, some issues—from verifying climate actions taken by countries to forest emissions—are to be specifically addressed in the Paris deal. Bonn will host the next high-level UN climate summit Nov. 6-17.

Little Leverage to Prod China, India

More specifically, exiting the deal means the U.S. will have far less influence in pushing China, India and other other developing nations to agree to tough reporting and verification to see whether they are making good on the actions they pledged to address their emissions.

The U.S. also won't be at the table to push those same rapidly developing nations to ratchet up their actions around 2020, when parties are to offer new, more ambitious pledges under the Paris Agreement.

Trump can't withdraw from the pact immediately—the U.S. must wait four years from when the pact went into force on Nov. 4, 2016, to withdraw. In the meantime, the U.S. is still a member of the Paris deal, and thus nothing bars it from still sitting in on those talks to implement it. By contrast, the Bush administration was relegated to observer status after it essentially withdrew from the Kyoto Protocol in 2001.

Thus for now, the U.S. remains "a full member" in the Paris pact, according to Alden Meyer, who tracks climate negotiations for the Union of Concerned Scientists.

"My assumption is they will remain relatively passive in those negotiations and basically be observing," he told Bloomberg BNA. "And if they ultimately are seen as actively intervening or trying to shape the decisions, I think they would get a pretty ferocious blowback from other countries." Within the broader U.N. framework convention, the U.S. could still debate some key technical issues being negotiated there, including the hotly debated issue of loss and damage compensation for vulnerable countries already suffering climate impacts. The U.S. also could wield influence in two subsidiary bodies of experts launched under the 1992 framework: the Subsidiary Body for Scientific and Technological Advice (SBSTA) and the Subsidiary Body for Implementation (SBI).

Among those issues, agriculture stands out as a crucial climate-related issue essentially left out of the Paris pact but still negotiated within the UN framework convention where the U.S. still has a seat, according to Pipa Elias, who tracks agriculture and forestry issues for the Nature Conservancy.

Seeking Engagement?

Tillerson brushed aside suggestions that the U.S. has alienated allies or had become an unpredictable international partner. But the secretary offered few specifics on ways the U.S. could remain engaged on climate action in the wake of Trump's Paris announcement.

"So, we do believe that engagement globally continues to be important on the issue of climate change, and we will be seeking ways to remain engaged" through the U.N. Intergovernmental Panel

on Climate Change, as well as various economic and trade forums, he said at a June 6 news conference with New Zealand Prime Minister Bill English.

The IPCC's next detailed global report on the latest climate science is due in 2021 or 2022.

Vow to Renegotiate Questioned

Cardin and other Democrats were particularly incensed over Trump's suggestion that he would be open to renegotiating the Paris deal—"on terms that are fair to the United States," Trump said—ignoring the fact that largely voluntary pact took more than 20 grueling years of talks to complete.

"To say that the president's actions just mean we want to negotiate a better agreement and we're still at the table—that is just inaccurate," Cardin said. "And our credibility has been badly damaged. Our seat is not there."

Sen. Chris Murphy (D-Conn.), who also sits on the Foreign Relations panel, scoffed at the notion that Trump would work to renegotiate the deal or his adminsitration will wield its influence in talks under the broader U.N. climate convention.

"If you want to still be part of that conversation, you should have stayed at the table" and remained in the Paris pact, Murphy told Bloomberg BNA.

Under the Paris Agreement, developed and developing nations alike vowed to take action to keep average temperatures from rising more than 2 degrees Celsius (3.6 degrees Fahrenheit) since the pre-industrial era and make best efforts to hold the line at a 1.5 degree Celsius increase (2.7 degrees Fahrenheit) this century.

U.S. Negotiators Still Expected in Bonn

The next round of talks in Bonn, known as the 23rd Conference of the Parties to the UNFCCC, or COP-23, will be focused primarily on implementing a sort of rulebook for the Paris deal, including how to verify that nations are actually making good on their climate pledges under the pact.

A total of 197 parties reached the deal in Paris in 2015. Of those, 148 parties either have ratified or formally joined the agreement. It is the 148 parties that will be at the table in those talks, launched last year in Marrakech, Morocco, as the Conference of the Parties to the Paris Agreement or CMA. Nations that haven't ratified the deal in time for the Bonn talks will still be able to observe the negotiations.

But the U.S. will likely send a small delegation of negotiators to Bonn, given that it remains in the 1992 convention, Andrew Light, a former Obama administration climate negotiator, told Bloomberg BNA.

Fewer negotiators would blunt the ability of the U.S. to shape any debate even if it stays at the table within the U.N. climate convention, according to Light, now a senior fellow in the World Resources Institute's global climate program.

"The size alone limits the ability to participate in all the conversations" which, in years past, have been held simultaneously and in rooms scattered across the Bonn summit site, he said.

Most in GOP Applaud Exit

Republican senators were in two camps. Most of them opposed President Barack Obama signing the U.S. onto the climate pact without Senate ratification. But a few, including Senate Foreign Relations Committee Chairman Bob Corker (R-Tenn.), had hoped to convince Trump that the pact was largely a non-binding deal and that the costs of withdrawal outweighed any benefit.

"I had four conversations with him last week, to explore ways of staying within it but still meeting U.S. objectives," Corker told reporters June 6. Sen. John McCain (R-Ariz.) also was disappointed. "I would have liked to fix the problems rather than junk the whole thing," he told Bloomberg BNA.

Vow to `Cease all Implementation'

In announcing his exit from the Paris accord, Trump by contrast made it clear the U.S. will disengage from international climate efforts and argued that other countries had gotten the better of the Obama administration in negotiating the agreement. In announcing the U.S. exit June 1, Trump said the U.S "will cease all implementation" of the Paris Agreement as well as "the implementation of the nationally determined contribution"—the U.S. pledge under which it vowed to cut emissions 26 percent to 28 percent from 2005 levels by 2025.

But world leaders haven't exactly been taking Trump up on his offer. Former Secretary of State John Kerry, who helped lead Obama's efforts on the Paris deal, also ridiculed Trump's negotiation offer.

"He is going to go out and find a better deal? That's like—I mean, that's like O.J. Simpson saying he's going to go out and find the real killer," Kerry said. "Everybody knows he isn't going to do that."

Europe's Climate Advice Business Resilient to Trump Paris Exit

Posted June 12, 2017, 10:33 A.M. ET

By Niklas Magnusson and Hanna Hoikkala

Europe's largest architecture and engineering consultancy says President Donald Trump's decision to pull the U.S. out of the Paris climate accord won't disrupt demand for advice on efforts to counter global warming.

Climate change is among three key factors spurring requests for Sweco AB's services, Chief Executive Officer Tomas Carlsson said in a June 7 interview in Stockholm. The others are urbanization and an increasing tendency for clients to focus on core businesses and outsource other operations, he said.

Trump's decision earlier this month to withdraw from the Paris climate pact drew criticism from scientists and environmentalists, company executives, political opponents and world leaders from French President Emmanuel Macron to Pope Francis. While the U.S. exit prompted concern it may hurt efforts to halt the warming of the planet, Carlsson said he regards that as unlikely, given how evident the effects of climate change already are.

"Trump can think what he wants, but water levels are higher in the Oder and Vistula rivers," Carlsson said, referring to two waterways in Poland where Sweco is involved in flood protection work. "There are more storms -- there's no way of getting around that."

The increasing need for climate change advice is underscored by the rising frequency of extreme weather, widening preparations by cities for higher temperatures and the growing tendency for power networks to be converted to energy-efficient smart grids, Carlsson said.

Warmer and Wetter

Sweco scenarios forecast that the climate will become warmer and wetter, with higher temperatures and changed precipitation patterns increasing the risk of local water shortages and droughts. There is also likely to be more flooding caused by violent downpours. These patterns mean there is a need for solutions to reduce the impact of changing weather and help societies adapt to a new reality.

To read more on the U.S. exit from the Paris accord, click here

The latest climate-related orders won by Sweco include advising South African utility Eskom Holdings SOC Ltd. on the transition toward renewable energy, the Oder-Vistula flood protection contract in Poland and new hydrogen refueling stations in Sweden. Demand for the services suggests that the global response to climate change won't be driven by U.S. government policy, Carlsson said.

"Based on our business, we have no worries that Trump could persuade more countries to leave the Paris climate deal," he said. "I also believe that both the industry and U.S. states will push the climate change question harder than one may think."

In the first quarter, Sweco reported a 9.7 percent increase in net sales to 4.41 billion kronor ($506 million). It said at the time that the Swedish market remained strong, that business in Norway, Denmark, western Europe and central Europe was generally good, while Netherlands and Finland were improving. The outlook for the latter two markets has become even more positive in recent months, Carlsson said.

"Sweden is a very strong market," while "Norway, Denmark, Germany, Belgium and the U.K. have good demand," even with the questions swirling around Britain's withdrawal from the European Union. "What's more positive now is that we see that the economies of Finland and the Netherlands have developed positively and that view has strengthened during the year and in the past few months."

Big Oil's Clean Energy Ambitions Face Limits, Consultant Says

Posted June 12, 2017, 10:04 A.M. ET

By Rakteem Katakey

The world's biggest oil companies probably won't become renewable energy majors, according to industry consultant Wood Mackenzie Ltd.

The largest drillers would need to spend $350 billion by 2035 to replicate the 12 percent market share they hold of global oil and gas production, Wood Mackenzie said in a June 12 report. Even that spending would mean renewables only account for 6.5 percent of their total energy output in 20 years with oil and gas still dominating, according to the report.

Royal Dutch Shell Plc is expanding in wind energy, while Total SA is buying solar projects as Big Oil acknowledges the role of renewables in future energy supply. Still, that spending remains small compared with the trillions of dollars sunk into oil and gas infrastructure. Those investments will continue as oil producers expect a majority of cars will be fueled by gasoline and diesel for years to come.

"The scale of the opportunity is simply not there on our forecasts for solar and wind, at least not in the next 20 years," Tom Ellacott, senior vice-president for research and corporate analysis at Wood Mackenzie, said in the report. "Companies are only just starting to sow the seeds for the radical changes that lie ahead."

Still, energy companies will increasingly divert funds from oil production to build more wind and solar capacity, with over one-fifth of total capital allocated to renewables after 2030, Wood Mackenzie said. Only a small proportion of their total budget is currently spent on clean energy. The world's five biggest non-state oil companies together plan capital expenditure of more than $80 billion this year.

Cash Flow

Shareholders have increasingly been demanding oil company bosses raise investments in renewables and cut down on oil and gas. Shell Chief Executive Officer Ben Van Beurden told investors at a meeting last year that although the company is expanding its presence in renewables, it's still oil and natural gas that will drive revenue and fund dividend payouts.

Wood Mackenzie said wind and solar projects are competitive compared with some long-life oil and gas projects. Renewables projects operate for many years and provide steady cash flows, which can support dividend payments, according to the consultants.

EPA Research Office Deputizes House Science Committee Aide

Posted June 12, 2017, 12:54 P.M. ET

By Brian Dabbs

A House Science, Space and Technology committee staff member took over the EPA deputy slot at the Office of Research and Development (ORD) June 12, according to an internal memo obtained by Bloomberg BNA.

Richard Yamada will advise ORD leadership on office priorities, while representing Environmental Protection Agency Administrator Scott Pruitt in advancing the agency's new platform, ORD Acting Assistant Administrator Robert Kavlock said in the memo.

The office spearheads the EPA scientific research that lays the foundation for the agency's rulemakings, analyses and models.

Yamada holds a bachelor of science degree from Yale University and a doctorate from Cornell University. He's worked on the House science committee for roughly four and a half years, joining the panel at the same time Chairman Lamar Smith (R-Texas) took the reins.

Smith led the House effort earlier this Congress to pass the EPA Science Advisory Board Reform

Act of 2017 (H.R. 1431). That legislation, which passed on partisan lines, would modify advisory board member qualifications and could exclude scientists who have EPA grants or contracts.

The bill's supporters say it would open up EPA research to more viewpoints, but detractors say the measure would increase industry influence at the expense of sound science. An uncertain future awaits the legislation in the Senate.

The White House has yet to tap a permanent ORD assistant administrator.

India Sets July Deadline for Industries to Get Groundwater Permits

Posted June 12, 2017, 9:32 A.M. ET

By Madhur Singh

Industries that extract water from underground to mine, manufacture and build products will have until July 13 to obtain "no objection" permits from India's federal groundwater authority, the government announced.

The policy change comes at a time when India is facing major water shortages, especially from aquifers that are becoming depleted.

The Central Ground Water Authority estimates that 29 percent of India's groundwater districts are overused or otherwise stressed.

The new deadline marks the second extension of the original March 31 deadline for groundwater-use permits, but the policy still faces opposition.

Members of the Chamber of Industrial and Commercial Undertakings, which represents industries from the northern, agrarian state of Punjab, do not intend to submit applications to draw groundwater, Avtar Singh, the chamber's president, told Bloomberg BNA.

World's Largest Groundwater User

The group complains that the farm sector uses much more groundwater than industry, but agriculture is not required to get the new permits, Singh said.

India is the world's largest consumer of groundwater, according to the World Bank.

Businesses in sectors ranging from real estate and construction to packaged drinking water and beverages have faced complaints and sometimes legal action for allegedly overdrawing groundwater.

The National Green Tribunal, India's environmental court, has instructed industries in some areas to get government permission to extract groundwater.

Pennsylvania Nuns to Appeal Transco Pipeline Decision

Posted September 29, 2017, 04:01 P.M. ET

By Leslie A. Pappas

Nuns who sued on religious grounds to stop a pipeline from traversing their property in Pennsylvania say they will appeal a judge's decision to dismiss the case.

The sisters of the Adorers of the Blood of Christ in July sued the Federal Energy Regulatory Commission (FERC) and Transcontinental Gas Pipe Line Co. LLC (Transco) to stop construction of the Atlantic Sunrise pipeline on land they own in Lancaster County.

The group said the pipeline would violate their freedom of religion under the Religious Freedom Restoration Act (RFRA), echoing religious arguments made by the Standing Rock Sioux Tribe and others in their quest to stop the Dakota Access Pipeline in North and South Dakota.

Judge Jeffrey L. Schmehl denied the nuns' motion for a preliminary injunction to stop the pipeline, and granted the company and FERC's motions to dismiss the case, in an order filed Sept. 28 in U.S. District Court for the Eastern District of Pennsylvania (Adorers of the Blood of Christ v. FERC, E.D. Pa., No. 5:17-cv-03163-JLS, 9/28/17). Schmehl said that the nuns needed to challenge the pipeline under procedures laid out in the Natural Gas Act (NGA).

"No matter how sweeping RFRA may be, plaintiffs simply may not bypass the specific procedure established by Congress in the NGA by bringing a RFRA suit against FERC in this Court," Schmehl wrote in his opinion.

Chris Stockton, a spokesman for Williams Companies, Inc., which owns the Transco pipeline system, said the company was "pleased with the court's well-reasoned decision to dismiss" and said the company remains "open to constructive dialogue with the landowner to find an amicable resolution of our differences."

'Sacredness of Earth'

The nuns maintain that the 42-inch pipeline, which would be used to transport natural gas from hydraulic fracturing operations, violates their belief in "the sacredness of Earth."

The pipeline would go through several Pennsylvania counties, carrying gas to markets like the Cove Point liquefied natural gas export terminal on the Chesapeake Bay.

"While the Adorers respect the District Court's conclusion that the Adorers could only raise their religious freedom claims during FERC's administrative proceedings, the issues and rights involved in this case are so important that the Adorers believe additional judicial review is warranted," the nuns said in a statement emailed to Bloomberg BNA Sept. 29. "The Sisters believe that God calls humans to treasure land as a gift of beauty and sustenance that should not be used in an excessive or harmful way."

Transco applied in March for authorization to construct the pipeline, and on Feb. 3, FERC gave the company the right to take private property along the pipeline route by eminent domain, the ruling says.

After the nuns refused to allow the pipeline onto their property, the company sued for access, and on Aug. 23, the court granted a portion of the nun's property to Transco.

The nuns said they plan to appeal the decision to the Third Circuit Court of Appeals in Philadelphia.

EPA Silent as Ozone Decision Deadline Looms, States Say

Posted September 29, 2017, 02:33 P.M. ET

By Jennifer Lu

States said the EPA remained mum just days before it was required to announce which areas of the country exceed federal ozone pollution standards and must clean up their air.

By law, the announcement is due Oct. 1. But just days before the deadline, state officials said they had not received feedback from the Environmental Protection Agency about their recommendations for places that violate the ozone standards, which were submitted a year ago along with plans for how to reduce ozone pollution.

Making those nonattainment designations could lead to new pollution control requirements for cars and large industrial facilities such as power plants.

"It's likely that we'll see no changes [to states' recommendations], although it is possible the administration will propose changes or delay," Miles Keogh, executive director of the National Association of Clean Air Agencies, which represents 40 states, told Bloomberg BNA.

As far as he knows, none of the 40 states in his organization had heard back from the EPA on their ozone nonattainment recommendations, Keogh said Sept. 28.

Air pollution officials in California and Utah also told Bloomberg BNA they had not heard from the agency.

The EPA said in an email it wouldn't comment on whether it would meet its Oct. 1 deadline.

White House Reviewing Proposal

A proposed rule (RIN:2060-AT41) that would rank the severity of nonattainment areas has been undergoing interagency review at the White House since Sept. 21.

The EPA in 2015 set new, more stringent ozone standards at 70 parts per billion, down from 75 ppb previously. Ozone is formed when pollutants emitted by vehicles and power plants react in the presence of sunlight. Ozone inhalation is linked to breathing problems, including asthma and chronic obstructive pulmonary disease.

As many as 116.3 million people live in areas in ozone nonattainment, according to the EPA.

Environmental advocates are likely to sue the EPA if it misses the deadline, Earthjustice staff attorney Seth Johnson told Bloomberg BNA. The EPA previously said it would push back making the ozone designations for a year, but reversed its decision after 15 states, the District of Columbia, and public health and environmental groups all sued over the delay.

A one-year delay wouldn't "make a difference one way or another" in Virginia, which is close to meeting the ozone standards, Michael Dowd, director of the air division in the state's Department of Environmental Quality, told Bloomberg BNA.

"We're still going to have to come to attainment," Dowd said. "They're either going to give us the same time or push it back a year."

States Weighing Options

Even without the EPA's designations, some states are already making plans to improve air quality.

"States don't have the power to achieve the standards without the authority of the Clean Air Act requiring upwind states to reduce their contributions," Paul Miller, deputy director and chief scientist at the Northeast States for Coordinated Air Use Management, an association of air pollution officials from eight states, told Bloomberg BNA.

In the Northeast, much of the pollution blows in from Midwestern sources, including coal-fired power plants in the Ohio River Valley.

Northeastern states may consider clamping down on pollution from cars and trucks in an effort to improve air quality, Miller said. One option would be to adopt stricter vehicle emissions standards set by California that some states have already embraced.

But until EPA makes its designations and approves states' ozone control plans, states can only do so much.

"It's not reinventing any wheels," Johnson said. "They've had a long time. States did their job. EPA needs to do its job."

Mosquito Woes Threaten Puerto Rico as Floodwaters Recede

Posted September 29, 2017, 7:35 A.M. ET

By Tiffany Stecker

A tropical disease epidemic could be brewing in Puerto Rico as the island territory struggles to emerge from Hurricane Maria's floods and wreckage.

Public health researchers are concerned that, in coming weeks or months, dengue fever transmission rates will increase in Puerto Rico as a result of rising populations of the virus-carrying Aedes aegypti mosquito. Scattered debris, stagnant pools of water, and a lack of air-conditioning due to power outages will create an ideal breeding environment for the mosquito.

And finding a way to kill the mosquitoes could be difficult as many island residents have opposed insecticide spraying in the past.

"All of these things combined may lead to another disease outbreak," Matthew DeGennaro, an assistant professor at Florida International University who leads the university's Laboratory of Tropical Genetics, told Bloomberg BNA.

The Zika virus, carried by Aedes aegypti, infected more than 40,000 Puerto Ricans last year. It is not expected to flare up again this year, but scientists are keeping an eye on rates of dengue, which can cause muscle pain, fever, nausea, headaches, and—in severe cases—death.

As of Aug. 25, the most recent date for which figures are available, the territory of 3.7 million people had nine confirmed cases of dengue fever, according to the World Health Organization. That number could rise quickly.

"Even in a good year, Puerto Rico has a difficult time with dengue fever," Peter Hotez, dean of the National School of Tropical Medicine at Baylor College of Medicine in Houston, told Bloomberg BNA.

Mosquito Diseases Could Rise in Months

The Centers for Disease Control is developing a mosquito-control plan for the island with local authorities. For now, immediate rescue operations take priority, Sven Rodenbeck, chief science officer of the Centers for Disease Control's hurricane response, told Bloomberg BNA.

The island has some time. Immediately after a hurricane, communities will see a rise in so-called nuisance mosquitoes—species that bite but don't transmit West Nile Virus, Zika, dengue, chikungunya, or yellow fever.

Between two weeks and two months after a major storm hits, the number of mosquitoes that carry mosquito-borne diseases increases, Rodenbeck said. But he does not expect to see a substantial increase in the number of people getting sick from diseases spread by mosquitoes, neither in Puerto Rico nor in Texas and Florida, which were ravaged by Hurricane Harvey and Hurricane Irma.

But others are worried that the viruses could spread. West Nile Virus is of particular concern in Texas and Florida, where the Culex genus of mosquitoes carry the disease.

"We're already seeing those in large numbers," Shelly Redovan, deputy director of education and communication for Lee County, Fla.'s mosquito control district, said of the Culex mosquitoes.

Aedes mosquitoes that carry tropical diseases like dengue are increasing in the Miami area,

indicating that Puerto Rico also will see an increase, DeGennaro said.

In Texas and Florida, efforts are underway to eradicate the pests. Redovan said her district, which covers about 1,000 square miles near Ft. Myers, Fla., already has exhausted its annual supply of mosquito-killing insecticides and has twice re-ordered the chemicals.

Debate Over Aerial Spraying

Puerto Ricans have a history of being skeptical of mosquito control efforts like aerial spraying of insecticides. Faced with widespread opposition from residents last year, officials on the island dropped a plan to deploy pest control aircraft to kill Zika-transmitting mosquitoes.

Aerial spraying is not the only solution, Rodenbeck said. Throwing out standing water and spraying chemicals on the ground is encouraged, and Puerto Rican officials will decide how to best control the mosquito infestations.

"It's important to emphasize that local authorities are in charge," he said.

DeGennaro of Florida International University thinks aerial spraying for Aedes mosquitoes would be largely ineffective in Puerto Rico because those species are primarily found in cities, making it more difficult to spray large areas.

In addition, DeGennaro thinks insecticides should be used sparingly like antibiotics: "You don't want to use them unless you really need to."

But Eric Wintemute, CEO of AMVAC Chemical Corp., the largest manufacturer of naled, the primary insecticide used for aerial spraying of adult mosquitoes, said the island's viewpoint could imperil public health.

"I think there's a fair amount of distrust Puerto Rico has with the U.S. government," Wintemute told Bloomberg BNA. As a result, "maybe decisions are made that aren't in the best interest of the overall population."

Naled is an organophosphate insecticide, a class of pesticides that works by suppressing nerve function. Organophosphates can be highly toxic to humans, but the Environmental Protection Agency says the product is sprayed at very low doses—a couple of tablespoons per acre—and dissipates quickly.

Changing Views

Sonja Swiger, an extension entomologist with Texas A&M University, said she regularly encounters residents who oppose aerial spraying, but that the situation after Hurricane Harvey left some locals more open to the aerial applications.

"Some people are more understanding because of the fact that there was a disaster," she said. "This is a rare practice in Texas."

In a typical year, AMVAC sends out enough naled to spray 12 million to 16 million acres. This year, that figure has risen to 20 million acres, with possibly another 10 million to go, Wintemute said.

"We pulled back on some export sales just so that we could make sure we would do everything we

could to meet demand," Wintemute said. Most exports go to Mexico for use on crops.

Outbreaks Years Later

The spread of diseases after hurricanes is relatively understudied, Hotez of the Baylor College of Medicine said.

The effects can be felt several years after an event. A 2008 study found that rates of West Nile Virus doubled around New Orleans one year after Hurricane Katrina in 2005. The authors didn't pin down a specific reason, but suggested that abandoned swimming pools and the holes left from uprooted trees may have been breeding grounds for the mosquito.

"After all three major hurricanes this season, provided there's some funds to study this, we could learn an awful lot on disease transmission after hurricanes," he said.

Trump Told Iowa He'd Save Ethanol. His EPA Chief Has Other Ideas

Posted September 29, 2017, 8:57 A.M. ET

By Jennifer A. Dlouhy and Mario Parker

As he sought votes during last year's Iowa caucuses, candidate Donald Trump courted farmers with praise for ethanol and promises that he would boost the home-grown fuel.

Now those farmers and other biofuel supporters say the people President Trump has put in charge of the issue in Washington are instead boosting their fossil-fuel rivals.

"This seems like a bait-and-switch," Iowa's senior senator, Chuck Grassley (R), said on the Senate floor this week. "Big Oil and oil refineries are prevailing, despite assurances to the contrary."

The issue is politically precarious for Trump, as it pits the oil industry against Midwest voters who helped elect him. Trump repeatedly vowed to "protect" ethanol. But he loaded his cabinet with allies of the oil industry, which views the Renewable Fuel Standard that mandates biofuel use as costly and burdensome.

Ethanol producers are most vexed by Scott Pruitt, the head of the Environmental Protection Agency. His agency has pursued a series of changes that would help the oil industry at the expense of farmers.

"The White House needs to rein in the EPA before the agency tramples the president's rural base—and his promises to voters," said Brooke Coleman, executive director of the Advanced Biofuels Business Council. "I would be surprised if those in the White House realize the depth of his attacks on the Renewable Fuel Standard."

Support for Fossil Fuels

Pruitt hails from oil-rich Oklahoma, and backing refiners and oil producers could aid any future political campaign in his home state, including a possible bid for the Senate seat that would open up if Republican Jim Inhofe retires in 2020. Pruitt has not announced plans to seek that seat or any other political office. While serving as Oklahoma's attorney general, Pruitt dubbed the quotas "unworkable" and a "flawed program."

Now at the EPA, Pruitt has gone "rogue," said Michael McAdams, president of the Advanced Biofuels Association.

"His job is to implement the vision of the president who says he supports biofuels," he said. Pruitt's actions don't "support biofuels in any shape or form."

Representatives of Pruitt declined to respond to questions about his ties to the oil industry. "EPA is currently seeking input from all stakeholders involved. Nothing has been finalized at this time," the agency said in a statement.

Despite the president's high-profile pledges of support, the intricate details of biofuel policy are being decided by administration officials with no allegiance to the sector, said Monte Shaw, executive director of the Iowa Renewable Fuels Association.

For instance, Trump's Energy Secretary is Rick Perry, who as Texas governor asked the EPA to waive half of the conventional renewable fuel quota in 2008. And Trump's Agriculture Department is led by Sonny Perdue, who previously was governor of Georgia, the nation's top poultry producer. Livestock producers have linked arms with the oil industry to fight the biofuel mandate, arguing it drives up feed costs.

Trump also tapped billionaire refinery owner Carl Icahn, a critic of the biofuel mandate, as special adviser on regulations. Icahn has since left that role.

In the latest policy move, the EPA this week issued a notice opening the door to potential reductions in annual quotas for biodiesel and ethanol. The action followed heavy lobbying by oil industry leaders seeking lower biofuel targets.

The 14-page "notice of data availability" that set those potential changes in motion explicitly invokes arguments by refiner Valero Energy Corp. or top oil trade groups nine times, with the EPA echoing the industry's assertions that imported biofuels jeopardize U.S. energy independence.

What's missing? Any reference to the counter arguments from the other side—biodiesel producers or corn farmers.

The EPA had already proposed lowering the amount of advanced biofuel that would be required next year, after Pruitt forced a last-minute rewrite of the agency's initial slate of renewable fuel quotas. EPA officials initially wanted to require 384 million gallons of cellulosic ethanol to be used next year—up 19 percent from this year's 311 million gallon quota—according to documents released by the Office of Management and Budget.

Corn Belt

But after lobbyists for refiners raised concerns about relying on imported biofuel to meet the targets, Pruitt directed EPA staff to recalculate the figures. The resulting proposal aims to lower the cellulosic ethanol requirement for the first time—to 238 million gallons next year.

Separately, the agency is mulling a change to allow exported biofuel to count toward compliance with the annual quotas—a move that would lower compliance costs for refiners while decreasing the premium some ethanol producers collect for selling the fuel domestically.

Oil industry leaders say Pruitt is making good on his pledge to get the RFS back on track, by establishing biofuel quotas ahead of legal deadlines.

The EPA is advancing "Congress's stated purpose of bolstering America's energy independence," the American Fuel and Petrochemical Manufacturers said in an emailed statement. "American drivers shouldn't have to shoulder more costs to help foreign biofuel producers."

Biofuel boosters are reminding Trump of his promises now.

"It is my hope that your EPA has not forgotten about the pledges that were made to my constituents and to farmers across the country," Senator Joni Ernst, a Republican from Iowa, told the president in a letter this week.

Senate Republicans Want to Allow Drilling in Alaska Refuge

Posted September 29, 2017, 01:07 P.M. ET

By Ari Natter and Erik Wasson

Senate Republicans set the stage for using the budget to end the 37-year ban on oil and gas drilling in Alaska's pristine Arctic National Wildlife Refuge.

A provision in the budget resolution, released Sept. 29, tells the Senate Energy and Natural Resources Committee to come up with $1 billion in savings over 10 years. That mandate is the first legislative step necessary for Congress to approve drilling in the preserve, known as ANWR, without the threat of a Democratic filibuster.

"You know me, I'm always trying to advance ANWR," Alaska Republican Senator Lisa Murkowski, the chairman of that committee, said on Sept. 26.

Murkowski and fellow Alaska Republican Senator Dan Sullivan have previously backed legislation that would allow oil and gas development on as much as 2,000 acres (809 hectares) of the refuge, and pressed to get this provision included in the budget.

Fossil fuel development in the 19-million-acre wilderness area has been prohibited since 1980.

If the budget is adopted by both the House and the Senate, a bill conforming to the instruction can be brought up in the Senate and could pass with 50 votes plus Vice President Mike Pence's tie-breaker, rather than the usual 60 votes need to end debate.

Royalties to Flow

Republicans plan to use the budget resolution to allow fast-track consideration of a tax overhaul plan.

Royalties from oil and gas production in the wildlife reserve would be a revenue-raiser that could help offset some of the tax cuts Republicans are proposing. President Donald Trump earlier this year proposed raising $1.8 billion over the next decade by opening up parts of the refuge for oil and gas development, a change that would require congressional action.

Energy production in the wildlife refuge, which is estimated to contain as much as 12 billion barrels of oil, has been debated for more than 50 years, with major oil companies such as ConocoPhillips, Alaska's biggest oil producer, interested in exploring for oil in the area. Environmentalists, meanwhile, have argued for making the refuge's coastal plain permanently off -limit to drilling, noting the area's fragile ecosystem is home to polar bears, caribou, musk oxen and more than 200 species of migratory birds.

"It would be a sin against the environment," Senator Ed Markey, a Massachusetts Democrat, said in an interview. "We should not be doing that for the oil industry. We don't need to set up a gas station on top of the ANWR."

Fuel Prices

Proponents of opening up the area to energy development argue it's needed to help keep domestic fuel prices low and generate government revenue, including funds for Alaska, which has seen its economy and state government coffers hit hard by a decline in oil prices.

In addition to Democrats, Republicans Senators such as Susan Collins of Maine and John McCain of Arizona have in the past voted against efforts to open the refuge to drilling. Asked how she might vote this time around, Collins said she was open to reconsidering.

"I am told that there is a new kind of horizontal drilling that is far safer, but I don't know enough about it to have looked into yet," Collins said in an interview. Still, she added, "I voted against it consistently in the past."

Perry Moves to Aid Coal, Nuclear Generators with Pricing Rule

Posted September 29, 2017, 9:58 A.M. ET

By Catherine Traywick

U.S. Energy Secretary Rick Perry is doubling down on coal and nuclear power.

The Energy Department proposed a rule Sept. 29 aimed at helping coal and nuclear power plants compete within wholesale power markets by allowing them to recover their costs at "a fair rate of return," according to the agency's website. Generators with a 90-day supply of fuel on site are eligible.

While they provide reliable, base-load power, coal, and nuclear plants are costly to run, so grid operators usually don't call on them until after all renewable and natural gas resources have been exhausted. Meanwhile, low cost gas, wind and solar power have lowered electricity prices to the point that coal plants, when needed, often aren't paid enough to cover operating costs.

"Ensuring a reliable and resilient electric supply and corresponding supply chain are vital to national security," Perry said in a letter to the Federal Energy Regulatory Commission, which will consider the proposal. The letter touts the agency's recent grid study, which made the case for preserving base-load power, a term typically used to describe coal and nuclear plants that can run all the time.

Perry's proposal may have a friend in Neil Chatterjee, who was tapped by President Donald Trump to temporarily lead the energy commission. Chatterjee has repeatedly argued that coal-fired plants are a crucial part of America's energy mix that needed to be "properly compensated to recognize the value they provide."

But grid operators may find implementing such a rule to be "difficult or problematic," Christi Tezak, managing director at ClearView Energy Partners in Washington, wrote in a research note. Still, a pricing rule of some kind may be formalized by as soon as spring 2018, she said.

'Major Retreat'

Rob Gramlich, founder of the clean energy consultancy Grid Strategies LLC, characterized the proposal as "a major retreat from competition."

The Federal Energy Regulatory Commission, an independent agency under the Energy Department, has authority over power markets, though the energy secretary may propose rules to the commission. Perry is seeking final action within 60 days.

The proposal follows the agency's controversial grid study, which argued that base-load power is critical to grid resilience and called for changes to how wholesale electricity is traded. The report cautioned that "market designs may be inadequate" to keep "traditional" power generation online.

Southern's Nuclear Plant Gets $3.7 Billion More in U.S. Aid

Posted September 29, 2017, 12:55 P.M. ET

By Ari Natter and Mark Chediak

Southern Co.'s troubled nuclear reactor project in Georgia is in line to get additional government support after the Energy Department announced Sept. 29 it offered $3.7 billion in additional loan guarantees.

Georgia Power Co. and its partners constructing the Vogtle plant—the only new nuclear power project in the U.S.—were already recipients of $8.3 billion in federally-backed loan guarantees, but asked the Trump administration to come to their aid amid ballooning costs and delays.

The project represents the last, best hope for a much-hyped nuclear renaissance that has failed to materialize in the U.S. following Japan's Fukushima accident and persistently weak wholesale electricity prices.

"I believe the future of nuclear energy in the United States is bright and look forward to expanding American leadership in innovative nuclear technologies," Energy Secretary Rick Perry said in a statement announcing the additional aid.

The proposed aid comes after the Trump administration proposed ending the loan guarantee program, which has been under fire from conservative critics since it famously backed a half-billion-dollar loan guarantee to failed solar-panel maker Solyndra LLC.

Project Costs Soar

The new federal financing comes as Southern seeks Georgia regulators' approval to continue building two reactors at its Vogtle nuclear facility. Costs for the project have soared to more than $25 billion amid construction delays, caused in part by the bankruptcy of contractor Westinghouse Electric Co.

The Energy Department announced conditional loan guarantees of $1.67 billion to Georgia Power, a subsidiary of Southern; $1.6 billion to Oglethorpe Power Corporation; and $415 million to three subsidiaries of Municipal Electric Authority of Georgia.

Securing the additional money will help the Atlanta-based company make its case to Georgia regulators who must now weigh Southern's recommendation to continue against concerns from environmental groups and consumer advocates.

The additional loan "will help us continue to reduce our financing costs," said Paul Bowers, president of Georgia Power. With more than $5 billion in loan guarantees promised to Southern, the utility owner says its customers will get $500 million in "benefits" for its customers.

Georgia's public service commission will likely give its OK to the Vogtle project if Southern and its partners receive about $3.7 billion in payments from Westinghouse's parent Toshiba Corp., Tim Echols, a member of the Georgia Public Service Commission, said last week.

"The additional loan guarantee money, monetizing the Toshiba payment, and tax credit extension are music to my ears," Echols said. "Without these it will be difficult to finish our Vogtle reactors and I hope the U.S. Senate knows that."

VW Still Choking on Diesel as Damages Surge to $30 Billion

Posted September 29, 2017, 12:44 P.M. ET

By Chris Reiter and Elisabeth Behrmann

More than two years after Volkswagen AG was thrown into chaos by the diesel-emissions scandal, the German auto giant is still choking.

The latest reminder that the crisis is far from over came Sept. 29 when Volkswagen announced it will take a charge of 2.5 billion euros ($3 billion) because plans to buy back or retrofit tainted U.S. diesel cars proved more complex than expected. That brings total damages to about $30 billion and raises questions about whether Chief Executive Officer Matthias Mueller has the situation under control.

"This is yet another unexpected and unwelcome announcement from VW, not only from an earnings and cash-flow perspective but also with respect to the credibility of management," Arndt Ellinghorst, a London-based analyst with Evercore ISI, said in an email. "No surprise, investors are skeptical and cynical."

To put the latest charge into perspective, it comes a full 15 months after the company reached a settlement with U.S. authorities to buy back or fix around 500,000 tainted vehicles, including Golf, Jetta and Audi A3 models. So after more than a year of working through the issues, Volkswagen suddenly discovered that the plans were technically tougher than anticipated. The complications, which the company didn't describe in detail, amount to more than 5,000 euros per car.

Volkswagen shares fell as much as 4 percent, making the prospect of returning to pre-crisis levels even more remote. Since September 2015, the stock has lost about 15 percent of its value.

While the charge was the clearest evidence the crisis is still smoldering, it wasn't the only sign this week. On Sept. 27, Munich prosecutors arrested former Volkswagen engineer Wolfgang Hatz, the second person detained in the widening probe into cheating at the automaker's Audi division. Hatz, who ran Volkswagen's motor development from 2007 to 2011, left the automaker in May 2016 after being suspended in the aftermath of the company's admission that it rigged diesel cars to cheat on regulatory tests.

And then there was the unrelated issue of the Scania truck unit being fined about $1 billion by European Union authorities over price fixing.

"What's clear is that the emissions scandal isn't off the table," said Stefan Bratzel, director of the Center of Automotive Management in Bergisch Gladbach, Germany. "Today's announcement shows they miscalculated."

Mueller has sought to push past the crisis, with only limited success. At the Frankfurt auto show earlier this month, he played the role of visionary, arriving at a presentation in the German financial capital in a self-driving bus, dubbed Sedric. Before hundreds of guests, he vowed to turn Volkswagen into an electric-car leader, as he remakes the company from within, with the Moia ride-hailing brand and de-centralized decision-making.

"We have got the message and we will deliver," Mueller said at the show. "'Business as usual' is no longer enough."

Yet there are plenty of signs that the old Volkswagen is alive and well. In addition to the long-running diesel saga, unions are flexing their muscles and resisting disposals of ill-fitting remnants from past empire-building such as the Ducati motorbike brand and divisions that make power plants and ship engines.

Electric Future

The affected diesel vehicles in North America are only a small part of the nearly 11 million rigged cars globally. In the U.S., Volkswagen is required to update the emissions software and make changes to engine hardware, a more rigorous fix than the repairs required in Europe.

The continuing fallout compounds pressures facing Volkswagen as it grapples with a disruptive shift in automotive technology, including the prospect of new, nimble competitors like vacuum cleaner pioneer Dyson Ltd. Keeping ahead of the shift to an era of self-driving electric cars requires significant resources, and Volkswagen is planning to invest about 20 billion euros by 2030 to develop a fleet of electric cars and another 50 billion euros to buy the batteries needed to power the vehicles.

The scandal set off a backlash that has led consumers to turn away from diesel technology amid

concerns about pollution and driving bans. That creates problems for Volkswagen as it relies on diesel cars to boost profit and lower carbon-dioxide emissions to reach tightening environmental targets. Still, the world's largest automaker had net liquidity of 23.7 billion euros at the end June to help it finance the investments.

"Volkswagen remains very liquid in terms of its financial position and the risk of a capital increase is low," said Juergen Pieper, a Frankfurt-based analyst with Bankhaus Metzler. "However, given the uncertainty in Europe about diesel cars and the future investments that need to be made for electric cars, that risk is rising" in the aftermath of the "surprisingly large" hit from the scandal.

Trump's 1970s-Era Oil Comes at Right Time to Feed Asia's Thirst

Posted September 29, 2017, 9:11 A.M. ET

By Robert Tuttle

When President Donald Trump's Energy Department was lining up buyers a month ago to dump 14 million barrels of crude into the market, it might have seemed like bad news.

But as all that oil from the Strategic Petroleum Reserve starts hitting the market next week, the timing turned out to be pretty good.

Here's what changed: crude got out of its funk and entered a bull market, the outlook for global consumption suddenly looks a lot brighter, compliance with OPEC-led cuts improved, the shale boom is waning and, most importantly, sales to Asia have led U.S. exports to record levels. So, America doesn't look so incurably awash in oil after all.

"You'll see a lot of it get exported right away," said Dominic Haywood, an analyst at consultant Energy Aspects Ltd. in London. "There's good demand for it."

To get an idea of the size of the sale, deliveries spread over two months will add an average 233,000 barrels a day of crude that's been stashed in salt caverns in Texas and Louisiana since the wake of the Arab oil embargo in the late 1970s. That's more than either Kuwait or the United Arab Emirates have cut so far this year under the OPEC-led accord, data compiled by Bloomberg show.

That seemed worrying when the DOE was taking bids in early September and futures in New York were stuck below $50 a barrel. Hurricane Harvey had knocked out more than a fifth of U.S. refining capacity, the summer driving season had just ended and stockpiles were rising again.

But with the global Brent benchmark nearing $60 a barrel, West Texas Intermediate seems like a steal even after it surpassed $52 for the first time since April this week.

The type of oil coming out of the caverns, sour crude, also happens to be in particularly high demand because that's the kind OPEC has cut the most. Bonito Sour, for instance, sold at a $3.75-a barrel premium to WTI on Sept. 22, the widest since May 2015, data compiled by Bloomberg show.

"Sour crude differentials are on a tear," Haywood said. "Definitely it's a good time."

For the government, getting rid of the oil hoard from another era has become a priority because

maintaining the facilities is a cash drain. Trump wants to slash it by half. In recent years, Congress has ordered small sales to fill government budget holes.

At a time when U.S. fields gush increasing amounts of crude, there has been growing support for making some cash out of the reserve, or even get rid of it altogether—specially because it'll cost about $2 billion to upgrade it.

By statute, the Energy Department needs to conduct two sales of oil from the Strategic Petroleum Reserve for fiscal year 2018, according to an agency spokeswoman. The timing is based on factors including the volume of oil, the potential delivery periods for each sale and how sales integrate with maintenance and operations at storage sites. The agency doesn't try to time it based on forecast commodity prices, she said.

Green Projects May Be About to Lose Their Richest Investors

Posted September 29, 2017, 8:29 A.M. ET

By Anna Hirtenstein

Renewable energy developers may lose some of their richest backers as wind and solar farms move toward competing on price instead of their green credentials, Sweden's largest utility said.

Vattenfall AB, which is one of Europe's biggest developers of offshore wind farms and has sold a stake in one of its projects to pension fund AMF Pensionsforsakring AB, said institutional investors may be wary of backing green projects in the future.

Green energy projects are starting to become more risky. A plunge in prices for wind and solar power has allowed many developers to bid for power-purchase deals at rates competitive with traditional forms of energy. Governments and regulators are responding by removing the subsidies and incentives that green energy sources required in their early years to attract investment, and without that backing, they're exposed to power-market price risks.

"The reason for very high interest from their side is it's a rather low-risk investment," said Chief Executive Officer Magnus Hall. "If you go for a merchant-based risk picture you would have to look at different investors. I don't think they would be the traditional pension funds because they have very clear regulation around them not to take too big risk."

So-called merchant risk is when electricity is sold on the wholesale power market rather than at a fixed price. Renewables have to date had long-term contracts that freeze a price, either paid by a government or by a large company for energy-intensive operations such as a data center.

This is starting to change as clean energy technologies like solar panels and wind turbines get cheaper. In April, developers in Germany placed bids for the first subsidy-free offshore wind farms. Hall is skeptical about whether they will actually get built.

"It's important to note that there are operators and developers who have been bidding zero bids and they have won, but we haven't seen any final investment decisions and they are not due for a quite

long time," he said. "That's important for politicians to note."

Hall expects that renewables will require long-term fixed prices going forward, but that they may not have to be inked by governments.

"As a developer you can seek to make long term contracts with a buyer of electricity and you can use that as part of your basis for investment," he said. "But the question is if we can have these fixed price contracts big enough to make the whole change that we want to make" in the energy system.

Electric Scooter Taxes to Drop as Taiwan Boosts Green Vehicles

Posted September 29, 2017, 01:41 P.M. ET

By Yu-Tzu Chiu

Electric scooter owners in Taiwan could see a tax break as the country aims to boost clean transportation and its domestic electric vehicle industry by extending licensing incentives through 2021.

Only 929 car buyers have taken advantage of the existing automobiles license tax waiver for electric cars, and Taiwan hopes dropping the fees for electric scooters will encourage more buyers to consider eco-friendly vehicles. The proposal Taiwan approved Sept. 28, which still must be approved by the legislature, would extend the existing waiver on the license tax for electric vehicles through the end of 2021. The tax break was set to expire Jan. 5, 2018.

Currently, the vehicle license tax rate in Taiwan for electric scooters under 12 horsepower is zero; electric scooters with 45 horsepower or more pay a vehicle license tax of 1,620 Taiwanese dollar ($53) annually.

Deputy Finance Minister Tzu-hsin Wu said at a news conference that revising tax codes is one of the government's strategies to encourage the development of domestic electric vehicle industries. As European countries such as Norway consider banning gasoline and diesel cars, Wu said it's important for Taiwan to catch up.

Taiwan projects that the extended tax breaks eventually will put 5,795 electric cars on the road by 2021and more than double the number of electric scooters to 171,000. The extended tax incentives would help the government gain an additional 800 million Taiwan dollars in revenue, Wu said.

During a recent meeting discussing the tax exemption proposal, Premier Lai Ching-te said the incentives are designed to both encourage green consumption and help boost the development of domestic electric vehicle industries, according to Kuo-yung Hsu, a spokesman for the Taiwan Cabinet.

Industry Hopes for Boost

Taiwan's automakers praised the tax incentives but suggested cash rebates, such as those used in the U.S., could encourage even more buyers to consider an electric vehicle. In Taiwan, cash incentives are offered to buyers of electric scooters as one of the government's pollution control measures. Taiwan wants to ban smoky two-stroke scooters by 2020.

Wen-yi Lo, a spokesman for Taiwan-based Yulon Motor Co Ltd., said the company has invested more than 3 billion Taiwanese dollars ($99 million) in the past decade to develop electric cars. Taiwan's electric vehicle charging network has expanded with the support of government policies, and by late 2017 three kinds of electric cars produced by Yulon will be available in Taiwan, he said.

Yen-yang Chen, marketing manager of Gogoro, a Taiwan-based company selling electric scooters, said it's encouraging that the electric vehicle license tax exemption would expand to electric scooters.

"More buyers will choose electric scooters because supportive policies have been seen here," Chen told Bloomberg BNA.

Gogoro started selling its electric scooters in Taiwan in 2015. By 2016, Gogoro's sales comprised two-thirds of the total 20,000 electric scooters sold in Taiwan, according to government statistics.

Foreign electric automakers also see opportunities in Taiwan. In late January, U.S.-based Tesla Motors delivered its first batch of products to Taiwanese customers and opened its first supercharging station in Taipei.

Local media reported that, after the end of the waiver in 2021, drivers of a Tesla model with 700 horsepower will have to pay an annual license tax of 117,000 Taiwanese dollar ($3,900), about four times that on some nonelectric super cars.

Tesla Taiwan declined to comment on the Cabinet's tax revision proposal.

PODCAST: Houston Faces Long-term Damage After Hurricane Harvey

Posted September 29, 2017, 9:35 A.M. ET

By David Schultz

In some ways, things are returning to normal in Houston after Hurricane Harvey. Schools have reopened, the power is back on, and the flood water has, for the most part, receded.

But in other, very important, ways, things will never be back to normal there.

For the latest episode of our environmental policy podcast, Parts Per Billion, we speak with Bloomberg BNA Houston correspondent Nushin Huq, a lifelong resident of the city, about how the cleanup is going a month after the storm. We also talk with her about some of the long-term environmental problems that may trouble Houston for years to come.

Listen to the podcast here.

Daily Environment Report for EPA

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: POLITICO Pro Energy Whiteboard
Sent: Mon 6/26/2017 1:46:25 PM
Subject: EPA opens nominations for key science boards

By Eric Wolff

06/26/2017 09:43 AM EDT

EPA is seeking nominations to fill key slots on the Clean Air Science Advisory Committee and the Science Advisory Board — committees the agency is required by law to maintain to advise it on air pollution and other scientific issues.

A notice will go into the Federal Register tomorrow that will allow 30 days for nominations to fill one opening on the Clean Air Science Advisory Committee, six slots on the Science Advisory Board and experts to serve on six SAB committees.

The timing for bringing on a new CASAC member is tight since committee chair Ana Diez Roux will depart at the end of September when her second term expires. As both a medical doctor and a member of the National Academy of Sciences, Diez Roux fills two roles required under the law. If her term ends without those roles filled, the committee will cease to function. CASAC provides essential advice for setting allowable air pollution levels for six key pollutants named in the Clean Air Act.

In addition to the six positions opening on the SAB committee, EPA is asking for nominees to serve on its Chemical Assessment Advisory Committee, the Drinking Water Committee, the Ecological Processes and Effects Committee, the Environmental Economics Advisory Committee; the Environmental Engineering Committee and the Radiation Advisory Committee.

WHAT'S NEXT: EPA will accept nominations for the positions for 30 days once the notice officially is published in the Federal Register, expected Tuesday.

Texas

WATER
Surface Water Quality Standards
Texas WATER

Proposed rule of the Texas Commission on Environmental Quality amends regulations under 30 TAC 307.2, .3, .6, .7, .9, and .10 regarding surface water quality standards. The rule updates toxic criteria to incorporate new data on toxicity effects, clarifies how water quality standards are assessed using instream monitoring data for bacteria, and incorporates new data and use-attainability analysis results concerning uses and criteria of individual water bodies. The rule also defines "coastal recreation waters," lists numeric criteria for aquatic life protection, and updates human health criteria to add four chemicals and revise 18 noncarcinogens. In addition, the rule changes the saltwater single sample criterion for Enterococci to 130 per 100 milliliters, allows for basing attainment of bacteria standards in coastal recreation waters on both geometric mean and single sample criteria, revises site-specific uses and criteria for classified segments for numerous water sources, and deletes several sources that no longer qualify as sole-source drinking water supplies. Finally, the rule revises descriptions for several water segments, adds

eight unclassified water bodies with their designated aquatic life uses and dissolved oxygen criteria, specifies site-specific copper and aluminum water-effect ratios for several segments, and revises the presumed use of primary contact recreation for numerous water bodies. A hearing is scheduled for Oct. 16, 2017, in Austin. Comments are due Oct. 17, 2017. Contact: Debbie Miller; TCEQ, Monitoring and Assessment Section; 512-239-1703

The Senate should build auto enrollment into health care reform

James C. Capretta and Lanhee Chen | Health Affairs

As the debate over health care rages behind the scenes, some Republicans are looking for ways to boost coverage, stabilize insurance markets, and lower health costs. Automatically enrolling Americans eligible for tax credits into no-premium plans with the opportunity to opt out would preserve freedom of choice while boosting the ranks of the insured — a win-win for conservatives.

US infrastructure is in trouble, but hiking the gas tax won't fix it

R. Richard Geddes | Illinois Business Journal

America's surface transportation system is in scary shape. Congested roads wasted 6.9 billion hours of motorists' travel time and almost 3.1 billion gallons of fuel in 2014. Key system parts are in need of major overhaul. Maintenance of roads and bridges has been deferred — sometimes for decades. Revenue sources are inadequate and unreliable; the system needs more direct user fees. So, time to raise the gas tax, right? Not so fast.

Arizona

PESTICIDES
Department of Agriculture/Pest Management
Arizona PESTICIDES

Final exempt rule of the Department of Agriculture, Pest Management Division, amends regulations under R3-8-101 through -606 (nonconsecutive) regarding pest management, which are recodified from R4-29-101 through -708 in a concurrent notice. The rule updates provisions to reflect the transfer of authority from the Office of Pest Management to the Pest Management Division. The rule addresses licensure for pest management, recordkeeping and reporting, disciplinary procedures, and supervision. The rule also adds and revises definitions. The rule is effective Aug. 29, 2017. Contact: Vince Craig; Department of Agriculture, Pest Management Division; 602-255-3663; vcraig@azda.gov

Regulatory Update

California Regions

AIR
Adhesives and Sealants
California Regions AIR

Proposed rule of the South Coast Air Quality Management District amends regulations under Rule 1168 regarding volatile organic compound (VOC) emissions limits for adhesives and sealants. The rule updates current VOC limits, adds new product categories and VOC limits, and adds three-year sell-through/use-through provisions. The rule also clarifies that the limits apply to adhesives, adhesive primers, caulks, sealants, or sealant primers not regulated by the California Air Resources Board; applies the most restrictive requirements to products marketed for use under certain specified categories; and prohibits storage of noncompliant products on site unless they are stored for shipment outside of the district. In addition, the rule adds VOC content container labeling requirements, test methods, and reporting requirements and prohibits the use of most Group II exempt solvents, except cyclic, branched, or linear completely methylated siloxanes. Finally, the rule provides for a technology assessment for certain product categories; revises exemptions; and applies VOC limits to consumer products used during manufacturing. A workshop is scheduled for Aug. 17, 2017, in Diamond Bar. A concurrent meeting will address analysis of the proposal under the California Environmental Quality Act. Comments are due Aug. 31, 2017. WATER
Susquehanna River Basin Commission/Meeting Actions
Maryland WATER

Notice of the Susquehanna River Basin Commission announces actions taken at its June 16, 2017, meeting in Entrinken, Pa. The commission elected a chair and vice chair; adopted the fiscal year 2018-2019 water resources program, the FY 2018 regulatory program fee schedule, and the FY 2019 preliminary budget; authorized execution of a treasury management services agreement; and approved or ratified contracts, a grant agreement, and a bank loan payoff. The committee also approved a rulemaking action to address application requirements, standards for review of projects, mitigation of consumptive uses, registration of grandfathered projects, and hearings and enforcement actions. In addition, the commission denied and tabled two requests, extended the term of an emergency certificate with Susquehanna Nuclear LLC, adopted amendments to the Comprehensive Plan for the Water Resources of the Susquehanna River Basin, and provided a report on delegated settlements with two project sponsors. Finally, the commission approved 17 and tabled eight project applications, including two involving a diversion. Contact: Jason Oyler; SRBC; 717-238-0423; joyler@srbc.net

Regulatory Update

WATER
Susquehanna River Basin Commission/Review and Approval of Projects
Maryland WATER

Notice announces a June 29, 2017, final rule of the Susquehanna River Basin Commission that clarifies application requirements and standards for review of projects and provides for the registration of grandfathered projects. The rule also revises requirements for hearings and enforcement actions and updates definitions. The final rule includes numerous changes and clarifications to the rule as proposed. For example, the final rule allows the executive director to use past grandfathering determinations and allows the commission to waive certain registration information if a project is relying on a past grandfathering determination. The final rule does not finalize proposed changes to the consumptive use mitigation policy. The commission plans to reevaluate its policies and procedures for consumptive use and consumptive use mitigation in a more comprehensive fashion. The rule is effective July 1, 2017. Provisions concerning registration of grandfathered projects and grandfathered consumptive use are effective Jan. 1, 2018. Contact: Jason Oyler; Susquehanna River Basin Commission; 717-238-0423; joyler@srbc.net. Citations: 18 CFR 806.1 through 808.18

Subject: Playbook Power Briefing: Senate GOP health care 'Plan B' on verge of failure -- EIGHTH PERSON in Don Jr. meeting identified -- Business down at some Trump properties -- RACHEL WHETSTONE to Facebook

View online version | Add politicoplaybook@politico.com to your address book.

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

BULLETIN -- "Eighth person in Trump Tower meeting is identified," by WaPo's Roz Helderman: "An American-based employee of a Russian real estate company took part in a June 2016 Trump Tower meeting between a Russian lawyer and Donald Trump Jr., bringing to eight the number of known participants at the session that has emerged a key focus of the investigation of the Trump campaign's interactions with Russian.

"Ike Kaveladze's presence was confirmed by Scott Balber, an attorney for Emin and Aras Agalarov, the Russian developers who hosted the Trump-owned Miss Universe pageant in 2013. Balber said Kaveladze works for the Agalarovs' company and attended as their representative. Balber said Tuesday that he received a phone call from a representative of Special Counsel Robert Mueller over the weekend requesting the identity of the Agalarov representative, which he said he provided. The request is the first public indication that Mueller's team is investigating the meeting." http://wapo.st/2u4JmnE

WHAT YOU NEED TO KNOW -- THE REPEAL EFFORT IS NEARLY DEAD -- SEN. SHELLEY MOORE CAPITO (R-W.VA.) is signaling she will not vote to begin debate on the House's Obamacare repeal and replace bill, but she's leaving herself some wiggle room. "My position on this issue is driven by its impact on West Virginians. With that in mind, I cannot vote to repeal Obamacare without a replacement plan that addresses my concerns and the needs of West Virginians." **SEN. SUSAN COLLINS (R-MAINE)** is a no on the motion to proceed. **SEN. LISA MURKOWSKI (R-ALASKA)** also is a no on moving ahead.

IF THIS HOLDS, this process is dead -- for now.

SENS. ROB PORTMAN (R-OHIO) and **DEAN HELLER (R-NEV.)** say they are undecided at the moment. **SEN. JOHN MCCAIN (R-ARIZ.)** is in Arizona recovering from surgery. **SENS. JERRY MORAN (R-KAN.)** and **MIKE LEE (R-UTAH)**, who came out as nos last night together, will vote for the motion to proceed. ***The latest from Seung Min Kim, Burgess Everett and Jen Haberkorn*** http://politi.co/2tb7VOl

-- THINK ABOUT IT THIS WAY: If you're a nervous Republican, there's no point in

voting for the motion to proceed because it could lead you down a path you might not want to go down. For example, if a senator votes for the motion to proceed and that leads to a repeal of Obamacare, he or she could be blamed for voting to repeal Obamacare -- even if he or she didn't.

THIS IS A BIG MOMENT -- Since this seems like it's dead, **SENATE MAJORITY LEADER MITCH MCCONNELL (R-KY.)** will have to go back to the drawing board and figure out how to get something to the floor. He might be forced to hold hearings, drawing this process out even more.

COMING ATTRACTIONS -- FIRST IN PLAYBOOK -- THE HOUSE FREEDOM CAUCUS is going to begin putting pressure on Speaker Paul Ryan to bring up the bill the Senate is considering immediately. Their thinking: it would put pressure on the Senate to get in line.

PRESIDENT TRUMP says he was "disappointed" about health care. His plan, per pooler Ben Jacobs of The Guardian: The plan is "to let Obamacare fail, it will be a lot easier. And I think we're probably in that position where we'll let Obamacare fail. We're not going to own it. I'm not going to own it. I can tell you the Republicans are not going to own it. We'll let Obamacare fail and then the Democrats are going to come to us."

WHITE HOUSE STATEMENTS ON THE PROCESS -- @realDonaldTrump at 7:53 a.m.: "We were let down by all of the Democrats and a few Republicans. Most Republicans were loyal, terrific & worked really hard. We will return!" ... **at 7:58 a.m.:** "As I have always said, let ObamaCare fail and then come together and do a great healthcare plan. Stay tuned!" ... **at 9:15 a.m.:** "With only a very small majority, the Republicans in the House & Senate need more victories next year since Dems totally obstruct, no votes!" ... **at 9:26 a.m.:** "The Senate must go to a 51 vote majority instead of current 60 votes. Even parts of full Repeal need 60. 8 Dems control Senate. Crazy!"

-- HEY, MR. PRESIDENT: Nothing under consideration right now needs 60 votes.

DRUDGE BANNER -- "MOST UNPRODUCTIVE CONGRESS IN 164 YEARS"

ANOTHER TRUMP PRIORITY FALTERS -- HAARETZ'S BARAK RAVID: "Prime Minister Benjamin Netanyahu told French President Emmanuel Macron in their meeting Sunday that he was skeptical about the peace efforts being made by U.S. President Donald Trump, diplomatic sources familiar with the conversation told Haaretz. During the meeting in Paris, Macron told Netanyahu that he supports Trump's efforts and that the settlement-building plans that Israel has advanced in the past six months have made an already complicated situation that much harder, the sources said." http://bit.ly/2tCxtDp

Good Tuesday afternoon. Jake and Anna talked to the great Bob Schieffer for his podcast with CSIS' Andrew Schwartz. ***Listen*** http://bit.ly/2uFhd9Q

FOGGY BOTTOM WATCH -- "U.S. levies new Iran-related sanctions," by Jake Lahut: "The U.S. is pursuing sanctions against 18 individuals and other entities for supporting Iran's ballistic missile program and other factors, including Iran's 'egregious human rights record,' the State Department announced Tuesday. The new sanctions follow the administration's announcement Monday that it had informed Congress that Iran continues to abide by the terms of the nuclear deal." http://politi.co/2tCN3iF ... ***State's statement on the new sanctions*** http://bit.ly/2uw402A

TRUMP INC. -- "Is the presidency good for Trump's business? Not necessarily at this golf course," by WaPo's David Fahrenthold and Rob Kuznia: "For two years, Donald Trump has been running a first-of-its-kind American experiment. Can one man be the face of a polarizing political movement and a successful hospitality business? ... But in Los Angeles County, the experiment doesn't seem to be going well. Since Trump entered the presidential race in June 2015, revenues from greens fees at the L.A. club has dropped by 13 percent, according to figures from the city government.

"Charity golf-tournaments, another core piece of the club's business, have moved away: ESPN relocated its celebrity tournament. The L.A. Galaxy soccer team withdrew. The L.A. Unified School District also moved, forfeiting a $7,500 deposit it had already paid Trump's course. Hollywood, another source of revenue for the club, has largely stopped coming to film TV shows and movies, according to city permit records. And the club's wedding business seems to have been affected as well. Couples used to hold big outdoor ceremonies at a city park across the street, then return to Trump National for a reception. Nobody's done that since November, according to city records.

"The troubles at the L.A. club mirror those that have been reported at some other Trump properties. Together, they illustrate an unexpected side effect of the presidency: In some cases, it has proven a challenge to sell the president's brand, without offering proximity to the presidency itself." http://wapo.st/2vyj7p0

BUT, BUT, BUT-- "Trump Properties Are Already Profiting Off Republican Campaigns," by BuzzFeed's Tarini Parti and Jeremy Singer-Vine: "BuzzFeed News has identified at least $293,000 in spending from Republican campaigns and committees on Trump businesses after Trump was elected to the White House. The bulk of the spending was from Trump's re-election campaign, but other Republican committees shelled out about $72,000, based on FEC data made public this week. The spending from House Republicans and party committees appears to be mostly for fundraisers held at Trump properties. The total does not include spending between April and June from Senate campaigns, which do not file their reports electronically, and from certain committees that file monthly and have yet to report their June spending." http://bzfd.it/2u5TPAF

MUST SEE TV -- @jonathanwald: "Exclusive. @ChrisChristie 1st interview since that day at the beach, the Russia bombshells, and GOP Health Care meltdown live 4pm @msnbc."

AFTERNOON READING -- NICK HANAUER in POLITICO Magazine, "To My Fellow Plutocrats: You Can Cure Trumpism: Pay your workers a decent wage and maybe you can stave off the pitchforks that are still coming": "I find myself in deep disagreement with almost everyone I talk to about Trump and Trumpism. I firmly believe that Trump, by himself, is not the problem. Indeed, the left's maniacal focus on Trump confuses cause with effect. Yes, Trump is a manifestation of a serious civic sickness. But treating the symptom by removing Trump won't cure the disease, even if it temporarily makes us feel better. No, to heal the body politic we must confront the disease itself.

"The real threat to our republic is an alarming breakdown in social cohesion, and the cause of this breakdown is obvious: radical, rising economic inequality, and the anger and anxiety it engenders. The truth is that over the span of decades, American lawmakers (at the behest of economic elites like us!) have enacted policies that have depressed wages, stoked economic insecurity and exacerbated cultural angst and social dislocation. At the same time, a tiny minority of mostly urban elite (again, us!) have benefitted obscenely from our growing economic, political and legal power." http://politi.co/2veMzky

FLASHBACK -- NICK HANAUER in POLITICO Magazine, July/Aug. 2014, **"The Pitchforks Are Coming... For Us Plutocrats":** http://politi.co/2tc0uGR

VALLEY TALK -- "Google Glass 2.0 Is a Startling Second Act," by Backchannel's Steven Levy: "The original Glass designers had starry-eyed visions of masses blissfully living their lives in tandem with a wraparound frame and a tiny computer screen hovering over their eye. But the dream quickly gave way to disillusionment as early adopters found that it delivered less than it promised-and users became the target of shaming from outsiders concerned about privacy. Within three years, Alphabet (the parent company of Google and its sister company, the 'moonshot factory' called X) had given up Glass for good-or so people assumed.

"What they didn't know was that Alphabet was commissioning a small group to develop a version for the workplace. ... For about two years, Glass EE has been quietly in use in dozens of workplaces, slipping under the radar of gadget bloggers, analysts, and self-appointed futurists. Yes, the population of those using the vaunted consumer version of Glass has dwindled, tired of being driven out of lounges by cocktail-fork-wielding patrons fearing unwelcome YouTube cameos. Meanwhile, Alphabet has been selling hundreds of units of EE, an improved version of the product that originally shipped in a so-called Explorer Edition in 2013. Companies testing EE-including giants like GE, Boeing, DHL, and Volkswagen-have measured huge gains in productivity and noticeable improvements in quality." http://bit.ly/2vxVMUA

HOT JOB - UBER has posted a director of federal affairs job for its D.C. office and hundreds of people have applied so far, including people from Fortune 100 companies, government, and NGOs. The company is starting to talk to candidates and expects to fill the position by the end of the summer, according to a source familiar with the hiring

process. The position includes managing the company's federal affairs team, dealing with the White House, Congress and third party groups, as well as related communications. Justin Kintz, the head of Americas public policy and communications at Uber, is in charge of hiring for the position, which is Niki Christoff's old job before she went over to Salesforce. ***See the job posting*** http://ubr.to/2u69pw7

-- "Former Uber comms head Rachel Whetstone is jumping to Facebook," by Recode's Kara Swisher: "Rachel Whetstone, who recently left her job as top public relations and policy exec at Uber, is joining the communications team at Facebook in a newly created role as VP of comms of its WhatsApp, Instagram and Messenger products. Whetstone, who previously worked at Google at the top of its comms and policy unit, will report to Facebook's VP of technology communications Caryn Marooney. Current comms leaders at Instagram and Messenger will continue to lead their teams and get guidance from Whetstone, who will primarily focus on WhatsApp. She will start in September." http://bit.ly/2u5Rmq4

HASTERT TRANSFERRED FROM PRISON -- From the Chicago Tribune's Christy Gutowski: "Former U.S. House Speaker Dennis Hastert returned to Chicago - under supervision - to complete the remaining month of his prison sentence for breaking banking laws to hide his sexual abuse of teenage boys. Nearly 13 months after entering a federal prison in Minnesota, Hastert was listed Tuesday as entering a residential re-entry management field office in Chicago, according to the Federal Bureau of Prisons website. Hastert, 75, originally reported to the Federal Medical Center in Rochester on June 22, 2016 - one year after his explosive indictment surrounding secret hush-money payments sparked the Chicago-area coaching legend's epic downfall." http://trib.in/2veGJQk

MEDIAWATCH -- Matt Thompson has been promoted at The Atlantic to a new role of executive editor overseeing all cross-platform projects. He was previously the deputy editor of TheAtlantic.com. **Adrienne LaFrance,** a staff writer, has been promoted to editor of TheAtlantic.com.

SPOTTED: Tucker Carlson entering the Liaison Hotel on Capitol Hill today ... Olympic Silver Medalist Sasha Cohen this morning on Capitol Hill discussing the importance of "home visiting" at the Council for a Strong America and Parents As Teachers MIECHV briefing in Russell (***the Council's new report on the subject:*** http://bit.ly/2uzc4zk)

TREASURY DEPARTURE LOUNGE -- After seven years at the Treasury Department, today is **Michael Greenwald's** last day in Treasury's office of terrorism and financial intelligence. He spent the last two years spent as Treasury's attaché to Qatar and Kuwait and tonight will be celebrating with friends and colleagues at Hay Adams' hotel bar Off the Record. Greenwald has been named a senior vice president at the investment management firm Tiedemann Wealth Management.

TRANSITIONS -- Erick Sanchez is the new director of community affairs for Drink Company, which brought D.C. the Game of Thrones pop up bar. He retains his position

as senior adviser at Frontier Solutions.

WEEKEND WEDDING -- Justin Vail, a McCaskill and Obama WH alum and now an independent consultant, on Saturday married **Roshni Shikari,** an associate at Correia & Puth, at The Alfred Caldwell Lily Pool in Chicago, the bride's hometown. The ceremony was attended by their parents, siblings, and nieces, and the Hon. Sharon Johnson Coleman, for whom the bride previously clerked, officiated. The couple met on their first day of law school at Washington University in St. Louis. ***Pic*** http://bit.ly/2veNku1

Driving the Day

Good Wednesday morning. SENATE MAJORITY LEADER MITCH MCCONNELL told lawmakers to expect to stay in session through the first two weeks of August. Here what he'd like to see accomplished in the coming weeks, according to several K Streeters: clear executive branch nominations, repeal and replace Obamacare, pass the National Defense Authorization Act, lift the debt ceiling and reauthorize the FDA user-fee structure.

-- HOUSE REPUBLICAN LEADERS have stopped short of saying they'll stay in session -- and privately, some have vowed to stick to the schedule and leave for the summer at the end of July. We assume they'll have to stay in session for the first week of August. Hope you bought refundable plane tickets!

THE UPSIDE of Congress staying in session: Lawmakers show they're working.

THE DOWNSIDE: If they get nothing accomplished, they look incompetent. McConnell wants to clear a bunch of Trump administration nominees. But we're skeptical that will break through with voters. Aides tell us they need to accomplish something tangible.

FROM THE WHITE HOUSE -- **@realDonaldTrump at 6:19 a.m.** : "My son Donald did a good job last night. He was open, transparent and innocent. This is the greatest Witch Hunt in political history. Sad!" ... **at 6:32 a.m.:** "Remember, when you hear the words 'sources say' from the Fake Media, often times those sources are made up and do not exist."

-- ACTUALLY, THIS IS NOT TRUE. We don't know any reporters who make up

sources. We don't make up sources. And Trump's White House often asks to be quoted on background -- which means identifying a source by a vague title, like "White House aide" or "administration official." And this story about the president's son is not based on a "source." It's based on emails that Donald Jr. sent and later released. to ***The president also retweeted a Fox News tweet that featured Jesse Watters saying Donald Jr. is a victim and a Fox & Friends segment praising Mitch McConnell***.

THE MAIN BAR -- THE NYT STORY THAT STARTED THIS ALL -- A1 -- "Russian Dirt on Clinton? 'I Love It,' Donald Trump Jr. Said," by Jo Becker, Adam Goldman and Matt Apuzzo. http://nyti.ms/2tHvMYB

THE WHITE HOUSE UNDER SIEGE STORIES...

-- POLITICO'S TARA PALMERI and **JOSH DAWSEY: "White House aides feeling 'helpless' as Trump Jr. scandal blossoms":** "White House aides feel blindsided by the bombshell revelations around Donald Trump Jr.'s campaign meeting with a Russian lawyer, while the president is using his relatively light schedule to watch TV and fume about the latest scandal, according to interviews with half a dozen White House officials and advisers. Unlike prior Russia-related controversies, the White House is not minimizing the political ramifications of Trump's eldest son's decision to meet with the Kremlin-linked lawyer after being offered information that he was told would 'incriminate' Hillary Clinton as 'part of Russia and its government's support for Mr. Trump.'"

"But top West Wing aides are exasperated by their limited ability to steer the damage control and the risk that more damaging news has yet to emerge. One Trump adviser said the White House was 'essentially helpless' because the conduct happened in an 'anything goes' campaign that had few rules. This person said he had spoken to several people in the White House on Tuesday, and that 'none of them knew anything about Donald Trump Jr.'s meetings,' despite the fact that top adviser Jared Kushner was also present for the controversial Trump Tower sit-down. Many of the White House aides had previously dismissed the Russia stories as 'conspiracy bullshit,' this person said, but that this scandal was not being dismissed as that." http://politi.co/2tGPK5R

-- NYT'S PETER BAKER and **MAGGIE HABERMAN: "Rancor at White House as Russia Story Refuses to Let the Page Turn":** "As Air Force One jetted back from Europe on Saturday, a small cadre of Mr. Trump's advisers huddled in a cabin helping to craft a statement for the president's eldest son, Donald Trump Jr., to give to The New York Times explaining why he met last summer with a lawyer connected to the Russian government. Participants on the plane and back in the United States debated how transparent to be in the statement, according to people familiar with the discussions. Ultimately, the people said, the president signed off on a statement from Donald Trump Jr. for The Times that was so incomplete that it required day after day of follow-up statements, each more revealing than the last. ... The Russia story has become the brier patch from which the president seemingly cannot escape. ... Advisers said the president was annoyed not so much by his son as by the headlines.

"But three people close to the legal team said he had also trained his ire on Marc E. Kasowitz, his longtime lawyer, who is leading the team of private lawyers representing him. Mr. Trump, who often vents about advisers in times of trouble, has grown disillusioned by Mr. Kasowitz's strategy ... The strain, though, exists on both sides. Mr. Kasowitz and his colleagues have been deeply frustrated by the president. And they have complained that Mr. Kushner has been whispering in the president's ear about the Russia investigations and stories while keeping the lawyers out of the loop, according to another person familiar with the legal team. But one person familiar with Mr. Kasowitz's thinking said his concerns did not relate to Mr. Kushner. The president's lawyers view Mr. Kushner as an obstacle and a freelancer more concerned about protecting himself than his father-in-law, the person said. While no ultimatum has been delivered, the lawyers have told colleagues that they cannot keep operating that way, raising the prospect that Mr. Kasowitz may resign." http://nyti.ms/2sOYfsx

PERHAPS the most important detail of the day is Peter and Maggie's reporting that shows the White House crafted Don Jr.'s statement.

-- WAPO'S PHIL RUCKER and **ASHLEY PARKER: "'Category 5 hurricane': White House under siege by Trump Jr.'s Russia revelations":** "The White House has been thrust into chaos after days of ever-worsening revelations about a meeting between Donald Trump Jr. and a lawyer characterized as representing the Russian government, as the president fumes against his enemies and senior aides circle one another with suspicion, according to top White House officials and outside advisers. President Trump ... is enraged that the Russia cloud still hangs over his presidency and is exasperated that his eldest son and namesake has become engulfed by it, said people who have spoken with him this week. ...

"Ivanka Trump, the president's daughter and senior advise r; Jared Kushner, her husband and another senior adviser; and first lady Melania Trump have been privately pressing the president to shake up his team -- most specifically by replacing Reince Priebus as the White House chief of staff, according to two senior White House officials and one ally close to the White House. ... After this story first published, Josh Raffel, a White House spokesman, said in a statement on behalf of Kushner and Ivanka Trump: 'Jared and Ivanka are focused on working with Reince and the team to advance the President's agenda and not on pushing for staff changes.' ... One White House official went so far as to stop communicating with the president's embattled son, although this official spoke sympathetically about his plight, casting Trump Jr. as someone who just wants to hunt, fish and run his family's real estate business." http://wapo.st/2sOAC3G

BY THE WAY ... Say what you want about Reince, but he has nothing to do with the scandals engulfing this administration. His job is literally impossible: he has to impose order on a president who thrives off chaos.

-- JONATHAN LEMIRE and **JULIE PACE** of the **AP: "As Russia scandal touches his son, Trump privately rages":** "The public has not laid eyes on the president since his return from Europe Saturday. But in private, Trump has raged against the latest Russia

development, with most of his ire directed at the media, not his son, according to people who have spoken to him in recent days. The only comment from Trump on the matter for much of the day came in a brief statement via spokeswoman Sarah Huckabee Sanders, who said Tuesday that the president believes his son is 'a high-quality person.'" http://bit.ly/2uhCt5n

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

NORM EISEN and **RICHARD PAINTER**, ethics chiefs for Obama and Bush, in the **NYT: "Did Donald Jr. Break the Law?":** "It raises a host of potential criminal and other legal violations for Donald Jr. and others involved, including his brother-in-law Jared Kushner; Paul Manafort, the campaign chairman at the time; and perhaps the president himself. These new facts are a critical inflection point in the Trump-Russia matter. But they should not be exaggerated: The investigation has much further to go before Donald Jr.'s liability, or that of others, can be finally assessed.

"The defense that this was a routine meeting to hear about opposition research is nonsense. As ethics lawyers, we have worked on political campaigns for decades and have never heard of an offer like this one. If we had, we would have insisted upon immediate notification of the F.B.I., and so would any normal campaign lawyer, official or even senior volunteer.

"That is because of the enormous potential legal liability, both individually and for the campaign. The potential offenses committed by Donald Jr., his colleagues and brother-in-law who attended the meeting, and the campaign itself, include criminal or civil violations of campaign finance laws. These laws prohibit accepting anything of value from a foreign government or a foreign national. The promised Russian 'documents and information' would have been an illegal campaign contribution from a foreign government -- and a priceless one." http://nyti.ms/2uQkHTI

FROM 30,000 FEET -- "Trump Jr.'s love affair with Moscow," by Michael Crowley: "While President Donald Trump's handful of trips to Russia have been meticulously scrutinized, a review of his son's public statements spanning several years, as well as social media posts and interviews with Russia experts, shows that Donald Jr. spent far more time in the country than his father did, and developed personal ties there that continued beyond the November election. That might help to explain why Trump Jr. was so receptive to an approach last summer by a Russian lawyer promising dirt on Hillary Clinton which, as an intermediary told him in an email, was part of a Kremlin effort to assist his father's campaign." http://politi.co/2uhipzU

DARREN SAMUELSOHN, "Trump Jr. delivers 'smoking gun' to Mueller: The email chain released by the president's son shows an intent to collude with Russia, veteran

prosecutors and white-collar defense attorneys say": "Two of Donald Trump's most senior campaign advisers -- Jared Kushner and Paul Manafort -- are also included in the 'private and confidential' email exchange, which the lawyers interviewed by POLITICO say exposes them to the same potential federal criminal statutes as Trump Jr., including prohibitions on the solicitation or acceptance of anything of value from a foreign national, as well as a conspiracy to defraud the United States." http://politi.co/2tGYZTu

REPUBLICAN frustration on Capitol Hill with the continued drip, drip out of the Trump White House over its Russia scandal is hitting a new high. House Oversight Chairman Trey Gowdy's (R-S.C.) exasperation was on full display in a brief Fox News interview Tuesday. "If you had a contact with Russia, tell the special counsel about it! Don't wait until the New York Times figures it out!," Gowdy said. "Someone needs to get everyone in a room and say, from the time you saw Dr. Zhivago until the moment you drank vodka with a guy named Boris, you list every single contact with Russia." Still, Gowdy declined to say his oversight committee would investigate Russian interference, leaving that to special prosecutor Robert Mueller. ***Rachael Bade's full report*** http://politi.co/2ucchZ3

MOSCOW'S NEW MAN IN D.C. -- "Russian diplomacy about to get tougher edge in Washington," by Ali Watkins: "A new -- and likely more aggressive -- chapter in Russian diplomacy is about to begin in Washington with the departure of Russian ambassador Sergei Kislyak, whose soft-power approach to D.C. will be taken over by noted hardliner Anatoly Antonov. The switch in what has become one of Washington's most scrutinized jobs comes as the controversy over President Donald Trump and his allies' ties to Moscow intensifies, especially with the revelation that Donald Trump Jr. met with a Kremlin-linked lawyer at the height of the campaign after being told she could provide damaging information on Hillary Clinton as 'part of Russia and its government's support for Mr. Trump.'

"The scandal has at times centered on secret meetings with Kislyak - a long-time and well-respected diplomat who held the top post in Washington for nine years before his 2016 meetings with Trump officials made him a politically radioactive figure. The 62-year-old Antonov is also a longtime diplomat, but he recently completed a nearly six-year stint as a deputy in Russia's far more hardline defense ministry. Antonov's arrival is expected to be a noted shift in Washington's diplomatic community, where Kislyak was known as an affable fixture on the embassy party circuit, and an experienced political figure with routine official access to U.S. government circles." http://politi.co/2v9lcqd

TRUMP'S TRIP TO PARIS -- THE PRESIDENT is going to France for Bastille Day tonight. Here is what he is doing, per a background official to Annie Linskey of the Boston Globe: he is meeting Thursday with Joseph Dunford, the chairman of the Joint Chiefs, and then will also hold a bilateral meeting with with French President Emmanuel Macron. Trump and Macron will also hold a news conference. The two, accompanied by their wives, are scheduled to have dinner. "The senior administration official is aware that [German Chancellor Angela] Merkel is [scheduled] to be in Paris earlier on Thursday, but does not expect POTUS to meet with her. 'That's not on the schedule right now,' said a SAO. Trump returns back to Washington Friday.

BURGESS EVERETT and **JEN HABERKORN** -- **"Reeling Republicans take one last shot at Obamacare":** "Twenty-three years ago, President Bill Clinton and Senate Democrats canceled two weeks of the August recess to pass a major health care bill. They got nowhere. Now Senate Majority Leader Mitch McConnell is trying the same thing with the GOP for the August break, and it may lead to the same result. ... There will be a vote to advance the bill next week, McConnell said Tuesday. And even if it fails, he made clear to his members at a party lunch that there will be no more false starts despite an increasingly downbeat feeling in the caucus. New text of the proposal will be made public Thursday, and a Congressional Budget Office analysis is expected on Monday. 'We're in gridlock,' said Sen. John McCain of Arizona. He added sarcastically: 'Now we're going to look at a new approach. And we're going to get a CBO estimate on Monday. Yay!'" http://politi.co/2uQmJDm

-- NEW POLITICO/MORNING CONSULT POLL: "Republican voters to GOP: Keep working on Obamacare repeal," by Steven Shepard: "The Republican base wants Senate GOP leaders to continue trying to repeal Obamacare despite recent setbacks, according to a new POLITICO/Morning Consult poll. A clear majority of Republican voters, 67 percent, want the GOP to continue to work to repeal and replace the health care law, compared to only 21 percent who want party leaders to move on. Among all voters, 40 percent want congressional Republicans to continue to work on a new health care bill, and 47 percent want them to move on.

"The poll also suggests that Republicans want Senate GOP leaders to shift gears and work with Democrats to pass a new health care bill. More than half of Republican voters who want the GOP to keep trying to repeal Obamacare, 54 percent, want their leaders to work with Democrats, while just 39 percent want them to work only with other Republicans." http://politi.co/2uQunNQ

VALLEY TALK -- "Paying Professors: Inside Google's Academic Influence Campaign," by WSJ's Brody Mullins and Jack Nicas: "Google operates a little-known program to harness the brain power of university researchers to help sway opinion and public policy, cultivating financial relationships with professors at campuses from Harvard University to the University of California, Berkeley. Over the past decade, Google has helped finance hundreds of research papers to defend against regulatory challenges of its market dominance, paying $5,000 to $400,000 for the work ... In some years, Google officials in Washington compiled wish lists of academic papers that included working titles, abstracts and budgets for each proposed paper -- then they searched for willing authors, according to a former employee and a former Google lobbyist." http://on.wsj.com/2tGSz6S

THE JUICE ...

-- ELIANA JOHNSON is reporting that the Heritage Foundation has hired the Atlanta-based executive search firm CarterBaldwin to assist in its efforts to find a replacement for former Sen. Jim DeMint (R-S.C.) to lead the organization. ***The full report***

http://politi.co/2tFCE8O

-- HAPPENING TODAY -- FBI director nominee Christopher Wray has his confirmation hearing today. It will be live streamed on Twitter via PBS NewsHour. http://bit.ly/2t3g0J3 **GET SMART FAST** with Seung Min Kim and Darren Samuelsohn's piece on "The 6 toughest questions for the next FBI director": http://politi.co/2uhL207

-- SCOOP: "Donna Brazile to publish book on 2016 titled 'Hacks,'" by Isaac Dovere, whose birthday is today: "Brazile will celebrate the one-year anniversary of President Donald Trump's election with the publication of her book 'Hacks: The Inside Story of the Break-ins and Breakdowns that Put Donald Trump in the White House.' ... Brazile's publisher Hachette promises a book that is 'equal parts campaign thriller, memoir, and roadmap for the future.' The publisher did not say how much the book deal was worth." http://politi.co/2tdJXkJ

Playbook Reads

PHOTO DU JOUR: Former Vice President Joe Biden walks through the hallways on Capitol Hill on July 11. | Pablo Martinez Monsivais/AP Photo

FOR AVIATION GEEKS -- "Trump rethinking aviation agreements with Gulf countries," by Andrew Restuccia and Michael Grunwald: "The Trump administration is rethinking a pair of international aviation agreements with the United Arab Emirates and Qatar amid allegations that the Persian Gulf nations are unfairly subsidizing their state-run airlines, three administration officials told POLITICO.

"The administration is facing increasing pressure from three of the biggest American airlines -- Delta, United and American -- to do something about the Gulf carriers' low ticket prices, with the U.S. airlines arguing they can't compete with the UAE and Qatar's deep pockets.

"National Economic Council Director Gary Cohn, White House trade adviser Peter Navarro, chief of staff Reince Priebus and other senior administration officials have been discussing the issue behind the scenes for months, the officials said. Staffers from the NEC, National Security Council, Transportation Department and other agencies huddled for the latest strategy meeting on the aviation agreements last week while Trump's senior aides were in Europe." http://politi.co/2uhuK7g

HOT ON CONSTITUTION AVE. -- "Sources: Cohn is Trump's top candidate to replace Yellen at Fed," by Ben White and Victoria Guida: "President Donald Trump is increasingly unlikely to nominate Federal Reserve Chair Janet Yellen next year for a second term, four people close to the process said. National Economic Council Director

Gary Cohn is now the leading candidate to succeed Yellen as the world's most important central banker ... If Trump taps Cohn for the Fed, it could enrage economic nationalists in the White House and some staunchly conservative Republicans on Capitol Hill who don't like the former Goldman Sachs president's background as a Democrat who generally favors free trade." http://politi.co/2vbCnIC

TWO GOOD MCCLATCHY STORIES -- "Trump-Russia investigators probe Jared Kushner-run digital operation," by Peter Stone and Greg Gordon: "Investigators at the House and Senate Intelligence committees and the Justice Department are examining whether the Trump campaign's digital operation - overseen by Jared Kushner - helped guide Russia's sophisticated voter targeting and fake news attacks on Hillary Clinton in 2016. Congressional and Justice Department investigators are focusing on whether Trump's campaign pointed Russian cyber operatives to certain voting jurisdictions in key states - areas where Trump's digital team and Republican operatives were spotting unexpected weakness in voter support for Hillary Clinton, according to several people familiar with the parallel inquiries." http://bit.ly/2udFhiU

--"Lawyer that met Don Jr. had ties to Russian government, spy agency," by Kevin G. Hall: "The Russian lawyer at the center of Donald Trump Jr.'s scandal over possible collusion with Kremlin election meddlers has denied she has ties to the Russian government. But she threatened action by the Russian security service, the FSB, against a rights group working to expose corruption by Russian government officials, according to information in the possession of U.S. prosecutors who had been investigating a large and complex money laundering case involving Russian funds." http://bit.ly/2tM2xIP

FUN READ - "Inside the Semi-Secret Life of Rob Goldstone, the Playboy Who Could Bring Down Trump," by The Daily Beast's Gideon Resnick and Kelly Weill: "Before he organized a meeting between Donald Trump Jr. and a Kremlin-connected attorney, Rob Goldstone was known as a New York City playboy who hosted vodka-soaked parties with younger acquaintances in the Russian Tea Room, a Manhattan restaurant blocks away from Trump Tower. Goldstone, 57, is a British music publicist and former journalist based in the New York area, who has represented musicians including John Denver and Michael Jackson. ... [O]ne former member of the scene [said it was the] 'kind of crowd where an apartment party in a loft on Madison Square Park turned into a limo ride turned into illicit substances in the bathrooms at Boom Boom Room, all of it getting paid for ... somehow. One of the fixtures in this scene was Rob, who was always the only old guy in the group." http://thebea.st/2tLUUvZ

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in this country becoming more complex, it's clear that innovative, holistic solutions are required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

TRUMP INC. - "Hackers have been stealing credit card numbers from Trump's hotels for months," by WaPo's Abha Bhattarai: "Guests at 14 Trump properties, including hotels in Washington, New York and Vancouver, have had their credit card information exposed, marking the third time in as many years that a months-long security breach has affected customers of the chain of luxury hotels. The latest instance occurred between August 2016 and March 2017, according to a notice on the company's website, and included guest names, addresses and phone numbers, as well as credit card numbers and expiration dates. The breach took place on the systems of Sabre Hospitality Solutions, a reservation booking service used by Trump Hotels, but did not compromise the Trump Hotels' systems." http://wapo.st/2sOBxRs

BEYOND THE BELTWAY -- "L.A. is a virtual lock to host 2024 or '28 Olympics after IOC vote," by L.A. Times' David Wharton: "The International Olympic Committee on Tuesday approved an unusual proposal to name two winners in the Summer Games bidding race between Los Angeles and Paris. Gathering at a meeting in Switzerland, IOC members unanimously agreed to the idea of awarding 2024 to one city and 2028 to the other. The decision all but assures that Southern California will get the Olympics back for a third time." http://lat.ms/2t0XT6x

MEDIAWATCH -- "Scarborough tells Colbert: 'I'm not going to be a Republican anymore'," by Cristiano Lima: "Joe Scarborough, the longtime Republican political figure and MSNBC host whose public feud with President Donald Trump grew to a fevered pitch two weeks ago amid a series of heated attacks, said he is leaving the Republican Party. 'I've got to become an independent,' Scarborough, a one-time Republican congressman and prominent figure in the conservative media sphere, told CBS' Stephen Colbert during an interview airing Tuesday night." http://politi.co/2tLrPkb ... ***5-min. video*** http://bit.ly/2vbtsHi ... ***Scarborough plays his song "Monkey House"*** http://bit.ly/2u7VLK5

Playbookers

SPOTTED: Valerie Jarrett and Betsy DeVos last night dining at Fiola Mare. They were at different tables ... Rep. Karen Handel (R-Ga.) walking out of a house on Q street near Dupont Circle just before 8 p.m. yesterday, talking on the phone, still wearing her

American flag pin ... RNC Chairwoman Ronna Romney McDaniel waiting yesterday at the Pittsburgh airport for a delayed flight to DCA ... Reps. Jim Renacci (R-Ohio) and Lou Barletta (R-Pa.) enjoying cigars last night on the patio at Bullfeathers ... Sen. Robert Menendez (D-N.J.) walking across Connecticut Avenue yesterday evening headed to Morton's Steakhouse.

OUT AND ABOUT -- SPOTTED last night at a dinner and a special screening of "Wonder Woman" at the MPAA, hosted by Carol Melton, EVP of Time Warner: Rep. Debbie Dingell (D-Mich.), Susan Molinari, Deborah Rutter, Deborah Lehr, Sally Quinn, Genny Ryan, Capricia Marshall, Ruth Marcus, Tammy Haddad, Hilary Rosen, Mary Brady, Heather Podesta, Penny Lee, Ann Stock, Amy Weiss, Jennifer Maguire, Melissa Moss, Elizabeth Bagley, Kathy O'Hearn, Sandra Sobieraj Westfall.

-- Amazon Public Policy celebrated its third annual Prime Day with a party last night at the National Union Building. They served banana daiquiris, ate from a raw bar and munched on popcorn. ***Pics*** http://smu.gs/2uh1BJn **SPOTTED** : Sen. Jim Inhofe (R-Okla.), Reps. Joe Wilson (R-S.C.), Eric Swalwell (D-Calif.), Mike Bishop (R-Mich.) and Sheila Jackson Lee (D-Texas), Internet Association's Michael Beckerman and Amazon's Jay Carney, Brian Huseman.

TRANSITIONS - Alexandra Smith has been named the new executive director of America Rising PAC. She is the former chairwoman of the College Republican National Committee and will be the first woman to lead the organization. **Colin Reed** will now be a senior adviser at AR, working on tracking potential 2020 Democrats. ***Katie Glueck's story on changes at the group*** http://bit.ly/2uQhCTy ... **Kristin Lee** is joining Facebook's communications team to work on Internet connectivity and access. She most recently served as comms director and senior policy adviser for the Obama White House Office of Science and Technology Policy. ... The Center for International Policy has hired **Salih Booker** as its new executive director. He most recently was VP of external relations at the U.S. Institute of Peace. ...

... The Herald Group has added **Marc Brumer**, former comms director for Sen. Kirsten Gillibrand (D-N.Y.) as a VP. It has also hired **Jason Cannata**, formerly with FP1 Strategies, as a director and **Seth Guidry,** formerly with Lukens Company, has joined as a digital account manager. ... **Lara Brown** has been formally named the director of GW's Graduate School of Political Management. She's been at GW for four years as a professor and has been the school's interim director for the last year.

WEEKEND WEDDINGS -- Sacha Samotin, co-founder of political data analytics firm Applecart, got married this weekend to **Laura Resnick** , Ph.D. candidate at Columbia University, in a traditional Jewish ceremony at Natirar Estate overlooking the hills of Somerset County, New Jersey. The couple met in 2013 as undergrads at UPenn. Pool report: "Wedding highlights included a hilarious musical homage to the couple by best-man Noah Samotin and a speech from the bride's sister, Allison Resnick, quoting Virgil in the original Latin. Former Schwarzenegger/Huntsman/Kasich strategist Matt David was spotted on the dance floor enthusiastically lifting the bride's chair aloft during the

hora." ***Pic*** http://bit.ly/2uQogsT

-- **SPOTTED:** Sacha's business partners Matt Kalmans and Anthony Liveris, Audrey Scagnelli, Campbell Curry-Ledbetter, Mitchell Resnick, Luke Thompson, Allan Anders, Elizabeth Ashford and Conyers Davis, Stephen Geer and Szelena Gray.

WELCOME TO THE WORLD -- Harley-Davidson lobbyist **April Canter Bohrer** and NAM's **David Bohrer** (who was a photographer for former VP Cheney) welcomed Mia Bohrer into the world last week. "Mom and baby are doing great; April says papa Dave is a already a 'supreme swaddler and master diaper changer'!" ***Pic*** http://bit.ly/2u85hNb

BIRTHDAY OF THE DAY: Ryan Lizza, Washington correspondent for The New Yorker, celebrating with "a quiet dinner at home with my two boys." Asked how the Trump is presidency going: "Off to a brilliant start!" Read his Playbook Plus Q&A: http://politi.co/2sOZ4Sf

BIRTHDAYS: Susan Axelrod ... Josh King, former Clinton visual guru, author of "Off Script," and now weekend host of Slate's "Trumpcast" (h/t old White House buddy Jeremy Gaines) ... Matt Rosenbaum, Treasury alum now at Paul Weiss, is 31 ... Adam Elias, COS to Rep. Bill Foster (D-Ill.) ... Politico's Isaac Dovere is 37 ... Beth Lester Sidhu, COO of PE firm The Stagwell Group and a Politico alum ... Brendan Daly, senior director of comms at Save the Children Action Network and former comms director for Nancy Pelosi (h/t Allie Wright and) ... Christie Vilsack ... Jason Childress ... Paul Shone (h/ts Teresa Vilmain) ... Eric Ueland, who has been nominated to be under secretary of state for management, is 52 ... Thea McDonald ... newly upped entertainment spox Brandon Shaw of Fifteen Minutes Public Relations leaves youth behind ... Eva Brown ... Ginny Justice ... Javier Folger, director of marketing and comms for the Appalachian Trail Conservancy (h/t Jon Haber) ...

... Alex Levy, president of speechwriting firm A.H. Levy & Co. ... Jordan Gehrke, partner of Vertical Strategies and a Ben Sasse alum ... John Gans Jr. ... David Lerman ... Nicole Narea ... Rep. Betty McCollum (D-Minn.) is 63 ... Rep. Kyrsten Sinema (D-Ariz.) is 41 ... former Rep. Mickey Edwards (R-Okla.) is 8-0 ... former Rep. J.D. Hayworth (R-Ariz.) is 59 ... Angela Belden Martinez ... Ashley Williams ... CBS News' Mary Walsh ... Gregorio Gomez, investment banking analyst at Goldman Sachs ... documentary and news producer and writer Basel Hamdan is 36 ... Jessica Hanks, SVP at DKC ... Brian Schoeneman is 4-0 ... Debbee Keller, director of public affairs at WeWork ... Rachel DiCarlo Currie ... Seton Motley ... writer-producer Brian Grazer is 66 ... actress Michelle Rodriguez is 39 ... Rachel Brosnahan ("House of Cards") is 27 ... Nobel peace prize laureate Malala Yousafzai is 2-0 (h/ts AP)

Subject: Former Arizona environmental chief tapped for EPA operations job

By Alex Guillén

06/14/2017 06:58 PM EDT

Arizona's former environmental chief has been tapped to be EPA's "chief of operations," according to a release from Gov. Doug Ducey's office.

Henry Darwin has been the state's chief operating officer since 2015, and is also acting director of the state's Department of Economic Security. Before that he spent five years as director of the Arizona Department of Environmental Quality. Darwin will remain in his Arizona post until June 30.

It is not clear what the job of chief of operations entails, or how it is different from deputy administrator, who traditionally runs day-to-day operations at EPA. Agency spokespeople today did not immediately answer questions about the position.

In 2014, Darwin testified before Congress that he did not believe EPA had the authority to regulate greenhouse gases as EPA did under its Clean Power Plan. He has a degree in engineering from the University of Arizona and a law degree from Lewis & Clark College.

Subject: Today on Climate Beat

June 15, 2017

Today on Climate Beat . . .

. . . we talked money, reporting that top Republicans and Democrats on the House appropriations panel overseeing EPA's budget are sharply criticizing the Trump administration's fiscal year 2018 proposal, suggesting that Congress is unlikely to adopt many of its steep proposed cuts.

Our daily news roundup previewed the lawmakers' concerns over the proposed $2.6 billion cut to the agency, which represents a 31 percent reduction.

Speaking of Congress, House appropriations interior subcommittee Chairman Rep. Ken Calvert (R-CA) is signaling strong concerns if the Trump EPA were to attempt to rescind California's longstanding authority to enforce its own vehicle emissions standards.

In personnel news, Arizona's former top environment official Henry Darwin will soon join EPA as assistant deputy administrator, a position that does not require Senate confirmation -- and his record as a state official shows support for flexible ways to comply with federal environmental programs, deferring to states, and opposition to climate rules.

And over at the Energy Department, officials are closing a small office focused on international climate collaboration – a move that could complicate the United States' ability to develop and advance clean energy technologies in coordination with other countries.

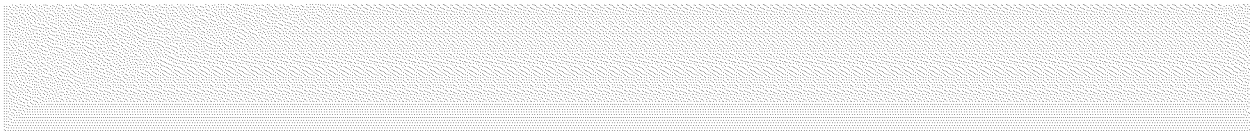
EPA Administrator Visits with Arizona Governor Doug Ducey

Pruitt Officially Approves Arizona Regional Haze State Implementation Plan

PHOENIX (October 6, 2017): Environmental Protection Agency (EPA) Administrator Scott Pruitt visited with Arizona Governor Doug Ducey today where he officially approved an Arizona Regional Haze State Implementation Plan (SIP) and a withdrawal of Federal Implementation Plan (FIP) for Coronado Generation Station ("Coronado"). This action approves a source-specific revision to the Arizona Regional Haze SIP for Coronado and withdraws from a FIP promulgated by the EPA in 2012 for Coronado, a facility located in eastern Arizona and owned and operated by the Salt River Project Agricultural Improvement District (SRP).

"Governor Ducey and the Arizona Department of Environmental Quality have delivered a thorough plan that aims to improve visibility and reduce emissions that cause regional haze," **said Administrator Pruitt**. "Our goal at EPA is not to use a one-size-fits-all approach to addressing state environmental problems, but to empower our state partners to make their own plans to address their individual environmental needs."



"Arizonans should chart their own destiny, rather than being forced to comply with one-size-fits-all policies from the federal government," **said Governor Ducey.** "What a welcome change to have EPA Administrator Pruitt who understands these decisions are best made at the state level and that taxpayer dollars can be saved by shifting decisions out of Washington, D.C."

Administrator Pruitt began his visit meeting with Governor Doug Ducey to discuss replacing the Obama-era FIP. Following their meeting, Administrator Pruitt and Governor Ducey held a roundtable with Arizona industry leaders where they discussed the FIP replacement, National Manufacturing Day, streamlining regulatory burdens and permitting, the Agency's proposal to rescind the 2015 "Waters of the United States" rule, and the Agency's review of the Clean Power Plan in light of President Trump's executive order.

EPA Administrator Scott Pruitt and Arizona Governor Doug Ducey

June 7, 2017

Today on Climate Beat . . .

. . . we went to court, where environmentalists challenging approval of a coal mining plan argue that the repeal of the White House Council on Environmental Quality's greenhouse gas guidance for National Environmental Policy Act reviews does not absolve the government from needing to consider GHGs in such assessments.

In other litigation news, a federal appellate court is requesting EPA quickly file a brief defending its administrative stay of several requirements of the Obama-era oil and gas methane standards after several environmental groups urged the court to block the pause – a first legal test of a Trump action to roll back or revise GHG regulations.

In regulatory updates, a top EPA air official pledged that there is "more to come" from the agency's air office, noting that the administration has kicked off high-profile reviews of several major GHG regulations for power plants, oil and gas drilling and landfills.

And our daily news roundup looked at whether proposed budget cuts to EPA's GHG reporting program would make it difficult to discern whether Trump's climate policy rollbacks are causing U.S. emissions to flatline or rise.

Subject: Playbook Power Briefing, presented by Samsung: TRUMP'S LAWYER threatens to file a complaint against Comey -- POTUS news conference at 2:45 p.m. -- DAN SCAVINO violated Hatch Act -- OSSOFF up 7 in new poll

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Samsung
06/09/2017 01:00 PM EDT

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

THE LATEST ON COMEY -- "Trump's lawyer to file complaint against Comey over memos," by CNN's Joe Johns and Dan Merica: "President Donald Trump's outside attorney plans to file a complaint against former FBI Director James Comey with the Justice Department Inspector General and the Senate judiciary committee, two sources with knowledge of the situation told CNN. The complaint will focus on Comey's testimony that he gave a friend the content of memos about his conversations with Trump and asked the friend to then give that information to a reporter. Comey said Friday that he gave the friend -- later identified as Daniel Richman, a longtime Comey confidante and Columbia University professor -- the information after Trump tweeted that he may have tapes of his conversations with the fired FBI director. ...

"It is unclear when Trump's attorney, Marc Kasowitz, will file the complaints, but the source said they are actively exploring their options. The Justice Department, however, has limited jurisdiction over former employees. They can investigate but the remedy in the event of finding wrongdoing would be to make a note in Comey's file should he ever seek to be employed by the DOJ again." http://cnn.it/2t2nyqY

NOTE: Trumpworld has threatened his opponents before and not followed through. Remember when Trump threatened a lawsuit against the New York Times and Sen. Ted Cruz (R-Texas)? That didn't happen.

TRUMP did not address Comey at a speech today at the Department of Transportation. He will have a joint press conference with Romanian President Klaus Iohannis at 2:45 p.m.

GROWING THE TEAM -- "Mueller Enlists Top Criminal Law Expert for Russia Probe," by The National Law Journal's Tony Mauro: "Special counsel Robert Mueller has recruited the Justice Department's top criminal law expert to help with his investigation of ties between the Trump presidential campaign and Russian officials.

"Deputy solicitor general Michael Dreeben, who has argued more than 100 cases

before the U.S. Supreme Court and oversees the Justice Department's criminal appellate docket, will be assisting Mueller on a part-time basis, according to sources familiar with the arrangement. While helping Mueller, Dreeben will continue in his role in the solicitor general's office, with other lawyers in the office pitching in to help him with upcoming criminal cases." http://bit.ly/2t2aRwo

U.K. ELECTION UPDATE -- "May vows to stay on as PM with Northern Irish allies: Tory leader gets permission from queen to hang on as prime minister after losing her majority in parliament," by POLITICO Europe's Annabelle Dickson: "Theresa May will stay on as prime minister with her Conservatives - who lost their majority in Thursday's election - getting parliamentary support from Northern Ireland's Democratic Unionist Party (DUP), she said on Friday. ... The terms of a deal with the DUP, which was founded by hard-line Unionist Ian Paisley and returned 10 MPs Thursday, are not yet clear, but they will likely push for a soft border between Northern Ireland and the Republic of Ireland after Brexit." http://politi.co/2t2MVcn

SUNDAY SHOW UPDATE -- Preet Bharara will be on ABC's "This Week" for his first television interview since he was fired from his U.S. attorney position.

****** **A message from Samsung:** Samsung is committed to creating high-skilled jobs, investing in cutting-edge manufacturing and R&D, and forming trusted partnerships nationwide. Samsung's footprint in the U.S. has been growing for nearly 40 years, with 18,500 employees across the country. Our Austin, TX semiconductor facility is one of the single-largest U.S. FDI's. Visit Samsung.com/VisionForTomorrow for more. ******

FEC FINE TIME -- "BINGO! It's a costly game for the Michigan Democratic Party," by the Detroit Free Press' Kathleen Gray: "Games of chance have always been risky, but they also just got very costly for the Michigan Democratic Party. The party has agreed to pay a hefty $500,000 civil fine to the [FEC] - one of the largest penalties ever levied by that office - after an internal investigation of its bingo operation, which was used for political fund-raising, found numerous examples of shoddy record keeping, contributions that exceeded limits and campaign finance reporting inaccuracies." http://on.freep.com/2t2gP0k

HMM... -- "Michael Cohen Pitched Investors For A Powerful Ukrainian Oligarch's Company," by BuzzFeed News' Anthony Cormier, Chris McDaniel, John Templon and Tanya Kozyreva: "Before he became President Donald Trump's personal lawyer, Michael Cohen worked on behalf of a company controlled by another wealthy and well-connected man: Viktor Topolov, a politician whose associates are members of the Russian and Ukrainian underworld.

"The leader of Ukraine's coal ministry and a personal friend of that country's president, he had been a board member at a state-run bank, the top executive at a construction company and the president of a professional football club. But beyond his official titles, Topolov has also been investigated twice for money laundering and embezzlement, and the FBI has said his associates are 'well known' members of the

Russian mafia. Back in 2006, he co-owned an ethanol company with his long-time business partner, Alex Oronov. The two men wanted to build a factory in Ukraine, so Oronov tapped his son-in-law, Bryan Cohen, along with his brother, Michael Cohen, to pitch the deal to American investors from Morgan Stanley. Both Cohen brothers today insist they knew nothing about Topolov when they tried to raise money for his company." http://bzfd.it/2t31rR7

GETTING IN TROUBLE -- @KenVogel: "Trump WH aide @DanScavino 'violated the Hatch Act' by calling for defeat of @justinamash from then-WH-linked twitter feed, @us_osc concludes" ***The letter*** http://bit.ly/2t2IX37

ON THE HILL -- "Grassley rips Trump administration for blowing off certain oversight requests," by Burgess Everett: "The Trump administration's policy of ignoring the oversight requests of Democrats and rank-and-file members has earned it a powerful enemy: Senate Judiciary Committee Chairman Chuck Grassley. In a letter to President Donald Trump, the veteran Iowa Republican senator urged Trump to reverse a policy instituted by the White House and the Department of Justice's Office of Legal Counsel to only answer oversight requests from committee chairmen, all of whom are Republicans because of GOP control of Congress. Though Grassley said that the Obama administration did sometimes ignore him, he said the formalization of a policy of ignoring the minority party 'doesn't drain the swamp, Mr. President. It floods the swamp.'" http://politi.co/2t2zFnN ... ***The letter*** http://bit.ly/2t2MJcQ

DISTURBING -- "Not A Random Attack: New Details Emerge From Investigation Of Slain NPR Journalists," by NPR's Robert Little: "NPR journalists David Gilkey and Zabihullah Tamanna died a year ago this week, ambushed on a remote road in southern Afghanistan while on a reporting assignment traveling with the Afghan National Army. Since their deaths, NPR has been investigating what happened, and today we are sharing new information about what we learned. It's a very different story from what we originally understood.

"The two men were not the random victims of bad timing in a dangerous place, as initial reports indicated. Rather, the journalists' convoy was specifically targeted by attackers who had been tipped off to the presence of Americans in Afghanistan's Helmand province. Gilkey, an experienced photojournalist, and Tamanna, an Afghan reporter NPR hired to work with him, were sitting together in a Humvee when they were attacked." http://n.pr/2s4GU1c

WHAT THE NRCC IS READING -- "AJC poll: Ossoff opens lead over Handel in Georgia's 6th," by The Atlanta Journal-Constitution's Greg Bluestein: "An Atlanta Journal-Constitution poll released Friday shows Democrat Jon Ossoff has a 7-point edge over Republican Karen Handel in the nationally watched race to represent Georgia's 6th Congressional District."

"The poll of likely voters has Ossoff leading Handel by a margin of 51 percent to 44 percent ahead of the June 20 runoff. About 5 percent of voters are undecided. The

margin of error is 4 percentage points. ... He's capturing about 13 percent of Republican voters and 50 percent of independents - a crucial voting bloc that leans to the right in the state. It shows almost no crossover on the flip side; only 3 percent of Democrats say they're backing Handel. Ossoff gets support from 44 percent of white voters, a big number for a Democrat in Georgia." http://on-ajc.com/2rlXgMG

AFTERNOON READ -- "Twelve seconds of gunfire: In tiny Townville, S.C., first-graders are haunted by what they survived -- and lost -- on a school playground," by WaPo's John Woodrow Cox. ***Heartbreaking, but important, read*** http://wapo.st/2s4K5pH

DOUBLE DUTY -- After helping lead the Comey hearing Thursday, Sen. Mark Warner (D-Va.), attended a fundraiser for fellow Virginia Sen. Tim Kaine at Warner's home in Old Town. **SPOTTED:** Sen. Amy Klobuchar (D-Minn.), Mario Marino, Russ Ramsey, Jack Davies and Kay Kendall, Raul and Jean-Marie Fernandez, Ambassador Howard Gutman and Michelle Loewinger, Ray and Shaista Lahood, Mike Henry, and many more.

PINZON FAREWELL -- Colombian Ambassador Juan Carlos Pinzon, who is running for president in the country, was honored at a farewell event at the State Department Thursday afternoon. Acting chief of protocol Rosemarie Pauli hosted the event. **SPOTTED:** Secretary of Homeland Security, John Kelly, Joshua Bolten, Mike Rogers, Luis Moreno, Ambassadors from Peru and Italy, Admiral Kurt Tidd, Michelle Kosinski, John Boehner and Coach Kathy Kemper.

OUT AND ABOUT -- Starz hosted a premiere party for season four of its show "Power" at the Newseum last night. *Pics* http://bit.ly/2t1Xegr ... http://bit.ly/2t2l5gc ... *Trailer* http://bit.ly/2r36KPT **SPOTTED:** Reps. Hakeem Jeffries (D-N.Y.) -- who represents the district where the show is filmed, Yvette Clarke (D-N.Y.), Lacy Clay (D-Miss.), Brenda Lawrence (D-Mich.), Lisa Rochester Blunt (D-Del.), Frederica Wilson (D-Fla.), Tony Cardenas (D-Calif.), Andre Carson (D-Ind.) and Donald Payne Jr. (D-N.J.), Delegate Stacey Plaskett (D-Virgin Islands), FCC Commissioner Mignon Clyburn, Washington Wizards' John Wall, cast members of The Real Housewives of Potomac, rapper 50 Cent, Omari Hardwick, Naturi Naughton, Lala Anthony, Joseph Sikora, Lela Loren, Larenz Tate, Starz CEO Chris Albrecht, Jas Sajjan and Taylor Jachman.

-- National Geographic, Bloomberg Philanthropies and **D.C. Mayor Muriel Bowser** hosted a screening of the documentary From the Ashes last night at National Geographic's HQ. The film premieres on June 25. **SPOTTED:** Katherine Oliver, Gary Knell, Courtney Monroe, Chris Albert, Kathleen Sheekey, Ryan Williams, Robin Goldman, Michael Bonfiglio, Carl Pope, Misty O'Quinn, Tommy Wells, Allison O'Brien, Kelly McMahon, Tammy Haddad, Kelley McCormick, Lindsay Drewel, Meredith Webster, Macy Luck, Chris Albert, Lee Cochran, Dylan Brown, Elizabeth Pleeter, Ali Rubin, Adrienne Elrod, Nancy Cutler, Maia Johnson, Alex Hornbrook, Sidney Beaumont, Michael Bonfiglio, Caitlin Ledacki, Chris Ortman, Dou Landry and Mary Jennings. *Trailer* http://bit.ly/2t28c5K

SPOTTED: Jennifer Swanson, Jonathan Prince, Jon Lovett, Ronan Farrow and Marc Adelman in Stockholm at the Brilliant Minds Symposium today.

****** **A message from Samsung:** Samsung's footprint in the U.S. has been growing for nearly 40 years. Today, we employ more than 18,500 people across the country, covering nearly every state. Samsung Austin Semiconductor (SAS) hosts 6,000+ manufacturing and engineering jobs and has become a $17bn investment - making it one of the largest single FDI's in the U.S. We're also committed to building strong communities through citizenship and support of programs for children's health, STEAM education, veterans and military families. Visit Samsung.com/VisionForTomorrow for more. ******

Subject: Morning Energy: Democrats hold fire on climate amid hurricane devastation — Pruitt, Ross to meet with Trump today — Upton pushes Enbridge for immediate repairs

By Anthony Adragna | 09/12/2017 05:41 AM EDT

ALL QUIET ON THE CLIMATE FRONT: Even as the double whammy of Hurricanes Harvey and Irma offers the U.S. an up-front glimpse of the types of devastation the world faces due to a warming climate, Democrats are largely holding their fire on Republicans, Pro's Emily Holden and Elana Schor report . Instead, they appear to be heeding the warnings of several of President Donald Trump's Cabinet officials that discussing climate change with large swaths of land still underwater would be insensitive. "The response to Hurricanes Harvey and Irma thus far has been more muted, likely in part because of a desire to keep the focus on immediate disaster relief," said Trevor Houser, former energy adviser to Hillary Clinton's presidential campaign.

Democrats say there will be opportunities to explore the linkage between extreme weather and manmade climate change moving forward. "We have a lot of time to make that point, and I think we also have a lot of legislative opportunities as we look at reauthorizing flood insurance and funding the disaster relief," Sen. Sheldon Whitehouse , one of staunchest climate hawks, said. Environmental advocates have hit Trump's inaction on climate change online, but have shied away from criticizing Democrats. "The truth is, I'd settle for politicians not talking about climate at all, and instead actually doing something," Bill McKibben, founder of 350.org, said.

Tone shift at the White House? Tom Bossert, Trump's homeland security adviser, told reporters Monday that the cause of both devastating hurricanes is "outside of my ability to analyze" but he acknowledged a need to bolster flood and coastal defenses threatened by rising seas and powerful storms. "We continue to take seriously the climate change, not the cause of it, but the things that we observe," he said. "What President Trump remains committed to is making sure that federal dollars aren't used to build things that will be in harm's way later or that won't be hardened against the future predictable floods that we see." While those words may offer hope to some, ME would note Trump has erased climate considerations from government processes, nixed flood standards for federal projects, withdrawn the U.S. from the Paris climate change agreement, pulled back a regulation to limit carbon dioxide from power plants and halted funding to help poor nations adapt to new weather extremes.

More money needed? Asked if the administration would put more money into agencies like FEMA and EPA, Bossert expressed openness to requesting additional funds — "We'll put money in as money is needed to address the need," he said — but added "right now we have plenty of resources to get through this."

Irma could've been even worse: Even as millions lost power during Hurricane Irma, the head of the state's largest utility said outages could've been even worse if Florida Power & Light Co. had not spent $3 billion to improve the energy grid, POLITICO Florida's Bruce Ritchie reports. "With this kind of storm what I can tell you is, we would be facing a much longer restoration" without the work, FPL President and CEO Eric Silagy said Monday.

Nelson wants Perry's help: The federal government should establish a fuel reserve in Florida to help prevent the fuel shortages that occurred during the response to Irma, Sen. Bill Nelson wrote in a Monday letter to Energy Secretary Rick Perry. "A Florida gasoline supply reserve would ensure that residents and first responders have access to an emergency supply of fuel, and help prevent the shortages that may have kept some from evacuating and may hinder recovery efforts going forward," Florida's senior senator wrote. DOE created the Northeast Gasoline Supply Reserve in 2014 following similar issues during Hurricane Sandy, he noted.

Checking in on Texas: EPA reported late Monday that 35 of the 2,238 drinking water systems affected by Harvey remain shut down, while 35 of the 1,219 wastewater treatment plants in affected countries also remain inoperable. The agency further said it had "directed potential responsible parties or has independently started collecting samples at the 43 Superfund sites to further confirm any impacts from the storm" and said additional assessments continue at two sites — San Jacinto Waste Pits and U.S. Oil Recovery. In addition, Reuters reported federal officials are cleaning up spills of oil and chemicals spilled from a dozen industrial facilities in the aftermath of Harvey.

Yikes: Water testing arranged by The New York Times from two Houston neighborhoods showed alarmingly high levels of bacteria and toxins. Tests from the Briarhills Parkway in the Houston Energy Corridor showed levels of E. coli at levels four times of what's considered safe, while Clayton Homes public housing development downtown showed concentrations of E. Coli more than 135 times healthy levels, as well as elevated levels of lead, arsenic and other heavy metals. The EPA said Monday that 40 of 1,219 waste treatment plants affected by Harvey were not working.

SIREN! Trump meets this morning at 10 a.m. in the Oval Office with EPA Administrator Scott Pruitt and Commerce Secretary Wilbur Ross. EPA and the White House did not respond to further requests about what they'll be chatting about.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and NRDC's Ana Unruh Cohen was the first (of many) to identify Sam Rayburn as the longest-serving House speaker. For today: Which state has had eight lawmakers go on to serve as speaker? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro.

EPA LAUNCHES PROBE INTO ARKEMA INCIDENT: Officials at EPA have requested information from Arkema to help them ascertain whether the chemical company properly followed Clean Air Act safety regulations before Hurricane Harvey. EPA asked in its letter, obtained by ME Monday, for a response from the company within 10 calendar days of receipt. Among the information sought is what the company did before the storm to prepare for potential flooding and loss of electricity, as well as the quantities of chemicals stored on site. Several chemical containers at the Crosby, Texas, facility caught fire after the hurricane deluged it with water.

MINE PRUITT VISITED FURLOUGHS WORKERS: Consol Energy's Bailey Mine

complex, which EPA Administrator Scott Pruitt visited back in April as one of the first stops on his "Back to Basics" campaign, furloughed more than 300 workers Monday after Pennsylvania's Department of Environmental Protection failed to approve a permit modification in time, the Observer-Reporter reports . A company spokesman said it was the first time in the site's history that state environmental regulators failed to approve a permit in a "timely manner" to maintain operations.

THEY'RE BACCCCCCK: House lawmakers return for a day and a half of work, with a slate of 6:30 p.m. votes expected to include the Interior and EPA section of eight-title, spending package H.R. 3354 (115) under consideration.

SPORTSMEN'S PACKAGE PUSH BEGINS AGAIN: The House Natural Resources Federal Lands subpanel today considers a broad sportsmen's package, H.R. 3668 (115). It contains a controversial provision that would make it easier to obtain gun silencers, bars EPA from ever regulating lead ammunition under the Toxic Substances Control Act, and reauthorizes the North American Wetlands Conservation Act for five years at $50 million per year. The subpanel cancelled the initial hearing on the bill following the June congressional baseball shooting, which the measure's sponsor, Jeff Duncan (R-S.C.), witnessed.

If you go: The session kicks off at 10 a.m. in Longworth 1334. Ranking member Raul Grijalva and Rep. Mike Thompson will discuss the gun silencer provision during a press availability following the hearing.

Other hearings shelved: After Hurricane Irma delayed the House's return, the Energy and Commerce Energy Subcommittee canceled what was to have been a blockbuster hearing on the grid's reliability. Witnesses would have included FERC Chairman Neil Chatterjee (in what would have been his first appearance since confirmation), as well as Gerry Cauley, president of the North American Electric Reliability Corporation, and a DOE official. In addition, the House Science Committee postponed a full committee hearing on the electric grid's resilience that had also been slated for 10 a.m.

SENATE ENERGY LOOKS AT LABS: Senators on the Energy and Natural Resources Energy Subcommittee take a look at the contributions of DOE's national laboratories at a hearing beginning at 3 p.m. Sens. Cory Gardner and Joe Manchin deliver opening remarks, followed by testimony from representatives of West Virginia University, Argonne National Laboratory, Duke Energy and National Renewable Energy Laboratory. More here.

MAIL CALL! UPTON PUSHES ENBRIDGE FOR REPAIRS: Rep. Fred Upton, chairman of the Energy and Commerce Energy Subcommittee, sent a letter Monday urging Enbridge to "conduct repairs immediately" on its Line 5 pipeline after revelations of gaps in the line's protective coating. "The more recent disclosure of a loss of protective coating and the likelihood that human error was a factor raises serious concerns about Enbridge's compliance with federal pipeline safety laws," Upton wrote. "Rest assured I will remain hyper-vigilant and expect prompt response to my request."

MORE VOICES WEIGH IN ON SOLAR TARIFF CASE: Six right-leaning policy groups

will urge the International Trade Commission not to back a bid from solar manufacturers Suniva and SolarWorld USA to impose tariffs on imported solar products in a letter today, Pro Trade's Megan Cassella reports . The groups fear an affirmative ITC decision would double the cost of solar products in the U.S. and leave the country vulnerable to retaliation and challenges at the WTO. "Similar to steel in 2002, solar tariffs today would amount to nothing more than a crony capitalist giveaway to failing companies," they wrote.

GREENS CHALLENGE NEVADA LEASE SALES: The Sierra Club and the Center for Biological Diversity filed a lawsuit Monday challenging BLM's June sale of oil and gas leases in northern Nevada. The lawsuit argues the government failed to consider the possible consequences of drilling in the area, ranging from contamination of desert water sources to increased greenhouse gas emissions. The June 13 sale brought in just $38,560 from three parcels covering approximately 5,760 acres out of more than 95,000 acres offered.

NO MASS EXODUS AMONG THE FEDS: Just more than two percent of federal employees have left their positions since Trump became president, more than during presidents George W. Bush and Barack Obama's opening months but less dramatic than the mass departures feared, BuzzFeed reports. Among the highest departure rates were the departments of Energy (2.7 percent) and Interior (2.5 percent).

REPORT: ROOM FOR IMPROVEMENT FOR SOLAR DIVERSITY: A report out Monday from the Solar Foundation finds women represent just 28 percent of employees in the 260,000 person strong solar industry and people of color are a tiny share of the workforce. African-Americans hold just 7 percent of solar jobs, while Hispanic or Latino employees are 17 percent of the workforce and Asians are 9 percent. The study concludes "women and people of color face significant hurdles to achieving equal pay and positions in the solar industry."

MOVERS, SHAKERS: Adam Kolton has been named executive director of the Alaska Wilderness League, effective Oct. 10. He'll join from the National Wildlife Federation where he's currently vice president of federal advocacy.

SPOTTED: Gina McCarthy, sporting a rolling backpack, at the Dirty Habit bar near the EPA. She was drinking red wine and laughing jovially on Monday evening, per our tipster.

Stories from POLITICO Pro

Democrats mum on climate as storm damage climbs Back

By Emily Holden and Elana Schor | 09/12/2017 05:05 AM EDT

Hurricanes Harvey and Irma have handed Democrats their most potent opportunity in half a decade to hammer Republicans on climate change — with the massive storms giving tens of millions of Americans an up-front glimpse of the types of devastation the world faces if the warming planet spawns a surge in extreme weather.

But instead, they're mostly keeping quiet.

Aside from a handful of outliers like Hawaiian Sen. Brian Schatz, leading Democratic politicians have been slow to use the double whammy from the tropics to denounce President Donald Trump, who has dismissed climate change as a "hoax."

That's a contrast from past storms like 2012's Hurricane Sandy, when Democratic New York Gov. Andrew Cuomo called the disaster a sign that "climate change is a reality." Even then-New York City Mayor Michael Bloomberg, an independent, cited the storm and climate change at the time among his reasons for endorsing Barack Obama's reelection as president.

This time, Democrats appear to be heeding the warnings of Trump appointees like EPA Administrator Scott Pruitt, who said last week that it's "very, very insensitive to the people in Florida" to talk about climate change now.

The wariness of appearing to seize on a disaster is "part of" the party's calculus behind keeping the climate politics to a minimum after the hurricanes, said the top Democrat on the Senate Environment and Public Works Committee, Tom Carper of Delaware.

"When we've done a good deal more work in terms of cleanup and getting folks' lives back to normal, I hope we do a deep dive into whether or not the warming in the Gulf of Mexico is really what's causing this," Carper added in an interview, vowing that a broader climate conversation is "coming soon."

Sen. Sheldon Whitehouse (D-R.I.), a climate hawk known for delivering more than 100 floor speeches on the issue, said he doesn't view the immediate aftermath of Harvey and Irma as heightening the sense of urgency to talk about global warming.

"We have a lot of time to make that point, and I think we also have a lot of legislative opportunities as we look at reauthorizing flood insurance and funding the disaster relief," Whitehouse said in a brief interview.

Sen. Chris Van Hollen (D-Md.) late Friday noted climate change's impact on extreme weather, citing the hurricanes as he unveiled a bill with Schatz and Sen. Cory Booker (D-N.J.) that would block Trump's cancellation of an order requiring federally funded infrastructure to take global warming into account. But Van Hollen underscored that the bill was already in the works before Harvey and Irma made their devastating landfalls.

"We actually feel like we have not been talking about these bills during this period of time" while Gulf Coast residents recover, Van Hollen told POLITICO, adding that his proposal is "designed to focus on how we rebuild. The idea is, when we invest federal dollars in infrastructure, we want it to be safe. So this is going to be a constructive part of the rebuilding conversation."

Trevor Houser, a former energy adviser to Hillary Clinton's presidential campaign, said

Democrats indeed may see dangers in latching onto the climate issue so soon after the twin disasters.

"The response to Hurricanes Harvey and Irma thus far has been more muted, likely in part because of a desire to keep the focus on immediate disaster relief," said Houser, who is now at the think tank Rhodium Group.

It's not a good idea to try to land a "punch to the gut of climate change deniers" while first responders are still "pulling bodies out of the water," said Jeff Schlegelmilch, deputy director of the National Center for Disaster Preparedness at Columbia University's Earth Institute.

But green groups haven't hesitated to take aim at Trump online, with the Natural Resources Defense Council criticizing his recent move to rescind climate standards for federal infrastructure and the League of Conservation Voters praising Miami's Republican Mayor Tomás Regalado for saying it is time to talk about climate change.

Bill McKibben, founder of the outspoken climate activist group 350.org, shied away from disparaging Democrats, though.

"The truth is, I'd settle for politicians not talking about climate at all, and instead actually doing something," he said via email. "We've reached the point where they expect a gold star for announcing they believe in science — that's not enough."

Climate advocates argue that now — when the issue is blaring from every TV screen — is the best time to call attention to scientists' abundant warnings that rising global temperatures may worsen extreme weather such as hurricanes, droughts or the wildfires now raging in California. Images of Irma's flooding are still topping national news coverage, and the air of crisis may continue next week depending on where Hurricane Jose decides to land.

In contrast, Republicans who deny that humans are causing rising temperatures have mostly put their public focus on responding to the immediate danger of the storms. While acknowledging the historic nature of the flooding in Houston and the record-breaking intensity of Hurricane Irma, the Trump administration has brushed off questions about climate change, focusing instead on the immediate recovery needs in Texas, Florida and hard-hit Caribbean territories like Puerto Rico.

Tom Bossert, Trump's homeland security adviser, told reporters during a White House briefing Monday that it was too early to say whether climate change worsened the hurricanes, but he acknowledged a need to bolster flood and coastal defenses threatened by rising seas and powerful storms.

"We continue to take seriously the climate change, not the cause of it, but the things that we observe," he said. "What President Trump remains committed to is making sure that federal dollars aren't used to build things that will be in harm's way later or that won't be hardened against the future predictable floods that we see."

Other administration officials have dodged climate change questions.

Pruitt told CNN that "to have any kind of focus on the cause and effect of the storm, versus helping people, or actually facing the effect of the storm, is misplaced." White House adviser Kellyanne Conway chastised CNN's Chris Cuomo for asking about the topic in the aftermath of Hurricane Harvey, saying, "We're trying to help the people whose lives are literally underwater, and you want to have a conversation about climate change." Energy Secretary Rick Perry similarly dismissed the issue, telling CBS that "everyone wants to run to the climate change debate, but that is very secondary at this particular time."

Lawmakers and the federal government will have to confront future risks as they send money for recovery, however. Congress is moving ahead with an initial $15 billion aid package for Texas and Louisiana, and scientists say addressing the role of a changing climate is crucial to using that money effectively.

"Climate change has to be a part of the conversation ... it's inaccurate to think you could have a conversation about the changing nature of risk without talking about greenhouse gases and burning fossil fuels," said Heidi Cullen, the chief scientist at the research group Climate Central, who studies how climate change affects extreme weather as part of the international science partnership called World Weather Attribution.

Scientists say man-made greenhouse gas emissions could make hurricanes more intense. Continued sea-level rise will also make storm surges higher and more dangerous. Both could complicate emergency response planning and investments to rebuild after the storms.

Despite Bossert's comments, Trump is actively erasing climate considerations from government processes, nixing flood standards for federal projects, withdrawing the U.S. from the Paris climate change agreement, pulling back a regulation to limit carbon dioxide from power plants, and halting funding to help poor nations adapt to new weather extremes.

In previous years, climate advocates and scientists could have relied on the Obama White House to amplify their message. Now, they've got cabinet members who doubt whether human activity is causing global temperatures to increase, seas to rise and coastal communities to face more risks from storm surge and flooding.

Congressional opponents of government efforts to address climate change aren't making any linkages between the two devastating storms, either.

"It's terrible to have Category 4 in the Gulf Coast of Texas and then a Category 5 in the Atlantic, but sometimes bad things happen," Rep. Joe Barton (R-Texas) said last week. "I guess we could pass a law saying you can't have hurricanes, but I'm not sure Mother Nature would listen to us."

Attributing extreme weather events to climate change is still an evolving area of research, although it has progressed quickly over the last few years. Scientists at the Geophysical Fluid Dynamics Laboratory, which works cooperatively with the National Oceanic and Atmospheric Administration, believe that by the end of the century, global warming will mean more intense

hurricanes that bring more rain. But they say it's too early to detect whether man-made greenhouse gas emissions have changed hurricane activity so far. That's because the extreme weather events are rare and difficult to model.

Michael Wehner, a senior staff scientist in the Computational Research Division at the Lawrence Berkeley National Laboratory, has studied how 15 hurricanes might have behaved under lower temperatures, and so far has determined that a one-degree Celsius increase — 1.8 degrees Fahrenheit — raises rainfall about 6 percent.

That would mean that Harvey, which dumped more than 50 inches of water on Houston, brought between 10 and 15 percent more rain because of climate change.

"The public should know, and policymakers should know, that any planning that you might have made based on the historical record is inadequate," Wehner said. "It's a different world. It's a warmer world, and storms behave differently."

Center-right groups urge ITC against recommending tariffs in solar case Back

By Megan Cassella | 09/11/2017 03:53 PM EDT

The International Trade Commission should avoid recommending the use of tariffs to protect the U.S. solar industry in an ongoing trade remedy case, a coalition of right-leaning policy groups will say this week as a swirling debate over a pending ITC ruling has divided domestic industry.

The heads of six groups, including the R Street Institute, the American Legislative Exchange Council and the National Taxpayers Union, warned in a letter that will be sent to the ITC on Tuesday that an affirmative decision would double the cost of solar products in the country and leave the U.S. vulnerable to retaliation and challenges at the World Trade Organization.

If the ITC finds evidence that domestic industry has been hurt by imports, it should tailor its recommended relief to exempt imports from countries that the U.S. has free trade agreements with, the letter says.

The groups also leaned on recent history to bolster their argument, noting that the statute under which the case was filed, known as Section 201, is an "extreme remedy with a troubling recent history." Former President George W. Bush levied import restrictions similar to what Suniva and SolarWorld Americas are asking for in this case to protect the domestic steel industry in 2002, but those were ultimately withdrawn after the European Union challenged them at the WTO.

"Similar to steel in 2002, solar tariffs today would amount to nothing more than a crony capitalist giveaway to failing companies," the groups wrote in the letter, a copy of which was obtained by

POLITICO. "They would be paid for by crippling an otherwise growing domestic solar industry (one whose preferential federal tax treatment has been correspondingly phasing down) and higher prices for energy consumers."

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

Wind Industry Tacks as Trump Shifts the Political Climate

Posted June 30, 2017, 10:12 A.M. ET

By Ari Natter

Three days after Energy Secretary Rick Perry directed his staff to find ways to give a boost to coal and nuclear power, the rival wind industry kicked its lobbying response into action.

The American Wind Energy Association would tap allies in Congress willing to weigh in with Perry and buy advertisements on "news channels closely followed by the Trump administration," according to a memo its leader sent to board members. During the Obama administration it had touted its role in addressing climate change, but now it would emphasize an economic message, something sure to resonate with President Donald Trump.

"The wind industry drives over 100,000 American jobs, more than coal, nuclear, or hydropower electricity generation," Chief Executive Officer Tom Kiernan wrote in the eight-page memo on April 17. The memo was provided to Bloomberg News by a competing lobbyist and confirmed by AWEA.

Once a darling of federal policy makers during the tenure of President Barack Obama, wind energy has been buffeted under Trump, who frequently complains that wind turbines kill eagles and aren't a reliable power source. In the administration's efforts to help coal miners, oil drillers and nuclear-plant operators, wind is the variable, subsidized power that is making life difficult for those so-called baseload electricity producers.

"I don't want to just hope the wind blows to light up your homes and your factory—as the birds fall to the ground," Trump said this month in Iowa, a state that gets more than a third of its electricity from wind power.

Republican Lobbyists

Kiernan has taken to fact-checking Trump's comments on Twitter. And the group has hired Republican lobbyists this year to help it gain a foothold in a very different Washington.

Last month, AWEA hired Amy Farrell, a former official in the administration of President George W. Bush and natural gas lobbyist, as its senior vice president for government and public affairs. It also hired William Myers, Bush's former Interior Department solicitor, as a lobbyist that same month.

The Energy Department study of the electric grid, however, poses the most tangible risk to wind power, which more than doubled in capacity during the Obama administration to more than 82,000 megawatts. A memo from Perry ordering the study posited that the reliability of the power grid was at risk, and listed factors such as regulations that could be forcing the "premature retirement of baseload power plants," which refers to mostly coal and nuclear facilities. While Perry didn't mention wind, he did discuss tax subsidies, which wind producers receive, and highlights a preference for on-site fuel, which wind doesn't have.

"Political driven policies, driven primarily by a hostility to coal, threatens the reliability and the stability of the greatest electrical grid in the world," Perry said this week. "Over the last few years, grid experts have expressed concern about the erosion of critical baseload resources, specifically how it is dispatched and compensated."

Publicly the wind industry says it's doing just fine under Trump.

Tom Vinson, vice president of federal regulatory affairs for the group, which counts subsidiaries of wind turbine makers such as Vestas Wind Systems A/S and Siemens AG on its board of directors, dismissed the memo as "old news" and said wind doesn't face overwhelming opposition as it supports the president's quest for "energy dominance." And it creates jobs, he added.

Perry, who had mostly praised coal, natural gas and nuclear power since becoming secretary, went out of his way to praise wind and solar this week.

"We are going to ensure that renewable energy finds its way to the grid and that the tremendous resources presented by the wind, the sun and hydro are efficiently captured and then delivered," he said.

When he was governor of Texas, Perry said in a blog post this week, that state took a lead in pursuing wind development, and it now stands as the top wind producing state in the U.S.

That shift in tone may, in part, represent that AWEA's efforts are paying dividends.

Soon after the the wind association started its lobbying campaign, wind-friendly lawmakers such as Sen. Charles Grassley (R-Iowa) sent letters with pointed questions about the study. Environmental groups filed Freedom of Information Act requests about the study and what prompted it. The industry group got in to brief administration officials on the benefits of the power source, Vinson said.

"We hope the Department of Energy will be taking this substantial body of existing research into account when they issue their study," Evan Vaughan, a spokesman for the trade group, said in an email.

And in another small victory for the industry, Trump announced June 28 that he would nominate Richard Glick, a Democratic Senate staff member and former wind lobbyist, to the Federal Energy Regulatory Commission.

While representatives of the wind industry continue to exude confidence, "I think privately they are a little concerned," said Paul Bledsoe, a former climate adviser in the Clinton administration. "It seems as if the administration is pursuing an ideological agenda against renewables based on political animus towards the Obama administration."

"They are anxious about some unexpected assault, but they are not quite sure what to prepare for," he added.

Canada Floats New Environmental Review Rules for Pipelines

Posted June 30, 2017, 10:00 A.M. ET

By Josh Wingrove

Canada is proposing consolidating environmental reviews under a single agency while adding an approval step for proponents of pipelines and other major projects—in what it said is a bid to both strengthen and clarify environmental rules.

The proposal would add a requirement for an "early engagement" phase for projects that the government said would lead to "clear guidance" for industry on how a full assessment will proceed and how long it will take. The move is aimed at industry frustrations that Canada's existing environmental approval process is already a maze—unclear, time-consuming, legally fraught, and under the watch of multiple agencies.

The proposal, contained in a discussion paper published June 29, lays out a framework that comes after a review of environmental assessment rules; fisheries laws; and the National Energy Board, which oversees pipelines in the country with the world's third-largest proven oil reserves. A range of projects is subject to environmental assessments. The changes would affect only new ones, as Prime Minister Justin Trudeau's government said existing proposals such as TransCanada Corp.'s Energy East pipeline won't be sent back to square one.

The proposal raises the prospect of greater "cost recovery" from the oil and gas industry, while also focusing on ensuring a "single window" agency for federal environmental approvals and permitting while expanding the power of people to intervene in the process and making more data publicly available.

Court Challenges

Major energy projects in Canada have regularly run into a tangle of court challenges, evolving government policy, and environmental protests, raising doubts about their fate. Trudeau introduced interim rules early last year before approving a pair of pipelines while rejecting a third—which his predecessor approved before being blocked by the courts.

The discussion paper proposes expanding the review of projects to consider a broader range of factors, including economic benefit, which is presently considered in a final Cabinet decision on any major proposal. The new assessment system will consider "both positive and negative impacts of a project," the discussion paper said.

So far, the paper has won positive reviews from energy-industry groups. Canadian Energy Pipeline Association Chief Executive Officer Chris Bloomer said June 29 that while his organization is taking time to fully review the paper, it supports the principles laid out in the document and is "encouraged" by its content. Canadian Association of Petroleum Producers Executive Vice President Terry Abel said his group backs the proposal as well.

"They've done a really good job of identifying opportunities where there could be improvements, and it's reflective of the broad range of input they've heard," Abel said in an interview.

Cumulative Effect

The proposed system will pay greater attention to so-called cumulative effect, or the total impact over time of a single project, and others near it, on the environment. That measure in particular could ripple through regions with high levels of industrial development, such as Alberta's oil sands, the heart of the country's energy sector.

The federal government is proposing to expand the ability of opponents and proponents to weigh in on a project by eliminating a test of which participants were given "standing," by the NEB while also allocating more "participant funding," the document said. It also commits to a process that "advances the government's commitment" to the United Nations Declaration on the Rights of Indigenous Peoples, though stops short of fully committing to the declaration. The U.N. document places an emphasis on "free, prior, and informed consent" of indigenous peoples, though Trudeau's government argued that doesn't amount to a veto on energy projects.

The scale of environment assessments will be "aligned" with the scale of a project and its impacts, the discussion paper said. The report commits both to peer-reviewed science and incorporating indigenous knowledge in reviews. The proposal also pledged "greater participation of indigenous peoples on assessment boards and review panels and in regulatory processes."

The NEB regulator will remain in Calgary, but board members and hearing commissioners will no longer have to live there, the paper said.

The paper comes after a review launched a year ago. The measures are classified as proposals only. Final changes to the environmental assessment and regulatory system are due this fall.

Rebirth of Canadian Oil Sands From Fire Stymied by Market Slump

Posted June 30, 2017, 10:14 A.M. ET

By Robert Tuttle

In the heart of Canada's biggest oil province, life is slowly returning to normal in Fort McMurray, Alberta. After a fire last year destroyed entire neighborhoods in the town and halted about a million barrels of daily production, green leaves are beginning to bud on charred trees and new construction is replacing homes that were burned to the ground.

But hopes for a complete rebirth are being undermined by a global oil slump. It's become less attractive to invest in the region, where tar-like reserves are among the most expensive and difficult in the world to extract. After 17 years of uninterrupted expansion around Fort McMurray -- which drove an 86 percent increase in the nation's output -- no new projects or expansions will go into operation next year, an analysis of company spending plans shows.

Producers including Royal Dutch Shell Plc and Koch Industries Inc. have shelved or put on hold billions of dollars of projects since crude fell from more than $100 a barrel in 2014 to as low as $26

last year. The economics of the business remained lousy in 2017. That's because sticky oil sands in Alberta have to be mined and then converted into liquid using a costly conversion process or loosened with steam and sucked out of wells. To justify expanding existing projects or starting new ones, crude needs to fetch at least $50.

"We will not see a pickup of significant work for two to three years," once existing expansions are completed in 2017, Jay Bueckert, regional director of the Christian Labor Association of Canada, a union representing oil-sands workers, said in an interview at his office in Fort McMurray.

The investment slowdown is a double blow for the town. It's still recovering from the May 2016 blaze that swept through neighborhoods such as Beacon Hill and Timberlea, destroying about 2,000 homes and forcing shutdowns of oil production for almost a month. The damage will wind up costing the government and insurers more than C$5 billion ($3.8 billion), according to the Conference Board of Canada.

As many as 5,000 people haven't returned, according to municipal population figures. While home sales were up in the first five months of the year, prices continued a decline that started after the oil-price slump began three years ago, according to the Fort McMurray Real Estate Board.

'People Left'

"A lot of people just sold and left," Sam Keane, a 27 year-old scaffolder from Ireland, said as he stood beside a rebuilt home he had just bought from a previous resident of a neighborhood that burned down.

As the community rebuilds, international companies are pulling back. Since March, Shell, ConocoPhillips and Marathon Oil Corp. have agreed to sell oil-sands assets to domestic producers Canadian Natural Resources Ltd. and Cenovus Energy Inc.Exxon Mobil Corp., majority owner of Imperial Oil Ltd., slashed billions from its Canadian reserves.

While prices have recovered from last year's low, they're down 21 percent this year to less than $45 a barrel. That's too cheap to justify most projects that require billions of dollars in up-front investment and years of development, said Kevin Birn, a director at IHS Energy in Calgary.

Fort McMurray has vast reserves. Only Saudi Arabia and Venezuela have bigger crude deposits. The town transformed from a remote trading outpost to an energy center in the late 1960s, when what is now Suncor Energy Inc. began extracting the viscous hydrocarbons from the soil under the dense boreal forests of remote Northern Alberta.

Early Growth

As crude prices surged after the turn of the millennium, concerns about oil scarcity drew more than C$200 billion of investment from the U.S., Asia and Europe. As money poured in, so did people from around the world seeking steady jobs and a higher standard of living. With the population growing 4 percent a year, the municipal government struggled to build infrastructure fast enough. Traffic jams lasting hours would tie up oil sands workers on the one road into the oil-sands mines to the north.

The boom ended abruptly in late 2014 with the surge in U.S. shale production that sent prices plunging. The number of oil-sands-related engineering and construction jobs will shrink by 9,300, or 30 percent, by 2023 from "already diminished employment in 2016," according to a report by BuildForce Canada, a trade organization.

"We always talk about diversification and it's something that's really hard to do when we are in the heart of the oil sands," said Alexis Foster, executive director of the Fort McMurray Chamber of Commerce.

Limited Expansion

In the past year, MEG Energy Corp., Cenovus and Canadian Natural announced plans to expand operations later in the decade. But those expansions are to thermal oil sands projects in an area located about two hours south of Fort McMurray. New projects near Fort McMurray, such as Suncor's newly proposed Lewis or Imperial Oil's Aspen, have yet to be sanctioned.

With investment in new oil sands winding down, Fort McMurray residents are left with jobs maintaining and repairing existing operations. Sustaining capital and maintenance work will rise "moderately" over the next decade and become an "increasingly important source of employment," according to BuildForce Canada.

As Fort McMurray contracts, expansions are occurring elsewhere in Canada. In the western Alberta town of Grande Prarie, drilling in the Montney shale formation was up an annual 80 percent early this year.

But Fort McMurray will remain the dominant oil town in Canada for now, Birn said. The provincial government said in its most recent budget that the reconstruction of the town after the fire and plans for increased oil production will add 1 percent to the gross domestic product this year.

There are signs of improvement: Unemployment is down from last year, Foster says construction work is expected to expand, and the median single-family home price in April rose from a year earlier.

Some people are moving back because they "saw opportunities to purchase," said Andrew Weir, president of the Fort McMurray Real Estate Board. They "don't feel like the sky is falling anymore," he said.

South Korea to Study, Plan for Climate Impacts on Infrastructure

Posted June 30, 2017, 9:21 A.M. ET

By Elaine Ramirez

Eighteen South Korean public and private institutions have agreed to assess the effects of climate change on infrastructure and devise ways to prevent further damage.

Through a convention facilitated by South Korea's Ministry of Environment and Korea Adaptation Center for Climate Change, 13 public institutions and five companies—Kumho Buslines; Samsung Engineering; construction company Halla OMS; and logistics companies CJ Korea Express and Hyundai Glovis—will work with the government to evaluate and diagnose climate change-related risks to infrastructure to develop countermeasures, the Ministry of Environment said.

The project also will identify facilities that are vulnerable to the effects of climate change and help

public institutions set up adaptive measures to ensure national safety and to minimize economic losses, according to the environment ministry.

"This convention is particularly meaningful in that it promises voluntary efforts by public authorities and industries to provide a pre-emptive response to climate change risks," the Ministry of Environment said in a June 27 statement.

"Since we want to reduce CO2 emissions as a long-term goal, we think the plan of the ministry is proper, and we can focus on the goal not only for our company but also for Korea to help with the development of climate change improvement," Jin Hartmann, spokesman for Samsung Engineering, told Bloomberg BNA.

The ministry and the Korea Adaptation Center for Climate Change will provide risk assessment tools, including those to analyze the impacts on facilities of climate situations such as extreme temperatures and heavy rain. Companies will then prioritize items and devise countermeasures with mid- and long-term objectives and action plans to minimize climate impacts.

Jung Seon-hee, research specialist at the (KACCC), said, "In addition to promoting governmentwide measures to adapt to climate change, South Korea is promoting climate change adaptation via infrastructure institutions. However, [this initiative] is still in its infancy, so additional policy support and investment is needed to improve effectiveness."

Project planning started before Korean President Moon Jae-in took office last month, and is expected to be more actively pursued during his governance, she added.

Establishing Adaptive Measures

Damage caused by climate change-related natural disasters affect mostly social infrastructure such as power, railways, and roads, and have a great social and economic impact, the ministry said. The damage to public facilities in 2013, amounting to nearly 150 billion won ($131.4 million), made up 87 percent of all natural disaster impacts during that year, the ministry said. Restoration of public facilities such as roads, rivers and harbors cost 8.9 trillion won ($7.8 billion) between 2004 and 2013.

In response, the government in 2016 launched a reporting system for public institutions to evaluate and diagnose the climate change-related risks they faced.

The Ministry of Environment said it will help the public and private sectors scientifically predict and evaluate the risk factors of climate change and establish effective adaptive measures. The institution will then decide on voluntary climate change adaptation measures and incorporate them into management plans and strategies.

Sharing Know-How

Samsung Engineering has carried out business partnerships with large and midsize companies to share carbon management know-how and energy-saving methods with subcontractors, according to company spokesman Lee Ho-jae. In 2016, the company concluded an agreement with the Ministry of Environment to reduce dust emissions.

Unforeseen natural disasters caused by climate change could have a profound impact on Samsung's project performance, Lee said, adding that the company plans to explore ways to contribute to the climate change action plan in the overall process of plant construction.

"[Addressing] climate change requires a national approach. At the same time, voluntary effort from individual companies is needed," Lee told Bloomberg BNA. "We hope the recognition of climate change spreads throughout the industry and many companies can participate."

The government also will evaluate other public agencies' adaptation measures for climate change and determine how to reflect them nationwide.

The 13 public institutions participating in the agreement include expressway, port and airport authorities, and coal, gas and heating companies.

"We anticipate that it will become a new paradigm of management strategy … to grasp the effects of climate change on sales and tangible assets," said Kumho Buslines spokesman Oh Kil-joong.

South Korea Is Very, Very Interested in America's Natural Gas

Posted June 30, 2017, 10:32 A.M. ET

By Ryan Collins

One thing became clear on the fourth day of the White House's Energy Week: South Korea is really, really into U.S. natural gas.

In less than 24 hours, South Korea's energy companies had announced four partnerships with U.S. companies to explore opportunities in the U.S. natural gas business. Korea Gas Corp., the state-owned gas supplier, said it will look into potential investments in liquefied natural gas projects in Alaska, Texas and Louisiana. SK Group signed an agreement with General Electric Co. and Continental Resources Inc. to pursue shale gas developments.

It makes sense. South Korea is one of the world's biggest importers of LNG and has bought eight cargoes of U.S. gas from Cheniere Energy Inc.'s Sabine Pass terminal in Louisiana. While Sabine Pass is the only one sending shale gas abroad, dozens of terminals have been proposed along U.S. coasts to do the same. The exports have put the U.S. on a path to becoming a net gas exporter for the first time in decades.

President Donald Trump noted during a June 29 Energy Week event in Washington that South Korea leaders were visiting the White House. He said they would be "talking about them buying energy from the United States of America. I'm sure they would love to do it."

U.S. LNG may in fact play a big role in furthering South Korea's energy policies. After the election of Moon Jae-in as president in May, the country is looking to transition away from coal and nuclear power in favor of cleaner natural gas-fired electricity generation. And buying more U.S. fuel could allow the country to smooth geopolitical disputes over unbalanced trade, Korea Gas Chief Executive Officer Lee Seung-Hoon said Sunday at the Sabine Pass terminal, where the company celebrated the start of an LNG contract with Cheniere.

"All of these projects are looking to find more long-term offtake in order to get the financial support they need to move forward," said Anastacia Dialynas, analyst at Bloomberg New Energy Finance, in a phone interview June 29. South Korea "might even be pitting them against each other" by exploring several projects to "see who offers the best terms," she said.

The Port Arthur, Texas, LNG export terminal is being developed by Sempra Energy and Woodside Petroleum Ltd., and Energy Transfer Equity LLC and Royal Dutch Shell Plc are planning the Lake Charles, Louisiana, one. The Alaska LNG export project is being proposed by the state's Alaska Gasline Development Corp.

Spot LNG prices in Singapore traded at about $5.244 per million British thermal units Thursday, according to a Singapore Exchange Ltd. assessment. That's down from more than $14 in October 2014 as production capacity rises and oil prices have tumbled.

Energy and Climate Report

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: POLITICO Pro Energy
Sent: Tue 6/6/2017 9:44:35 AM
Subject: Morning Energy: Four energy nominees get committee votes today — Chinese diplomat resigns over Paris pullout — Pruitt feared Paris might force domestic climate rules

By Anthony Adragna | 06/06/2017 05:42 AM EDT

With help from Esther Whieldon and Darius Dixon

NEW JOLT OF ENERGY (NOMINEES)! The Energy and Natural Resources Committee is set to advance four crucial energy nominees to the full Senate by midday today as Republican votes alone are sufficient to move them forward. Arguably the greatest fight may be over President Donald Trump's pick for the No. 2 slot at Interior, David Bernhardt. Expect Democrats to raise concerns about Bernhardt's industry ties, ethics waivers and his assertion at his confirmation hearing that the Interior will take its cues on climate change from Trump, who has called it a hoax perpetrated by the Chinese. A coalition of environmental groups sent a letter to committee leaders on Monday citing what they said were "serious legal and ethical questions" about his actions in 2008 with California water districts while serving as Interior's Solicitor and calling for an investigation before his confirmation (The League of Conservation Voters sent its own letter opposing Bernhardt's nomination).

Don't expect any Republicans to break from their party's support for Neil Chatterjee or Rob Powelson, Trump's picks for FERC commissioners, or Deputy Energy Secretary nominee Dan Brouillette. Sen. Ron Wyden has already announced his opposition to Chatterjee and Powelson, but they're likely to get at least some Democratic votes. Keep in mind however that anti-pipeline protesters showed up at their nomination hearing — when the nominees' families were present — so there's no reason to think there won't be a bit of a ruckus today. The panel's top Democrat, Sen. Maria Cantwell, wouldn't tip her hand when ME caught up with her Monday night, but did say she had unspecified "concerns" with some of the nominees.

If you go: The business meeting kicks off at 9:30 a.m. in Dirksen 366.

U.S. DIPLOMAT QUITS OVER PARIS: David Rank, the Beijing embassy's chargé d'affaires, resigned Monday in a move driven by Trump's call last week to withdraw from the Paris climate agreement, POLITICO's Nahal Toosi reports . Rank, who spent 27 years at the State Department, made the unusual move to inform colleagues of his decision in a public town hall. "Such a move shows the level of utter disdain for Trump and his policies by senior American diplomats," Brett Bruen, a retired State Department veteran who served as Director of Global Engagement in the Obama White House, told POLITICO. "They face the brunt of the blowback from our allies and have to contend with the advantages it offers our adversaries."

Another Cabinet member weighs in: Energy Secretary Rick Perry, speaking in Japan, said those seeking out Trump's view on climate change are "chasing a rabbit down a hole," but he vowed the U.S. would remain involved in international discussions, according to multiple reports. "Is the climate changing? Yes," Perry said. "Is man having an impact? Yes. How are we going to address it going forward? And the answer is, that's not going to change. The United

States is still going to be very engaged in that."

Meanwhile, new polling out Monday finds 59 percent of Americans oppose Trump's move to pull out of the landmark climate pact while just 28 percent back it, POLITICO's Madeline Conway reports. A majority, 55 percent, said they believe the decision hurts U.S. leadership in the world, while just 18 percent said it would help American leadership's standing.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and LCV's Tiernan Sittenfeld was first to identify Indiana as the state with hyper-restrictive Sunday laws on beer, wine and liquor. For today: There are three states that are entirely dry by default. (Counties must specifically authorize the sale of alcohol.) Which states are they? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

PRUITT WORRIED PARIS MIGHT COMPEL DOMESTIC REGULATIONS: EPA Administrator Scott Pruitt took to Breitbart Radio Monday to reiterate a key reason he pushed for Trump to withdraw from the Paris Agreement was fear that staying might trigger litigation seeking to compel new regulations under Section 115 of the Clean Air Act. "[Paris] could trigger lawsuits by environmental groups here, the environmental left suing the EPA and the United States government and saying, 'Hey, we agreed to 26 percent and 28 percent targets in this international agreement. Why aren't you taking steps to meet those targets?' and then to compel action," he said. A group of environmental attorneys outlined ways EPA could pursue such regulations in a January 2016 report.

Bashes health concerns: Pruitt criticized comments from many that withdrawing from the Paris accord would have disastrous health consequences, arguing there's a key difference between carbon dioxide and other criteria pollutants. He said it was time for a new discussion about the health impacts of carbon dioxide. "What the American people deserve is a true, legitimate, peer-reviewed, objective, transparent discussion about CO2," Pruitt said. "The American people need to have that type of honest, open discussion, and it's something that we hope to help provide as part of our leadership."

Returning to the Hill: For the first time since his confirmation, Pruitt returns to the Hill June 15 to testify about the Trump administration's proposed 31 percent cuts to EPA, Pro's Alex Guillén reports. The hearing before the House Appropriations Interior-EPA subcommittee will take place at 1 p.m. ME expects House Democrats to aggressively question Pruitt on a host of actions to unwind the Obama administration's rules.

CALIFORNIA BACKS CLIMATE COOPERATION WITH CHINA: Led by Gov. Jerry Brown, the government of California agreed today to work with China's Ministry of Science and Technology on deploying clean energy technologies and collaborating on emissions trading, Reuters reports. That comes after Brown signed an agreement with Jiangsu Province expanding their cooperation on climate change and another with Sichuan Province enhancing their work on clean energy efforts.

EPA TOUTS PROGRESS ON CHEMICALS BACKLOG: Citing effective prioritization and

process efficiencies, EPA now says it will eliminate a backlog of new chemicals awaiting review under the Toxic Substances Control Act by the end of July. "Reviewing new chemicals quickly will enable those deemed safe to enter the marketplace to support jobs and our economy," Pruitt said in a statement. The agency says it plans to provide weekly progress updates. Back in April, Pruitt said the backlog stood at about 1,000 chemicals when he took office but he pledged to hit regulatory deadlines outlined in the revamped TSCA law this year.

WHAT'S AFTER STUCK IN THE MUD? The White House is making a push this week toward privatizing air traffic control and promoting Trump's $1 trillion infrastructure plan, but tossing infrastructure onto the existing heap of huge legislative lifts runs the risk of stalling the president's entire agenda, POLITICO's Andrew Restuccia and Lauren Gardner report. "I believe a new president has about a year to get three to four big things done," said former Transportation Secretary Ray LaHood, a Republican who served under President Barack Obama. "And if they don't do it in that year, it's probably pretty much a lost opportunity."

SCHUMER BLAMES TRUMP FOR FEDERAL VACANCIES: Trump has slammed Democrats for "taking forever" to confirm his nominees to a litany of vacant federal positions, but Senate Minority Leader Chuck Schumer correctly noted that he hasn't nominated anyone to fill many of them. "President Trump ought to roll up his sleeves and get to work rather than pointing false fingers of blame," Schumer said in a statement. The White House has not formally nominated people to fill 441 of 559 key positions requiring Senate confirmation, according to the Partnership for Public Service.

NEVADA PASS BILL TO HIKE RENEWABLES: In its last day in session, the Nevada legislature on Monday sent Gov. Brian Sandoval a bill, A.B. 206, that would raise the state renewable portfolio standard to 40 percent by 2030 instead of 25 percent by 2025. The bill also eliminates the requirements setting out how much must come from solar projects and includes language allowing utilities to provide direct sales contracts to customers from renewable power projects.

MILITARY LEADERS SOUND ALARM ON ENERGY DISRUPTION: Successfully transitioning to an advanced energy economy will be decisive for U.S. competitiveness, diplomacy and national security for years to come, according to a report out this morning from the highest-ranking retired group of U.S. military officers. The CNA Military Advisory Board advises that a wide portfolio of advanced energy technologies will enhance geopolitical security and failure to lead in this space will compromise U.S. global influence and national security. The group will provide a closed-door briefing to administration defense and security officials on the report this week.

MORE NOMINEES WITH ENERGY TIES: Trump announced two picks for roles in the Overseas Private Investment Corporation, a foreign development fund, and both have significant energy ties. Ray Washburne, nominated to be president of the entity, was on the Trump's short list for energy secretary during the transition. David Bohigian, up to be executive vice president of OPIC, founded E2 Capital Partners, which pushed new financing models for energy efficiency projects, and championed international clean energy deployment efforts while serving as an assistant secretary of Commerce during the George W. Bush administration.

FOR PLANNING PURPOSES: Interior Secretary Ryan Zinke is scheduled to give a luncheon address today to a meeting of the Recreation Vehicle Industry Association in Washington.

STORAGE SECTOR CONTINUES UTILITY-SCALE BOOM: The U.S. added 234 megawatt-hours of energy storage in the first quarter of this year, the industry's biggest quarter yet, GTM Research and the Energy Storage Association said in a report out this morning. Most of that growth was boosted by a few large utility-scale projects in Arizona, Hawaii and California, including one to offset power supplies lost during the Aliso Canyon natural gas leak.

REPORT: EMPLOYEE SENT HARASSING MESSAGES: A Bureau of Indian Affairs employee sent inappropriate — and frequently sexual — text and Facebook messages to Colorado River Indian Tribes employees and tribal members, an Interior inspector general report found. The employee admitted sending the messages and that his conduct was "unprofessional and inappropriate," but the report doesn't say whether he faced additional disciplinary action.

MOVERS, SHAKERS: Ryan Serote has joined Salt River Project as senior manager of federal affairs in the utility's Washington office; he comes from the lobbying shop of National Rural Electric Cooperative Association.

Judith Browne Dianis, executive director of Advancement Project, a multi-racial civil rights organization, has joined the board of directors of Friends of the Earth. "The organization's staunch advocacy to protect our planet is vital in this moment when policymakers want to scrap environmental protections," she said in a statement.

John Deutch will join the Energy Policy Institute at the University of Chicago as a distinguished fellow for the fall quarter; previous jobs include a professorship with MIT and several positions at DOE, including undersecretary, during Jimmy Carter's presidency.

Pat Hart has joined the Edison Electric Institute as director of preparedness and outreach with its security and business continuity group; he was most recently senior adviser to DOE Deputy Secretary Liz Sherwood-Randall.

Tristan Daedalus (who has what had to be one of the most distinctive names of any congressional staffer) has joined the American Forest Foundation as director of policy. He was previously communications director for Rep. Matt Salmon (R-Ariz.) (h/t POLITICO Influence).

Stories from POLITICO Pro

U.S. diplomat in Beijing resigns over Trump climate stance Back

By Nahal Toosi | 06/05/2017 06:55 PM EDT

A top U.S. diplomat in Beijing resigned on Monday, a move that a source said was driven by President Donald Trump's decision last week to withdraw from the Paris climate change agreement.

A State Department spokesperson confirmed that David Rank, the Beijing embassy's chargé d'affaires, had resigned, citing only "a personal decision."

But a former State Department official familiar with the situation confirmed reports that Rank's departure was related to Trump's decision to exit the Paris climate change agreement.

Rank, who also had postings in Afghanistan and Pakistan during his 27 years at the State Department, publicly informed his colleagues at the embassy about his departure, according to John Pomfret, an editor for the English-language China news aggregator SupChina and author of a book on U.S.-China relations.

"Rank called a town hall meeting @USEmbassyBJ to say he could not deliver a demarche to the

PRC govt over US withdrawal from @ParisAgreement," Pomfret tweeted.

Using a town hall to announce a resignation is unusual, said Brett Bruen, a retired State Department veteran who served as Director of Global Engagement in the Obama White House.

"I started as a diplomat under George W. Bush. Many in the Foreign Service had issues with the Iraq War," he told POLITICO. "A couple officers resigned over it. Yet, for those who stayed our views were always expressed in low whispers — not at a town hall. Such a move shows the level of utter disdain for Trump and his policies by senior American diplomats. They face the brunt of the blowback from our allies and have to contend with the advantages it offers our adversaries."

Trump announced last week he would pull the United States out of the Paris climate agreement, the 2015 pact signed by 195 countries and designed to combat the emissions of greenhouse gases and adapt to rising sea levels and temperatures. Trump said he would seek to renegotiate a more favorable deal for the U.S., though several European countries have already dismissed the notion of the reopening talks that led to the agreement.

Eric Wolff and Tara Palmeri contributed to this report.

Poll: 59 percent oppose Trump's decision to exit Paris agreement Back

By Madeline Conway | 06/05/2017 03:57 PM EDT

Fifty-nine percent of Americans oppose President Donald Trump's decision to exit the Paris climate agreement, according to a new Washington Post-ABC News poll.

Just 28 percent of people surveyed support Trump's decision to "withdraw from the main international agreement that tries to address climate change," as the poll, conducted from June 2-4, described the deal. While 13 percent said they have no opinion, 46 percent of respondents said they strongly oppose Trump's choice.

The White House has justified the decision to exit the 2015 pact, which more than 190 countries have signed, by claiming that it is a "bad deal" that puts the U.S. economy at a disadvantage and will cost American jobs.

Most people surveyed by the Post and ABC disagree: 47 percent of respondents said they expect Trump's decision to cost the U.S. jobs, while 39 percent said they expect it to create jobs. Overall, 42 percent of those surveyed said they expect exiting the agreement to hurt the U.S. economy, compared to 32 percent who think it will help it.

A majority, 55 percent, said they believe the decision hurts U.S. leadership in the world, while

just 18 percent said it would help American leadership's standing.

The survey had a sample of 527 adults and a margin of error of 1.4 percent.

Pruitt to testify June 15 on proposed cuts to EPA budget Back

By Alex Guillén | 06/05/2017 04:18 PM EDT

EPA Administrator Scott Pruitt will testify on the White House's controversial proposal to slash his agency's budget by 31 percent.

The hearing before the House Appropriations Interior-Environment subcommittee will take place Thursday, June 15 at 1 p.m. It is Pruitt's first time testifying since his Jan. 18 confirmation hearing. He will be joined by Holly Greaves, a landing team member who works on budget issues.

Appropriators have already indicated they will not cut away EPA's budget as severely as the White House's proposal, particularly on state grants and popular programs cleaning up the Great Lakes, the Chesapeake Bay and other regions.

WHAT'S NEXT: The subcommittee hearing is June 15 at 1 p.m.

Pruitt says EPA working to clear new chemical review backlog Back

By Alex Guillén | 04/07/2017 11:24 AM EDT

EPA Administrator Scott Pruitt said today that his agency's chemical safety office is working hard to clear a backlog of chemical reviews that manufacturers and companies must complete before they can sell products that contain new substances.

Pruitt said EPA's backlog had grown to about 1,000 chemicals when he took office in February, but there are now just 500 to 600 chemicals still awaiting review.

"Our chemical office is working very diligently to get those chemicals out and approved as soon as possible, or decisions made," Pruitt told state regulators in Washington for a meeting of the nonprofit Environmental Council of the States.

The agency traditionally would review hundreds or thousands of chemicals every year, but industry groups say EPA has seen a growing backlog of chemical reviews since Congress last summer reformed the Toxic Substances Control Act.

Before Congress updated TSCA, EPA had just 90 days to review new chemicals, which would be automatically approved unless EPA declared them too risky. Now, the agency can take more time and must make an "affirmative finding" that new chemicals are sufficiently safe before they can move to market.

Pruitt noted that the TSCA reform law included a number of regulatory deadlines this year that "are going to be met."

"We're already on task to do that," he said.

WHAT'S NEXT: EPA by June must finalize a series of implementation regulations under the reformed TSCA, including rules on how risk evaluations will be conducted and prioritized and a new fee structure for the industry.

Trump's infrastructure pitch adds to legislative pileup Back

By Andrew Restuccia and Lauren Gardner | 06/05/2017 07:19 PM EDT

Health care and tax reform legislation are on ice, Congress faces a time crunch to prepare a budget and avoid a debt crisis this summer, and the White House is under pressure from the Russia investigations. But President Donald Trump is trying to turn D.C.'s focus this week to two other mammoth pitches — privatizing air traffic control and promoting his $1 trillion infrastructure plan.

The problems: Capitol Hill aides say a broad infrastructure bill isn't going anywhere any time soon either. And the proposed air-safety overhaul failed to even make it to the House floor when GOP lawmakers proposed it a year ago.

Continuing to toss ambitious proposals into an already-stuffed legislative calendar poses a danger for Trump: If he and Congress can't regroup to focus on one priority at a time, they could end up seeing the president's three biggest policy objectives — tax reform, health care and infrastructure — stuck in the Capitol.

"I believe a new president has about a year to get three to four big things done," said former Transportation Secretary Ray LaHood, a Republican who served under President Barack Obama. "And if they don't do it in that year, it's probably pretty much a lost opportunity."

But White House aide Reed Cordish said the administration has every reason to expect its agenda to succeed on the Hill. "We absolutely do feel that the infrastructure package can be accomplished this year," he told reporters Monday. "We are working every day to that end."

Trump kicked off the infrastructure theme Monday morning with a formal endorsement of a controversial GOP proposal to privatize air traffic control, a transportation initiative that the White House is lumping into its infrastructure push.

Trump's separate $1 trillion infrastructure plan, which so far amounts to a six-page fact sheet tucked into his fiscal 2018 budget, involves spending $200 billion in federal money over the next decade to upgrade roads, bridges, tunnels, airports and other transportation networks, along with broadband, schools and hospitals, the administration has said. The rest of the money would come from other sources, including private financiers who could recoup their money by charging tolls and fees.

But lawmakers haven't made much progress in trying to turn those infrastructure ideas into legislation — and tax reform might need to happen first to provide the needed federal money. If so, "it could change the timeline quite a bit, depending," said California Republican Rep. Jeff Denham, who leads the House Transportation Committee's rail subcommittee.

The air traffic control proposal that took center stage Monday at the White House is much further along, having been batted around in past administrations since the 1980s and more recently championed by House Transportation Chairman Bill Shuster (R-Pa.). Shuster sponsored a bill on the topic last year and has already held one hearing on the issue this spring.

But Shuster's previous bill got a rough reception in Congress just a year ago, failing to even make it to the House floor after lawmakers of both parties attacked it. It's unclear whether its fortunes will change because of Monday's endorsement from Trump, who outlined broad legislative "principles" for a bill that would split air traffic control away from the FAA and place it under a private, nonprofit corporation governed by a board that includes the airline industry.

While the event in the East Room resembled a bill signing and included members of Congress, the principles still need to win congressional approval — which is far from a sure thing.

Shuster's ideas had one thing going for them, however: Because of all his previous work, the administration could rely on a nearly ready-made proposal for Monday's rollout. That's one reason it went first.

"Part is because Chairman Shuster did a very good job in pulling together a package," Trump infrastructure adviser D.J. Gribbin said Monday when describing why the administration kicked off its infrastructure focus with air traffic control. "It seemed like naturally low-hanging fruit from a policy perspective. It also serves as a great template for how we think about infrastructure."

Privatizing the FAA's air traffic control operations may be an issue near and dear to Trump, who

owns his own fleet of planes and helicopters and has complained for decades about the noise of jets flying over his mansion in Palm Beach, Fla. But it isn't exactly the kind of infrastructure improvement that Trump talked about during the presidential campaign, when he called for a nationwide push to fix aging roads, bridges and airports.

"We have bridges that are falling down. ... We have many, many bridges that are in danger of falling," Trump said in August. "We're going to have to rebuild our infrastructure. We have no choice."

Trump returned to the theme during his election-night victory speech in November, pledging that "we're going to rebuild our infrastructure — which will become, by the way, second to none — and we will put millions of our people to work as we rebuild it."

The idea seemed for a while to have bipartisan appeal. The $1 trillion price tag "sounded good to me," Senate Minority Leader Chuck Schumer told ABC News in December.

But Democrats have increasingly soured on Trump's plan as the details became clearer — including the fact that the federal government would provide only a fifth of the money, while the rest would come from states, cities, counties and private investors. Trump's proposed 2018 budget would provide just $5 billion for the infrastructure initiative, while imposing sharp cuts on various existing transportation programs.

"When the president ran, he said it was about America First and creating jobs in America. He talked about infrastructure. The average person thinks roads, bridges, school, broadband, water delivery systems," said Rep. Mark Pocan of Wisconsin, a critic of Trump's plan who joined fellow liberal Democrats offering their own infrastructure proposal. "A very small part of it is going to be traditional infrastructure. And a lot of it is going to be the selling out of our roads and bridges to the private sector."

Shuster's air traffic control proposal is faring little better so far. House Minority Leader Nancy Pelosi called it "a tired Republican plan that both sides of the aisle have rejected." Rep. Peter DeFazio of Oregon has staunchly opposed it from his perch as top Democrat on the House Transportation Committee. Meanwhile, tax-writers from both parties have been lukewarm to the idea, and senior Republican appropriators like former Chairman Hal Rogers (R-Ky.) and Rep. Mario Diaz-Balart (R-Fla.), who oversees DOT spending, have outright opposed it.

At the same time, Trump's infrastructure ideas have had to overcome initial skepticism from conservative budget hawks.

A White House official huddled with representatives from more than a dozen conservative groups last week in a bid to sell them on the $1 trillion infrastructure plan. And while conservatives are warming to the proposal, they also acknowledge that an infrastructure bill could take a backseat to must-pass legislation.

"Infrastructure doesn't have a deadline attached to it, which makes it easier to push back to next year," said one official from a leading conservative group who has talked to the White House

about the proposal. "The longer this goes, there's certainly an intersection with the midterm elections."

White House Director of Legislative Affairs Marc Short told reporters Monday night that Trump's team has made "a lot of progress" on the president's agenda, citing efforts to overturn Obama administration regulations, and said the administration will focus on health care and tax reform throughout the summer and fall. Short declined to give a specific timeline for when Congress would take up an infrastructure bill, but he said he hoped lawmakers will "tackle" it this calendar year.

Short dismissed concerns that Trump's indignant tweeting distracts from the administration's agenda. "He may not have a conventional style in doing that, but many of his efforts are extremely helpful to us in getting our legislative agenda accomplished," he said. He added later that there's "no doubt" that the Russia investigations distracts lawmakers from Trump's policy agenda, but he said he didn't know how much.

As with health care, Trump could also face sharp differences of opinion between the House and Senate on infrastructure. Senate Environment and Public Works Chairman John Barrasso (R-Wyo.) said last month that he is striking out on his own, working on legislation within his own committee — and with Democrats.

"We are going to work with the White House, but we're not going to wait," he said.

Meanwhile, the infrastructure push continues.

On Wednesday, Trump will travel to Ohio and Kentucky for a speech that will focus on waterways and rural infrastructure, followed by a Thursday meeting in the White House with mayors and governors and a Friday address at DOT.

White House officials have dubbed this week "infrastructure week," part of a series of policy-themed weeks that the administration is expected to roll out in the coming months, including one focused on energy planned for late June that could include a trip to Louisiana to visit a liquefied natural gas export facility, administration officials said. But if past is precedent, it's very possible Trump could change the subject again with a series of indignant tweets or an offhand comment during a rally.

On infrastructure, which requires a sizable pot of money from the federal government regardless of how much private financing the administration expects to leverage, any tough votes on scrounging up that funding — like a gas tax increase or a fee based on miles driven — would ideally happen before members find themselves in campaign season again, LaHood said.

If "Congress doesn't really begin to start talking about the funding alternatives by the August recess, I think a lot of time has been lost and I think we're right back behind the curve again in terms of getting anything done," LaHood said.

"The tough votes need to be taken this year," he said.

Perry to visit Trump Tower today Back

By Darius Dixon and Alex Isenstadt | 12/12/2016 09:53 AM EDT

Former Texas Gov. Rick Perry is making a previously unannounced trip to Trump Tower today, POLITICO has confirmed.

Perry is a leading candidate for Energy secretary, along with Democratic Sen. Joe Manchin, who is meeting with President-elect Donald Trump today, and Ray Washburne.

CBS first reported Perry's visit this morning.

Also visiting Trump Tower today is Rep. Cathy McMorris Rodgers (R-Wash.), the expected pick to become Interior secretary.

Trump's Commerce transition team pick championed clean energy, climate change Back

By Esther Whieldon | 11/21/2016 03:54 PM EDT

David Bohigian, who was named to President-elect Donald Trump's Commerce Department transition team today, once led the nation's international clean energy deployment efforts and advocated for reducing global greenhouse gas emissions.

Bohigian, managing director of investment advisory group Pluribus Ventures, was assistant secretary of Commerce from 2005 to 2009 and helped promote the Asia Pacific Partnership on Clean Development and Climate, a joint effort of the U.S. and six other major Asia-Pacific countries. Member countries worked together to address barriers and aid deployment of clean energy technologies that reduce greenhouse gas emissions.

In a January 2008 interview with China Daily, Bohigian said, "If China and the U.S. are not working together, the problems will only get worse with air and water pollution, and climate change. Our companies have the ability to work together closely with your companies."

He also said in the interview that clean energy should attract bipartisan support. "Republicans and Democrats seek to develop cleaner energy, and energy that doesn't have the same carbon

footprint that we've had in the past. It's important that we show cooperation in trade and on clean energy," he said.

After leaving Commerce, Bohigian went on to found E2 Capital Partners, which promoted energy efficiency business models. He later spent three years at hedge fund Bridgewater Associates.

Summaries

AIR
Automobile and Light Truck Corporate Average Fuel Economy Standards
AIR

Notice announces the intention of the National Highway Traffic Safety Administration to prepare an environmental impact statement for proposed corporate average fuel economy standards for model years 2022-2025 passenger automobiles and light trucks. NHTSA intends to issue a proposed rule that would specify attribute-based standards for passenger cars and light trucks for each model year with vehicle footprint as the attribute. It also would establish specific fuel economy targets based on vehicle footprint. A draft EIS will be made available concurrently with the proposed rule. Comments are due Aug. 25, 2017. Contact: Ken Katz; NHTSA, Office of International Vehicle, Fuel Economy, and Consumer Standards; 202-366-4936; Ken.Katz@dot.gov. Citations: 49 CFR 531, 533

Regulatory Update

AIR
Review of Primary NAAQS for NO2
AIR

Proposed rule of the EPA would retain the current primary NAAQS for nitrogen dioxide (NO2) as protective of public health with an adequate margin of safety. The rule would retain the one-hour standard of 100 parts per billion (ppb), based on the three-year average of the 98th percentile of the annual distribution of daily maximum one-hour concentrations. It also would retain the annual standard of 53 ppb, based on average annual concentrations. The rule is being proposed following review of the standards, as required under the CAA and under a federal court order which requires a final determination by April 6, 2018. The proposed rule is based on the assessment of the evidence in the integrated science assessment (81 FR 4910; 01/28/2016), analyses and considerations in the policy assessment (82 FR 17947; 04/14/2017), and the advice and recommendations of the Clean Air Scientific Advisory Committee. Hearing requests are due

Aug. 2, 2017. Comments are due Sept. 25, 2017. Contact: Breanna Alman; EPA, Office of Air Quality Planning and Standards; 919-541-2351; alman.breanna@epa.gov. Citations: 40 CFR 50

ENDANGERED SPECIES
Alaska/Marine Mammals Incidental Take
ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request from the City and Borough of Sitka, Alaska, for authorization to take five species of marine mammals incidental to pile driving and removal activities at the Gary Paxton Industrial Park dock in Sawmill Cove, Alaska. The authorization would allow take in the form of Level A and B harassment of the humpback whale, killer whale, harbor porpoise, Stellar sea lion, and harbor seal for 16 days from Oct. 1 through Dec. 31, 2017. Comments are due Aug. 25, 2017. Contact: Jaclyn Daly; NMFS, Office of Protected Resources; 301-427-8401

FOOD SAFETY
Food Additive Petition/Calcium, Vitamin D3 in Juice Products
FOOD SAFETY

Notice of the FDA announces the filing of a food additive petition by the Juice Products Association, of Washington, D.C., to replace the current recommended daily intake percentage values of calcium in fruit juices and fruit juice drinks for vitamin D3 with absolute values and to update the specifications for vitamin D3. The changes would allow manufacturers of fruit juices and fruit juice drinks that are fortified with calcium to maintain the absolute level of added calcium at 330 milligrams and 130 mg, respectively. The FDA has determined that a categorical exclusion applies and neither an environmental assessment nor an environmental impact statement is required. GENERAL ENVIRONMENT AND SAFETY
Consumer Antiseptic Wash Products
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a guidance for industry related to the Sept. 6, 2016, consumer antiseptic wash final rule (81 FR 61106), which specified that 19 active ingredients used in over-the-counter products are not generally recognized as safe and effective and are misbranded. The guidance explains the scope of the rule, describes how and when manufacturers must comply with its provisions, and addresses the significance of triclosan and triclocarban. The guidance also identifies active ingredients that were deferred from the rule and the effectiveness and safety criteria for those ingredients. Comments may be submitted at any time. Contact: Pranvera Ikonomi; FDA, Center for Drug Evaluation and Research; 240-402-0272. Citations: 21 CFR 310.545

GENERAL ENVIRONMENT AND SAFETY
Greenhouse Gas Emissions/ Production and Transport of Sugar Beets
GENERAL ENVIRONMENT AND SAFETY

Notice of the EPA announces the availability of its analysis of greenhouse gas emissions associated with production and transport of sugar beets as a feedstock for biofuel production. The analysis addresses scenarios in which noncellulosic beet sugar is extracted for conversion to biofuel and the remaining beet pulp coproduct is used as animal feed. The analysis also addresses trade restrictions between the U.S. and other countries. The EPA anticipates that biofuels produced from sugar beets could qualify as renewable fuel or advanced biofuel under certain circumstances and invites comment on the analysis of beet pulp and its effect on agricultural markets. Comments are due Aug. 25, 2017. Contact: Christopher Ramig; EPA, Office of Transportation and Air Quality; 202-564-1372; ramig.christopher@epa.gov

Subject: BREAKING NEWS: Trump says he plans to 'let Obamacare fail'

President Donald Trump said Tuesday that he plans to "let Obamacare fail," saying Democrats would be willing to work with Republicans on replacing it after it crashes.

"I think we're probably in that position where we'll just let Obamacare fail. We're not gonna own it. I'm not gonna own it," Trump told reporters. "We'll let Obamacare fail and then Democrats are going to come to us."

Subject: BREAKING NEWS: Joint Chiefs to troops: 'No modification' to transgender policy

There will be "no modifications" to the military's transgender policy as a result of President Donald Trump's tweets, the chairman of the joint chiefs said in a message to top military officers on Thursday.

Marine Gen. Joe Dunford wrote in the message to the chiefs of the services and senior enlisted leaders that the military will continue to "treat all of our personnel with respect."

"I know there are questions about yesterday's announcement on the transgender policy by the President," Dunford wrote in the message, a copy of which was provided to POLITICO. "There will be no modifications to the current policy until the President's direction has been received by the Secretary of Defense and the Secretary has issued implementation guidance."

"In the meantime, we will continue to treat all of our personnel with respect. As importantly, given the current fight and the challenges we face, we will all remain focused on accomplishing our assigned missions," he continued.

The president said Wednesday in a series of three tweets that transgender troops would no longer be allowed to serve in any capacity, sparking a number of questions about what that means for the thousands currently in uniform and whether it constitutes an official policy change.

Asked about an implementation plan, the Defense Department on Wednesday directed all questions to the White House.

The tweets sparked immediate blow back from lawmakers in both parties and advocacy groups who threatened legal action.

President Trump admires Vladimir Putin, but he doesn't understand him

Leon Aron | Politico

American presidents have been getting Russia wrong for years, but last Friday was different. President Trump made many mistakes during his summit with Vladimir Putin, beginning by saying it was an "honor" to meet with the Russian strongman. But the most disheartening takeaway is that, like predecessors Barack Obama and John Kerry, President Trump and his secretary of state fundamentally do not understand the man they're dealing with.

Reuters

The Fed is trying to remove the punch bowl. Easier said than done.

Desmond Lachman | The Hill

Last week's Federal Open Market Committee minutes leave little doubt the Fed is planning to start trying to unwind its massively bloated balance sheet soon. But it's doubtful the Fed will get far in these efforts, given the size of the market bubbles the Fed created when it expanded its balance sheet in the first place. The moral of the story is that the Fed should think twice before resorting again to highly unorthodox monetary policies as it has during the past eight years.

Trump Seen Replacing Obama Power Plant Overhaul with a Tune Up

Posted October 06, 2017, 01:47 P.M. ET

By Jennifer A. Dlouhy

President Barack Obama's signature plan to reduce carbon dioxide emissions from electrical generation took years to develop and touched every aspect of power production and use, from smokestacks to home insulation.

The Trump administration is moving to scrap that plan and has signaled that any alternative it might adopt would take a much less expansive approach, possibly just telling utilities to operate their plants more efficiently.

That's a strategy environmentalists say is almost certain to fall short of what's needed.

The benefit of the Clean Power Plan "is that it enabled states to create programs and enabled companies to find a reduction strategy that was the most efficient and made the most sense for their own content," said Kathryn Zyla, deputy director of the Georgetown Climate Center. "And that flexibility was really important for the states and companies."

President Donald Trump promised to rip up the Obama-era Clean Power Plan, which mandated that states change their overall power mix, displacing coal-fired electricity with that from wind, solar and natural gas. The EPA is about to make it official, arguing the prior administration violated the Clean Air Act by requiring those broad changes to the electricity sector, according to a draft obtained by Bloomberg.

Possible Replacements

Later, the agency will also ask the public to weigh in on a possible replacements. The administration will ask whether the EPA can or should develop a replacement rule—and, if so, what actions can be mandated at individual power plants.

Such changes—such as adding automation or replacing worn turbine seals—would yield at most a 6 percent gain in efficiency, along with a corresponding fall in greenhouse gas emissions, according to earlier modeling by the Environmental Protection Agency and other analysts. That compares to the 32 percent drop in emissions by 2030 under Obama's Clean Power Plan.

"In these existing plants, there's only so many places to look for savings," said John Larsen, a director of the Rhodium Group, a research firm. "There's only so many opportunities within a big spinning machine like that."

EPA Administrator Scott Pruitt outlined such an "inside-the-fence-line" approach in 2014, when he served as Oklahoma's attorney general. Under his blueprint, states would set emissions standards after a detailed unit-by-unit analysis, looking at what reductions are possible given "the engineering limits of each facility."

Inside-the-Fence Options

The EPA has not decided whether it will promulgate a new rule at all. In a forthcoming advanced notice of proposed rulemaking, the EPA will ask "what inside-the-fence-line options are legal, feasible and appropriate," according to a document obtained by Bloomberg.

Increased efficiency at a coal plant—known as heat-rate improvement—translates into fewer carbon dioxide emissions per unit of electric power generated.

Under Obama, the EPA envisioned utilities would make some straightforward efficiency improvements at coal-fired power plants as the first step to comply with the Clean Power Plan. But that was expected to coincide with bigger, broader changes—such as using more cleaner-burning natural gas, adding more renewable power projects and simply encouraging customers to do a better job turning down their thermostats and turning off their lights.

Obama's EPA didn't ask utilities to wring every ounce of efficiency they could out of coal-fired power plants because they saw the other options as cheaper. A plant-specific approach "would be grossly insufficient to address the public health and environmental impacts from CO2 emissions," Obama's EPA said.

That approach might yield modest emissions reductions and, in a perverse twist, might event have the opposite effect. If utilities make coal plants more efficient -- thereby driving down operating costs they also make them more competitive with natural gas and renewables, "so they might run more and pollute more," said Conrad Schneider, advocacy director for the Clean Air Task Force.

In a competitive market, any improvement in emissions produced for each unit of energy could be overwhelmed by an increase in electrical output.

"A very minor heat rate improvement program would very likely result in increased emissions," Schneider said. "It might be worse than nothing."

Power companies want to get as much electricity as possible from every pound of coal, so they already have an incentive to keep efficiency high, said Jeff Holmstead, a former assistant EPA administrator now at Bracewell LLP. But an EPA regulation known as "new source review" has discouraged some from making those changes, for fear of triggering other pollution-control requirements, he said.

Modest Impact

"If EPA's replacement rule allows companies to improve efficiency without triggering new source review, it would make a real difference in terms of reducing carbon-dioxide emissions," Holmstead said.

A plant-specific approach doesn't have to mean modest impact.

"If you're thinking about what can be done at the power plants by themselves, you don't stop at efficiency tune-ups," said David Doniger, director of the Natural Resources Defense Council's climate and clean air program. "You look at things like switching to natural gas or installing carbon capture and storage."

Requirements that facilities use carbon capture technology or swap in natural gas for coal could actually come close to hitting the same goals as in Obama's Clean Power Plan—if not go even further, Schneider said. They just would cost more.

Some utilities, including Houston-based Calpine Corp., PG&E Corp. and Dominion Resources Inc., backed the Obama-era approach. And they are still pushing the Trump administration to be creative now.

"The Clean Power Plan achieved a thoughtful, balanced approach that gave companies and states considerable flexibility on how best to pursue that goal," said Melissa Lavinson, vice president of federal affairs and policy for PG&E's Pacific Gas and Electric utility. "We look forward to working with the administration to devise an alternative plan for decarbonizing the U.S. economy through regulations that recognize the changing dynamics of the electric power sector, including new sources of low-carbon energy."

Trump Quietly Stalls Safeguards for Dozens of Endangered Species

Posted October 06, 2017, 8:13 A.M. ET

By Alan Levin

The Trump administration has quietly withdrawn dozens of pending actions to protect endangered species ranging from the green sea turtle to plants in the Florida Everglades, something conservationists say may violate federal law requiring the government to act.

The pending rules were mostly withdrawn in March and April. But environmental groups and others didn't know about the action because the administration only noted it in passing in a broader posting from the White House on the status of regulations.

The U.S. Fish and Wildlife Service, which oversees U.S. policy on plants and animals in danger of extinction, withdrew a total of at least 42 pending regulatory actions pertaining to endangered species, many of which detailed how to protect animals or plants already deemed to be in peril, according to Office of Management and Budget data compiled by Bloomberg. The actions pertain to such species as the yellow-billed cuckoo and Miami tiger beetle, along with bats, salamanders and fish.

The Center for Biological Diversity, which has filed multiple lawsuits against the government seeking stronger protections for endangered species, wasn't aware the rules were withdrawn until asked about it by Bloomberg, said Noah Greenwald, who directs the group's efforts on the issue.

"They are required by law to issue these," Greenwald said. "If they are taking them off the schedule, they are in violation of the law and they are also putting species at risk of extinction. I think it's totally unacceptable."

The Fish and Wildlife Service took the action because it "reflects our anticipated workflow at this time," according to an emailed statement from its parent agency, the Department of Interior. The department is assessing possible additional actions on the endangered species list, according to the statement.

"Withdrawing a rule simply means the agency is focusing its resources on other priorities for the coming 12-month period," it said in the statement.

In comments last July, OMB Director Mick Mulvaney characterized the more than 400 pending rules withdrawn by the administration as the beginning of President Donald Trump's effort to cut regulations, which he views as a burden on business that slows hiring and imposes economic costs on the nation. He said they were part of a pool "that we got rid of."

Separately, the Fish and Wildlife Service drew criticism from environmental groups earlier this week when it declined to list 25 species, including the Pacific walrus, as endangered.

The withdrawn endangered species regulations, along with hundreds of other pending rules at other agencies, were included in the OMB's so-called Unified Agenda, the twice-a-year listing of all pending regulatory actions released in July. The Fish and Wildlife Service didn't issue a press release on its decision or notify groups that had an interest in the issues.

Such notice isn't required if work is halted on a pending regulation, the agency said.

Shelving the actions on endangered species is a reversal of the agency's plans for the year. In a "workplan" posted on its website, the Fish and Wildlife Service said it would complete many of the pending regulations it halted.

Intensely Controversial

Rules to protect endangered species have been controversial, frequently plagued by delays and subject to litigation. Pro-development groups, including oil drillers and home builders, have charged that the Endangered Species Act unnecessarily puts a stranglehold on economic development.

Wyoming Sen. John Barrasso (R), who chairs the Senate Environment and Public Works Committee, is shepherding legislation to overhaul the act. "I think the Endangered Species Act has really been hijacked in ways that doesn't focus on the species," Barrasso said.

One of the withdrawn rules, which would have protected two rare garter snakes in Arizona, illustrates what's at stake and the potential legal pitfalls for Fish and Wildlife Service.

In 2014, the agency found that the snakes were endangered. U.S. law requires that a second regulatory action be taken within one year that identifies the areas that are home to the species so it

can be protected, it said in the Federal Register.

But the habitat area was never completed under the previous administration of President Barack Obama. Now, with the pending rule being withdrawn, it will be delayed for at least another year.

In its workplan, the agency said it had planned to finalize 20 such habitats this year. They include protections for endangered sea turtles, bats, salamanders and fish. Sixteen of them were withdrawn this year, the records show.

"It is troubling to see the administration withdrawing scores of regulations that are required by law with little to no justification," said Amit Narang, regulatory policy advocate for the consumer advocacy group Public Citizen. "It adds to a pattern we're seeing of this administration taking legally dubious actions in order to fast-track deregulation."

Luminant Coal Plant to Close Despite EPA Easing Haze Rule

Posted October 06, 2017, 12:15 P.M. ET

By Nushin Huq

A Luminant coal-fired power plant in Texas will retire even though the EPA eased emissions rules for it and seven other coal plants in the state. Luminant, a subsidiary of Vistra Energy, will retire its Monticello plant in January 2018, the company said Oct. 6. The announcement came a week after the Environmental Protection Agency issued its final rules to address haze pollution in Texas. The rules allow the plants to participate in a new intrastate pollution trading program rather than install costly emission controls.

In the end, continued falling wholesale electricity prices forced the company to retire the plant, the company said.

"The decision to retire the plant was based on economics, not pending or current federal regulation," Allan Koenig, a Vistra Energy spokesman, told Bloomberg BNA via email.

The company spent a year in a structured process to identify improvement opportunities across its plants and mines, Koenig said. The company tried several measures over the last few years to sustain the plant's life.

But as wholesale power prices have continued to decline, the economics of the plant no longer make it a viable option, Koenig said.

Notice Triggers Review

Once Monticello retires, about 1,800 megawatts of power will be taken offline, Luminant said in a statement.

As part of the retirement process, Luminant filed a notice with the Electric Reliability Council of Texas, the state's electric grid operator.

The notice triggers a reliability review. If ERCOT determines the units are not needed for reliability following a 60-day review, the company plans to stop plant operations on Jan. 4, 2018.

The company will decommission the plant in accordance with all federal and state regulations, the company said. It also will continue ongoing reclamation works at the plant's mines, which ceased active operations in the spring of 2016.

Luminant estimates that Monticello's retirement would impact about 200 employees.

Expensive Controls

The original federal proposal for the Texas Regional Haze Rule, issued in the final days of the Obama administration, would require Texas power plants to install new pollution controls in order to improve visibility in nearby national parks, including the Big Bend and Guadalupe Mountains national parks. Luminant Generation Co. LLC projected the proposal would require utilities to spend more than $3 billion on emissions controls.

Luminant as well as other utilities and the state of Texas sued the EPA over the rule. The state argued that the requirement to install the costly sulfur dioxide controls would force the plants to retire and affect power reliability in the state. The U.S. Court of Appeals for the Fifth Circuit stayed the rule (Texas v. EPA, 5th Cir., no. 16-60118, 12/19/16).

In addition to Monticello, other Luminant plants affected by the rule are Big Brown, Martin Lake and Sandow. The other coal-fired power plants under the rule are owned by Xcel Energy, Dynegy, and NRG.

On Sept. 30, the EPA signed a final rule that allowed the eight plants to join an air pollution trading program instead of installing expensive sulfur dioxide controls.

Market Pressure

EPA's more flexible regulations may not be enough to save coal plants from retirement. Market pressure from renewables still will likely force some Texas plants to shutter, according to Rob Whaley, an analyst with the consulting firm Wood Mackenzie who focuses on ERCOT.

"The ERCOT market, with all the wind generation coming on, is really suppressing prices and making it really hard for these baseload units to make money," Whaley told Bloomberg BNA in an interview before EPA's final rules were issued.

Wind generation accounted for nearly 23 percent of ERCOT's power generation in the first quarter of 2017. That level marked the highest quarterly wind penetration in ERCOT's history and highlighted the market challenges facing the coal industry in Texas.

With less costly rules, some of the Luminant plants may be economical, but some may still have to retire, Whaley said.

'Unstoppable Shift'

The retirement of Monticello is evidence of an "unstoppable shift away from dirty coal plants and toward clean energy," the Sierra Club said in a statement.

"Clean energy like wind and solar is rapidly replacing uneconomical, dirty coal plants across the country as America transitions to a clean energy economy," Bruce Nilles, director of Sierra Club's Beyond Coal Campaign, said in a statement.

The group said Monticello is the 11th coal plant retired in 2017 and the 10th since President Donald Trump took office.

The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

Storm-Hit Puerto Rico Tweets Offer @Elon to Prove Battery Tech

Posted October 06, 2017, 8:14 A.M. ET

By Perry Williams and Dana Hull

The government of storm-battered Puerto Rico has taken to Twitter to engage Tesla Inc.'s Elon Musk to show off his company's battery technology.

"Let's talk," Governor Ricardo Rossello tweeted at Musk. "Do you want to show the world the power and scalability of your #TeslaTechnologies? PR could be that flagship project."

This isn't the first time Musk has been approached via social media to demonstrate Tesla's power-storage tech. Earlier this year, a bet wagered via Twitter resulted in Musk promising to install the world's biggest battery project within 100 days or it's free. He said Sept. 29 in South Australia that the project is on-track to beat its own deadline.

"I fully support this!," Glorimar Ripoll, Puerto Rico's chief innovation officer, wrote on Twitter. "Let's build the Puerto Rico we all want through innovation #letstalk."

Tesla said last week that it's sending Puerto Rico hundreds of its Powerwall battery systems, which can be paired with solar panels. The U.S. solar industry is also about to airlift rooftop panels and batteries in an effort to help the island territory, where more than 90 percent of homes and businesses remain without electricity after Hurricane Maria destroyed the grid.

"The Tesla team has done this for many smaller islands around the world, but there is no scalability limit, so it can be done for Puerto Rico too," Musk wrote in a post before Rossello's tweet.

Solar's Courting Puerto Rico, and the Ravaged Island Is All Ears

Posted October 06, 2017, 9:09 A.M. ET

By Mark Chediak and Brian Eckhouse

The U.S. solar industry is about to airlift rooftop panels and batteries to Puerto Rico, where more

than 90 percent of homes and businesses remain without electricity after Hurricane Maria destroyed the grid. The first plane full of supplies is set to leave this week.

It's primarily a humanitarian effort, according to the Solar Energy Industries Association. But it's also a chance for the industry to showcase what it can offer that conventional power plants and grids can't: an energy source capable of weathering natural disasters. And Puerto Rico Governor Ricardo Rossello, leader of an island wrecked by back-to-back storms, is all ears.

After Elon Musk suggested on Twitter Oct. 5 that Tesla Inc. could rebuild Puerto Rico's electricity system with solar panels and batteries, Rossello responded: "Let's talk."

Renewable-energy advocates have wasted no time in promoting solar and batteries as a solution for regions wrecked by hurricanes Irma and Maria. Tesla Inc. said it would send hundreds of battery systems to Puerto Rico that could be paired with rooftop panels.

Edward Fenster, chairman of solar-panel provider Sunrun Inc. said it's also looking to help in restoration efforts. The storms knocked out power to millions of utility customers who depend largely on fossil-fuel plants and long-distance transmission lines for service. Some in Puerto Rico may be in the dark for as long as a year as the grid's repaired.

"We build solar panels to withstand 150-mile-an-hour winds—if the roof stays on your house, the solar panels stay on your roof," Sunrun's Fenster said in an interview at Bloomberg's San Francisco office Oct. 5. "And batteries are real-life safety equipment. From a broad perspective, solar and storage can strengthen grids everywhere."

Solar's proposition is proving an attractive choice for an island facing the daunting task of rebuilding a system from the ground up. It could take six months to a year before power is restored across the entire island, the U.S. Army Corps of Engineers in Puerto Rico said, citing initial forecasts.

"What's the smartest way to rebuild?" asked Abigail Ross Hopper, president of the Solar Energy Industries Association. "Do you recreate the infrastructure that existed and could be devastated in a storm, or do you balance a resilient system like solar plus storage that can better weather storms?"

Energy Storage

The supplies U.S. solar companies are sending to help with the hurricane response is a testament to how crucial energy storage has become to their business. Solar customers are looking for affordable ways to keep the lights on even when the sun's not shining—and lithium-ion battery pack prices fell 73 percent from 2010 to 2016, based on Bloomberg New Energy Finance estimates.

While such a combination may look increasingly appealing for regions like the Caribbean islands hit hard by the hurricanes, "the question is whether you can do it affordably," said Ethan Zindler, an analyst with Bloomberg New Energy Finance in Washington.

According to the Rocky Mountain Institute, a nonprofit group that promotes clean energy, it would cost roughly $250 million to build about 90 megawatts of solar and storage across a chain of Caribbean islands. That's enough to power an estimated 15,000 U.S. homes. While it may be sufficient for islands like the Turks and Caicos, more than a million households live in storm-battered and debt-ridden Puerto Rico alone.

Aid to Rebuild

"Certainly there's an opportunity here, with the potential for positives in Puerto Rico probably much larger than the potential total revenue," Zindler said. "There are sales potentially to be had," he said, but that assumes Puerto Rico gets the aid it needs to rebuild.

Meanwhile, the solar association has packed more than $1 million of donated gear onto airplanes. It's working with disaster-relief groups and other trade organizations to get the equipment where it's needed and to help raise money for the recovery efforts.

"We're trying to connect people with each other," said Hopper, the trade group's president. "Our customers have products that can make a huge difference in people's lives."

FERC's Powelson Walks Back Comments About Perry's Pricing Rule

Posted October 06, 2017, 01:56 P.M. ET

By Catherine Traywick

Robert Powelson, the newest member of the agency that oversees U.S. power markets, Oct. 6 walked back a day-old threat to quit before supporting U.S. Energy Secretary Rick Perry's proposal to shore up nuclear plants.

Powelson, speaking at an industry event Oct. 5, said that he would quit before supporting a Federal Energy Regulatory Commission rule that would "blow up" markets.

"When that happens, we're done. I'm done; I don't need this job," he said.

The next day, Powelson reiterated support for competitive markets at the same time he eased back on the threat.

"I think everyone who knows me and who has worked with me fully understands my steadfast commitment to competitive markets," he said in an email. "In the context of the DOE request, I made it very clear that we are reviewing it and will take the necessary time to look at some of the issues facing baseload resources in the markets."

Perry last week directed the agency to craft regulation enabling certain coal and nuclear plants to recover their costs, a move that critics have cautioned could upend markets.

On Oct. 6, Powelson said that FERC should look to the work of PJM Interconnection LLC, the largest U.S. grid operator, as the commission evaluates Perry's proposal. PJM has asked the agency to change the way it sets prices and recognize the contributions of baseload plants, such as coal and nuclear. PJM's plan would be much narrower in scope than Perry's.

Canada Aligns Small Engine Emissions Rules with U.S.

Posted October 06, 2017, 11:29 A.M. ET

By Peter Menyasz

Canada wants to make it easier for lawnmower and other small engine manufacturers to sell their products in the U.S. so it's giving the industry an extra year to meet new air pollution requirements.

Delaying the new pollution standards for small engines until the 2019 model year will allow manufacturers such as Ariens Co., Husqvarna AB, MTD Products Inc., Briggs and Stratton Corp., and Toro Co. to bring their products into compliance with the new requirements, Environment and Climate Change Canada said Oct. 4. The standards were originally planned to take effect for model year 2018 engines.

Other changes to the requirements, which manufacturers had sought, align Canada's labeling requirements with those in the U.S.

"The rule looks to provide a clear path for manufacturers to concurrently sell products in the U.S. and Canada under an EPA certification," Kris Kiser, president and chief executive officer of the Outdoor Power Equipment Institute, which represents more than 100 power equipment, engine and utility vehicle manufacturers, told Bloomberg BNA in an email. Kiser said Canada's regulations should serve as a model for other countries considering similar requirements.

Lawn and Garden Products

The new standards apply to lawn and garden products such as hedge trimmers, lawn mowers, leaf blowers, and snow blowers as well as to small generators, chainsaws, and generators.

When fully implemented, the rules are expected to reduce pollutant emissions from small engines by 58,000 metric tons of volatile organic compounds and 20,000 metric tons of nitrogen oxides between 2019 and 2032, the department said.

Benefits are expected to total C$153 million to 253 million ($122 million to 201 million) over that period, while costs are expected to total C$91 million ($72 million), including increased engine and testing costs and government compliance promotion and enforcement activities, it said.

While many of the 1.5 million to 2 million small gas engines that enter Canada each year already meet U.S. requirements, further aligning the two countries' regulations will prevent less expensive engines with higher pollution emissions from entering Canada, Environment and Climate Change Canada said.

Companies' Burning of Spilled Oil, Composting Sewage Now OK in Brazil

Posted October 06, 2017, 12:01 P.M. ET

By Michael Kepp

Companies will be allowed to do controlled burns of significant oil slicks far offshore if other methods of cleaning them up have failed under one of two resolutions by Brazil's National Environmental Council (CONAMA) now in effect.

The other resolution will allow sewage treatment operators to convert residual sludge into compost.

Neither activity had been permitted before because the council, a public-private, policy-making body headed by the Environment Ministry, had not regulated them.

The resolution on controlled burning (No. 482) only allows the technique if chemical dispersants that break up oil from oceanic spills and the use of skimmers to collect contained oil from slicks prove ineffective.

Controlled burning is also only allowed when the spill is "nationally significant," requiring the use of a national contingency plan to clean it up; has "expressive volumes" of oil equivalent of at least 1,600 cubic meters (422.7 gallons) per day continue to be spilled; or has the potential to migrate to environmentally-sensitive areas.

No burning will be allowed if the slick is within a nautical mile (1.15 miles) from the coast or nearby islands or three nautical miles from coral reefs. Companies responsible for the spill are required to notify state officials and stop the burning if evidence shows that the resulting smoke could affect coastal areas.

Burning the Midnight Oil

Robson Jose Calixto de Lima, environmental analyst at Brazil's Environment Ministry, told Bloomberg BNA Aug. 30 the resolution comes in response to the 2010 Macondo spill in the Gulf of Mexico and is an effort to modernize Brazil's oil spill cleanup techniques and make them more efficient.

The BP-operated Macondo well exploded in April 2010, killing 11 workers and spewing an estimated 4.9 million barrels of oil into the Gulf of Mexico.

Daniel Ribeiro, the emergency response manager for Shell Brasil, which operates two offshore oil production platforms in Brazil, told Bloomberg BNA Aug. 31 that the resolution provides an important new tool for cleaning up spills.

"It's a tool that is most effective when big concentrations of oil have been spilled and when the weather is calm, making the slick easier to ignite. At Macondo, controlled burning was responsible for 5 percent of the oil cleaned up," he said.

Brazil's state oil company Petrobras told Bloomberg BNA in a Sept. 1 statement that the technique was a good option "for responding, in exceptional cases, to major offshore oil spills far from the coast" but would not be the preferred solution. Rather, it would be considered on a case-by-case basis.

Composting to Save Money

The other CONAMA resolution (No. 481) allows sewage sludge, a byproduct of wastewater treatment—to be turned into compost. The decomposed organic matter can be recycled as fertilizer and a soil additive.

The resolution bars composting sludge that is the byproduct of waste from health facilities, airports, ports, or companies whose treated organic waste is classified as dangerous.

"This CONAMA resolution is important because being able to turn sewage sludge into compost will

allow water-and-waste treatment companies to reduce costs because they no longer have to pay for disposing sludge in landfills," Carlos Bocuhy, a member of CONAMA and president of the Brazilian Institute for Environmental Protection, an environmental group that focuses on industrial pollution, told Bloomberg BNA Aug. 31. He lamented, however, that the resolution doesn't deal with how to treat and eliminate pharmaceutical waste, which could pose a health risk, in the process of turning sludge into compost.

The composting resolution and the oil slick burn-off resolution, both approved by CONAMA Aug. 23, took effect when published in the government's daily registry, on Oct. 4, and Oct. 6 respectively.

Faster, Fewer Environmental Reviews Coming Under New Czech Law

Posted October 06, 2017, 01:24 P.M. ET

By Jan Stojaspal

Developers in the Czech Republic can expect faster reviews of how their projects could affect the environment under changes to the country's environmental assessment law that take effect Nov. 1, a senior environment ministry official said.

The current two-tiered environmental impact assessment (EIA) process was shortened, giving interested parties only one chance, not two, to comment and object. This will cut about six weeks off the usual six months developers have to wait for an EIA, Evzen Dolezal, director of environmental impact assessment and integrated prevention at the Czech Ministry of the Environment, told Bloomberg BNA in an Oct. 3 interview.

A number of project proposals will also benefit from changes to how they are categorized for different types of environmental reviews, he added.

For example, facilities for the production of cement and lime and facilities for the processing of magnesite with annual outputs exceeding 15,000 tons will no longer require a full-fledged EIA—unless a screening procedure determines it to be necessary, according to Dolezal.

Fewer Projects Need Review

Also, projects that fall below certain screening thresholds—and there are around 2,000 of them per year—will only require review if they are planned for specially protected areas.

Dolezal expects the number of these projects to decline by as many as 1,700. And he expects a "10 percent to 20 percent" decline in the number of projects requiring a full EIA or a screening procedure.

"An ideal outcome will be an environmental assessment process that is simpler and shorter," Dolezal said. "And the process will be only applied when necessary, to projects that can have a potential impact" on the environment.

The amendment was signed into law by the Czech president Sept. 12, and, Dolezal said, does not favor any particular sector or industry.

It incorporates the 2014 revisions to a European Directive (2011/92/EU) on the assessment of the effects of certain public and private projects on the environment. The revisions, for example, require

EU member countries to expand their focus to include the potential impact of projects on biodiversity or climate change.

But most of the changes, including efforts to speed up and streamline assessment procedures, are based on local experience with the Czech environmental assessment law, which has been in effect since 2002 and which in many cases has gone above and beyond European environmental protection rules, according to Dolezal.

Possible Turning Point

Tomas Kaderabek, director of Prague-based Developer Association, told Bloomberg BNA Oct. 4, the amended EIA Act was a possible turning point for how development projects are treated by the state administration.

"The most valuable thing, from my perspective, is that the state administration finally reached the point where it realized that it is no longer viable to increase restrictions, but that the opposite is required," he said. "This is the first moment when someone says things have gone too far."

But Petr Kincl, managing associate, PwC Legal in Prague, remained skeptical.

"The amendment brings no revolution," he told Bloomberg BNA in an Oct. 5 email. "It is above all an administrative correction of mistakes made during previous implementations of European regulations or amendments to these regulations."

He said he did not think the changes would have much impact for Czech investors. "In general, investors would find more helpful improvements in the quality and speed of work of public officials, so that their opinions/assessments/decisions are defensible and difficult to contest by those who try to scuttle their investment projects for whatever reason," he added.

Subject: BREAKING NEWS: McConnell calls on Moore to step aside if report on relations with teenagers is true

Senate Majority Leader Mitch McConnell (R-Ky.) called on the party's nominee for Senate in Alabama, Roy Moore, to withdraw from the race if a new report that he pursued teenage girls in his 30's is true.

"If these allegations are true, he must step aside."

The Washington Post published the story about Moore on Thursday.

Subject: Morning Media: Fox News' new lineup? -- Breitbart TV, part duex -- Feds investigating Russian media

By Alex Weprin | 09/12/2017 05:39 AM EDT

FOX NEWS' NEW LINEUP? Tucker Carlson, Sean Hannity, Laura Ingraham. According to CNN's Brian Stelter and Hadas Gold, that will be Fox News Channel's new prime-time lineup, assuming Ingraham closes her deal to join the cable news channel. The new prime-time lineup will see "The Five" shift back to its old time slot at 5 p.m., with the "Fox News Specialists" canceled in the wake of Eric Bolling's departure. It will also be a homecoming of sorts for Sean Hannity, who held court at 9 p.m. for most of his career at Fox News, moving to 10 p.m. in 2013 to make room for Megyn Kelly. Assuming the deal gets done, Ingraham - who had been rumored to be a candidate for White House press secretary for President Donald Trump - will now move to what is arguably a more powerful perch: prime time on the president's preferred cable news channel. Ingraham, of course, has appeared regularly on Fox News, and would often fill in for Bill O'Reilly on his program.

-A new lineup won't be the only new thing coming to Fox News. Per NewscastStudio, the channel's on-air graphics are getting a major refresh, including a new, "flat" look for the logo. That might not sound like a big deal, but in the world of cable news, changes to the on-air product are made sparingly, lest viewers be turned off by the tweaks. In this case, it sounds as though Fox wanted to minimize distractions from moving pieces in the lower third.

Good morning and welcome to Morning Media. I always want to improve Morning Media and make it more useful to you, so please send me tips, ideas and feedback! I'm on Twitter @alexweprin and on email at alexweprin@gmail.com. Morning Media is produced with help from **Cristiano Lima (clima@politico.com / @ludacristiano)**. **Archives**. **Subscribe.**

BREITBART TV, PART DUEX: Another week, another story about Breitbart's long-rumored expansion into television. This BuzzFeed News story about Breitbart and Steve Bannon's media ambitions has some news in it (an expanded presence on SiriusXM, a book deal), but it also touches on the conservative website's TV plans.

"A separate source close to Bannon said Bannon has talked with Christopher Ruddy, a Trump friend and the CEO of Newsmax Media, about bringing him on to work on a TV effort. The Sinclair Broadcast Group, a conservative-leaning television company with a growing presence in local markets around the country, also reached out to Bannon about possibly producing content for their networks, the source said. While Bannon's team has discussed whether a TV network or 'TV-lite' online streaming approach would be a good fit, one ally said Sinclair owns a cable channel which it could hypothetically convert for Bannon, making it the easiest option for a delivery system."

-I wrote in Morning Media a couple of weeks ago about the rumored Sinclair tie-up, and why a whole new cable news channel would have steep challenges. Those challenges still apply

to Newsmax just as much as Sinclair. The cost of launching a TV channel is prohibitive, and Sinclair can't just "flip" a channel it owns like Tennis Channel into a cable news channel without repercussions from cable providers.

-That being said, a Breitbart streaming service would cost far less than a dedicated cable news channel, and could get off the ground much faster. Likewise, it would be relatively simple to produce a few Breitbart-branded programs for Newsmax or Sinclair, though Newsmax's limited cable distribution means that they would be unlikely to draw anything close to Fox News or CNN numbers. Likewise, while Sinclair owns hundreds of local TV stations across the country, affiliation agreements limit the amount of programming they can run, and the most popular hours for watching TV (prime time, morning news hours) are taken by national network programs.

-Related: Despite Press Secretary Sarah Huckabee Sanders' comments on Monday, it sounds like Bannon still talks fairly regularly to President Trump. Your silly conspiracy of the day: Some conservative outlets are claiming that CBS News fooled around with the coloring during Bannon's "60 Minutes" interview to make him look less flattering. CBS News says it is nonsense.

FEDS INVESTIGATING RUSSIAN MEDIA: Two Russian-owned media outlets, cable news channel RT and the Russian news agency Sputnik, are under investigation by the federal government under the Foreign Agents Registration Act. According to Yahoo News' Michael Isikoff and Hunter Walker, Sputnik's former white House correspondent handed over a thumb drive with thousands of internal documents and emails. He was questioned by FBI agents about how Sputnik decided what stories it would cover, and the approach it would take. In a separate story, Walker and Isikoff note that RT revealed in a note on its website that the Department of Justice had reached out about registering under FARA. Legislation has been proposed in congress that would broaden FARA's scope.

-RT editor in chief Margarita Simonyan, in the note, said "The war the US establishment wages with our journalists is dedicated to all the starry-eyed idealists who still believe in freedom of speech. Those who invented it, have buried it," adding that the proposed legislation could impact U.S. news outlets that operate in Russia. "I wonder how US media outlets, which have no problems while working in Moscow, and that are not required to register as foreign agents, will treat this initiative."

THE HILL'S STEEP CLIMB: The Hill, which started its life as a newspaper covering politics and policy, has big ambitions. According to Bloomberg , it wants to start selling ads "to a bigger, broader group of consumer advertisers" as it seeks scale as a digital publisher. And what better place to start than with original video series? Specifically, Bloomberg reports that The Hill wants to add an original comedy show sometime in 2018, as well as a morning talk show a la MSNBC's "Morning Joe," and political opinion programming. It's a bold, expensive move, and it will mean that The Hill will compete more directly with upstarts like Vox Media and BuzzFeed as they chase scale. As Bloomberg notes, many of The Hill's competitors (which, I should note, include POLITICO) have grown their businesses by launching targeting premium news services focusing on specific policy areas, leaving scale to more general interest news organizations.

HURRICANE IRMA'S SNAPCHAT IMPACT: During a 24-hour period over the weekend, more than 250,000 Hurricane Irma-related submissions from Snapchat users were sent to the platform's news team to be considered in its "stories" about the disaster, according to data shared with POLITICO by Snap. That is particularly notable given that just a week before, Snap saw an average of around 100,000 submissions per day during Hurricane Harvey in Texas. For comparison, a year ago, during the Louisiana floods, Snap saw 96,000 submissions in total. As the platform continues to grow, and its stories platform continues to gain traction, more and more users, both professionals and regular people, are sending their videos to the platform's editors for consideration. At the same time, Snap is getting more coverage from traditional platforms like TV, with its "Snap Map" feature in particular being highlighted by outlets like NBC's "Today" show.

ANOTHER FAKE NEWS HEADACHE: Facebook may have another problem to deal with as it continues its fight against false news. According to my colleague Jason Schwartz , a Yale study suggests that its fact-checking efforts are not having much of an impact in how people perceive fake news stories, and in some cases may be making people more likely to believe false stories. "[T]he sheer volume of misinformation that floods the social media network makes it impossible for the fact-checking groups Facebook has partnered with-like Politifact, FactCheck.org and Snopes.com-to address every story. The existence of flags on some-but not all-false stories made Trump supporters and young people more likely to believe any story that was not flagged, according to the study published Monday by psychologists David Rand and Gordon Pennycook."

-Remember that $100,000 that entities tied to Russia spent on Facebook ads? Some of it was spent to promote anti-immigrant rallies on U.S. soil, per The Daily Beast.

SOUNDBITE: "One reason I hesitate giving career advice to young journalists is by the time you have any success, whatever route you took to it is gone." -New York Times TV critic James Poniewozik.

REVOLVING DOOR:

-Taylor Antrim is now executive editor of Vogue. He was previously senior editor and then articles editor.

-Kimberly Dozier is becoming executive editor of The Cipher Brief. Dozier previously served as a reporter for the AP, CBS News and The Daily Beast.

-Scott Wilson will cover "the West and especially California" for The Washington Post. He had been national editor. You may remember Wilson from this story last week.

-Lenore Moritz has been named VP of publicity for Time Inc's video and TV division. She previously worked at Viacom and NBCUniversal.

-Jordan Frasier, who had been a producer for "Meet the Press" and a 2016 NBC news campaign

embed, is joining The Washington Post as a video journalist covering national politics.

-Christine Glancey has been named deputy editor for newsroom standards at Dow Jones. She was most recently managing editor for news operations and talent at The Wall Street Journal.

-Miguel Hernan, Charles Lang, Heather Lynch and M. Marit Rehavi have been named data journalism advisers for ProPublica. More information here.

EXTRAS:

-"60 Minutes" executive producer publishes an excerpt from his new book about the program in Vanity Fair. A side note: if you are fascinated by TV news, you will really enjoy the book. Lots of interesting details about the program and its origins, as well as its impact on TV news and journalism in general.

-Cheddar hires a general counsel as it seeks a European expansion.

-Could The San Francisco Chronicle show a path forward for struggling newspapers?

-Here's Jack Shafer on why we can't look away when a disaster like Harvey or Irma hits.

-The Washington Post's Erik Wemple writes about a POLITICO meeting focusing on how reporters should use social media.

-There's another streaming TV bundle coming. This one's called Philo, and it is specifically avoiding expensive sports channels for the time being. Discovery, Viacom, AMC and Scripps are on board though, and it will have a price point of $20 per month.

-Vulture's Joe Adalian has a great Q&A with MSNBC's Joy Reid.

-Real estate brokers will no longer have to pay to have listings featured in the NYTimes.com real estate section.

Confidential Business Data Compounds Some Chemical Cleanups

Posted June 30, 2017, 10:15 A.M. ET

By Pat Rizzuto

Federal agencies are working to help state health and environmental regulators better understand which of a particular class of chemicals are contaminating groundwater supplies and other natural resources.

They want to figure out how to prevent future contamination from what are known as poly- and perfluorinated chemicals. These refer to compounds that make other chemicals—or the materials they coat—heat, stick and stain resistant.

One challenge: the precise chemistry of some of these substances is considered confidential business information, making it difficult to come up with a mitigation strategy, Linda Birnbaum, director of the National Institute of Environmental Health Sciences and the National Toxicology Program, said during a June 29 meeting of NTP's Board of Scientific Counselors.

Some of these substances are toxic, can persist in the environment for long periods of time, and can even potentially accumulate in various organisms that come into contact with them, according to information from the Organization for Economic Cooperation and Development.

Perfluorinated chemicals are used in a variety of household products, ranging from non-stick cookware to stain-resistant carpets, according to the National Institute of Environmental Health Sciences.

Contamination is a costly issue for the U.S. military due to the use of a foam containing perfluorinated chemicals to fight petroleum fires. The Air Force needs to inspect nearly 200 bases for potential contamination, while the Navy estimates it could face billions in cleanup costs.

3,000 Chemicals

The most recognized perfluorinated chemicals, perfluorooctanoic acid (PFOA) and perfluorooctane sulfonate (PFOS), are no longer made in the U.S. However, similar substitutes for both chemicals are being made, according to Birnbaum.

Scientists have detected some 3,000 variations of poly- and perfluorinated chemicals in drinking water, she said.

For example, the North Carolina Department of Environmental Quality is working with the state's Department of Health and Human Services to investigate the Chemours Co.'s discharge of GenX, a PFOA substitute, into the lower Cape Fear River.

These agencies and those in other states face challenges in figuring out the best way to address the substitutes because confidential business information protections prevent agencies from knowing exactly what chemicals they are dealing with, Birnbaum said.

Seemingly small changes to a substance's chemistry can alter the technique for removing them from drinking water, according to Birnbaum.

For example, she said, long-chain molecules, such as PFOA and PFOS, can be removed from drinking water with carbon filters, but many shorter chained substitutes can't.

The National Institute of Environmental Health Sciences, and the National Toxicology Program will analyze a subset of the poly- and perfluorinated chemicals to help scientists and agencies understand what's getting into the environment, Birnbaum said. The precise number of chemicals that will be analyzed has yet to be determined, she told Bloomberg BNA by email.

The NIEHS and National Toxicology Program are working with other agencies to address concerns about these types of chemicals, Birnbaum told the advisory board.

Base Closure Implications

For example, the Air Force already has stopped using a perfluorinated-based petroleum fire fighting foam, Aqueous Film Forming Foam, for training exercises, according to information that military branch provided Bloomberg BNA.

The Air Force no longer uses the foam unless it is warranted by an emergency or is in a contained environment certified by a civil engineer's environmental representative at the base where the chemical would be used, an Air Force spokeswoman told Bloomberg BNA June 29.

The Air Force has spent $152.5 million investigating and mitigating sites for PFOS and PFOA contamination, according to a fact sheet it updated on June 20. Further site inspections are needed at 190 bases, the fact sheet said.

Navy Defense Base Closure and Realignment, or BRAC, officials have said the cleanup of PFOS and PFOA at both active and closed installations could cost billions of dollars, according to a Government Accountability Office report released in January.

Wind Industry Tacks as Trump Shifts the Political Climate

Posted June 30, 2017, 10:12 A.M. ET

By Ari Natter

Three days after Energy Secretary Rick Perry directed his staff to find ways to give a boost to coal and nuclear power, the rival wind industry kicked its lobbying response into action.

The American Wind Energy Association would tap allies in Congress willing to weigh in with Perry and buy advertisements on "news channels closely followed by the Trump administration," according to a memo its leader sent to board members. During the Obama administration it had touted its role in addressing climate change, but now it would emphasize an economic message, something sure to resonate with President Donald Trump.

"The wind industry drives over 100,000 American jobs, more than coal, nuclear, or hydropower electricity generation," Chief Executive Officer Tom Kiernan wrote in the eight-page memo on April 17. The memo was provided to Bloomberg News by a competing lobbyist and confirmed by AWEA.

Once a darling of federal policy makers during the tenure of President Barack Obama, wind energy has been buffeted under Trump, who frequently complains that wind turbines kill eagles and aren't a reliable power source. In the administration's efforts to help coal miners, oil drillers and nuclear-plant operators, wind is the variable, subsidized power that is making life difficult for those so-called baseload electricity producers.

"I don't want to just hope the wind blows to light up your homes and your factory—as the birds fall to the ground," Trump said this month in Iowa, a state that gets more than a third of its electricity from wind power.

Republican Lobbyists

Kiernan has taken to fact-checking Trump's comments on Twitter. And the group has hired Republican lobbyists this year to help it gain a foothold in a very different Washington.

Last month, AWEA hired Amy Farrell, a former official in the administration of President George W. Bush and natural gas lobbyist, as its senior vice president for government and public affairs. It also hired William Myers, Bush's former Interior Department solicitor, as a lobbyist that same month.

The Energy Department study of the electric grid, however, poses the most tangible risk to wind power, which more than doubled in capacity during the Obama administration to more than 82,000 megawatts. A memo from Perry ordering the study posited that the reliability of the power grid was at risk, and listed factors such as regulations that could be forcing the "premature retirement of baseload power plants," which refers to mostly coal and nuclear facilities. While Perry didn't mention wind, he did discuss tax subsidies, which wind producers receive, and highlights a preference for on-site fuel, which wind doesn't have.

"Political driven policies, driven primarily by a hostility to coal, threatens the reliability and the stability of the greatest electrical grid in the world," Perry said this week. "Over the last few years, grid experts have expressed concern about the erosion of critical baseload resources, specifically how it is dispatched and compensated."

Publicly the wind industry says it's doing just fine under Trump.

Tom Vinson, vice president of federal regulatory affairs for the group, which counts subsidiaries of wind turbine makers such as Vestas Wind Systems A/S and Siemens AG on its board of directors, dismissed the memo as "old news" and said wind doesn't face overwhelming opposition as it

supports the president's quest for "energy dominance." And it creates jobs, he added.

Perry, who had mostly praised coal, natural gas and nuclear power since becoming secretary, went out of his way to praise wind and solar this week.

"We are going to ensure that renewable energy finds its way to the grid and that the tremendous resources presented by the wind, the sun and hydro are efficiently captured and then delivered," he said.

When he was governor of Texas, Perry said in a blog post this week, that state took a lead in pursuing wind development, and it now stands as the top wind producing state in the U.S.

That shift in tone may, in part, represent that AWEA's efforts are paying dividends.

Soon after the the wind association started its lobbying campaign, wind-friendly lawmakers such as Sen. Charles Grassley (R-Iowa) sent letters with pointed questions about the study. Environmental groups filed Freedom of Information Act requests about the study and what prompted it. The industry group got in to brief administration officials on the benefits of the power source, Vinson said.

"We hope the Department of Energy will be taking this substantial body of existing research into account when they issue their study," Evan Vaughan, a spokesman for the trade group, said in an email.

And in another small victory for the industry, Trump announced June 28 that he would nominate Richard Glick, a Democratic Senate staff member and former wind lobbyist, to the Federal Energy Regulatory Commission.

While representatives of the wind industry continue to exude confidence, "I think privately they are a little concerned," said Paul Bledsoe, a former climate adviser in the Clinton administration. "It seems as if the administration is pursuing an ideological agenda against renewables based on political animus towards the Obama administration."

"They are anxious about some unexpected assault, but they are not quite sure what to prepare for," he added.

German Court Ruling for Daimler Bucks Trend Against Diesel

Posted June 30, 2017, 01:57 P.M. ET

By Jabeen Bhatti

German auto giant Daimler didn't misrepresent the effectiveness of pollution control technology in one of its Mercedes diesel vehicles, the Regional Court of Stuttgart ruled June 29.

Berlin-based environmental nonprofit Deutsche Umwelthilfe (DUH) alleged in its Februrary 2016 lawsuit that Daimler overstated emissions efficiency on its Mercedes C-Class BlueTEC 220 CDi model in advertisements. According to the organization, the standard exhaust purification system on the car didn't reduce nitrogen oxide emissions by up to 90 percent when compared to diesel

engines not outfitted with the software.

But the court dismissed that claim, ruling in favor of Daimler's argument that context of the advertisement was a comparison between diesel vehicles in its own fleet, rather than all diesel vehicles on the market.

DUH officials told Bloomberg BNA they will consider an appeal of the decision once the court officially releases it, which was not available as of June 30.

Test Results

In its claim, DUH cited an independent study conducted by the nonprofit Netherlands Organization for Applied Scientific Research (TNO) to dispute Daimler's efficiency claim.

TNO laboratory tests verified figures the automaker cited in its advertisements. But road tests TNO conducted during days when temperatures ranged between 7 and 10 degrees Celsius (45 to 50 degrees Fahrenheit) yielded nitrogen oxide emissions that were about 28 times higher than the acceptable limit of 0.08 grams per kilometer for Euro 6 class vehicles, according DUH. The Euro 6 standard is currently the most stringent emissions class for new vehicles in Europe.

Still, the court found no grounds for ruling Daimler and its subsidiary Mercedes misrepresented the efficacy of its technology because both the government-funded and private laboratory tests affirmed the advertisement's claim, as well as the context of the claim—a Mercedes-to-Mercedes comparison, rather than a comparison between Mercedes' vehicles and all other diesel engine vehicles, Juergen Resch, chief executive officer of Deutsche Umwelthilfe, told Bloomberg BNA.

"We completely reject that reasoning," he said. "Daimler is making itself very small," he added, referring to the defendant's argument.

A Daimler spokeswoman told Bloomberg BNA that "we welcome the fact that the court confirmed our legal position."

Diesel Drop

The court's ruling bucks the anti-diesel trend currently shaking the auto industry in Germany.

In March, the Bavarian High Administrative Court upheld a 2012 decision instructing authorities in Munich to begin drafting plans to institute a partial driving ban on diesel vehicles due to a DUH suit. Meanwhile in Duesseldorf, regional courts ordered city officials to begin drafting similar regulations in September 2016. In Stuttgart, partial driving bans of diesel engines will begin taking effect in 2018 following a lawsuit by DUH.

Despite DUH's recent loss in its efforts against Daimler, the impact of the numerous cases is making the car industry and consumers nervous, according to Ferdinand Dudenhoeffer, director of the Center for Automotive Research at the University of Duisberg-Essen.

"This current case of Deutsche Umwelthilfe against Daimler is just one mosaic stone in the greater diesel-gate trend," Dudenhoeffer told Bloomberg BNA, referring to the emissions-cheating scandal involving Volkswagen that began in 2015.

Diesel engine vehicles comprise one-third of all private vehicles on German roads, but their market

share could easily drop if the courts continue to issue anti-diesel rulings, Dudenhoeffer said.

"Because of these cases, there's a lot of insecurity among consumers to buy new diesel vehicles," he said.

Rebirth of Canadian Oil Sands From Fire Stymied by Market Slump

Posted June 30, 2017, 10:14 A.M. ET

By Robert Tuttle

In the heart of Canada's biggest oil province, life is slowly returning to normal in Fort McMurray, Alberta. After a fire last year destroyed entire neighborhoods in the town and halted about a million barrels of daily production, green leaves are beginning to bud on charred trees and new construction is replacing homes that were burned to the ground.

But hopes for a complete rebirth are being undermined by a global oil slump. It's become less attractive to invest in the region, where tar-like reserves are among the most expensive and difficult in the world to extract. After 17 years of uninterrupted expansion around Fort McMurray -- which drove an 86 percent increase in the nation's output -- no new projects or expansions will go into operation next year, an analysis of company spending plans shows.

Producers including Royal Dutch Shell Plc and Koch Industries Inc. have shelved or put on hold billions of dollars of projects since crude fell from more than $100 a barrel in 2014 to as low as $26 last year. The economics of the business remained lousy in 2017. That's because sticky oil sands in Alberta have to be mined and then converted into liquid using a costly conversion process or loosened with steam and sucked out of wells. To justify expanding existing projects or starting new ones, crude needs to fetch at least $50.

"We will not see a pickup of significant work for two to three years," once existing expansions are completed in 2017, Jay Bueckert, regional director of the Christian Labor Association of Canada, a union representing oil-sands workers, said in an interview at his office in Fort McMurray.

The investment slowdown is a double blow for the town. It's still recovering from the May 2016 blaze that swept through neighborhoods such as Beacon Hill and Timberlea, destroying about 2,000 homes and forcing shutdowns of oil production for almost a month. The damage will wind up costing the government and insurers more than C$5 billion ($3.8 billion), according to the Conference Board of Canada.

As many as 5,000 people haven't returned, according to municipal population figures. While home sales were up in the first five months of the year, prices continued a decline that started after the oil-price slump began three years ago, according to the Fort McMurray Real Estate Board.

'People Left'

"A lot of people just sold and left," Sam Keane, a 27 year-old scaffolder from Ireland, said as he stood beside a rebuilt home he had just bought from a previous resident of a neighborhood that burned down.

As the community rebuilds, international companies are pulling back. Since March, Shell, ConocoPhillips and Marathon Oil Corp. have agreed to sell oil-sands assets to domestic producers Canadian Natural Resources Ltd. and Cenovus Energy Inc.Exxon Mobil Corp., majority owner of

Imperial Oil Ltd., slashed billions from its Canadian reserves.

While prices have recovered from last year's low, they're down 21 percent this year to less than $45 a barrel. That's too cheap to justify most projects that require billions of dollars in up-front investment and years of development, said Kevin Birn, a director at IHS Energy in Calgary.

Fort McMurray has vast reserves. Only Saudi Arabia and Venezuela have bigger crude deposits. The town transformed from a remote trading outpost to an energy center in the late 1960s, when what is now Suncor Energy Inc. began extracting the viscous hydrocarbons from the soil under the dense boreal forests of remote Northern Alberta.

Early Growth

As crude prices surged after the turn of the millennium, concerns about oil scarcity drew more than C$200 billion of investment from the U.S., Asia and Europe. As money poured in, so did people from around the world seeking steady jobs and a higher standard of living. With the population growing 4 percent a year, the municipal government struggled to build infrastructure fast enough. Traffic jams lasting hours would tie up oil sands workers on the one road into the oil-sands mines to the north.

The boom ended abruptly in late 2014 with the surge in U.S. shale production that sent prices plunging. The number of oil-sands-related engineering and construction jobs will shrink by 9,300, or 30 percent, by 2023 from "already diminished employment in 2016," according to a report by BuildForce Canada, a trade organization.

"We always talk about diversification and it's something that's really hard to do when we are in the heart of the oil sands," said Alexis Foster, executive director of the Fort McMurray Chamber of Commerce.

Limited Expansion

In the past year, MEG Energy Corp., Cenovus and Canadian Natural announced plans to expand operations later in the decade. But those expansions are to thermal oil sands projects in an area located about two hours south of Fort McMurray. New projects near Fort McMurray, such as Suncor's newly proposed Lewis or Imperial Oil's Aspen, have yet to be sanctioned.

With investment in new oil sands winding down, Fort McMurray residents are left with jobs maintaining and repairing existing operations. Sustaining capital and maintenance work will rise "moderately" over the next decade and become an "increasingly important source of employment," according to BuildForce Canada.

As Fort McMurray contracts, expansions are occurring elsewhere in Canada. In the western Alberta town of Grande Prarie, drilling in the Montney shale formation was up an annual 80 percent early this year.

But Fort McMurray will remain the dominant oil town in Canada for now, Birn said. The provincial government said in its most recent budget that the reconstruction of the town after the fire and plans for increased oil production will add 1 percent to the gross domestic product this year.

There are signs of improvement: Unemployment is down from last year, Foster says construction work is expected to expand, and the median single-family home price in April rose from a year earlier.

Some people are moving back because they "saw opportunities to purchase," said Andrew Weir, president of the Fort McMurray Real Estate Board. They "don't feel like the sky is falling anymore," he said.

Canada Floats New Environmental Review Rules for Pipelines

Posted June 30, 2017, 10:00 A.M. ET

By Josh Wingrove

Canada is proposing consolidating environmental reviews under a single agency while adding an approval step for proponents of pipelines and other major projects—in what it said is a bid to both strengthen and clarify environmental rules.

The proposal would add a requirement for an "early engagement" phase for projects that the government said would lead to "clear guidance" for industry on how a full assessment will proceed and how long it will take. The move is aimed at industry frustrations that Canada's existing environmental approval process is already a maze—unclear, time-consuming, legally fraught, and under the watch of multiple agencies.

The proposal, contained in a discussion paper published June 29, lays out a framework that comes after a review of environmental assessment rules; fisheries laws; and the National Energy Board, which oversees pipelines in the country with the world's third-largest proven oil reserves. A range of projects is subject to environmental assessments. The changes would affect only new ones, as Prime Minister Justin Trudeau's government said existing proposals such as TransCanada Corp.'s Energy East pipeline won't be sent back to square one.

The proposal raises the prospect of greater "cost recovery" from the oil and gas industry, while also focusing on ensuring a "single window" agency for federal environmental approvals and permitting while expanding the power of people to intervene in the process and making more data publicly available.

Court Challenges

Major energy projects in Canada have regularly run into a tangle of court challenges, evolving government policy, and environmental protests, raising doubts about their fate. Trudeau introduced interim rules early last year before approving a pair of pipelines while rejecting a third—which his predecessor approved before being blocked by the courts.

The discussion paper proposes expanding the review of projects to consider a broader range of factors, including economic benefit, which is presently considered in a final Cabinet decision on any major proposal. The new assessment system will consider "both positive and negative impacts of a project," the discussion paper said.

So far, the paper has won positive reviews from energy-industry groups. Canadian Energy Pipeline Association Chief Executive Officer Chris Bloomer said June 29 that while his organization is taking time to fully review the paper, it supports the principles laid out in the document and is "encouraged" by its content. Canadian Association of Petroleum Producers Executive Vice President Terry Abel said his group backs the proposal as well.

"They've done a really good job of identifying opportunities where there could be improvements, and it's reflective of the broad range of input they've heard," Abel said in an interview.

Cumulative Effect

The proposed system will pay greater attention to so-called cumulative effect, or the total impact over time of a single project, and others near it, on the environment. That measure in particular could ripple through regions with high levels of industrial development, such as Alberta's oil sands, the heart of the country's energy sector.

The federal government is proposing to expand the ability of opponents and proponents to weigh in on a project by eliminating a test of which participants were given "standing," by the NEB while also allocating more "participant funding," the document said. It also commits to a process that "advances the government's commitment" to the United Nations Declaration on the Rights of Indigenous Peoples, though stops short of fully committing to the declaration. The U.N. document places an emphasis on "free, prior, and informed consent" of indigenous peoples, though Trudeau's government argued that doesn't amount to a veto on energy projects.

The scale of environment assessments will be "aligned" with the scale of a project and its impacts, the discussion paper said. The report commits both to peer-reviewed science and incorporating indigenous knowledge in reviews. The proposal also pledged "greater participation of indigenous peoples on assessment boards and review panels and in regulatory processes."

The NEB regulator will remain in Calgary, but board members and hearing commissioners will no longer have to live there, the paper said.

The paper comes after a review launched a year ago. The measures are classified as proposals only. Final changes to the environmental assessment and regulatory system are due this fall.

South Korea to Study, Plan for Climate Impacts on Infrastructure

Posted June 30, 2017, 9:21 A.M. ET

By Elaine Ramirez

Eighteen South Korean public and private institutions have agreed to assess the effects of climate change on infrastructure and devise ways to prevent further damage.

Through a convention facilitated by South Korea's Ministry of Environment and Korea Adaptation Center for Climate Change, 13 public institutions and five companies—Kumho Buslines; Samsung Engineering; construction company Halla OMS; and logistics companies CJ Korea Express and Hyundai Glovis—will work with the government to evaluate and diagnose climate change-related risks to infrastructure to develop countermeasures, the Ministry of Environment said.

The project also will identify facilities that are vulnerable to the effects of climate change and help public institutions set up adaptive measures to ensure national safety and to minimize economic losses, according to the environment ministry.

"This convention is particularly meaningful in that it promises voluntary efforts by public authorities and industries to provide a pre-emptive response to climate change risks," the Ministry of Environment said in a June 27 statement.

"Since we want to reduce CO2 emissions as a long-term goal, we think the plan of the ministry is proper, and we can focus on the goal not only for our company but also for Korea to help with the development of climate change improvement," Jin Hartmann, spokesman for Samsung Engineering, told Bloomberg BNA.

The ministry and the Korea Adaptation Center for Climate Change will provide risk assessment tools, including those to analyze the impacts on facilities of climate situations such as extreme temperatures and heavy rain. Companies will then prioritize items and devise countermeasures with mid- and long-term objectives and action plans to minimize climate impacts.

Jung Seon-hee, research specialist at the (KACCC), said, "In addition to promoting governmentwide measures to adapt to climate change, South Korea is promoting climate change adaptation via infrastructure institutions. However, [this initiative] is still in its infancy, so additional policy support and investment is needed to improve effectiveness."

Project planning started before Korean President Moon Jae-in took office last month, and is expected to be more actively pursued during his governance, she added.

Establishing Adaptive Measures

Damage caused by climate change-related natural disasters affect mostly social infrastructure such as power, railways, and roads, and have a great social and economic impact, the ministry said. The damage to public facilities in 2013, amounting to nearly 150 billion won ($131.4 million), made up 87 percent of all natural disaster impacts during that year, the ministry said. Restoration of public facilities such as roads, rivers and harbors cost 8.9 trillion won ($7.8 billion) between 2004 and 2013.

In response, the government in 2016 launched a reporting system for public institutions to evaluate and diagnose the climate change-related risks they faced.

The Ministry of Environment said it will help the public and private sectors scientifically predict and evaluate the risk factors of climate change and establish effective adaptive measures. The institution will then decide on voluntary climate change adaptation measures and incorporate them into management plans and strategies.

Sharing Know-How

Samsung Engineering has carried out business partnerships with large and midsize companies to share carbon management know-how and energy-saving methods with subcontractors, according to company spokesman Lee Ho-jae. In 2016, the company concluded an agreement with the Ministry of Environment to reduce dust emissions.

Unforeseen natural disasters caused by climate change could have a profound impact on Samsung's project performance, Lee said, adding that the company plans to explore ways to contribute to the climate change action plan in the overall process of plant construction.

"[Addressing] climate change requires a national approach. At the same time, voluntary effort from individual companies is needed," Lee told Bloomberg BNA. "We hope the recognition of climate

change spreads throughout the industry and many companies can participate."

The government also will evaluate other public agencies' adaptation measures for climate change and determine how to reflect them nationwide.

The 13 public institutions participating in the agreement include expressway, port and airport authorities, and coal, gas and heating companies.

"We anticipate that it will become a new paradigm of management strategy … to grasp the effects of climate change on sales and tangible assets," said Kumho Buslines spokesman Oh Kil-joong.

South Korea Is Very, Very Interested in America's Natural Gas

Posted June 30, 2017, 10:32 A.M. ET

By Ryan Collins

One thing became clear on the fourth day of the White House's Energy Week: South Korea is really, really into U.S. natural gas.

In less than 24 hours, South Korea's energy companies had announced four partnerships with U.S. companies to explore opportunities in the U.S. natural gas business. Korea Gas Corp., the state-owned gas supplier, said it will look into potential investments in liquefied natural gas projects in Alaska, Texas and Louisiana. SK Group signed an agreement with General Electric Co. and Continental Resources Inc. to pursue shale gas developments.

It makes sense. South Korea is one of the world's biggest importers of LNG and has bought eight cargoes of U.S. gas from Cheniere Energy Inc.'s Sabine Pass terminal in Louisiana. While Sabine Pass is the only one sending shale gas abroad, dozens of terminals have been proposed along U.S. coasts to do the same. The exports have put the U.S. on a path to becoming a net gas exporter for the first time in decades.

President Donald Trump noted during a June 29 Energy Week event in Washington that South Korea leaders were visiting the White House. He said they would be "talking about them buying energy from the United States of America. I'm sure they would love to do it."

U.S. LNG may in fact play a big role in furthering South Korea's energy policies. After the election of Moon Jae-in as president in May, the country is looking to transition away from coal and nuclear power in favor of cleaner natural gas-fired electricity generation. And buying more U.S. fuel could allow the country to smooth geopolitical disputes over unbalanced trade, Korea Gas Chief Executive Officer Lee Seung-Hoon said Sunday at the Sabine Pass terminal, where the company celebrated the start of an LNG contract with Cheniere.

"All of these projects are looking to find more long-term offtake in order to get the financial support they need to move forward," said Anastacia Dialynas, analyst at Bloomberg New Energy Finance, in a phone interview June 29. South Korea "might even be pitting them against each other" by exploring several projects to "see who offers the best terms," she said.

The Port Arthur, Texas, LNG export terminal is being developed by Sempra Energy and Woodside Petroleum Ltd., and Energy Transfer Equity LLC and Royal Dutch Shell Plc are planning the Lake Charles, Louisiana, one. The Alaska LNG export project is being proposed by the state's Alaska

Gasline Development Corp.

Spot LNG prices in Singapore traded at about $5.244 per million British thermal units Thursday, according to a Singapore Exchange Ltd. assessment. That's down from more than $14 in October 2014 as production capacity rises and oil prices have tumbled.

By Joe Pompeo | 06/06/2017 05:39 AM EDT

With Cristiano Lima and Alex Weprin

SORRY WE DISAPPEARED ON YOU YESTERDAY WITHOUT NOTICE - I had a bit of a toddler emergency over the weekend but everything's fine now. That said, I'm still playing catch up, so bear with me as I get back up to speed.

MOVE OVER, EDWARD SNOWDEN - Let's begin this one by emphasizing that the Obama administration was notorious for its aggressive leak prosecutions, and despite what the Trump crowd will tell you about the lovey-dovey relationship between journalists and the 44th president, there was actually a lot of animosity and ill-will as a result of this issue. But it's also no secret that Trump and his lieutenants are out for blood when it comes to leakers, which is why I wouldn't want to be Reality Leigh Winner right now.

From the DOJ's announcement last night: "A criminal complaint was filed in the Southern District of Georgia today charging Reality Leigh Winner, 25, a federal contractor from Augusta, Georgia, with removing classified material from a government facility and mailing it to a news outlet ... Winner was arrested by the FBI at her home on Saturday, June 3, and appeared in federal court in Augusta this afternoon. ... On or about May 9, Winner printed and improperly removed classified intelligence reporting, which contained classified national defense information from an intelligence community agency, and unlawfully retained it. Approximately a few days later, Winner unlawfully transmitted by mail the intelligence reporting to an online news outlet." Press release.

The "online news outlet" is The Intercept, which published the following story about an hour before the DOJ went public with its prosecution: "TOP-SECRET NSA REPORT DETAILS RUSSIAN HACKING EFFORT DAYS BEFORE 2016 ELECTION." Key detail: "The top-secret National Security Agency document, which was provided anonymously to The Intercept and independently authenticated...."

What led the feds to their prey: "The U.S. Government Agency examined the document shared by the News Outlet and determined the pages of the intelligence reporting appeared to be folded and/or creased, suggesting they had been printed and hand-carried out of a secured space. The U.S. Government Agency conducted an internal audit to determine who accessed the intelligence reporting since its publication. The U.S. Government Agency determined that six individuals printed this reporting. WINNER was one of these six individuals. A further audit of the six individuals' desk computers revealed that WINNER had e-mail contact with the News Outlet. The audit did not reveal that any of the other individuals had e-mail contact with the News Outlet." That's from the criminal complaint affidavit, which you can read in full here. This is going to get ugly.

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima** (clima@politico.com / @ludacristiano). **Archives**. **Subscribe.**

-- "Inside the Cut-Throat World of Toddler Bike Racing" [Outside] ***Ed. Note: No relation to the above-mentioned toddler emergency.*

MEGYN KELLY MUST BE PRETTY HAPPY WITH HER NBC DEBUT RATINGS - 6.1 million viewers overall and 1.2 million in the important 25-54 demographic tuned in for June 4 maiden voyage of "Sunday Night With Megyn Kelly." NBC was crowing that the Putin-equipped premiere nearly beat CBS in total viewers -- "60 Minutes" counter-programmed with a re-air of its 2015 Putin interview with Charlie Rose -- and that Kelly's numbers "were a huge jump compared to how the network typically performs in the slot." Now the pressure will be on for the former Fox News star to keep it up, particular once she is up against a new edition of "60 Minutes," and not a rerun.

A NUMBER MSNBC HASN'T SEEN IN AWHILE - Michael Grynbaum in today's New York Times : "The last time that MSNBC was No. 1 in prime-time cable news, Bill Clinton was president, Madonna led the Billboard charts and "Friends" still ran new episodes on TV. Seventeen years and a few rebrandings later, the network is back on top -- buoyed by a surge of interest in news and the channel's stable of reliably liberal anchors, like Rachel Maddow, who have found their groove amid a time of intense anxiety for the political left. The MSNBC resurgence -- in May, it beat its rivals for the highest prime-time viewership on weeknights in the critical 25-to-54 age demographic, up an astounding 118 percent from a year earlier -- is part of a newly shifting landscape in television news, and within the channel itself."

REVOLVING DOOR: NOTABLE NEW HUFFPOST HIRES - Congrats to Morning Media pal Hillary Frey on being named director of editorial strategy, a "newly-created role" in which she will oversee strategic and special projects," according to a memo yesterday from EIC Lydia Polgreen. Hillary -- who taught me a thing or two about good writing and reporting when she was one of my editors at The New York Observer years ago -- has already been working with HuffPost in a consulting capacity for the past few months, so expect her to be a key figure in Polgreen's ongoing revamp of the 12-year-old web-news behemoth. Also, Jennifer Kho is joining as managing editor from Guardian US; Shelley Venus is joining from Mic as head of newsroom video; and Kate Rodemann has left her post as Texas Monthly's editorial director to become an

editor for Highline, HuffPost's destination for long-form storytelling.

Elsewhere...

-- **Eric Bolling has re-upped at Fox News**, where he will remain co-host of "The Fox News Specialists" at 5 p.m. on weekdays and the host of "Cashin' In" on Saturday mornings. He also will continue to host the network's annual New Year's Eve programming.

-- **Two notable AP departures:** Venezuela correspondent Hannah Dreier is leaving to cover immigration for ProPublica, and Washington-based reporter Eileen Sullivan is leaving to join The New York Times, where she will reunite with her Pulitzer Prize co-recipients Matt Apuzzo and Adam Goldman.

-- **Also at The New York Times:** Nellie Bowles, a prominent tech reporter currently with HBO's "Vice New Tonight," is joining Bizday to cover tech and digital culture out of San Francisco. And on the business side, "Guy Griggs will join the company as head of revenue for the social influencer marketing agency HelloSociety and the experiential design agency Fake Love, both acquired by The Times Company in 2016."

-- **Here's who took buyouts in McClatchy's D.C. bureau**, according to our Playbook colleagues.

CRUSADE TO SAVE THE NYT COPY DESK - The union that represents Times journalists isn't staying quiet about the Times Company's decision to target copy editors in its latest buyout offering. In a very au courant op-ed issued yesterday, Grant Glickson, president of the News Guild of New York and a Times veteran himself, made the case for keeping the Times' long-standing copy desk intact as opposed to a planned restructuring: "[W]hen readers hear the inevitable cries of 'fake news,' how do they know what to believe? It comes down to accuracy, to a news organization's track record of getting even the smallest details right. When typos and misspellings jump off a page, readers are more likely to wonder what else is wrong. So why would the New York Times want to join the sorry parade of other American newsrooms that have cut out the last, best line of defense against errors?"

The Times' position is that it will still have a more rigorous editing apparatus than most other global news organizations even after eliminating dozens of copy editors and so-called "backfield" editors, some of the most behind-the-scenes jobs in the 1,300-person newsroom. It also says the cost-savings will enable the Times to hire an additional 100 journalists.

On that note, the following email went out internally yesterday: "As we revamp the way we edit our report and transition to the 'strong desk' model, the newsroom is seeking editors in four areas: news and feature desks around the newsroom, the Express Team, and the News Print and Features Print Hubs. On news and feature desks and on the Express Team, editors will need a broad range of skills that will enable them to own a story from beginning to end - to conceptualize a story and story form, edit through all necessary drafts, copy edit all the elements to digital publication readiness and ensure the widest possible audience." One Times source sniffed to Morning Media: "The requirements for the editors are now, 'be an editor and a copy

editor too.' Will they get paid more?"

SOUND BITES:

-- "Guy with 'Infowars dot com- CNN is ISIS!' sign asked why the Paris deal was bad: 'I personally haven't looked into it. I just trust Trump'" [Tom Namako]

-- "Good reporting needs to be able to distinguish between Trump's Bannonist base (20-25% of the country) and all Trump voters (46%)." [Nate Silver]

-- "Breitbart is a hard gig. You can be fired for both being too racist and not racist enough. The Goldilocks level of racism is hard to hit." [Jeet Heer]

-- "Last question, where is Sean?" [April Ryan]

ALL EYES ON COMEY - Thursday may just bring new meaning to the phrase "must-watch TV." Per Variety : "ABC and CBS will break into their daytime programming on Thursday to cover James Comey's appearance before the Senate Intelligence Committee. ABC's George Stephanopoulos will anchor the network's coverage, while 'CBS This Morning' co-hosts Norah O'Donnell, Gayle King and Charlie Rose will anchor coverage for that network. Rose, King and O'Donnell will be joined in New York by 'Face the Nation' anchor and chief Washington correspondent John Dickerson and chief legal correspondent Jan Crawford. The former FBI Director's testimony is set to begin at 10 a.m. ET. NBC News has yet to confirm whether or not they will carry the hearing live."

Fox News/Fox Broadcast also announced their live coverage plans yesterday: "Co-anchored by FNC's Bill Hemmer and Shannon Bream, coverage will begin at 9AM/ET and contributions will be made by a panel including FNC's chief political anchor Bret Baier, FOX News Sunday's Chris Wallace and The Five co-host Dana Perino. Additionally, FNC will be commercial-free when the hearing begins at 10AM/ET. FNC's Shepard Smith will anchor coverage for FOX Broadcast." No official word yet from CNN, but if their Comey countdown clock is any indication, we'd say there's a 100 percent chance you'll be able to watch the testimony live there as well.

Subject: Morning Media: Voters trust of the media vs. Trump -- The Don Jr. emails -- Donna Brazile announces campaign memoir

By Hadas Gold | 07/12/2017 05:56 AM EDT

With Cristiano Lima and Alex Weprin

EXCLUSIVE POLL - VOTERS (BARELY) TRUST MAJOR MEDIA OUTLETS MORE THAN TRUMP via POLITICO's polling guru Steven Shepard: Following President Donald Trump's cascade of insults and mock-violent memes attacking CNN and MSNBC, this week's POLITICO/Morning Consult poll asked voters how credible they consider information they get from various media outlets - and from the president himself.

The main takeaway? By a narrow margin, voters have more trust in major media outlets than they do in Trump. Just 22 percent say information from Trump is "very credible," while the media outlets all rate higher. And the 33 percent who say Trump isn't credible at all is higher than for any of the networks or newspapers. But the news still isn't good for the news media. Significant percentages of voters - mostly Republicans - think many outlets are either not too credible or not credible at all.

Here's the rundown:

The White House: 21% very // 31% somewhat // 18% not too // 19% not at all

President Donald Trump: 22% very // 24% somewhat // 13% not too // 33% not at all

CNN: 26% very credible // 28% somewhat credible // 14% not too credible // 23% not credible at all

Fox News: 24% very // 31% somewhat // 18% not too // 19% not at all

MSNBC: 23% very // 31% somewhat // 15% not too // 19% not at all

Washington Post: 24% very // 32% somewhat // 14% not too // 15% not at all

New York Times: 26% very // 31% somewhat // 14% not too // 16% not at all

Wall Street Journal: 26% very // 36% somewhat // 14% not too // 11% not at all

ABC News: 28% very // 34% somewhat // 15% not too // 12% not at all

NBC News: 27% very // 34% somewhat // 16% not too // 13% not at all

CBS News: 27% very // 35% somewhat // 15% not too // 12% not at all

PBS: 29% very // 34% somewhat // 13% not too // 9% not at all

-- *Toplines: http://politi.co/2uO3Ukh | Crosstabs: http://politi.co/2sMRKXd*

THE DON JR. EMAILS: Another day, another apparent bombshell -- this time preempted by the subject himself.

New York Times deputy managing editor Matt Purdy told the Huffington Post that Times asked Trump Jr. to respond by 11 a.m. on Tuesday to e-mails they had obtained about the meeting between Trump's eldest son and a Russian lawyer they had been reporting on for days.

Trump Jr. decided to preempt the Times story and at the appointed hour he tweeted out his own statement and the email chain with music producer Rob Goldstone, who clearly indicates that he is arranging a meeting with a "Russian government attorney" about "very high level and sensitive information" that is "part of Russia and its government's support for Mr. Trump."

At 11:06 a.m. the Times sent a breaking news alert with their story.

Though the story was covered by the rightwing media, some dismissed it as another "nothing burger" or mirrored Trump Jr.'s claim he was being transparent. CNN's Oliver Darcy has a run down here including one Breitbart editor suggesting the emails prove "straight up collusion".

As though to prove how "nothing" the story was, Fox News' Sean Hannity, whom Donald Trump Jr. went to for his one interview on Tuesday, told fellow host Martha MacCallum before hand that "I never run out of questions. I ran out of questions tonight."

The New York post took a different approach, "Dumb. Dumb. Dumb," they called Trump Jr. in an editorial, which The Drudge Report linked to as it's main splash with the headline "Russian Roulette."

Meanwhile at the White House the president is "fuming" at the coverage, my colleagues Tara Palmeri and Josh Dawsey report, as the White House has taken a backseat to shaping the coverage since Trump Jr. is not a White House employee and represented by his own lawyer.

JOE SCARBOROUGH SAYS HE'S DONE WITH THE GOP, the MSNBC host and former Republican congressman announced Tuesday night on Stephen Colbert's "The Late Show." When I saw this making the rounds last night I actually thought for a moment 'Wait, he didn't already do that?' Long time coming, it seems.

"You have to ask yourself what exactly is the Republican party willing to do? How far are they

willing to go how much of this country or values are they willing to sell out," Scarborough told Colbert. "I am a Republican but I'm not going to be a Republican anymore. I've got to become an Independent."

Scarborough and co-host (and fiance) Mika Brzezinski seem to be on a mini-publicity tour of late. Coming off of Colbert last night, they'll be at the National Archives in D.C. tonight for a Harvard Kennedy School Institute of Politics event (Joe and Mika are visiting fellows). And Page Six just reported Brzezinski has landed a three-book deal with Weinstein Books.

SOUNDBITE: "Reminder: These disclosures are not happening out of any action of good will. They're happening because investigative reporters are digging." [Matt Viser]

DONNA BRAZILE RELEASING 'CAMPAIGN THRILLER' MEMOIR 'HACKS': Donna Brazile is hardly shying away from her criticism of the Trump administration. On the contrary, the former DNC chief and CNN and ABC News contributor will mark the one-year anniversary of the president's electoral victory over Hillary Clinton with the release of her book, "Hacks: The Inside Story of the Break-ins and Breakdowns that Put Donald Trump in the White House," POLITICO's Edward-Isaac Dovere reports . According to publisher Hachette the book promises a book that is "equal parts campaign thriller, memoir, and roadmap for the future." In her book deal announcement, Brazile warns of history repeating itself if we don't learn the lessons of the 2016 election: "Our nation is under unprecedented assault, and if we don't get the facts out, it will happen again - and worse than you can imagine."

INTERCEPT TO SUPPORT PROSECUTED LEAKER'S DEFENSE: The Intercept says it will provide financial support for Reality Winner, the former NSA contractor whose leak of intelligence to the online publication has led to an arrest and pending charges from the Trump administration. In an announcement posted Tuesday, editor-in-chief Betsy Reed stressed the outlet's opposition to "the use of the Espionage Act against government whistleblowers." She added: "The Intercept's parent company, First Look Media, has taken steps to provide independent support for the legal defense of Reality Winner, the NSA contract employee who was recently arrested in the first instance of the Trump administration using the 100-year-old Espionage Act to prosecute an alleged journalistic source."

REVOLVING DOOR:

-- ICYMI Jason Schwartz is joining our team as a media writer! He comes to us from ESPN.com and ESPN Magazine where he is a senior editor. Before that he was a senior editor at Boston magazine (you may remember his great deep dive into Curt Schilling and his failed video game venture). We are so excited to have Jason and can't wait for his contributions to Morning Media!

-- Veteran NYT staff writer Fernanda Santos has taken a buyout, she announced on social media Tuesday, though she vowed to continue reporting out of Arizona on issues like immigration and "pursuing my definition of success." The paper has recently met resistance in its push to consolidate the newsroom, offering buyouts to copy editors and other staffers.

-- Ryan Lucas will join NPR as a justice reporter, after two years covering the intelligence beat and the investigation into the Trump campaign's Russia ties for CQ. He starts Aug. 14.

-- David Von Drehle is rejoining the Washington Post as an opinion columnist, the paper announced Tuesday. Von Drehle, who previously was the Post's New York City bureau chief, comes over from Time Magazine where he served as an editor-at-large, authoring over 50 cover stories for the publication.

-- The Weekly Standard is bolstering its opinion and books and arts sections, announcing the hires of Barton Swaim and Adam Keiper as its new respective editors. A regular Washington Post contributing columnist, Swaim will oversee the Standard's editorial production,while Keiper joins after serving as an editor The New Atlantis journal for over a decade.

TIL: Don Lemon really loves coconut and argan oil.

KEEP AN EYE OUT FOR: Credibility attacks on the reporters who broke the Trump Jr. stories. According to the Washington Post, a "handful of Republican operatives close to the White House... have begun what could be an extensive campaign to try to discredit some of the journalists who have been reporting on the matter." These operatives plan to research reporter's previous work and exploit "any mistakes or perceived biases" and then "demand corrections, trumpet errors on social media and feed them to conservative outlets, such as Fox News."

-- Flashback to last week in Breitbart: "Allies of the president outside the White House have assembled informal units to review everything the fake news media has ever written-and will write-about the White House, fact-checking everything media-wide."

Energy and Climate Report

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

EPA to Seek Legislative Fixes In Place of Regulations, Pruitt Says

Posted June 15, 2017, 02:44 P.M. ET

By Brian Dabbs

The EPA will proactively reach out to seek legislative fixes to environmental laws that avoid lengthy litigation akin to the Clean Power Plan and the Clean Water Rule, Administrator Scott Pruitt told lawmakers June 15.

That strategy aims to curb agency "overreach" while providing certainty to companies, Pruitt said.

"When you disrespect rule of law, and what that fundamentally means, is when you take statutes passed by Congress and act in a way that's not authorized, it creates uncertainty," Pruitt told lawmakers. "If you have not spoken to an issue, if you have not given authority to the agency, we're not to reimagine it. We're not going to create it. We're going to let you know when those deficiencies arise."

The two high-profile regulations have been wading through legal limbo in recent years, and the Environmental Protection Agency is now reconsidering the Clean Power Plan rule. That regulation, arguably the trademark of the Obama administration's environmental legacy, would require decreased carbon dioxide emissions on the fleet of existing power plants.

EPA rules have had a "devastating impact" on coal-producing communities, Rep. Hal Rogers (R-Ky.) told Pruitt. Rogers has recently complained of the Trump administration's plan to zero out the Appalachian Regional Commission, an economic development program that is receiving $152 million this fiscal year through the Energy Department's appropriations account.

Senate Committee Advances Nuclear Regulator Nominee Svinicki

Posted June 15, 2017, 10:54 A.M. ET

By Rebecca Kern

The Nuclear Regulatory Commission is a step closer to retaining its quorum as the Senate Environment and Public Works Committee advanced the nomination of current NRC Chairman Kristine Svinicki for a third term at the agency.

The committee voted unanimously by voice vote to favorably report Svinicki's nomination for another five-year term on the commission. Chairman John Barrasso (R-Wyo.) told Bloomberg BNA after the June 15 business meeting that he and others are working with Senate leadership to get a floor vote on Svinicki before July 1.

Svinicki's current term is set to expire on June 30, after which she will no longer be allowed to serve and the NRC will not have a quorum.

In addition to Svinicki, a Republican, the committee considered two other Republicans nominated by the Trump administration: Annie Caputo, a long-time energy policy adviser for the committee, and David Wright, a former chairman of the South Carolina Public Service Commission. The committee has not yet scheduled votes on those nominations.

The NRC is an independent agency that licenses and regulates the country's nuclear reactors. Its five commissioners serve staggered five-year terms, with three seats belonging to the political party in power in the White House. It currently has three commissioners: Svinicki, whom President Donald Trump named as chairman in January; Stephen Burns (I), the previous chairman in the Obama administration; and Jeff Baran (D).

Nuclear Waste Bill Set to Change After Subcommittee Markup

Posted June 15, 2017, 01:25 P.M. ET

By Rachel Leven and Rebecca Kern

A House subcommittee June 15 approved, along party lines, a draft bill to reboot efforts to make Yucca Mountain the nation's permanent repository for nuclear waste and a bill (H.R. 806) that would push back deadlines for Obama-era ozone standards.

Additionally, draft legislation that would reauthorize the EPA's brownfields program for the first time since 2006 was approved unanimously by the House Energy and Commerce's Subcommittee on Environment. That program aims to clean up and repurpose contaminated industrial and commercial sites.

Rep. John Shimkus (R-Ill.), the subcommittee's chairman, previously told Bloomberg BNA that he hopes the House will pass the three bills, along with a drinking water reauthorization bill, by August.

At the markup, Democrats expressed concern that the administration didn't testify on the bills.

"We do not know how the agencies that would implement these programs would interpret the language in these bills," full committee ranking member Rep. Frank Pallone (D-N.J.) said at the start of the markup. "We are being asked to vote on legislation without the opportunity to fully understand its effects and potential unintended consequences."

The Environmental Protection Agency and the Energy Department didn't immediately respond to Bloomberg BNA's messages asking why they didn't testify and whether they support these bills. A spokesman for the Nuclear Regulatory Commission said the committee didn't request that the agency testify at the hearing on the nuclear waste draft bill in April and that it has no stance on the draft bill.

The two draft bills will next be introduced and all will be sent to the full committee, a committee spokesman told Bloomberg BNA in an email. There could be changes from the draft bills discussed at the markup to the bills that are formally introduced, the spokesman said.

Trump's Budget Puts Climate Research Program on Thin Ice

Posted June 15, 2017, 12:18 P.M. ET

By Catherine Douglas Moran

The U.S. could fall behind on mitigating expensive and irreversible damage from climate change domestically as a result of the White House's proposed cuts to an interagency research program's budget. Funding worries for the domestic climate and climate-related research program come at a time of uncertainty about the Trump administration's priorities for climate change as it slashes funding for that work across the government. President Donald Trump has pledged that the U.S. will exit the Paris Agreement and has proposed a fiscal year 2018 budget that would discontinue more than $100 million in funding for several climate change research and partnership programs.

Margaret Leinen, director of the Scripps Institution of Oceanography at the University of California San Diego who previously served on the National Science and Technology Council's environment committee that guides the U.S. Global Change Research Program, told Bloomberg BNA that if major cuts are made to the program, the decreased funding will not stop or alter the course of climate research. But she said it may affect the country's reputation internationally and reduce the amount of domestic research.

"Other countries are not going to do the work on impact in the U.S. for us," she said. "No one else is going to do that research for us, so that's really what's at risk when we cut the U.S. climate research."

Comprised of nearly a dozen agencies and departments, Congress created the program in 1990 under the Global Change Research Act (Pub. Law No. 101-606) to better understand human-caused and natural climate changes and to develop mitigation and adaptation policies. Every three years Congress requires the submission of a strategic plan outlining goals and priorities for the next 10 years, and no less than every four years Congress and the president receive a national scientific assessment on the research program's findings.

Funding Fluctuations

The largest contributors to the program include NASA, the Energy Department, the National Oceanic and Atmospheric Administration, and the National Science Foundation.

Some of the agencies submit requests for the research program as a part of their budgets. Others calculate their contribution to the program from allotted research grants. The program's annual report that explains and breaks down the budget request is expected in a few months.

Here are the known agency funding requests for Global Change Research Program for fiscal 2018, according to the agencies:

• National Science Foundation: $264 million—a decrease of $66 million from its actual fiscal 2016 amount

• Smithsonian: $8 million—largely steady from fiscal 2014 to fiscal 2018 request

• Energy Department: $84.2 million—a decrease of $144.7 million from its fiscal 2017 enacted appropriation

• EPA: Global Change Research listed as a proposed eliminated sub-program along with other science programs

"I think it's really important that people understand that there are real risks, and the risks are not just for polar bears or for coral reefs," Leinen said. "They are for us and our economy and what our livelihood is like."

Leinen said the collaboration between the agencies is only as good as the budgets provided. The research program has tried to recover from funding dips by accepting proposals from scientists who were turned away at other agencies, but one agency will not assess the impacts of climate and environmental change for another agency's mission, she said.

Congress Could Rescue Funding

While Congress and the administration set the priorities for climate change research, Congress probably won't eliminate or "massively" cut funding for the program in the upcoming fiscal year, Leinen said.

"Each administration comes in seeing the problem of climate change with their own lens and may have different priorities," Leinen said. "I think that one of the things that was quite, quite clear in the 2017 deliberations was that Congress did protect, Congress did acknowledge the importance of climate change research and made sure that it was funded to the best of their ability."

Overall, funding for Global Change Research Program grew 30.2 percent from fiscal 2000 to the fiscal 2017 request, peaking in 2003, according to the American Association for the Advancement of Science. After declining during President George W. Bush's administration, the program was revitalized in fiscal 2009 when the American Recovery and Reinvestment Act provided an additional $641 million.

Anthony Janetos, a Boston University biologist and next chairman of the National Academies of Science advisory committee for the U.S. Global Change Research Program, told Bloomberg BNA that there is "nothing concrete to put our fingers on" financially for fiscal 2018, until the multiple appropriations committees that handle the agency budgets piece together the funding.

"Even small changes can make a difference in what gets done," he said. "The accumulation of the kind of scientific knowledge is best served by budgets that don't radically change from year to year."

Agency Overlap and Collaboration

Two Republican committee aides familiar with the research program's reports told Bloomberg BNA that it will probably not face funding problems. However, one of the aides said the cuts might be justified by potential duplication of climate modeling and other resources at the agencies.

"Is this funding cut in one place? Is there an offset somewhere else where the federal government is already doing research into that topic?" the aide said. "The federal government doesn't need to be spending money on any sort of competing research."

One of the reasons that Congress created the research program was to reduce the redundancy between agencies, John Furlow, the deputy director for humanitarian assistance and international

development at Columbia University's International Research Institute for Climate and Society, told Bloomberg BNA. He was a USAID representative to the climate change research program.

"There might be a little bit of redundancy, but I think there's more complementarity," he said. "If you cut something that NASA is doing, it might make it more difficult for NOAA to do its piece. So I mean just as a very coarse example, if NASA doesn't launch satellites, NOAA can't stick instruments on those satellites."

He said he is concerned about the uncertainty for climate funding and what that will mean for the program's future if the budgets for the EPA, NOAA, and National Science Foundation plummet.

If the climate research program's funding is slashed, Furlow said public outreach, website maintenance, and production of reports for Congress may be constrained.

"It probably would not be the end of the world but just reduce the amount of outreach that GCRP can provide," Furlow said. "I don't know what happens if the funding were to become so constrained that they couldn't pass the smell test of meeting the requirements of that law."

Political Controversies

This is not the first time that the Global Change Research Program has faced funding cuts and encountered concerns about potential political influence on its science.

One of the majority committee aides said the reports were used to further the agenda of the Obama administration by narrowly focusing on human-caused climate change instead of global change.

"I think we could agree that the politics has influenced the work of GCRP over the years," the aide said. "I think the conclusions of the National Climate Assessment are used to support climate policies specifically of the last administration and that's its job, that's its goal, that's its duty. Support the president."

Leinen said she thinks politics influence the funding, but not the science.

"Although there can be political push, there are so many other forces that I don't think the science gets steered," she said. "Does the politics get steered by the science? Sometimes."

—With assistance from Dean Scott.

EU Environment Agency Warns of 'Profound and Rapid' Arctic Changes

Posted June 15, 2017, 01:15 P.M. ET

By Stephen Gardner

The European Union should do more to relieve the pressures on the Arctic ecosystem or risk a breakdown of "the Arctic's role in global climate regulation," the European Environment Agency said June 15.

Specific measures for the 28-nation EU bloc to take could include initiatives to limit marine litter and black carbon, designation of more nature conservation areas in the European Arctic, phasing out the use of diesel generators in the Arctic in favor of renewable power, and designating low

environmental impact shipping corridors, the agency said in a report.

The EU should also do more within international forums to promote protection of the Arctic environment and to ensure that economic exploitation of the Arctic's resources does not damage the region's ecosystems, the report said.

The current slowdown of investment in resource extraction in the Arctic, caused by low commodity prices, is a "window of opportunity" to introduce new more environmentally-friendly Arctic policies, the report added.

Global warming is leading to "profound and rapid changes" in the Arctic environment that could have worldwide consequences, the environment agency report said.

Of the eight countries with Arctic territory, Finland and Sweden are EU members, while Greenland is a territory of EU member Denmark.

Singapore's Carbon Tax May Be Felt Throughout Southeast Asia

Posted June 15, 2017, 5:31 A.M. ET

By Lien Hoang

When Singapore rolls out Southeast Asia's first carbon tax in 2019, the biggest impact may not be on carbon emissions at all—at least, not directly.

Instead, a government that threw itself behind digital currencies and self-driving cars could accelerate far-reaching research into efficiency technologies. The island-nation also could serve as a role model for its more carbon-intensive neighbors.

As a nation, Singapore's 5.6 million people are responsible for only one-tenth of 1 percent of the world's carbon emissions, according to data from the country's National Climate Change Secretariat. But Singaporeans rank in the top 30 for emissions per capita, more as individuals than the Swiss, British, or Chinese.

"We are in the unique position of being a city-state that has a large manufacturing sector. For example, we have a large chemicals industry on Jurong Island that has a significant carbon footprint," said Toh Wee Khiang, program director of the Energy Research Institute at Nanyang Technological University.

Manufacturing and construction emitted 25 percent of Singapore's carbon dioxide in 2014, compared with the global average of 20 percent, the World Bank reported.

Existential Crisis

Singapore also suffers from the air pollution caused by constant forest fires in Indonesia. And coastlines will be threatened if climate change continues to raise sea levels. The carbon tax will "incorporate the negative externalities" such as these threats into the cost of fossil fuels to help the nation deal with the environmental effects, Toh said.

The tax, which will range between S$10 and $20 ($7.30 to $14.58) per ton of greenhouse gas emissions, also will figure into the Paris Agreement. Earlier this month, President Donald Trump's

decision to pull the U.S. out of the climate change accord prompted Singapore to double down. The island-nation said it "staunchly supported" global climate change efforts such as the accord and the carbon tax will help the country meet its Paris pledge.

"This may also spur the creation of new opportunities in green growth industries such as clean energy," Singapore Finance Minister Heng Swee Keat said when announcing the tax in February. "Revenue from the carbon tax will help to fund measures by industries to reduce emissions."

From Apple to Exxon

Companies across the island are taking steps to shrink their carbon footprints—from Apple Inc.'s all-solar operations to Exxon Mobil Corp.'s overhead waste heat recovery.

The tax also could get more businesses interested in recovering energy so they can reuse it, according to Toh.

One beverage factory, for example, now harvests the heat from its boiling process, even as researchers at the National University of Singapore continue to study and refine the technology. Professors there want to salvage cold energy that's expended when liquefied natural gas is converted back into gas and use it to desalinate water.

The Sustainable Energy Association of Singapore also identified the petroleum, semiconductor, and metal sectors as other industries that are ripe for waste energy recovery.

"Businesses need to innovate their processes, products, and services to respond to the changing environment effectively," said Ian Hong, a partner specializing in sustainability at KPMG Singapore.

The transportation and construction sectors, in particular, will likely have to rethink their energy strategies in the wake of the carbon tax, according to Isabella Loh, chairman of the Singapore Environment Council.

"Singapore should aspire to be a global leader in the research and development of renewable technologies as this will boost our economy by creating jobs and attracting investments," Loh told Bloomberg BNA. "That's why the SEC is urging the government to consider channeling the revenue raised by the carbon tax into promoting this innovation."

Heng said in his speech the tax "will help to fund measures by industries to reduce emissions."

Carbon-Capture Politics

Although solar panels are part of the nation's overall energy strategy, Singapore acknowledges few prospects for renewables due to its limited land mass and natural resources. Instead, the microstate is focusing on improving the efficiency of the energy already available and to advance carbon capture, another technology that Toh expects will get more attention under the carbon tax.

"As long as our reliance on fossil fuels remains, CCS/U has potential to be an important part of our strategy to reduce CO2 emissions," the climate change secretariat said in a 42-page report on carbon capture, storage, and utilization.

Singapore could capture carbon from power plants before it enters the atmosphere and turn it into products such as methanol, formaldehyde, or even drugs or sand, for the construction sector. But

low demand for these products means the economics "are still not favorable," the report said.

What's more, if the tiny nation of Singapore wants to bury carbon in the ground, it will have to find some friends. "The absence of suitable storage sites in Singapore means foreign sites will have to be sought," the secretariat said. "International geopolitical and corporate negotiations will be necessary."

Rajiv Biswas, IHS Global Insight's chief economist for Asia, said after the carbon tax is rolled out, Singapore will become a "center of expertise" for emerging markets interested in green technology.

Toh agreed, saying the city-state could set an example for tackling greenhouse gases in urban areas, especially among heavy industries. The tax targets major polluters high up in the energy chain, such as power stations.

"If we can be a lead adopter of measures that can significantly reduce GHG emissions while maintaining economic competitiveness," Toh said, "it will have relevance overseas."

Energy and Climate Report

To: Maisano, Frank[frank.maisano@bracewell.com]
From: Maisano, Frank
Sent: Mon 6/12/2017 5:52:25 PM
Subject: Jun 12 PRG Energy Update: Budgets, Ethanol, Events

Friends,

Another exciting weekend with a $450 million POWERBALL winner (not me), Pittsburgh winning the Stanley Cup for the second straight year and scoring a winner in the Belmont. While I had the Win/Place order reversed, I still won a $5 *Exacta* (which paid out $115) on Saturday as *Tapwrit* outdueled *Irish War Cry* to take the third jewel of the Triple Crown, following in the footsteps of his sire *Tapit*. Of course, my *trifecta* was snake-bitten by *Lookin At Lee* for the third straight race as this time I had him in the box and he faded badly (Yes, I left him out of the Derby/Preakness boxes and should have known this would happen). Anyway, at least I didn't lose money this week finishing slightly ahead. Finally, tonight, Golden State goes for the clincher tonight at home and golf's US Open starts on Thursday at Erin Hills in Wisconsin.

It is a very busy week in DC, starting tomorrow with the rescheduled confirmation hearing at Senate EPW for NRC Commissioners and EPA enforcement head Susan Bodine. They are expected to vote Thursday to move NRC Chair Kristine Svinicki to fast-track her approval before the June 30 expiration of her current term. We also expect a vote on FERC nominees soon as well (before July 4th recess). Senate Energy canceled its permitting hearing slated for tomorrow. On Wednesday, Senate EPW tackles the RVP ethanol issue (even as rumors continue that RVOs will soon be released by EPA) and Senate Commerce looks at automated vehicle technology and hurdles for testing and deployment in the US.

The budget process launches in earnest this week after a few hearings last week. This week there are 18 hearings highlighted by a visit by Scott Pruitt to House Interior/Enviro Approps on Thursday. Secretary of State Tillerson will appear at Senate Foreign Relations tomorrow and Ag Secretary Perdue is at Senate Ag tomorrow afternoon. Secretary Chao make two separate visits to the Senate and House Transportation committees.

Off the Hill, EEI gathers in Boston today through Wednesday for its annual conference, while BP launches its annual Energy Statistics review tomorrow and will discuss it in a couple of events on Thursday. For the future, Secretary Moniz returns to Press Club next Wednesday to discuss energy innovation (I'm hosting him for an NPC newsmaker event), Statoil's Annual Energy perspectives report is next week as well and EIA's annual Energy Conference is right around the corner, too.

I also thought you might find Amy Harder's latest Harder Line column interesting since it looks at the importance of accurate media coverage of climate change, a topic near and dear to many of all our discussions over the years and one she is taking up at today's Citizens Climate Lobby conference here in DC. And keep your eye peeled for the Business Council for Sustainable Energy weighing into energy/environment budget debate soon.

Finally, the FireFly Music Festival starts on Thursday in Delaware and carries through four days of music. This is my wife's favorite event, so when she heads out Thursday, my kids and I will be living large, eating as much great carry-out (KFC Buckets and Ledo Pizza are on the agenda) as possible, watching movies late into the night and listening to loud music in the House. Now that's livin'. Which reminds, on Friday, I'm hosting Newt Gingrich for a National Press Club event about his new book: *Understanding Trump.* It should be insightful, so please attend or pass on to your many colleagues covering the political angles…

Call with questions…

Best,

Frank Maisano

(202) 828-5864

c. (202) 997-5932

FRANKLY SPOKEN

"The successful development of new energy technologies – and the jobs they create – depends on effective partnerships between public and private sectors. A significant component of those partnerships is the proper alignment of investments along the technology development process. Leveraging its expertise, the private sector has invested billions of dollars to commercialize new energy investments. Critical to this process is the feedstock supplied by

federal investments, especially in the early-stage and high-risk research."

A Letter from 14 CEOs, including major Corporations like Southern, Air Liquide and DuPont, as well as Chamber CEO Tom Donahue, urging Congressional appropriators to support funding for energy innovation programs. The letter was sponsored by the Bipartisan Policy Center's American Energy Innovation Council.

-

IN THE NEWS

CEOs Urge Congress to Protect Energy Innovation – Late last week, the Bipartisan Policy Center's American Energy Innovation Council sent a letter to Congress urging their support for the Advanced Research Projects Agency-Energy and research and development programs to ensure that the United States maintains its competitive edge. In a letter, 14 energy and economic heavy hitters, including Southern CEO Tom Fanning, Air Liquide CEO Mike Graff and Chamber of Commerce head Tom Donahue said early federal research helped develop hydraulic fracturing technologies as one example of why the private sector alone can't fund critical innovation in energy. Other signers include Lockheed's Norn Augustine, Exelon's Chris Crane, Shell's Bruce Culpepper, former Commerce official John Doerr, Pioneer's Tim Dove, PG&E's Anthony Early, Clean Line CEO Michael Skelly, former DuPont CEO Chad Holliday, NEI's Maria Korsnick, AGA's Dave McCurdy and David Holt of the Consumer Energy Alliance. I can send PDF if you need it.

New Research Initiative to Update, Improve Social Cost of Carbon – Resources for the Future (RFF) is launching a multi-year, multidisciplinary research initiative to improve the methodology used to calculate the social cost of carbon—an economic tool used to quantify both the benefits to society of reducing carbon dioxide emissions from the atmosphere and the harm to society from emitting more carbon dioxide. The social cost of carbon informs billions of dollars of policy and investment decisions in the United States and abroad—making it critical that estimates of the measure are transparent and based on the best available science and methodology. The following few examples highlight use of the social cost of carbon across several jurisdictions. Along these lines, RFF's new initiative will support and inform policy design choices and evaluations of actions that affect climate change by decisionmakers and analysts worldwide.

Platts Cap Crude to Look at Paris, Oil Exports – The current edition of Platts Capitol Crude will look at whether President Trump's decision to pull the US out of the Paris climate

agreement hurt national security. It also looks at whether US crude exports are actually benefitting US allies and if we should be selling off the Strategic Petroleum Reserve. Andrew Hollard, director of studies and a senior fellow at the American Security Project, answers these questions and more on this week's Capitol Crude.

Defense Energy Advisor Appointed – President Trump announced his intent to nominate Lucian Niemeyer late Friday to serve as assistant secretary of Defense for Energy, Installations and Environment. Niemeyer was previously a long-time staffer on the Senate Armed Services Committee where he ran the military installation portfolio and conducted oversight of federal energy and environmental programs.

Immelt to Step Down at GE – General Electric CEO Jeff Immelt is stepping down effective August 1, after 16 years of leading the company. He will be replaced by John Flannery, who currently heads the industrial giant's health care division.

ON THE SCHEDULE THIS WEEK

EEI Holds Annual Meeting – The Edison Electric Institute will launch its annual conference in Boston today through Wednesday at the Copley Marriott. Keynote speakers include NBC's Tom Brokaw, MIT Digital Economy Co-Director Andy McAfee, retired general Keith Alexander and former White House advisor and CNN analyst David Gergen. Southern CEO moderates a great breakout session tomorrow morning featuring DOE veteran Pat Hoffman, FERC's Joe McClelland and Oracle Chief Security Officer Mary Ann Davidson.

Climate Lobby Meetings, Hill Day Set – The Citizens Climate Lobby hold its 8th annual conference in Washington, DC on today and tomorrow at the Omni Shoreham. The keynote speaker will be Dr. Anthony Leiserowitz, Director of the Yale Program on Climate Change Communication. Most of tomorrow will be on Capitol Hill.

LNG CEO to Address Forum – The Atlantic Council will host a forum today at Noon looking at how unconventional oil and gas continues to reshape global energy markets. Tellurian LNG CEO Meg Gentle will speak. The conversation will focus on the outlook for US LNG, changes in the LNG market globally, and other trends and drivers.

Security Experts to Address Methanol Policy Forum – The Institute for the Analysis of Global Security (IAGS), the U.S. Energy Security Council (USESC) and the Methanol Institute will hold a Methanol Policy Forum tomorrow at the National Press Club. The Forum will include a special luncheon discussion: Energy Security through Fuel Choice, which features a conversation with the U.S. Energy Security Council experts like former National Security Advisor Robert C. McFarlane, former CIA Director James Woolsey, former President of Shell Oil Company John Hofmeister, former White House Counsel and Ambassador to the EU C. Boyden Gray and former Louisiana Senator and Senate Energy Bennett Johnston. Our friend Joe Cannon and other will speak on panels as well.

Senate Environment Host NRC Nominees, EPA Enforcement Official – After it was postponed last week over paperwork issues, the Senate Environment Committee will host a nomination hearing tomorrow at 10:00 a.m. on three NRC nominees and EPA enforcement chief Susan Bodine. The NRC nominees include current commissioner Kristin Svinicki and new appointees Annie Caputo, a former Exelon Corp. executive who now works for the EPW Committee and David Wright, a former South Carolina Public Service commissioner. Then on Thursday, the Committee will hold a business meeting to the nomination of current NRC Chair Kristine Svinicki, who needs to be reappointed by June 30th to continue her service.

CANCELED - Senate Energy Permitting Hearing – The Senate Energy and Natural Resources Committee has cancelled its hearing slated for tomorrow on the federal permitting processes. No word on reschedule yet.

House Ag to Look at Watershed Issues – The House Agriculture Committee's Conservation and Forestry Subcommittee holds a hearing tomorrow at 10:00 a.m. on small watershed infrastructure. The hearing will look at continuing the current mission, and building upon successes.

Forum to Look at Global Risks – Tomorrow at 1:00 p.m., the Stimson Center and Georgetown's Institute for the Study of Diplomacy will hold a strategic conversation analyzing the global risks presented to human security by environmental change, as well as the findings and recommendations from the recently released report - "New Challenges to Human Security: Environmental Change and Human Mobility." The event will be a discussion analyzing the global risks presented to human security by environmental change, as well as the findings and recommendations from the recently released report — *New Challenges to Human Security: Environmental Change and Human Mobility*

***Post* Forum to Look at Food Systems** – *The Washington Post* will host a forum tomorrow at 3:30 p.m. that brings together entrepreneurs, food industry executives, scientists and farmers to discuss how technology and science are changing our modern food systems. They will explore the business practices that are driving consumer demand, the innovations and new ideas that are shaping the future of what – and how – we eat and consider the policies that will regulate an increasingly complex global food market. Speakers will include USDA Economic Research Service Administrator Dr. Mary Bohman, EWG's Ken Cook, Seth Goldman of Honest Tea, Hungry Harvest CEO Evan Lutz, Marty Matlock of the University of Arkansas, DC Chef/ Restaurateur Spike Mendelsohn, former U.S. Deputy Secretary of Agriculture Kathleen Merrigan and Veronica Nigh of the American Farm Bureau Federation.

NAS to Discuss Social Cost of Carbon – The US National Academies of Sciences, Engineering, and Medicine will host members from its committee on Assessing Approaches to Updating the Social Cost of Carbon as well as experts from federal and state governments and academia on Wednesday to discuss approaches to valuing climate damages. The symposium is organized into three panels: the first to review the committee's recommendations, the second to hear from academics who are developing estimates of the social cost of carbon, and the third to discuss federal and state approaches to valuing climate damages.

Senate Commerce to Look at AVs – The Senate Committee on Commerce, Science, and Transportation, will convene a hearing on Wednesday at 10:00 a.m. on paving the way for self-driving vehicles. The hearing will explore automated vehicle technology and hurdles for testing and deployment in the United States. The hearing will also examine state and federal roles to ensure safety while promoting innovation and American competitiveness. Witnesses will include Alliance of Automobile Manufacturers' CEO Mitch Bainwol, Rob Csongor of NVIDIA Corporation, John Maddox of the American Center for Mobility and MADD's Colleen Sheehey-Church.

RFF to Host Webinar of RGGI Emissions Issues – Resources for the Future (RFF) will hold a webinar Wednesday at 10:15 a.m. to discuss emissions containment reserve (ECR) concepts with the Regional Greenhouse Gas Initiative. Researchers at Resources for the Future (RFF) and the University of Virginia have been working hard on further analysis and modeling of the ECR and the webinar will present the results of this research; a final report will be released in early summer. The webinar will begin with an introduction and brief review of the ECR concept. Dallas Burtraw (RFF) and William Shobe (UVA) will then present results from simulation modeling and laboratory experiments that illustrate how the Regional Greenhouse Gas Initiative (RGGI) market would work with the addition of an ECR. Following the presentations, representatives from industry, environmental advocacy groups, think tanks, and state environmental agencies will respond to the analyses with a look at what they view as

opportunities, as well as potential challenges, of introducing an ECR program as part of RGGI. The webinar will include with time to respond to questions and comments from the audience.

Senate to Look at RFS – The Senate Environment Committee will hold a hearing on the Renewable Fuels Standard on Wednesday targeting legislation by Sen. Fisher on renewable fuels, S 517, the Consumer and Fuel Retailer Choice Act. Witnesses will include long-time renewable fuels advocate Brooke Coleman, Jonathan Lewis of the Clean Air Task Force, Sheetz EVP Mike Lorenz, Briggs & Stratton's Todd Teske and Janet Yanowitz of Ecoengineering.

House Energy to Look at Energy Planning – The House Energy & Commerce Committee's Subcommittee on Energy will hold a hearing on Wednesday at 10:00 a.m. getting states' perspectives on energy security planning, emergency preparedness and state energy programs.

Senate Energy to Discuss Hydro Legislation – The Senate Energy Committee's Water and Power Panel will hold a legislative hearing on Wednesday at 2:00 p.m. looking at several hydropower bills. Witnesses will include Scott Cameron, acting assistant secretary for water and science, Department of the Interior; Mark Gabriel, administrator and CEO, Western Area Power Administration; Harlowton, Mont., Mayor Jeff Sell; Tom Fisher, president, Patterson Lake Homeowners Association; Mike Hamman, chief engineer and CEO, Middle Rio Grande Conservancy District; and Christopher Wynn, vice president, Brookfield Renewable Energy Group.

RCP to Host Energy Workforce Conversation – On Thursday at 9:00 a.m. at the Columbus Club, RealClear Politics will convene experts spanning the commercial construction industry and its adjacent sectors to analyze industry success and workforce development.

Forum to Launch BP Energy Review – The Atlantic Council will launch of the 2017 BP Statistical Review of Energy on Thursday at 9:30 a.m. featuring BP Chief Economist Spencer Dale. From the shift to low-carbon fuels to the proliferation of renewables to the future of coal, BP's Statistical Review of Energy continually provides authoritative and in-depth information and insightful analysis that is invaluable in understanding changing energy markets and production and consumption patterns.

Pruitt to Testify on EPA Budget – The House Appropriations Interior-EPA subcommittee will

host EPA Administrator Scott Pruitt on Thursday at 11:00 a.m. to testify on the White House's EPA Budget, which proposed cutting the agency's budget by 31%. Pruitt will be joined by Holly Greaves, a landing team member who works on budget issues.

BP's Dale Also Addresses NatGas Roundtable – The Natural Gas Roundtable will also BP's Dale as its guest speaker at its next luncheon at Noon on Thursday where he will continue the public rollout of this year's BP Statistical Review of World Energy Markets.

Gingrich to Discuss Politics, Book – Former Speaker of the House and 2012 presidential candidate Newt Gingrich will appear at a National Press Club Headliners Event on Friday at 10:00 a.m. in the club's First Amendment Lounge to discuss his new book, Understanding Trump. I will be hosting the event on behalf of the NPC. In *Understanding Trump*, Gingrich shares what he learned from more than two years helping Donald J. Trump throughout his presidential campaign, during his transition from presidential candidate to Commander in Chief, and in his first few months in office. Gingrich provides a unique perspective on how the new president's past experience as a business leader has shaped his political agenda and approach to governing the country.

WCEE to Look at Western Energy Markets – The Women's Council on Energy and the Environment will host a forum on Friday at Noon at FERC to get an overview of the Western Energy Imbalance Market from FERC staff Elizabeth Olson who worked in the California electricity market during EIM implementation.

IN THE FUTURE

Ukraine Gas Leaders to Address Forum – Next Monday at 3:30 p.m., the Atlantic Council's Dinu Patriciu Eurasia Center and Global Energy Center will hold a conversation on the future of Ukraine's energy sector with Naftogaz leadership. On May 31, Ukraine's Naftogaz won a victory over Russia's Gazprom in the international arbitration court in Stockholm. Naftogaz won on all three counts the court considered. On the heels of this extraordinary development, the Atlantic Council will bring together Naftogaz Chief Executive Officer and Chief Commercial Officer, Andriy Kobolyev and Yuriy Vitrenko, and fellow energy experts, to discuss Ukraine's energy sector – Nord Stream 2, implications of the arbitration between Naftogaz and Gazprom in Stockholm, and energy reforms.

Zinke to Talk Interior Budget at Senate Energy – The full Senate Energy and Natural Resources Committee will convene a hearing next Tuesday to examine the president's budget request for the Department of the Interior for Fiscal Year 2018. Secretary Ryan Zinke will appear.

Forum to Look at AVs – The Information Technology and Innovation Foundation and the Washington Embassy of the Federal Republic of Germany will hold a forum next Tuesday, June 20th at 10:00 a.m. to discuss key policy and commercial issues and insights on how enterprises and policymakers from the U.S. and Germany are enabling the future of mobility. Emerging digital technologies are enabling connected and autonomous vehicles (AVs). These technologies will reshape the future of mobility, reducing accidents and producing an estimated $1 trillion-a-year economic benefit in the United States alone. But to achieve that vision, policymakers will need to create a regulatory environment that encourages experimentation while ensuring high standards of road safety, as Germany has recently done by developing a policy framework for autonomous vehicle research and experimentation. Speakers include Michael Bültmann of HERE Deutschland, ITIF's Stephen Ezell and German Federal Ministry of Transportation's Tobias Miethaner.

WAPA to Host Steel Discussion – The Washington Automotive Press Assn is holding a forum at the National Press Club Tuesday June 20th at Noon featuring the Steel Market Development Institute. Dr. Jody Hall, vice president of the automotive market for the Steel Market Development Institute, will discuss advancements in steel grades and how their application in the vehicle structure helps protects occupants in the event of a crash and is easier to repair than vehicles made with alternative materials.

Forum to Look at OPA Reform – The Environmental Law Institute will hold a forum on Tuesday, June 20th at 12:00 p.m. looking at updating the Oil Pollution Act (OPA) in 1990. OPA was passed following the Exxon Valdez oil spill, to strengthen the federal government's ability to prevent and respond to oil spills, establish financial resources to aid response, and raise standards for contingency planning. The program will cover OPA issues raised by pipeline projects, and by the Trump Administration's efforts to increase production from offshore and federal lands and to restrict the definition of waters of the United States in ways which may reduce the scope of contingency planning requirements for inland locations. Speakers will also discuss key decisions from the past year involving the OPA and related federal statutes, including decisions about recoverable damages, citizen suits, and presentation of claims to the Oil Spill Liability Trust Fund, as well as decisions in enforcement cases against vessels involving the use of "magic pipes" to deal with oily bilge water. The expert panel includes NOIA's Randall Luthi, Cyn Sarthou of the Gulf Restoration Network and Richard Udell, who serves in DOJ's Environmental Crimes Section.

BPC Innovation Forum to Feature Sen Alexander, Southern ClearPath Experts – The Bipartisan Policy Center's Energy Innovation Commission will hold a conversation on Tuesday June 20th at 3:00 p.m. in 430 Dirksen about the energy innovation process, with leading industry voices discussing whether smart, targeted approaches for limited federal resources can complement private sector investments in pursuit of advanced energy technologies. President Trump's recent budget proposal for fiscal year 2018 has sparked a conversation about the appropriate federal role in supporting the nation's innovators. As the congressional appropriations process begins in earnest, energy research programs within the Department of Energy are among those under scrutiny, despite a history of broad, bipartisan support. Sen. Lamar Alexander will offer Keynote remarks, followed by a panel discussion with ClearPath's Rich Powell, Air Liquide's Mike Rosen and Southern's Steve Wilson moderated by Axios' Ben Geman.

WCEE to Host Litigation Roundtable – The Women's Council on Energy and the Environment hold its Third Annual Litigation Roundtable with the women Administrative Law Judges of the Federal Energy Regulatory Commission (FERC) and the Environmental Protection Agency (EPA). The Judges will discuss their experience as Administrative Law Judges, interesting developments in their careers, who mentored them along the way and who they themselves mentored, and share the "Dos & Don'ts" regarding hearings and settlement conferences.

Wilson Forum Look at Arctic Relations – The Wilson Center hold its Arctic Circle Forum on Wednesday and Thursday, June 21-22, beginning each day at 8:30 am and looking at the U.S. and Russian roles in the Arctic. The Arctic is a region of international dialogue and potential competition, of varied challenges and diverse opportunities. It is also a region that is gaining in both geopolitical significance and public awareness every day. The complex relationship between the United States and Russia, along with the approaches of the six other Arctic nations, will continue to shape the region's social, economic, political and environmental issues far into the future. The event will explore the crucial Arctic relationship and the implications for all Arctic nations, the communities that call the region home, and the countries and organizations that have a vested interest in a peaceful and sustainable Arctic.

BNEF to Release Energy Outlook – The CSIS Energy and National Security Program is hosting the launch of Bloomberg New Energy Finance's (BNEF) New Energy Outlook 2017 on June 21st at 10:00 a.m. The report is BNEF's annual economic forecast for the world's power mix to 2040. Built over nine months, it is the result of a major collaboration of more than 65 market and technical experts from BNEF's 11 offices around the world. Seb Henbest (NEO Lead

Author and Head of Europe, Middle East, & Africa; BNEF) and Elena Giannakopoulou (Lead Energy Economist; BNEF) will present on the NEO 2017 findings, followed by Q&A and discussion.

Press Club to Host Former Energy Sect Moniz – The National Press Club will host a Newsmaker on Wednesday June 21st at 10:00 a.m. in the Club's Lisagor Room featuring former Secretary of Energy Dr. Ernest Moniz. Moniz will propose ways to maintain the American leadership edge on energy innovation. Moniz also is expected to announce the formation of a new non-profit organization "The Energy Futures Initiative," that aims to foster innovation in global energy systems. According to the creators, EFI will be a non-partisan, think tank and advisory firm working across all energy sources to provide evidence-based analysis on decarbonizing energy systems, creating high-paying energy jobs, and finding ways to make energy infrastructure and supplies more secure.

CA Energy Forum Set – Advanced Energy Economy's (AEE) annual California energy policy event, Pathway to 2050, will be held on June 21st in Sacramento. The event brings together an influential group of advanced energy business leaders and state policy-makers to discuss opportunities to accelerate California's economy through the growth of advanced energy. Speakers will include our friends Caroline Choi of SoCalEd, Dan Morain of the *Sacramento Bee* and Greentech's Katie Fehrenbacher. Other speakers include SoCal Ed CEO Kevin Payne, GE's Deb Frodl, Cal Assembly Speaker Kevin de Leon, CPUC President Michael Picker, Cal Energy Commissioner Janea Scott and Tom Steyer.

Senate Energy to Hear from Perry on DOE Budget – The full Senate Energy and Natural Resources Committee will convene a hearing on Thursday June 22nd at 10:00 a.m. to examine the president's budget request for the Department of Energy for Fiscal Year 2018. Secretary Perry will testify.

WAPA to Host Ride/Drive of *Ionig* – WAPA also will host a lunch and drive on June 22 at 11:00 a.m. at River Farm in Alexandria, VA featuring the all-new Hyundai Ioniq Electric and Hybrid line of vehicles

CSIS to Host Statoil Energy Report – The CSIS Energy and National Security Program will host a forum on June 22nd at 1:00 p.m. featuring Eirik Wærness, Senior Vice President and Chief Economist of Statoil, to present the company's newly released *Energy Perspectives 2017*. The *Energy Perspectives* report summarizes different narratives about global energy demand and

energy mix for the future decades, scenarios, based on different assumptions about regional and global economic growth, conflict levels and implications, technological development and energy and climate policies. In the 2017 version, models have been adjusted with last year's developments in the energy and climate policy area, technology costs and maturity, more thorough assessments of GDP forecasts, as well as included adjustments made to historic global CO2 emissions. The modelling runs to 2050 with 2014 as baseline year, and provides a forecast for global energy demand and energy mix, economic growth, CO2 emissions, and more.

Forum to Hear Energy Demand Expert – On Friday June 23rd at Chinatown Garden, the National Capital Chapter of the US Energy Economists will host physicist, venture capitalist, author, government advisor, and senior fellow at the Manhattan Institute, Mark Mills. Mills will discuss energy demand disruptions and the aspirations versus the reality. Mills says we are nearing an era of 'peak energy demand' requires believing that innovation is over, and similarly that we've seen the end of normal economic and social behaviors. Technology and demographic trends in fact suggest that the recent past is in an interregnum, not a 'new normal' when it comes to energy demand.

EIA Energy Conference Set – The 2017 EIA Energy Conference is scheduled for June 26-27 in Washington, DC.

Smart Cities Conference Headed for Austin – The 2017 Smart Cities Connect Conference will be in Austin, TX at the Convention Center on June 27th. The event convenes more than 200 global city leaders to prospect and partner with innovative technology and service providers.

Global Security Forum Set – The Center for a New American Security hosts its 2017 Annual Conference in partnership with The Washington Post on Wednesday, June 28th at The Mayflower Hotel. This year's conference will bring together U.S. national security policymakers and experts to highlight major divides and identify potential bipartisan solutions. CNAS is an independent and nonpartisan research institution that develops strong, pragmatic and principled national security and defense policies.

JULY 4th Recess – June 30th to July 11th

Congressional Renewable Expo Set – The 20th annual Congressional Renewable Energy and Energy Efficiency EXPO and Policy Forum will be held on Tuesday, July 11th from at 9:30 a.m. to 4:30 p.m. In Rayburn.

Community Solar Forum Set for Denver – The Coalition for Community Solar Access will host the first annual National Community Solar Summit in Denver on July 26 – 28. A few highlights for Denver include energy company CEOs including Tom Matzzie of CleanChoice Energy, Jesse Grossman of Soltage, Zaid Ashai of Nexamp, Rick Hunter of Microgrid Energy and Steph Spiers of Solstice. Other speakers include energy company leaders Hannah Masterjohn of Clean Energy Collective, Dan Hendrick of NRG Energy, Adam Altenhofen of US Bank, Adam Capage of 3 Degrees and Lori Singleton of Salt River Project.

Subject: POLITICO's Morning Energy: Perry preps for House grilling today — McConnell tees up Svinicki vote — Health groups press Pruitt on air issues

By Anthony Adragna | 06/20/2017 10:00 AM EDT

With help from Eric Wolff, Esther Whieldon, Alex Guillén, Ben Lefebvre and Darius Dixon

PERRY V. CLIMATE SCIENCE: Energy Secretary Rick Perry has set himself up for a fierce grilling before a House Appropriations subcommittee today after he said Monday - contrary to the overwhelming scientific consensus - that he doesn't think carbon dioxide emissions from human activity are the main driver of climate change. Greens quickly pounced, with the Sierra Club saying that "Rick Perry's outrageous comments are the latest indication that this administration will do everything in its power to put polluter profits ahead of science and public health." Remember EPA Scott Pruitt faced weeks of criticism and a scientific integrity probe when he made similar remarks about CO2 on the same show, CNBC's "Squawk Box." Following his comments, Oregon Rep. Earl Blumenauer sent Perry a host of educational materials outlining the basic established science of climate change.

This is both Perry's first public appearance on Capitol Hill since his nomination hearing in January as well as the first hearing in 2017 of Rep. Mike Simpson 's energy spending subcommittee, so there's plenty to discuss. Simpson doesn't support a lot of the deep cuts Trump's 2018 budget suggests for DOE, but he has also said that the proposal is "Mulvaney's budget" rather than a document with buy-in from the Cabinet secretaries so don't expect him to call on Perry to defend the funding decisions made by the White House. Democrats, on the other hand, will likely needle Perry over funding cuts for renewable energy programs, climate-related work and the elimination of ARPA-E. There aren't any big climate hawks on the panel but issues further afield, like Perry's comments Monday that carbon dioxide emissions aren't the primary "control knob" of climate change, are almost certain to squeeze their way into the discussion. The hearing starts at 1 p.m. in Rayburn 2359.

VOTE TEED UP ON SVINICKI: Senate Majority Leader Mitch McConnell filed cloture on the renomination of NRC Chairwoman Kristine Svinicki, lining up a final vote on her confirmation before the end of the week, Pro's Darius Dixon reports. Svinicki's term expires June 30 - she'd have to step down, at least temporarily, if not confirmed by then - but Republicans have been fast-tracking her to a third term. But it's likely to be a slow walk after Democrats vowed Monday to object to all unanimous consent agreements in opposition to GOP efforts to repeal Obamacare.

NUCLEAR TAX BILL TO GET SOME HOUSE LOVE: The House is slated to vote tonight on a bipartisan bill to rewrite a nuclear energy production tax credit that will likely to decide the fate of two power plants in South Carolina and Georgia. The House Ways and Means Committee approved the legislation, H.R. 1551 , last week and quickly got it on the floor calendar. The bill, which extends the start-up deadline for reactors to qualify for the credit, garnered plenty of support in committee and is expected to be considered under suspension of the rules, which is

usually reserved for uncontroversial legislation. Assuming the full House gives its blessing, it's still unclear if the measure gets cobbled into a larger tax bill or if the Senate will take it up in time to help Southern Co. and SCANA, the companies building the plants. The vote series, which includes more than a dozen bills, starts at 6:30 p.m.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and a tip of the hat to Stoel Rives' Gregory Jenner for identifying Joseph Welch as the man who asked Joseph McCarthy "have you no decency sir?" Today's trivia: What future U.S. senator served as minority counsel on the Senate Watergate Committee? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ZINKE HEADS TO SENATE ENERGY: Interior Secretary Ryan Zinke heads to the Senate Energy and Natural Resources Committee today at 10 a.m. for a hearing to review his agency's budget request for Fiscal 2018. A Democratic committee aide told ME to expect fierce questioning about Zinke's decision to suspend key parts of BLM methane waste rule and "his assault on national monuments after conspicuously cloaking himself in Teddy Roosevelt's legacy during his confirmation." ME also expects Democrats to press Zinke for prompter responses to oversight requests and to raise concerns on proposed budget cuts for the agency, including its climate change research.

HEALTH GROUPS PRESS PRUITT ON AIR QUALITY: A coalition of public health groups met Monday with EPA Administrator Scott Pruitt to press him on Clean Air Act implementation and enforcement (shortly before he met with utility CEOs on the future of the Clean Power Plan). According to Lyndsay Moseley Alexander, assistant vice president of the American Lung Association and an attendee, the groups brought up the need to base policy on science, the "importance of preventing harm before it occurs," and reductions in smog and soot pollution. She said they also stressed the connection between climate change and improving air quality, a topic the groups said in a new declaration requires "bold action." Moseley Alexander declined to characterize Pruitt's response beyond calling the dialogue "important."

Full list of attendees: Harold Wimmer, American Lung Association, along with Moseley Alexander; Georges Benjamin, American Public Health Association; Mark Del Monte, American Academy of Pediatrics; Katie Huffling, Alliance of Nurses for Healthy Environments; Jeff Carter, Physicians for Social Responsibility; John Auerbach, Trust for America's Health; Martin Hamlette, National Medical Association; Jessica Wolff, Health Care Without Harm; Lynda Mitchell, Asthma and Allergy Foundation of America; David Dyjack, National Environmental Health Association; Laura Hanen, National Association of County and City Health Officials; George Thurston, American Thoracic Society's Environmental Health Policy Committee; Cindy Pellegrini, March of Dimes.

PUSHING ENERGY INNOVATION: Sen. Lamar Alexander, who oversees Energy Department appropriations, speaks today at a panel hosted by the American Energy Innovation Council about DOE and investing in innovation technologies. The event kicks off at 3 p.m. in Dirksen 430.

That comes as the group releases a new report this morning with a series of "specific steps to spur innovation in the energy sector." Among the suggestions are investing $16 billion annually in advanced energy innovation, funding ARPA-E at $1 billion a year, creating a new energy challenge competition for high-impact energy projects with a $20 billion appropriation over ten years, and establishing regional innovation programs. The American Energy Innovation Council boasts such heavy hitters as Microsoft co-founder Bill Gates and Southern Co. Chairman Thomas Fanning.

CELEBRATING TEN YEARS: The U.S. Chamber of Commerce's Institute for 21st Century Energy is teasing a "big announcement" today as it celebrates its tenth anniversary and they've certainly got the VIPs lined up for the party. Pruitt, Perry (by video) and Zinke are all slated to give remarks, along with other energy luminaries. The program kicks off at 9 a.m. at Chamber headquarters.

HOUSE DEMS HOST CLIMATE ROUNDTABLE: House Science ranking member Eddie Bernice Johnson hosts a roundtable today from 10 a.m. to 1 p.m. looking at current climate change effects and possible preventative actions and solutions. Some VIPs on the second panel: Christiana Figueres, one of the key negotiators of the Paris agreement; Jonathan Elkind, a former senior DOE official; and David O'Sullivan, European Union ambassador to the U.S. More details and livestream of the event here.

TRUMP'S PUSH TO KILL A RUSSIAN PIPELINE: Germany and Austria are furious after the Senate approved legislation imposing new sanctions against companies supporting Russian energy export projects, POLITICO Europe's Anca Gurzu reports. Both countries have companies helping Russia's Gazprom with the ???9.5 billion Nord Stream 2 pipeline that the Trump administration is on a diplomatic offensive to kill. "They are actively trying to promote their LNG in Europe and make a business case out of it," Severin Fisher, senior research at the Center for Security Studies in Zurich, said of U.S. lobbying.

CHAFFETZ: TRANSPARENCY AS BAD AS UNDER OBAMA: Outgoing House Oversight Chairman Jason Chaffetz told CNN that Trump administration federal agencies share Obama-era offices' low levels of transparency. "The reality is, sadly, I don't see much difference between the Trump administration and the Obama administration," the Utah Republican said. "In many ways, it's almost worse because we're getting nothing, and that's terribly frustrating."

LOTS OF KLOTZ: There's a lot of Beltway chatter these days about how long retired Lt. Gen. Frank Klotz will be leading the Energy Department's nuclear weapons arm, but there are gears in motion. Klotz, the only Obama administration holdover at DOE, has led the agency's National Nuclear Security Administration since April 2014, though sources tell ME that interviews for a successor have begun. In the final days of the Obama administration, it wasn't clear whether Klotz would have to resign on Inauguration Day like the vast majority of other Obama political appointees. He was ultimately asked to stay for the sake of an "orderly transition."

The White House hasn't announced a NNSA nominee, and in January, some people tracking the agency said Klotz might be willing to serve in the job as long as a year. However, some DOE watchers now say that Klotz could be out over the summer. Still others said that, if he has any

say, Klotz wouldn't leave NNSA without at least a successor being announced by the White House.

REPORT SAYS RENEWABLES NOT TO BLAME FOR COAL WOES: A new report by the Analysis Group contends cheap natural gas prices, the addition of efficient gas-fired power plants and flat electricity demand from customers are prompting closures of coal, older gas-fired and nuclear power plants. The report, commissioned by the Advanced Energy Economy and American Wind Energy Association, says state and federal policies promoting renewables and new energy technologies are a "distant second" factor behind the closures and any claims that plant retirements are causing grid problems are unsubstantiated. The groups are sending the report to DOE which is preparing its own report on grid reliability.

CO-OPS BACK VEGETATION MANAGEMENT BILL: National Rural Electric Cooperative Association President Jim Matheson sent House Natural Resources Chairman Rob Bishop a letter Monday urging lawmakers to back the Electricity Reliability and Forest Protection Act (H.R. 1873) in a floor vote this week. "The bill allows sensible procedures that would cut through federal bureaucratic red tape and reduce delays that currently impede our ability to adequately manage dangerous vegetative overgrowth in existing utility rights of way," he wrote. "Such delays not only add to the costs our electricity consumers pay for their electricity, but present a major threat to human safety, wildlife habitat and the reliable delivery of electricity."

CHALLENGING CHALLENGE OF CARBON REDUCTIONS IN A COALITION OF COALITIONS: The myriad alliances of cities, states and businesses that have pledged to continue with carbon emission reductions despite Trump's withdrawal from the Paris climate agreement would confuse even professional observers: We're Still In, Under 2 MOU and C40, to name just a few. Together these groups make up 36 percent of American carbon emissions and about half of U.S. GDP and population, according to a presentation from the Rocky Mountain Institute. Coordinating all those groups and focusing on a single carbon reduction number will be challenging. Companies have long, nationwide supply chains, and most of the cities and towns are in states that already have climate commitments, making double counting is a problem. RMI's presentation asks whether a single "societally determined contribution" is worth the difficult analysis required, or whether simpler targets could be worked out.

BIG OIL JOINS CARBON TAX PUSH: BP, Exxon Mobil, Shell and Total are just a few of the large corporations joining the Climate Leadership Council, a goup dedicated to promoting a carbon tax as a solution to climate change. The group is marking the moment with a full-page ad in The Wall Street Journal, an op-ed in The Washington Post by former Secretary of State George Schultz and former Obama White House adviser Larry Summers, and an op-ed in the Financial Times by CLC CEO Ted Halstead. The group launched in February with a meeting between Republican luminaries and Vice President Mike Pence, National Economic Council Chairman Gary Cohn, and others. GM, Unilever, Pepsico and Johnson & Johnson have also joined the group.

FRACKING REPEAL UNDER REVIEW: The OMB is reviewing a proposed rescission of the Bureau of Land Management's fracking rule, according to the OIRA website. BLM had

hinted it would make this move when it asked a judge in March to stay an appeal made by the agency during the Obama administration after a lower court ruled BLM didn't have standing to enforce the rule. The rule required companies to publicly list the ingredients in their fracking chemicals and also conduct well integrity tests before they started pumping oil and gas from fracked wells.

PHMSA REVIEWING GAS STORAGE RULE: The Pipeline and Hazardous Materials Safety Administration will not enforce certain aspects of an Obama-era safety rule for underground natural gas storage sites while it crafts a new version, Pro's Ben Lefebvre reports. The federal pipeline safety regulator hopes to have a new rule out for review by January.

EXAMINING METHANE RULE'S LONE STAR IMPACTS: The Texas Grassroots Network released a report today highlighting how it says oil and gas development in Texas has exacerbated air pollution and public health issues. It argues doing away with EPA's methane standards for new and modified oil and gas sources means Texans will "continue to suffer serious health issues from preventable air pollution."

MAIL CALL! ODD GROUP PRESSES ON CITGO: Senate Finance ranking member Ron Wyden and Senate Foreign Relations ranking member Ben Cardin sent a letter to the State and Treasury departments asking for the likelihood of Russia's Rosneft gaining control of CITGO. The letter rings the same alarm bells Robert Menendez and Marco Rubio sent in April. Rosneft obtained bonds worth about 49 percent of CITGO from the refiner's parent company, Venezuela's state-owned Petroleos de Venezuela, as collateral for a loan. If PdVSA defaults on that loan, Rosneft - a company whose executive chairman is under U.S. sanctions - could wind up owning a company operating three major refineries and interstate gas and oil pipelines in the U.S. "The Treasury Department must immediately determine the likelihood of Rosneft acquiring a controlling stake in Citgo," Wyman's letter states.

NEW PUBLIC LANDS PUSH LAUNCHED: The League of Conservation Voters today is launching the "Our Lands, Our Vote" campaign with an initial $600,000 investment in paid advertising, online organizing and on-the-ground mobilization into protecting public lands and national monument designations from efforts to roll them back.

REPORT: QUANTIFYING CALIFORNIA'S CLEAN ENERGY CONTRIBUTIONS: Environmental Entrepreneurs released a new analysis Monday finding clean energy technologies are responsible for 519,000 jobs in California and the state's climate policies have added $45 billion in public and private investments into the economy. The top counties for clean energy jobs are Los Angeles (117,000 jobs), San Diego (61,500) and Orange (45,200).

MOVERS, SHAKERS: Ana Unruh Cohen has joined the Natural Resources Defense Council as government affairs director; she's served as Sen. Ed Markey's top climate aide for the past four years. Ed Yoon has been named permanent director of NRDC's Center for Policy Advocacy after having worked there for the past four years.

Subject: EPA watchdog expands investigation into Pruitt's travel

By Alex Guillén

10/06/2017 03:26 PM EDT

EPA's inspector general says it is expanding the scope of its previously announced probe into Administrator Scott Pruitt's travel to include all of his travel.

The IG's office already opened an audit of Pruitt's travel to and from Oklahoma following complaints that he spent too much time back in his home state. In recent weeks, Democratic lawmakers and outside groups have called for the IG to look at whether Pruitt's non-commercial flights were necessary and appropriate expenses.

According to a memo dated Thursday and released today, the significantly expanded scope will consider the "frequency, cost and extent" or Pruitt's travel through Sept. 30, as well as whether agency procedures were followed by Pruitt, his security and his staff, and whether those procedures are properly designed to prevent fraud, waste or abuse.

"To accomplish these objectives, we will review supporting documentation and conduct interviews with management and staff to determine whether the EPA followed applicable policies and practices, and complied with federal requirements," the memo says.

WHAT'S NEXT: The investigation is likely to take several months to complete.

EPA Lowers Mandate For Cellulosic Biofuel, Keeps Ethanol At 15B Gallons

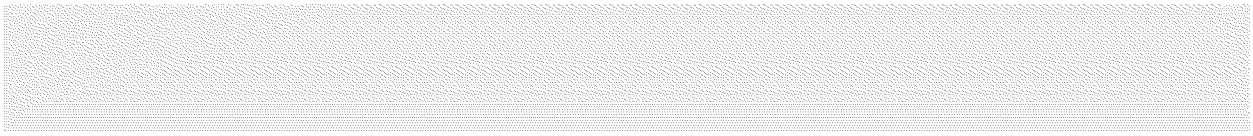
The Des Moines Register
Jason Noble
July 5, 2017
http://www.desmoinesregister.com/story/money/2017/07/05/epa-lowers-mandate-advanced-biofuel-keeps-ethanol-15-b-gallons/452831001/

The U.S. Environmental Protection Agency released new mandates Wednesday for the amount of renewable fuel that must be blended into the nation's fuel supply.

The agency said the proposed Renewable Fuel Standard "reflects demand for 2018."

It kept the total amount of conventional ethanol that must be blended into the nation's fuel supply at 15 billion gallons.

But it dropped the level of cellulosic biofuel, considered the next generation of ethanol, to 238 million gallons from 311 million gallons.



"Increased fuel security is an important component of the path toward American energy dominance," said EPA Administrator Scott Pruitt. "We are proposing new volumes consistent with market realities focused on actual production and consumer demand while being cognizant of the challenges that exist in bringing advanced biofuels into the marketplace."

The proposed standard set for conventional ethanol, or corn ethanol, matches the level set by Congress.

Regulatory Update

New York

SOLID WASTE
Solid Waste Management Facilities
New York SOLID WASTE

Notice of the Department of Environmental Conservation announces revisions to and an additional hearing on a March 16, 2016, proposed rule to amend, adopt, repeal and readopt, and renumber provisions under 6 NYCRR 360 through 621 (nonconsecutive) to reorganize solid waste management standards and incorporate changes in law and technology. The rule addresses the management of historic fill; material recovery facilities; combustion, thermal treatment, transfer, and collection facilities; landfills; waste transporters; biohazard waste management facilities;

local solid waste management planning; and state assistance projects. The changes provide an extended time frame to transition existing facilities to new requirements, add provisions for navigational dredged material handling, update distance requirements, and require certain facilities to install and use fixed radiation detectors to monitor incoming waste. The changes also update radiation detection and regulated medical waste provisions, prohibit the disposal of fluids from oil and gas production, update registration requirements for transporters, and establish a targeted priority area assistance program. The hearing is scheduled for July 13, 2017, in Albany. Comments now are due July 21, 2017. Contact: Melissa Treers; DEC, Division of Materials Management; 518-402-8678; melissa.treers@dec.ny.gov

Subject: POLITICO's Morning Energy, presented by Chevron: White House coy ahead of House Russia sanctions vote — House GOP mulls another try at full omnibus — Bernhardt confirmed by Senate

By Anthony Adragna | 07/25/2017 10:00 AM EDT

With help from Esther Whieldon and Darius Dixon

RUSSIAN SANCTIONS GETS HOUSE VOTE TODAY: House lawmakers vote today on a package of sanctions against Russia, Iran and North Korea, but it remains an open question what President Donald Trump would do once the measure reaches his desk. White House Press Secretary Sarah Huckabee Sanders on Monday appeared to walk back earlier indications of support. "He's looking over where it stands exactly at this point and we'll keep you posted on the decision," she told reporters on traveling with the president on Air Force One. The bill, H.R. 3364, includes language sought by the U.S. energy sector that would allow companies to participate in projects as long as sanctioned Russian firms do not have a controlling interest or more than a 33 percent stake in them. It is expected to easily clear the House.

Speaking of sanctions, any new penalties currently being considered against Venezuela won't start with the country's oil exports, Pro's Ben Lefebvre reports, citing a senior administration official. "Everything is definitely on the table" as far as sanctions targets, the official told Ben. But "round one will definitely not" target the country's oil sector, the official added. Analysts have said that targeting Venezuela's oil sector would crash its economy and make the human rights situation there worse. U.S. refiners have also scoffed at the idea.

SUMMER BREAK DELAYED? Frustrated with their leadership's decision to pursue a slimmed-down, mini-spending package this week, House GOP Appropriators are urging the cancellation of the first week of August recess so they can pursue a full, 12-bill omnibus, POLITICO's Rachael Bade and John Bresnahan report. "The whole purpose of whipping is to be able to make your case so the fact that we did all this work and it's not going anywhere is really frustrating," steamed appropriator Tom Rooney said last Thursday. Sources close to GOP leaders said Monday they were considering reversing course and pursuing the broader spending package. But by Monday night it appeared they still sorely lacked the votes.

In the meantime, the House Rules Committee is expected to finalize the structure of the debate for the mini-bus later today. Lawmakers filed 79 amendments to the Energy and Water title of the package H.R. 3219 (115) on everything from funding for Yucca mountain to increasing funds for DOE's Energy Efficiency and Renewable Energy to barring a rider related to the Waters of the U.S. regulation. Many of those are unlikely to actually see floor time, but we'll have to wait until the committee finishes up its work to see the full list of what made the cut.

In a statement of administration policy Monday, the White House backed the underlying spending bill but strongly condemned "continued construction" for the MOX project in South Carolina, which the administration called "unaffordable and risky." In addition, the White House voiced concern with a prohibition on using other funds from the Nuclear Waste Fund on interim

nuclear waste storage activities and called for lawmakers to "further reduce funding for costly later-stage development, commercialization, and deployment activities" on energy research.

WELCOME TO TUESDAY! I'm your host Anthony Adragna, and Sen. Orrin Hatch is the proud boaster of the sole Reagan Republican primary endorsement. For today: Who was the first senator in history to be reelected after switching parties? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

Playbook Exchange Denver - Join POLITICO Playbook co-authors Anna Palmer and Jake Sherman for a special Playbook Exchange event in Denver with Colorado Gov. John Hickenlooper. Aug. 1 - 5:30 p.m. MDT / 7:30 p.m. EDT - S&P Global, 1800 Larimer St., 2nd Floor, Denver. RSVP: Here. Watch it live: Here.

BERNHARDT WINS SENATE CONFIRMATION: Senators voted 53-43 Monday evening to confirm David Bernhardt's nomination as deputy secretary at Interior, Pro's Ben Lefebvre reports. Five members of the Democratic caucus - Michael Bennet, Joe Donnelly, Heidi Heitkamp, Angus King and Joe Manchin - joined all Republicans in supporting his bid to serve as Secretary Ryan Zinke's No. 2. "David's extensive experience serving under previous Interior secretaries, his esteemed legal career, and down-right love of our land and resources is exactly what is needed to help streamline government," Zinke said in a statement after the vote.

Green and good governance groups, which criticized Bernhardt as having too many conflicts of interest to fill the position, vowed after the vote they would closely watch his actions at the agency. "Bernhardt is ethically compromised on issues ranging from national monuments to offshore drilling; we expect timely recusals from these decision-making processes," Kelly Mitchell, Greenpeace's climate and energy director, said in a statement.

SPOTTED: Energy Secretary Rick Perry and fellow Eagle Scout Zinke (in a Scout uniform) traveled with Trump to the 2017 National Scout Jamboree in Beaver, W.Va., and stood behind the president on stage as he delivered remarks. Picture of the two Cabinet secretaries here. Trump tweeted video of them boarding Air Force One as well.

DEEP DIVE INTO USDA SCIENCE PICK: All major farm groups are lining up behind Sam Clovis, Trump's pick to be USDA's chief scientist who lacks scientific experience and has criticized mainstream climate change science, Pro Agriculture's Helena Bottemiller Evich reports. "Some have suggested that Dr. Clovis is not qualified for this position due to his lack of hands-on science and research experience," a coalition of nearly two dozen industry groups wrote . "We do not share this point of view." But environmental and scientific groups say he's not qualified for a position that, by law, must be drawn from "among distinguished scientists with specialized training or significant experience in agricultural research, education and economics." Despite criticism of his credentials, Clovis has been quietly winning over rank-and-file at USDA, which was not seized by the chaos that engulfed other agencies, like EPA, during the first few months of the Trump administration.

DEMS READY TO ROLL ON ENERGY BILL? Whatever shot the Senate's energy package

S. 1460 (115) has for movement in the near term likely hinges on today's healthcare vote, but Energy and Natural Resources ranking member Maria Cantwell says her side is good to go. "We hotlined it on our side and everybody's ready to go," she told reporters. Should the healthcare vote fail, the measure's backers hope it could be slotted in for floor time as the chamber plans to stick around into August. But a Democratic committee aide was less equivocal about where things stand later Monday: "We're still working through the amendment process right now," the aide said.

CARPER BASHES PRUITT: Amid disclosures showing EPA Administrator Scott Pruitt spent nearly half his first three months atop the agency on trips to Oklahoma, Senate EPW ranking member Tom Carper called for "increased transparency" from the administrator but delivered quite the burn. "Mr. Pruitt has spent more days in Oklahoma at this point than President Trump has spent at his golf courses, which is no minor feat," he said in a statement.

PROBE SOUGHT OVER INTERIOR REASSIGNMENTS: Eight Senate ENR Democrats, led by ranking member Maria Cantwell, asked Interior's inspector general to look into recent moves to reassign senior career staff, Pro's Esther Whieldon reports. The move follows the highly publicized transfer of Joel Clement, who was moved from a managerial position involving climate change issues to a job collecting royalties from oil and gas companies. In a letter to Deputy Inspector General Mary Kendall, the senators said moving career staff to jobs "where their talents are wasted would constitute a serious act of mismanagement, a gross waste of public funds, and an abuse of authority."

** **A message from Chevron**: We're piloting a program that uses drones to keep an eye on Chevron wells, tanks, and pipelines-all to keep DOERS and what they're doin' safer. Watch the video: http://bit.ly/2vnI0Ve **

FIRST STEP TOWARD CLIMATE 'RED TEAM'? The Competitive Enterprise Institute's Myron Ebell says EPA might tap Steven Koonin, DOE undersecretary for science from 2009 to 2011, to run its "red team" review of climate science, Pro's Alex Guillén reports. Koonin, who wrote in 2014 the science behind climate change "is not settled," floated the formation of a red team in an April Wall Street Journal piece , where he said such a review "would shine much-needed light on the scientific debates" surrounding the issue. Critics say such an exercise would give the minority disputing the scientific consensus on climate change an outsized public voice.

WOTUS TOURS ROLLS ON: Pruitt headed to South Carolina Monday for further discussion with local officials about the Waters of the U.S. regulation. Attendees included Sen. Lindsey Graham, Rep. Joe Wilson and state Attorney General Alan Wilson. "#WOTUS fails common sense test and proven to be government overreach at its worst," Graham tweeted.

ANOTHER PANEL WADES INTO BIOFUELS DEBATE: Two House Science subpanels dip their toes into the ongoing debate over biofuels policy with a hearing at 10 a.m. that the committee says will "examine federal funding of biofuels projects and how it affects the private market." Witnesses include representatives from Oak Ridge National Laboratory and University of Michigan's Energy Institute, as well Growth Energy's CEO Emily Skor and the Heritage Foundation's Nicolas Loris. More info here.

NUCLEAR, CCS TECHNOLOGIES EXAMINED: The Senate EPW Subcommittee on Clean Air and Nuclear Safety today hears from experts on the research, development, and deployment of advanced nuclear and carbon capture, utilization, and sequestration technologies. A committee aide said the session would "inform potential future legislative proposals and review of regulatory activities." Lamar Alexander, the top Energy appropriator, testifies first. The hearing kicks off at 10 a.m. in Dirksen 406.

HOTTEST TAKE: House Science Chairman Lamar Smith published a piece on the Heritage Foundation's Daily Signal Monday arguing "the benefits of a changing climate are often ignored and under-researched." Read it here.

HEITKAMP DISHES ON CCS BILL: If you, like ME, hadn't known previously that Sen. Heidi Heitkamp has a podcast, her latest episode features Sens. Sheldon Whitehouse and Shelley Moore Capito discussing their efforts to enact legislation boosting carbon capture and sequestration technologies. "I'm a very strong believer in an all-in strategy," Whitehouse said, describing why he's pushing the bill. "We know it's not going to be what it was in the past - we know that and accept that - but we do see it as a baseload energy provider, but if we don't get it cleaner, we're going to have much rockier roads in front of us," Capito said of coal.

LBNL REPORT SAYS STATE RPS PLAYING DIMINISHED ROLE: A new report by DOE's Lawrence Berkeley National Laboratory finds that overall state renewable portfolio standards are playing less of a role in renewables growth, particularly where wind generation is concerned. Across the U.S. last year, RPS drove 44 percent of all renewable capacity additions whereas from 2008 through 2014 it accounted for up to 70 percent of new projects. In 2016, only 21 percent of all wind additions were because of state requirements, although 59 percent of new solar was thanks to state RPS. The report attributes the changes partly to corporate contracts for renewable power and growth of utility-scale projects in states that do not have renewable standards.

REPORT: NEW REACTORS COULD MAKE INDUSTRY COMPETITIVE: Advanced reactor tech could make nuclear-generated electricity competitive in the power markets where the industry has states bending over backward to rescue the existing fleet, according to a report coming out today. The study, being released by the Energy Innovation Reform Project, estimates that the technology under development at eight companies could generate electricity at an average of $60 per megawatt-hour, nearly 40 percent below what the Vogtle and Summer nuclear expansions will be producing at. "At these costs, nuclear would be effectively competitive with any other option for power generation," the report says. EIRP's executive director will discuss the report at the Nuclear Energy Institute headquarters at 10 a.m.

FORUM LOOKS AT GRID INNOVATION: The Edison Electric Institute, GridWise Alliance and National Electrical Manufacturers Association today at 9:30 a.m. kick-off an expo looking at the latest technologies and projects transforming the electric grid. Held in conjunction with the House Grid Innovation Caucus, the event takes place in the Rayburn Foyer.

DELAWARE RIVER WATERSHED FRACKING BAN SOUGHT: Environmental groups

from New Jersey, New York and other states will submit a petition with more than 60,000 signatures this week to governors and the Army Corps of Engineers asking for a permanent ban on fracking in the Delaware River watershed area, POLITICO New York's David Giambusso reports. The Delaware River Basin Commission has imposed a moratorium on hydraulic fracturing in the river's watershed area since 2010.

MOVER, SHAKER: Robert Scher has been appointed head of international affairs for BP America, effective immediately; he's been serving since 2014 as the assistant secretary of Defense for strategy, plans, and capabilities in the Pentagon.

Driving the Day

Good Tuesday morning. YOU'RE INVITED -- NEXT WEEK! -- We're super excited to announce the guests for our first live podcast taping next Thursday night (Dec. 7) at 7 p.m. at Sixth and I. Our idea: to bring the written Playbook to life in a live setting. We want you to hear from the people behind the story, the reporters reinventing how we consume news and the strategists putting together their party's game plan for 2018.

Our inaugural guests: **MICHAEL BARBARO,** host of the New York Times' hit podcast "The Daily," **DCCC EXECUTIVE DIRECTOR DAN SENA** and **NRCC EXECUTIVE DIRECTOR JOHN ROGERS.** And a panel of POLITICO stars: **RACHAEL BADE, SEUNG MIN KIM** and **ANNIE KARNI.** ***Get your tickets now!*** http://bit.ly/2hWK7tF

-- AND DON'T FORGET -- SEN. MARCO RUBIO (R-FLA.) will sit down with us for the Playbook Interview Wednesday at 8 a.m. at the Liaison Hotel on Capitol Hill (415 New Jersey Ave., NW). http://bit.ly/playbookrubio

NEW NYT MAG COVER STORY - SEAN HANNITY PROFILE -- "How Far Will Sean Hannity Go? The Fox News host is willing to defend Trump at all costs - and is reaching more than 13 million people a day," by Matthew Shaer: "Along with Neil Cavuto and Jon Scott, Hannity is one of the last remaining members of the original 1996 Fox News lineup, and following the sexual-harassment scandals that led to the ouster of its chief executive, Roger Ailes, and the host Bill O'Reilly, the network's prime-time offerings have largely been remade in Hannity's image. But because of his radio obligations, Hannity rarely spends much time at Fox, preferring to remain at the radio offices until the last possible moment so he can prepare for his TV show in silence. 'I come in to do TV, I do TV and I walk out,' is how he put it to me. Office politics, he said, didn't interest him. ...

"Hannity rarely grants interviews to mainstream reporters, whom he calls 'disgustingly biased, ideological and corrupt.' But he also suffers from a suspicion that his critics willfully misunderstand his motivations. ... [I]n October, when I asked him to show me around his hometown, Franklin Square, on Long Island, he enthusiastically agreed, suggesting a pizzeria off Hempstead Turnpike." http://nyti.ms/2ibtYo6 ... ***The cover*** http://bit.ly/2Bv2Ipm

FIRST IN PLAYBOOK -- 45COMMITTEE THANKS SEN. RAND PAUL FOR SUPPORTING TAX REFORM -- 45Committee, the Adelson- and Ricketts-family backed group, is rotating in a new spot on television thanking Rand Paul for committing to vote for tax reform in an ad titled "Leading the Way." "President Trump and Sen. Rand Paul are leading the way on tax reform. ... Sen. Paul knows it's your money, and tax reform means an extra $2,000 for hard-working Kentucky families ... Thank Sen. Paul, he's fighting for real tax reform," the narrator says in the ad. **BEFORE HE COMMITTED TO VOTING YES,** 45Committee had an ad on air saying "keep your word, Sen. Paul, vote yes on tax cuts." ***The 'keep your word' ad*** http://bit.ly/2BtL7xV ... ***The 'thank you' ad*** http://bit.ly/2k6NSAY

BREAKING ... LAST-MINUTE TAX CHANGES -- SEUNG MIN KIM, COLIN WILHELM and **BERNIE BECKER:** "Senate Republicans are rushing to change their tax overhaul just days before a planned floor vote, with GOP leaders trying to appease at least a half-dozen holdouts. Senate Majority Leader Mitch McConnell can lose only two votes and still pass the bill by week's end. The last-minute modifications underscore the speed with which leadership is moving and the narrow margin for error on the party's top legislative priority. Two critical Republican swing votes, Ron Johnson of Wisconsin and Bob Corker of Tennessee, on Monday left open the possibility that they could vote against the tax plan in a key committee vote scheduled for Tuesday if changes weren't made to their liking. That would tank the bill before it could reach the floor, putting more pressure on leadership to quickly make revisions.

"Johnson and a fellow former businessman, GOP Sen. Steve Daines of Montana, are demanding more generous tax treatment for so-called pass-through businesses. Yet the changes they want are expensive, and tax-writers would have to find savings elsewhere to ensure the bill ultimately costs no more than $1.5 trillion over a decade as required under a budget framework.

"'We're gonna make them happy,' Senate Finance Committee Chairman Orrin Hatch of Utah said of Johnson and Daines. 'But we're not sure we can do exactly what they want to have done.' And a handful of deficit hawks -- including Corker and Sens. Jeff Flake of Arizona and James Lankford of Oklahoma -- are discussing a trigger mechanism that would kick in and potentially change tax rates if the economic growth needed to defray the cost of the tax overhaul doesn't materialize." http://politi.co/2jtudHJ

-- THE TIMES' TAKE: "Senators Scramble to Advance Tax Bill That Increasingly Rewards Wealthy," by Jim Tankersley, Alan Rappeport and Tom Kaplan: "The

Republican tax bill hurtling through Congress is increasingly tilting the United States tax code to benefit wealthy Americans, as party leaders race to shore up wavering lawmakers who are requesting more help for high-earning business owners. ... With pressure increasing on Republicans to produce a legislative victory, lawmakers are contemplating changes that would exacerbate the tax bill's divide between the rich and the middle class.

"Those include efforts to further reward certain high-income business owners who are already receiving a tax break in the Senate bill but who are at the center of a concerted push by conservative lawmakers and trade groups to sweeten those benefits. As Republican leaders pressed for a Senate floor vote this week, there appeared to be little momentum for amendments that would help low-income Americans, which some Republican and many Democratic senators had sought." http://nyti.ms/2jrNfxW

-- AMERICAN ACTION NETWORK is launching a $2.5 million TV and digital ad campaign thanking House members in 28 districts for their support for the House tax bill. ***List of targeted districts*** http://bit.ly/2nbg6vl ... ***The ad*** http://bit.ly/2AcswrT

WHAT'S ON PRESIDENT TRUMP'S MIND -- @realDonaldTrump at 9:48 p.m.: "New home sales reach a 10 year high. Stock Market has more record gains. Hopefully Republican Senators will give us the much needed Tax Cuts to keep it all going! Democrats want big Tax Increases."

****** **A message from PhRMA: How much are hospitals marking up medicine prices?** According to new Moran Company analysis, hospitals mark up medicine prices nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. Read more: http://onphr.ma/2hSaqox ******

BIG DAY IN D.C. -- TRUMP will be on the Hill meeting with Senate Republicans, before he has the big four -- Nancy Pelosi, Chuck Schumer, Paul Ryan and Mitch McConnell -- at the White House. VP Mike Pence will be in New York, where he'll speak at Israel's mission to the U.N. In the evening, he'll receive an award from the Hudson Institute.

-- WAPO'S SEAN SULLIVAN and **ED O'KEEFE:** "Ahead of the meeting with House Speaker Paul D. Ryan (R-Wis.), Senate Majority Leader Mitch McConnell (R-Ky.), House Minority Leader Nancy Pelosi (D-Calif.) and Senate Minority Leader Charles E. Schumer (D-N.Y.), there were unresolved questions about how much more money the federal government may spend in the coming years - plus pressing concerns regarding immigration and health care.

"With government funding scheduled to dry up on Dec. 8, both sides have floated the possibility of passing a short-term plan that would push negotiations until just before Christmas. Currently, Congress may spend no more than $549 billion for defense programs and $516 billion for non-defense programs next year, a cut from current levels.

"But the Trump administration and defense hawks want to boost defense spending to more than $600 billion, and Democrats are demanding a dollar-for-dollar increase in non-defense spending. In a sign of how serious Republicans are about boosting Pentagon spending, Defense Secretary Jim Mattis is expected to attend the meeting, according to aides." http://wapo.st/2AEQ9dW

AMAZING WASHINGTON POST REPORTING MOMENT ON TAPE -- SHAWN BOBURG, AARON DAVIS and **ALICE CRITES:** "A woman who falsely claimed to The Washington Post that Roy Moore, the Republican U.S. Senate candidate in Alabama, impregnated her as a teenager appears to work with an organization that uses deceptive tactics to secretly record conversations in an effort to embarrass its targets.

"In a series of interviews over two weeks, the woman shared a dramatic story about an alleged sexual relationship with Moore in 1992 that led to an abortion when she was 15. During the interviews, she repeatedly pressed Post reporters to give their opinions on the effects that her claims could have on Moore's candidacy if she went public.

"The Post did not publish an article based on her unsubstantiated account . When Post reporters confronted her with inconsistencies in her story and an Internet posting that raised doubts about her motivations, she insisted that she was not working with any organization that targets journalists. But on Monday morning, Post reporters saw her walking into the New York offices of Project Veritas, an organization that targets the mainstream news media and left-leaning groups. The organization sets up undercover 'stings' that involve using false cover stories and covert video recordings meant to expose what the group says is media bias.

"James O'Keefe, the Project Veritas founder who was convicted of a misdemeanor in 2010 for using a fake identity to enter a federal building during a previous sting, declined to answer questions about the woman outside the organization's offices on Monday morning shortly after the woman walked inside. 'I am not doing an interview right now, so I'm not going to say a word,' O'Keefe said. In a follow-up interview, O'Keefe declined to answer repeated questions about whether the woman was employed at Project Veritas. He also did not respond when asked if he was working with Moore, former White House adviser and Moore supporter Stephen K. Bannon, or Republican strategists." http://wapo.st/2ADohXB

-- MUST-WATCH VIDEO ... Stephanie McCrummen confronts the woman that approached the Post. http://wapo.st/2ADEqvX

-- @jaketapper: "Political activist prankster caught faking a sexual assault in an attempt to undermine real victims. Other than being an actual sexual predator, I'm not sure how much more ethically lost someone could be than that -- but the night is still young."

SNEAK PEEK - PETER HAMBY speaks to **STEVE BANNON** in today's episode of Snapchat's "Good Luck America," about Bannon's influence, his fight against the GOP

establishment and the Alabama Senate race. Bannon on his power outside the WH: "When you're in the White House, you're just another staffer. And I had a lot of influence. But there's a difference between influence and power. When I'm out with Breitbart and have all my weapons, I can really effectually change much more and help the president." ***40-second video*** http://bit.ly/2AEbTpY

WHAT EVERYONE IS TALKING ABOUT -- "Congress on edge over sexual harassment allegations," by Kyle Cheney and Heather Caygle: "The specter of new sexual harassment allegations becoming public has Capitol Hill on edge, creating an atmosphere of uncertainty even as lawmakers attempt to overhaul the system of harassment reporting in Congress. The House will take its first step to confront sexual harassment on the Hill this week. But that's unlikely to ease pressure on Speaker Paul Ryan and House Minority Leader Nancy Pelosi, who face a furious public and are struggling with how to grapple with the metastasizing scandal.

"Further spooking lawmakers and aides across the Capitol: fear of the unknown. In recent days, two Democratic lawmakers have faced public accusations of sexual harassment - Rep. John Conyers Jr. (D-Mich), the longest-serving member of the House, and Sen. Al Franken (D-Minn.) - that have called into question their future in Congress. Rep. Joe Barton, a veteran Texas Republican, was forced to admit that a nude picture of him circulating online was authentic though he emphasized that it was made while in a consenting relationship with an adult.

"A vote, scheduled for Wednesday, will change House rules to require training for all lawmakers and staff to prevent sexual harassment. But that will do little to squelch outrage about an unknown number of harassment accusations concealed in opaque settlement agreements and paid out over the last two decades. That's putting pressure on Ryan and Pelosi to do more." http://politi.co/2AbDdLk

ANOTHER ACCUSATION AGAINST CONYERS -- DETROIT NEWS, posted at 12:01 this morning -- "A former staffer of U.S. Rep. John Conyers said the veteran lawmaker made unwanted sexual advances toward her, including inappropriate touching, adding to allegations by other unnamed former employees that have prompted a congressional investigation.

"Deanna Maher, Conyers' former deputy chief of staff who ran his downriver office from 1997 to 2005, told The Detroit News that the Detroit Democrat made unwanted advances toward her three times. ... The first instance of harassment happened, Maher said, shortly after the congressman hired her in September 1997 during an event with the Congressional Black Caucus. 'I didn't have a room, and he had me put in his hotel suite,' said Maher, 77, adding that she rejected his offer to share his room at the Grand Hyatt in Washington and have sex.

"The other incidents with the now 88-year-old Conyers involved unwanted touching in a car in 1998 and another unwanted touching of her legs under her dress in 1999, she said. Conyers' attorney Arnold Reed questioned why Maher would continue

to work for Conyers for so many years after the alleged incidents. He also said Maher's allegations are uncorroborated and that his client denies wrongdoing. 'At the end of the day, he's confident that he will be exonerated because he maintains that he has not done anything wrong,' Reed said. Maher said her need for employment explains why she stayed on the job. 'I needed to earn a living, and I was 57. How many people are going to hire you at that age?' she said." http://detne.ws/2zxvKDm

-- PELOSI STATEMENT ON MONDAY EVENING: "This afternoon, I spoke with Melanie Sloan who worked for Congressman Conyers on the Judiciary Committee in the mid-1990s. Ms. Sloan told me that she had publicly discussed distressing experiences while on his staff. I find the behavior Ms. Sloan described unacceptable and disappointing. I believe what Ms. Sloan has told me.

"Ms. Sloan, as a respected ethics expert and attorney, also gave me valuable feedback into the substantive reforms many of us in Congress are advocating to foster a climate of respect and dignity, and to protect legislative branch employees. I have not had the opportunity to speak with the other women, one of whom cannot speak publicly because of the secretive settlement process in place. That ridiculous system must be ended and victims who want to come forward to the Ethics Committee must be able to do so."

STAR TRIBUNE EDITORIAL -- "Franken's apology fails the full candor test: He seems to be saying, 'I'm sorry for what you think I did'": "U.S. Sen. Al Franken broke his self-imposed silence over the weekend, submitting to a series of media interviews on the sexual misconduct allegations against him, professing his shame and embarrassment. That was a necessary move - Minnesotans and the country at large deserved to hear from him. But his apology falls lamentably short in several respects.

"The Minnesota Democrat said in one interview it was important 'that we listen to women,' but then refuted the story of Leeann Tweeden, the USO entertainer who accused him of shoving his tongue down her throat during a rehearsed 'kiss.' He recalls 'a normal rehearsal,' but didn't elaborate. On the subsequent allegations of women who say he groped them during photos - specifically, that he grabbed their buttocks - Franken apologized, but for what, exactly? ...

"Franken is right - he has much to do to regain Minnesotans' trust. It may not be possible. As he continues his reflection, we urge the senator to consider what is best for Minnesota and to weigh that more heavily than what might be best for his political career." http://strib.mn/2k7yrsj

WAR AT THE CFPB -- "Mulvaney imposes temporary hiring, regulations freeze on CFPB," by Andrew Restuccia: "Mick Mulvaney, President Donald Trump's pick for acting director of the Consumer Financial Protection Bureau, said Monday he has no immediate plans to dismantle the agency, but he nonetheless implemented a temporary freeze on hiring and new regulations. 'Rumors that I'm going to set the place on fire or blow it up or lock the doors are completely false,' Mulvaney, a longtime critic of the

bureau, told reporters during a briefing at CFPB headquarters. He insisted that his first day at the CFPB was 'extraordinarily smooth and professional' despite an unfolding fight for control of the bureau between himself and Leandra English, who on Friday was appointed acting director by outgoing chief Richard Cordray." http://politi.co/2nbPwIR

-- @ZekeJMiller: "Mulvaney standing by criticism of bureau he now leads: 'My opinion of the structure of the CFPB has not changed. I still think it's an awful example of bureaucracy gone wrong.'"

-- **LORRAINE WOELLERT -- "Why Democrats are to blame for consumer agency debacle":** "President Donald Trump is likely to control the Consumer Financial Protection Bureau for years to come. And Democrats have only themselves to blame. Trump Budget Director Mick Mulvaney and Leandra English, a legacy employee of the Obama presidency, faced off on Monday over which of them has the authority to lead the bureau amid dueling statutes after CFPB Director Richard Cordray abruptly stepped down on Friday. Mulvaney and English showed up for work and started directing employees, both attempting to use the wide-ranging power that Democrats granted the director when the agency was created in 2010." http://politi.co/2n7Pvzs

WHAT WHITE HOUSE AIDES ARE NOT HAPPY ABOUT -- "White House Weighs Personal Mobile Phone Ban for Staff," by Bloomberg's Jen Jacobs and Justin Sink: "The White House may ban its employees from using personal mobile phones while at work, raising concerns among some staffers including that they'll be cut off from family and friends, according to seven administration officials. ... While some lower-level officials support a ban, others worry it could result in a series of disruptive unintended consequences. Mobile devices issued by the White House aren't able to send text messages, creating a hardship for staff who say texting is often the easiest way for their families to reach them in the middle of a busy day of meetings.

"Other staff are concerned that they could be accused of wasting government resources if they use White House-issued phones to place personal calls. ... Former White House Chief of Staff Reince Priebus proposed a ban on personal mobile phones before he left his post in July ... His aim was to crack down on use of personal phones to conduct official business." https://bloom.bg/2zK4cyt

LATEST FROM ALABAMA -- "Moore buried under TV ad barrage: The Alabama airwaves are flooded with ads - and the embattled Republican can't keep pace," by Daniel Strauss and Scott Bland: "Doug Jones and Roy Moore both released new television ads on Monday. But many Alabama voters will see only one of them. That's because of the massive disparity in TV ad spending between the two candidates in the Alabama special election to a Senate seat, where Jones, the Democratic candidate, is outspending Moore roughly 7-to-1. The imbalance is stunning, with just two weeks to go in the campaign: Jones has aired more than 10,000 spots on broadcast TV in Alabama since the primaries, while Moore, the embattled GOP candidate, has run just over 1,000, according to figures compiled by Advertising Analytics." http://politi.co/2iZ2C1r

-- **"'This is a Spiritual Battle We're Fighting':** At a rally in the small town of Henagar, embattled Senate candidate Roy Moore faced his supporters with defiance," by Eric Velasco in Henagar, Alabama: "Roy Moore's campaign appearance Monday night in northeast Alabama -- his first rally since his Senate campaign was blown open by allegations of sexual impropriety and an assault involving teenagers-had the atmosphere of an old-fashioned religious tent revival. A Baptist preacher thanked God for Moore during an invocation, and prayed, 'May we win this battle against a lost and dying world.' The head of the county Republican Party called the election 'a spiritual battle we're fighting.' The candidate called for a return to morality and said America can become great again only by acknowledging God. The standing-room audience frequently punctuated Moore's comments with 'amen.'" http://politi.co/2zukEPf

--**"Retired Marine colonel to launch Senate write-in campaign in Alabama,"** by WaPo's Michael Scherer: "A retired Marine colonel [Lee Busby, 60, of Tuscaloosa, Ala.] who once served as a top aide to White House Chief of Staff John F. Kelly [launched] a long-shot write-in campaign Monday afternoon to become Alabama's next senator, with just 15 days left in the campaign." http://wapo.st/2AE4dUL

COMING ATTRACTIONS -- PLAYBOOK POWER LIST -- We will unveil our latest Playbook Power List: "18 to Watch in 2018" on Monday, where we profile the people who we expect to have pronounced impact and influence in the coming year.

Playbook Reads

PHOTO DU JOUR: President Donald Trump speaks during a meeting with Navajo Code Talkers in the Oval Office of the White House on Nov. 27. | Susan Walsh/AP Photo

VIDEO DU JOUR -- @DanLinden: "Pres. Trump during event honoring Native American code talkers: 'You were here long before any of us were here -- although we have a representative in Congress who they say was here a long time ago. They call her Pocahontas.'" ***42-second video*** http://bit.ly/2ADAmfb

-- DO YOU EVER WONDER how history books will document a moment like this? The president called a United States senator "Pocahontas" in front of a group of aging Native Americans with a painting of Andrew Jackson behind him.

SHOT -- FOGGY BOTTOM DEPARTURE LOUNGE - "Top Official In Charge Of State Department Redesign Quits Job," by BuzzFeed's John Hudson: "The departure of Maliz Beams, who entered the Trump administration in August boasting a resumé of private sector experience, removes a key leader of a 'redesign' effort that Secretary of State Rex TIllerson has identified as a chief priority of his tenure. 'Maliz Beams is stepping away from her role here at the Department of State and is returning to her home in Boston,' a State Department spokesman told BuzzFeed News. 'Effective

immediately, Christine Ciccone will step in to lead the redesign effort and manage its daily activities.'" http://bzfd.it/2hXrbuR

CHASER -- HMM... - "Ivanka for U.N. Ambassador? Why Not?: Some in the White House have reportedly floated the idea. It's not as crazy as it sounds," by Richard Gowan in POLITICO Magazine: http://politi.co/2i9tT49

2018 SCOOP -- "Gutierrez won't seek reelection," by Illinois Playbooker Natasha Korecki: "Rep. Luis Gutiérrez (D-Ill.), a leading national voice on immigration reform, will not seek reelection, three Democratic sources with knowledge of the decision told POLITICO. Gutierrez, who has held his seat since 1993, is expected to announce Tuesday afternoon he's withdrawing the nominating petitions he just filed on Monday and will formally endorse Jesus 'Chuy' Garcia. Garcia, a Cook County commissioner, had forced Mayor Rahm Emanuel into a runoff election in 2015. His bid for Gutierrez's seat means Garcia will not challenge Emanuel again in 2019 as he had previously planned, sources tell POLITICO. With petition filing open on Monday, candidates for Gutierrez's open seat will have to turn in nearly 7,000 signatures in less than a week." http://politi.co/2jviXdw

VALLEY TALK -- "How tech is winning in the Trump era," by Steven Overly and Nancy Scola in San Francisco: "The conventional wisdom about the tech industry's relationship with Donald Trump is that it's a street brawl, with Silicon Valley's liberal CEOs clashing with the president on everything from immigration to climate change to transgender rights. But the reality is that Silicon Valley is getting much of what it wants. Trump and congressional Republicans are speeding ahead with a tax overhaul that would bring huge benefits for wealthy tech giants and their executives.

"A White House office headed by Trump son-in-law Jared Kushner is opening the door to companies like Amazon and IBM gaining a greater share of the federal government's multibillion-dollar information technology budget. And the administration's proposed NAFTA rewrite, criticisms of China's tech policies and efforts to champion computer science education could also bolster the industry's bottom line - as has the surging stock market that the president touts at every opportunity." http://politi.co/2AhFwdl

****** **A message from PhRMA:** According to new analysis from the Moran Company, hospitals mark up medicine prices, on average, nearly 500 percent. The analysis of 20 medicines also found a hospital is paid 2.5 times what the biopharmaceutical company, who brought the medicine to market, receives. While hospital markups lead to higher costs for patients, employers and payers, these markups are often overlooked in conversations about medicine costs. As the provider market continues to become more concentrated and the number of medicines being administered in hospital-owned facilities is growing, the amount hospitals mark up medicine prices needs greater scrutiny. http://onphr.ma/2Ba0TOa ******

NYT'S ANDREW ROSS SORKIN -- "A Prince's Uncertain Fate Deepens Mystery in

Saudi Arabia": "It has been more than three weeks since Prince Alwaleed bin Talal, the most prominent investor in Saudi Arabia, was arrested on a Saturday night as part of the sweeping detention of several dozen elites. Since then, he has been holed up inside the Saudi version of prison for the ultrawealthy: the Ritz Carlton hotel in Riyadh, about a 10-minute drive from the prince's home. ...

"His arrest has also created a sense of uncertainty among investors about whether to do business with Saudi Arabia and, by extension, could affect some of its partners, like Masayoshi Son's $100 billion SoftBank fund, in which the kingdom holds a 45 percent stake. It could also affect the highly anticipated public offering of the state-owned oil company, Aramco, planned for next year...

"The Murdoch family, which has long had a relationship with the prince ... has tried to find out more about his situation but has been stymied. Known as the Warren Buffett of the Middle East, the prince has worked with Bill Gates on various projects, including their ownership of the Four Seasons resorts and several philanthropic endeavors.

"'I'm only aware of what I've read in the press, and I can't speculate,' Mr. Gates, Microsoft's co-founder, said by email. 'Prince Alwaleed has been an important partner in my foundation's work to ensure that kids around the world receive lifesaving vaccinations. We've worked together to help stop the spread of polio, measles and other preventable diseases. His commitment to philanthropy is inspiring.'" http://nyti.ms/2naSYNX

MEDIAWATCH -- PAGE SIX's Emily Smith and Ian Mohr: "CBS News correspondent Vladimir Duthiers has emerged as the front-runner to take over for Charlie Rose at 'CBS This Morning,' sources tell Page Six. ... Duthiers is a Peabody and Emmy winner, and got high marks for covering the Black Lives Matter protests in Ferguson, Mo. He was also CNN's West Africa correspondent." http://pge.sx/2AeasOw

DESSERT -- "Prince Harry designs Meghan Markle's engagement ring using Diana's diamonds," by the Telegraph's Sarah Royce-Greensill: "Set in yellow gold, the engagement ring features three diamonds, which carry special significance for the couple. The central stone is a diamond from Botswana: a country that Prince Harry has visited many times over his life, and where the couple have spent time together. Flanking this are two further diamonds which come from the personal collection of the Prince's late mother, Diana, Princess of Wales. The ring was made by court jewellers Cleave and Company and designed by Prince Harry himself -- a daunting task for any groom-to-be." http://bit.ly/2zNa7D1

China Fossil Fuel Deadline Shifts Focus to Electric Car Race

China will set a deadline for automakers to end sales of fossil-fuel-powered vehicles, becoming the biggest market to do so in a move that will accelerate the push into the electric car market led by companies including BYD Co. and BAIC Motor Corp.

International Climate
Poland Sets Expiry Date on Its Love for Coal as EU Limits Beckon
After decades of trying to persuade the rest of Europe that coal was vital for the region's energy security, Poland is showing the first signs of admitting that it might have been wrong.

Motor Vehicles
China Set to Unveil Cap-and-Trade Auto Emission, Mileage Rules
China will soon unveil a mandatory cap-and-trade credit program for electric cars, starting the countdown for automakers to be in compliance with stricter rules on emissions and fuel economy, according to the country's state-backed auto association.

Motor Vehicles
Fuel Efficiency Standards Rule Delay Leads Five States to Sue
California has joined New York and three other states in a lawsuit against the Trump administration over vehicle fuel efficiency regulations.

Motor Vehicles
VW CEO Vows to Offer Electric Version of All Models by 2030
Volkswagen AG Chief Executive Officer Matthias Mueller announced sweeping plans to build electric versions of all models in the group's lineup as the world's largest automaker accelerates the shift away from combustion engines and tries to draw a line under the emissions-cheating scandal.

Pipeline Safety
CSX Veteran Tapped to Head Pipeline Safety Agency
A freight rail veteran who's backed by the gas and pipeline industry, yet relatively unknown to safety advocates, is President Donald Trump's choice to head the Pipeline and Hazardous Materials Safety Administration.

Renewable Energy
Energy Storage Permits Would Get Easier With California Bill
Local permitting of the energy storage systems California needs to help meet its clean energy goals should get easier under a bill headed to the desk of Gov. Jerry Brown (D).

Renewable Energy
Offshore Wind Costs Fall Below New Nuclear Plants in U.K.
The cost of generating electricity from offshore wind farms fell sharply in the U.K. to below the price the next nuclear reactors will charge, making the form of clean energy one of the cheapest ways to supply the grid.

Toxic Substances
Abandoned Kerr-McGee Oil Well Fouled Water, Suit Says
Kerr-McGee Oil & Gas Onshore LP failed to take proper steps to clean up a crude oil leak at an abandoned Colorado oil well, according to a complaint filed Sept. 8 in the District of Colorado (Murray v. Kerr-McGee Oil & Gas Onshore, LP, D. Colo., No. 17-cv-02174, filed 9/8/17).

Toxic Torts
Water Suit Against Flint Belongs in State Court

Residents of Flint, Mich., may pursue class claims against state actors stemming from the contamination of the city's water supply in state court, the Sixth Circuit affirmed Sept. 11 (Mays v. City of Flint, 2017 BL 318091, 6th Cir., No. 16-2484, 9/11/17).

Skiers Lose to Snowmobilers in Parking Lot Suit

The National Forest Service didn't violate federal law in approving a parking lot designed for snowmobilers, the Ninth Circuit ruled Sept. 8 (Wild Wilderness v. Allen, 2017 BL 316263, 9th Cir., No. 14-35505, 9/8/17).

U.S. Solar Bracing for First Decline as Rooftop Demand Slumps

The U.S. is poised to experience its first annual decline in solar-panel installations, as a drop in rooftop demand slows growth in the world's second-biggest market.

Practitioner Insights: EPA, Corps to Narrow Scope of Clean Water Act

On June 27, 2017, the U.S. Environmental Protection Agency and the U.S. Army Corps of Engineers (ACE) published a proposed rule in the Federal Register announcing a two-step process to review and revise the regulatory definition of "waters of the United States." In the first step, the agencies propose to rescind the 2015 definition of "waters of the United States"—which is currently codified in the federal regulations—and to recodify the pre-2015 ...

EPA's Weekly Round-Up ...

NATIONAL COVERAGE …

The Wall Street Journal first reported on Pruitt's move to walk-back WOTUS. Saying that it's "another sign the new administration and the EPA under administrator Scott Pruitt intend to prioritize the economic concerns of industry and agricultural interests over environmental concerns and, more broadly, to erase significant pieces of former President Barack Obama's legacy."

The National Review Editorial Board wrote that Pruitt is restoring order at EPA by correcting course on the Obama-Era WOTUS Regulation. "Scott Pruitt is not so much shaking things up at the EPA as restoring order, as with his decision to rescind the "Waters of the United States" rule — WOTUS, inevitably — which purported to expand the application of the Clean Water Act (CWA) and empower the federal government to regulate essentially any standing body of water and the lands adjacent to it. If you are wondering how bonkers the EPA was willing to be in its interpretation, consider that WOTUS would have applied to wet grass, if the grass had been wet enough."

Fox News reported that Pruitt's action on WOTUS ends a federal overreach on farmers and property owners. "The EPA and the Army Corps said dismantling the Obama rule would not change existing practices because the measure has been stayed by the 6th Circuit U.S. Court of Appeals in Cincinnati in response to opponents' lawsuits. House Speaker Paul Ryan, R-Wis., said the move showed "the West has won in the battle over the Obama administration's WOTUS rule. "This regulation would have been a disaster for rural communities in the West and across the country, giving Washington near-total control over water resources," Ryan added."

Additionally, Bloomberg BNA reported that repealing this water rule fulfills a major Trump campaign pledge. "The proposed repeal, once in final form, will be the first step the Trump administration takes in a two-step process to undo the 2015 Clean Water Rule, also known as the Waters of the U.S. rule (WOTUS). The second step, which Pruitt has said will be completed by as soon as the end of the year, will involve a rewrite of the 2015 regulation."

TO THE STATES …

In Georgia, the Gainesville Times reported that lawmakers and industry groups, including the Greater Hall Chamber of Commerce, cheered Pruitt and the Trump Administration's action on WOTUS. "The Obama-era Waters of the United States regulation would have allowed federal oversight on a swath of private and state waters — from large wetlands down to ditches. The rule attracted intense opposition from Republican lawmakers and lawsuits from states, including a suit filed by then-Oklahoma Attorney General Scott Pruitt — now the head of the Environmental Protection Agency."

Farm groups in North Dakota were also proud of the Administrators action. The Duluth News Tribune reported that Daryl Lies, a Douglas, N.D., farmer and president of the North Dakota Farm Bureau, said the announcement "is a big deal and a great day for agriculture." They also wrote that, "WOTUS was unpopular with ag groups nationwide, but North Dakota ag producers were particularly critical of it. Sloughs, potholes and other small, often temporary bodies of water are common in the state, and North Dakota farmers worried about the impact of WOTUS."

In Wyoming, The Casper Star Tribune reported that the state would receive a grant to address water pollution. "Wyoming will receive nearly a million federal dollars to address water pollution, an award praised by U.S. Rep. Liz Cheney and EPA Administrator Scott Pruitt. The $850,000 grant will be used for seven state projects that include stream restoration and the reduction of pollutants like selenium in rivers to lakes. That type of pollution occurs from runoff, when rain and snow melt carry contaminants from cities, bacteria or pesticides from ranches and pollutants from mines and drilling activities down to Wyoming's waterways."

In Texas, the High Plains Journal praised an EPA Grant awarded to the Texas Department of Agriculture. "The grant funds a cooperative agreement between EPA and the state of Texas for the state to implement pesticide regulatory and enforcement programs. These programs include compliance monitoring, enforcement, certification and training for pesticide applicators, worker protection safety, and outreach and education."

In Florida, EPA awarded the Florida Department of Environmental Protection with a $1.38m grant. WWSB reported that, "The grant will be used to support many of Florida's environmental programs. The funds will help support Florida so the state can continue the operation of its environmental programs and address environmental priorities, while strengthening its partnership with EPA."

Today's Playbook Power Briefing presented by Better Medicare Alliance

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Monday afternoon. To celebrate our first year at the helm, we're releasing bonus audio briefings every day this week to take you behind the scenes of Playbook and of covering Washington. Today, Jake and Anna talk about the growth of Playbook over the past year. http://bit.ly/2v45lVr

We want to celebrate our Playbook anniversary with you. Tweet or post a Facebook post with #PlaybookLoyal telling us your favorite part about the Playbook community between now and Friday for a chance to win a signed print from POLITICO's Pulitzer Prize winning cartoonist Matt Wuerker.

TODAY'S WHITE HOUSE PRESS BRIEFING will be from Sarah Huckabee Sanders. It is off camera at 2 p.m.

DEFENSE SECRETARY JIM MATTIS got a call on his cell phone from a high-school newspaper reporter, and he did an interview with him in June! Per the Mercer Island High School Islander in Washington State: "'I'd like to begin by asking some questions directed to our high school audience,' Teddy said. Mattis' response set the tone for the rest of the interview. 'I speak the same to high schoolers, college grads, or congressmen,' he said. 'I've found high schoolers to be plenty bright.' The conversation then shifted to a subject that high schoolers either know and love, or know and hate. History.

"'I don't think you can go wrong if you maintain an avid interest in history,' Mattis said when asked what students today should study to best prepare them for the future. 'I wish now looking back on it, if I'd known what waited for me in life, I would have put a lot more attention into history.'" http://bit.ly/2v3AzBN

AFP: TRUMP will dine with **EMMANUEL MACRON** "at the Jules Verne restaurant on the second floor of the Eiffel Tower." http://bit.ly/2v3DqKS

FROM THE PRESIDENT -- @realDonaldTrump at 6:40 a.m.: "James Comey leaked

CLASSIFIED INFORMATION to the media. That is so illegal!" ... **at 6:47 a.m.:** "I cannot imagine that Congress would dare to leave Washington without a beautiful new HealthCare bill fully approved and ready to go!" ... **at 7:31 a.m.:** "When I left Conference Room for short meetings with Japan and other countries, I asked Ivanka to hold seat. Very standard. Angela M agrees!" ... **at 7:47 a.m.** "If Chelsea Clinton were asked to hold the seat for her mother,as her mother gave our country away, the Fake News would say CHELSEA FOR PRES!" ***The president also retweeted several FOX & Friends tweets slamming Comey and New York City Mayor Bill de Blasio, and a Sean Hannity tweet bashing Hillary Clinton.***

THE MEMOS -- "Some Comey memos were 'retroactively classified,' source says," by Austin Wright: "Some of the memos that former FBI Director James Comey wrote documenting his private conversations with President Donald Trump have been 'retroactively classified,' according to a source with knowledge of the memos. The source said it was unclear whether that included a memo in which Comey says Trump encouraged him to end the FBI's investigation into former national security adviser Michael Flynn. Whether that particular memo has been retroactively classified will be a key question as Comey faces attacks from President Donald Trump and his supporters, who are now accusing him of mishandling classified information." http://politi.co/2v49hLf

ABOUT THAT MEETING -- "Publicist set up Trump Jr., lawyer meeting," from the AP: "A music publicist says he set up a meeting between a Russian lawyer and Donald Trump's eldest son on behalf of a client in Moscow named Emin Agalarov. In a statement to The Associated Press on Monday, Rob Goldstone says the lawyer said she had information about purported illegal campaign contributions to the Democratic National Committee that she thought Donald Trump Jr. might find helpful." http://bit.ly/2v46AJW

****** **A message from BMA: HEALTH CARE POLICY ALERT:** We can all agree that high need, high cost patients deserve the right care. And with Medicare Advantage, seniors and people with disabilities are getting the high-value care they need through flexible benefits and specialized care. Learn more: http://www.bettermedicarealliance.org/special-needs-plans ******

2020 WATCH -- "Prairie Lights brings Bernie Sanders back to Iowa City," by the Iowa City Press-Citizen's Zach Berg: "The Prairie Lights bookstore will bring former Democratic presidential candidate and current U.S. Senator Bernie Sanders back to Iowa City in August. ... The reading marks Sanders' first return to Iowa City since the end of the 2016 Presidential election." http://icp-c.com/2u4lv9x

BEN TERRIS' LATEST -- "Jason Kander lost a big Senate race. In today's Democratic Party, he's still a rising star," in WaPo: "Jason Kander doesn't feel like a loser. He doesn't feel much like a millennial either, whatever that means. But having lost his bid to represent Missouri in the United States Senate at the age of 35 last year, he is, technically, both of those things. And so, on a recent Wednesday evening, one of the oldest, losing-est millennials in American politics headed to the annual gathering of the

High School Democrats of America to speak about, what else, the future of their party. ... Democrats are desperate for something, for someone, to get excited about - and these days, some of their most thrilling figures are losers. None more so than Jason Kander." http://wapo.st/2u4X6AX ... ***Isaac Dovere's June podcast with Kander*** http://politi.co/2v3QZK4

TRUMP'S FBI PICK -- "Wray ethics agreement released ahead of FBI nomination hearing," by Seung Min Kim: "Christopher Wray, President Donald Trump's nominee to lead the FBI, has provided legal services to several major corporations including Wells Fargo, Johnson & Johnson, and Chevron, in addition to his extensive legal work at an influential international law firm, according to Office of Government Ethics documents released Monday. The veteran corporate lawyer, who will go before the Senate Judiciary Committee on Wednesday for his confirmation hearing, will also have to step aside from any matter that involves his firm, King & Spalding, for a year unless he obtains a waiver. The Atlanta-based firm boasts an extensive list of clients, including half of the Fortune Global 100 corporations. ...

"**Wray's sprawling client list also includes** Credit Suisse, the military shipbuilding company Huntington Ingalls Industries, SunTrust Banks, the fantasy sports platforms FanDuel and DraftKings, Officer of Standard Chartered Bank in London, Georgia-Pacific Corporation, Medtronic, the drug monitoring company Ameritox, PricewaterHouse Coopers, and the telecommunications company Alcatel-Lucent. The FBI director nominee also represented New Jersey Gov. Chris Christie during the so-called 'Bridgegate' scandal. Additionally, Wray has offered legal services to three U.S. organizations that Wray did not disclose because they are subject to non-public investigations." http://politi.co/2v3NVxO

AFTERNOON READ -- NEW YORK MAG'S LATEST COVER -- "The Uninhabitable Earth," by David Wallace-Wells: "It is, I promise, worse than you think. If your anxiety about global warming is dominated by fears of sea-level rise, you are barely scratching the surface of what terrors are possible, even within the lifetime of a teenager today. And yet the swelling seas - and the cities they will drown - have so dominated the picture of global warming, and so overwhelmed our capacity for climate panic, that they have occluded our perception of other threats, many much closer at hand. Rising oceans are bad, in fact very bad; but fleeing the coastline will not be enough. Indeed, absent a significant adjustment to how billions of humans conduct their lives, parts of the Earth will likely become close to uninhabitable, and other parts horrifically inhospitable, as soon as the end of this century." http://nym.ag/2v3ugxV

BUT BUT BUT -- Michael E. Mann, a climatologist at Penn State: "I figured I should comment on it, especially as I was interviewed by the author (though not quoted or mentioned). I have to say that I am not a fan of this sort of doomist framing. It is important to be up front about the risks of unmitigated climate change, and I frequently criticize those who understate the risks. But there is also a danger in overstating the science in a way that presents the problem as unsolvable, and feeds a sense of doom, inevitability and hopelessness." http://bit.ly/2v3YNvy

KUSHNER INC. -- "Jared Kushner tried and failed to get a half-billion dollar bailout from Qatar," by The Intercept's Ben Walsh, Ryan Grim and Clayton Swisher: "Not long before a major crisis ripped through the Middle East, pitting the United States and a bloc of Gulf countries against Qatar, Jared Kushner's real estate company had unsuccessfully sought a critical half-billion investment from one of the richest and most influential men in the tiny nation, according to three well-placed sources with knowledge of the near transaction. ...

"That hardline comes in the wake of the previously unreported half-billion deal that was never consummated. Throughout 2015 and 2016, Jared Kushner and his father, Charles, negotiated directly with a major investor in Qatar, Sheikh Hamad bin Jassim al-Thani, known as HBJ for short, in an effort to refinance the property on Fifth Avenue, the sources said." http://bit.ly/2v40vNr

MEDIAWATCH -- "Holt is a steadying force for NBC as anchor," by AP's David Bauder: Lester "Holt, 58, exudes an aura of calm on the set, so much so that it's surprising to hear him talk candidly about how tough it was to replace Brian Williams as NBC News' chief anchor. Two years removed from that drama, he's in a tight battle for supremacy with ABC's David Muir for viewers and advertising dollars in the dinner hour. There were moments after replacing Williams, Holt conceded, 'when I thought, 'Is this really what I want to do?'" http://bit.ly/2u4B15m

-- @Hadas_Gold (the new Morning Media author): ".@AriFleischer joins Fox News as a contributor".

TRANSITIONS -- Daniel P. Erikson was named managing director at Blue Star Strategies, leading the firm's Latin America practice. He previously worked at the State Department and was an adviser to former Vice President Joe Biden.

ENGAGED - Charles Garrison, an account executive at public sector software startup OpenGov and a FiscalNote and Politico alum, got engaged on Sunday to **Claire Goldman,** a program analyst with Customs and Border Protection. He proposed on a trip they're currently on in Cartagena, Colombia on the roof of their hotel, La Passion. They met at a mutual friend's engagement party in 2015. *Pics* http://politi.co/2v3y2qS ... http://politi.co/2u54l6b ... http://politi.co/2v3us0d

WELCOME TO THE WORLD -- Sheera Frankel, cybersecurity reporter at the N.Y. Times and a BuzzFeed alum, and **Tom Bradpiece,** who works in tech, have welcomed Ella Ray Bradpiece. They post on Facebook: "We couldn't be more in love. Ella, born [Saturday], already wide-eyed and curious about the world." ***Pic*** http://bit.ly/2sWdaWl

****** **A message from BMA: MEDICARE ADVANTAGE TAILORED CARE MEETS THE NEED OF HIGH COST, HIGH NEED CARE SENIORS:** 18.5 million seniors and people with disabilities choose Medicare Advantage for one reason: it gives them the affordable, robust, and individualized health care they need. And with health needs in

this country becoming more complex, it's clear that innovative, holistic solutions are required.

Under Medicare Advantage, Special Needs Plans (SNPs) specializes care for the health care system's fastest growing and most costly and complex care beneficiaries - frail, disabled, and chronically-ill Medicare beneficiaries. SNPs tailor benefits, provider networks, and prescription drug coverage to best meet the needs of the beneficiaries they serve. In addition to providing Traditional Medicare benefits, SNPs also provide reduced cost sharing and enhanced benefits related social services, wellness and home care. SNPs are designed to address complex conditions by providing better access to specialized care for those who need it most. Subject: Court backs oil industry, rejects EPA solid waste rule

By Eric Wolff

07/07/2017 12:26 PM EDT

The D.C. Circuit today vacated parts of an EPA rule on solid waste and upheld other parts, delivering a partial victory to the American Petroleum Institute. The court also dismissed a petition from environmentalists that the rule was inadequate.

The case centers on EPA's 2015 rule to establish standards for dealing with secondary hazardous waste and recycling under the Resource Conservation and Recovery Act. EPA has been trying to define "discarded solid waste" for recycling and hazardous waste purposes since 2007.

The ruling accepted one disputed part of the rule, in which EPA argues that secondary discarded waste must be "contained." API asserted that EPA had no authority to make such a rule, but the court went with the agency.

The court vacated a second part of the rule to prevent companies from mixing hazardous waste with non-hazardous or recyclable materials to sidestep the disposal requirements. The court found that EPA did not have the authority to impose such a requirement.

The ruling was issued per curiam, but Judge David Tatel, an appointee of President Bill Clinton, argued in a partial dissent that in vacating part of the rule the court overstepped its bounds by deciding "a policy question Congress left to the Administrator."

Subject: Morning Energy: Energy, environmental funding hits House spotlight — NRC, EPA nominees finally get their day — Two more picked for DOE roles

By Anthony Adragna | 07/12/2017 05:41 AM EDT

With help from Esther Whieldon, Eric Wolff, Darius Dixon and Annie Snider

SPENDING PACKAGES GET SUNLIGHT: Two key spending packages get public trials through hearings before the House Appropriations Committee today. First up is full committee consideration of the fiscal 2018 $37.5 billion Energy and Water Appropriations package, which cleared a subcommittee last month by voice vote. Look for an effort to restore funding to the high-risk ARPA-E research program, which the bill proposes zeroing out. Veteran energy watchers may remember the program won a surprise one-vote floor victory in 2011 to increase its funding by about 80 percent, and the program has secured smaller increases in most subsequent floor debates. ARPA-E received $306 million in the omnibus Congress passed in May. Other contentious parts of the FY18 bill include a rider barring DOE from using an updated social cost of carbon figure, another provision making it easier for the administration to withdraw the Waters of the U.S. regulation and significant cuts to DOE's renewable energy office. The markup starts at 10:30 a.m. in Rayburn 2359 and available to stream here.

Later this afternoon, an Appropriations subcommittee examines the fiscal 2018 Interior-EPA spending bill, released Tuesday. The package drops EPA funding to its lowest levels since 2008 — $7.5 billion — but steers away from the draconian cuts to the agency sought by the Trump administration. As Pro's Alex Guillén and Annie Snider report, the agency's State and Tribal Assistance Grants, which provide states with funds for implementing and enforcing environmental laws, would be cut to $3.3 billion from the $3.5 billion spent in 2017, but the measure strongly rebuffs the administration's efforts to end popular regional watershed cleanup efforts, providing $397 million for such programs. The Interior subcommittee markup begins at 3 p.m., but amendments typically are not introduced until the full committee takes up the bill.

Riders, yeah we got riders: The package would bar EPA from completing work on a court-ordered regulation requiring hardrock mining companies to have enough cash on hand to clean up their sites once work is complete. As Pro's Alex Guillén, Annie Snider and Esther Whieldon report, it also includes language shielding EPA's effort to withdraw the Waters of the U.S. regulation from legal challenges, delaying implementation of the 2015 ozone standard until 2025 and barring Interior from listing the sage grouse as an endangered or threatened species, among other provisions.

Speaking of Interior, the bill would slash the agency's budget by around 7 percent to $11.9 billion next year, while boosting the Bureau of Ocean Energy Management budget by $171 million. As Pro's Ben Lefebvre reports, BLM would see its funding reduced by 4 percent to $1.2 billion, mainly through cuts in its land acquisition budget, while spending on the Bureau of Safety and Environmental Enforcement would remain essentially flat at $136 million. The proposed measure also refuses a Trump administration attempt to ax the Chemical Safety Board,

funding the board that investigates accidents at refineries and other industrial sites at $11 million.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and the Pebble Partnership's Peter D. Robertson was first to identify President Calvin Coolidge as the one sworn in by his father. For today: What is the only state to have coastline on three different seas? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy and @POLITICOPro .

WE'LL BE BACK: Thank you to everyone who provided feedback on ME's makeover. We're ironing a few technical issues, but will be back to the new format in the near future!

POLL: PUBLIC SHARPLY DIVIDED ON PARIS PULLOUT: Only 30 percent of the public backs Trump's intent to pull out of the Paris climate accord while 53 percent disapprove, your ME host reports, citing new polling by POLITICO and the Harvard T.H. Chan School of Public Health. What's more, 59 percent of the public broadly supports more interaction between the U.S. and other countries on climate issues compared to just 12 percent who want less effort. But the results continue to show starkly different views on climate matters between Democrats and Republicans.

NRC, EPA NOMINEES ON THE MOVE: The Senate Environment and Public Works Committee meets this morning to advance nominees for EPA and the Nuclear Regulatory Commission on potentially contentious votes. Ranking Member Tom Carper still isn't satisfied with how EPA's treating his oversight requests and would only reply "we'll see" when asked if he'd support Susan Bodine, Trump's nominee to head the agency's enforcement office. Carper also acknowledged NRC nominees Annie Caputo and David Wright are "well qualified" to join the commission, but he told ME that many Democrats likely would vote against the pair of GOP nominees to express frustration with EPW Chairman John Barrasso . Carper said Barrasso declined his request to wait for an expected renomination of Democratic NRC Commissioner Jeff Baran so all three NRC nominees could move together as part of a bipartisan package. The objections are unlikely to keep the nominees from clearing committee, but they may add to the growing animosity in the Senate over the slow pace filling the massive number of vacancies in the federal government.

In addition to the nominations, the committee will consider legislation reauthorizing popular Brownfields and diesel engine retrofitting programs. Details on the session, which kicks off at 9:45 a.m. in Dirksen 406, are here.

FROM BERKSHIRE & J.P. MORGAN TO DOE: President Donald Trump is looking to K Street and Wall Street to fill two senior posts at DOE. The White House announced Tuesday he would nominate Paul Dabbar as undersecretary and Mark Menezes as undersecretary of science at DOE, Pro's Darius Dixon reports . Menezes, currently vice president for federal relations at Berkshire Hathaway Energy, previously represented energy companies as a lobbyist for Hunton & Williams, and he served before that as chief counsel for the House Energy and Commerce Committee. Dabbar is managing director for mergers and acquisitions at JPMorgan Chase and serves on the advisory board for DOE's environmental management program.

ENERGY COMPANIES PUSH RUSSIA SANCTIONS CHANGES: U.S. oil companies like Exxon Mobil are pushing House Republicans to amend a Russia sanctions bill making its way through Congress, Pro's Ben Lefebvre reports. One tweak attracting interest is setting an ownership level bar that Russian companies must meet before triggering the sanctions, lobbyists and a senior GOP aide said. "Maybe make it 50 percent threshold, something to say, 'Yeah, the Russians are here,'" the aide said, noting discussions remained in the earliest stages. Senate Minority Leader Chuck Schumer accused "Republicans and oil companies" of trying to "water the bill down." The measure cleared the Senate, 98-2, in mid-June.

More wrinkles: House and Senate Democrats are sniping about language in the bill that allows only Republicans to force a vote on blocking Trump from easing sanctions, POLITICO's Elana Schor and Heather Caygle report.

CALIF. GOVERNOR SLAMS HOUSE DROUGHT BILL: California Gov. Jerry Brown (D) is fiercely opposing a House measure aimed at rebalancing the state's complex and fragile water systems. "This bill overrides California water law, ignoring our state's prerogative to oversee our waters. Commandeering our laws for purposes defined in Washington is not right," Brown wrote in a letter to House Speaker Paul Ryan Tuesday. H.R. 23 (115) from Central Valley Republican David Valadao — Republicans' second go at drought relief after passing a bipartisan measure into law last year — is slated for consideration on the House floor as soon as today with only a handful of amendments allowed. California's two Democratic senators have opposed the measure, leaving it with long odds of overcoming a filibuster in the upper chamber.

NDAA UP NEXT: Once they finish the drought bill, House lawmakers will begin several days of debate over the National Defense Authorization Act H.R. 2810 (115), which will feature votes on a handful of energy-related amendments. One, from Texas Republican Rep. Mike Conaway, would bar the military from entering into any new contracts or spending new funds on drop-in biofuels or biorefineries while sequestration continues and another, from Rep. Tony Cardenas, a California Democrat, calls for a report on Arctic readiness "including the reasons why the arctic region is changing at such a rapid rate." The measure also contains language requiring a report on how climate change threatens military installations, including the ten most vulnerable to its impacts, and that describes climate change as a "direct threat to the national security of the United States."

NAVY NOMINEE CALLS CLIMATE THREAT REAL: Richard Spencer, Trump's Navy secretary nominee, told a Senate committee Tuesday climate change represented a real threat worthy of close attention. "The Navy, from my briefings to date, is totally aware of rising water issues, storm issues, etc.," he said in response to a question from Elizabeth Warren. "We must protect our infrastructure, and I will work hard to make sure we are keeping an eye on that because without the infrastructure, we lose readiness."

PRUITT'S READY FOR PRIME TIME: EPA Administrator Scott Pruitt told Reuters Tuesday his plans for a "red team" review of climate change science may be televised, Pro's Alex Guillén reports , and accused scientists of not sufficiently exploring the issue. "It is a question about how much we contribute to it. How do we measure that with precision? And by the way,

are we on an unsustainable path? And is it causing an existential threat?" Pruitt said. The review is "not necessarily" the first step toward undoing the 2009 endangerment finding that declared climate change a threat, according to Pruitt. Full transcript here.

Speaking of Pruitt, he held meetings with Sens. Steve Daines and Deb Fischer on Capitol Hill Tuesday that touched on, among other things, Superfund issues. Pics.

STEP ONE TOWARD REVERSING PEBBLE VETO: EPA took the first step Tuesday toward reversing the Obama administration's effort to preemptively veto Clean Water Act permits for the Alaska's planned Pebble Mine in the Bristol Bay region, Pro's Alex Guillén reports. The agency will take public comment for 90 days on its proposal to withdraw the previously proposed veto and accompanying analysis, according to a notice published Tuesday.

RECESS LOSS COULD BE ENERGY BILL'S GAIN: Senate Majority Leader Mitch McConnell's Tuesday announcement that the Senate would scrap the first two weeks of its traditional August recess could be a boon for a bipartisan energy package S. 1460 (115). Senate Energy and Natural Resources Chairwoman Lisa Murkowski tells ME she's "hoping" she can secure floor time this work period. As your ME author reports, the Alaska Republican summed up her sales pitch to colleagues: "We have a bipartisan product that's ready to go, and why wouldn't you want to take it up?"

CLIMATE TALK POSSIBLE DURING FRENCH SWING: Trump heads to France for the latter part of this week, and a senior administration official told reporters Tuesday it was "entirely possible" French President Emmanuel Macron would raise climate change during the trip. "If he does, the president has spoken on the issue a number of times, and he'll be ready to engage in that as well," the official said.

STATES, INTERIOR TO TALK SAGE GROUSE IN DENVER: Members of the Interior's sage grouse review team and staffers from a number of Western state governors' offices are holding informal meetings Wednesday and Thursday in Denver as part of the Interior's broad review of the BLM's land-use conservation plans for the bird in those states, sources tell ME. Western governors have pushed to have a voice in the Interior's review of the conservation plans and Secretary Ryan Zinke has given his team until Aug. 6 to send him recommendations.

BIPARTISAN BOOST FOR CCS: Democratic Sens. Heidi Heitkamp and Sheldon Whitehouse and Republican Sens. Shelley Moore Capito and John Barrasso today will unveil legislation to extend and expand the so-called "45Q" tax credit for carbon capture and sequestration tax credit. The CCS cause suffered a blow last month when Southern Company pulled the plug on the carbon capture aspects of the Kemper plant in Mississippi, but Petra Nova in Texas has been humming along with a different version of the technology for months. The bill is backed by the NRDC and Center for Climate Solutions, and an aide to Heitkamp said the bill is supported by coal companies Arch, Peabody, and Cloud Peak.

MAIL CALL! DEMOCRATS: REVERSE COURSE ON METHANE: A group of 27 Senate Democrats is urging Trump to reverse "unwarranted" efforts to delay EPA and BLM regulations aimed at curbing methane emissions. "The BLM and EPA rules each rely on proven, widely

available, and cost effective technologies to reduce leaking, venting and flaring, and keep natural gas in production and in commerce rather than in the air," they wrote in a letter released Tuesday. "Delaying or revising these rules will only cause additional and unnecessary waste and result in substantial harm to communities across the country that will be exposed to dangerous air pollution."

DEMOCRATS CONVENE CLIMATE BRIEFING: House Science ranking member Eddie Bernice Johnson and Rep. Don Beyer are convening a roundtable with military leaders, scientists and foreign policy experts on climate change's national security implications this afternoon. It kicks off at 3 p.m. in Cannon 340 and can be streamed here.

Stories from POLITICO Pro

ARPA-E gets an extra $80 million Back

By Darius Dixon | 07/14/2011 06:14 PM EDT

The Energy Department's high-risk research program won a surprise victory on the House floor Thursday afternoon when lawmakers agreed — by one vote — to add $80 million to its account.

The House approved an amendment from Rep. Adam Schiff (D-Calif.) to shift $80 million from DOE's administrative accounts to the Advanced Research Projects Agency- Energy.

The vote was 214-213.

Lawmakers also passed, 297-130, a mostly symbolic amendment from Rep. John Shimkus (R-Ill.) to boost funds for the license review of the Yucca Mountain nuclear waste site by $10 million.

Amendments to increase funds for non-defense nuclear cleanup efforts were split.

The House accepted a measure by Rep. Tom Reed (R-N.Y.) to increase cleanup funds by removing money from agency administrative accounts but shut down one by Jim Matheson (D-Utah) that sought to move funds from DOE's weapons division, the National Nuclear Security Administration.

Republican efforts to cut funding to DOE's Science Office and its Advanced Technology Vehicles Manufacturing Loan Program also failed.

House bill would cut EPA budget, reduce state grants Back

By Alex Guillén and Annie Snider | 07/11/2017 05:59 PM EDT

The House's EPA spending bill would shrink the embattled agency's fiscal 2018 funding by $528 million to the lowest level in a decade, but a far more modest cut than the one sought by the Trump administration.

The bill would provide EPA with $7.5 billion, according to the House Appropriations Committee, its lowest funding level since 2008.

The proposal would cut the State and Tribal Assistance Grants, which make up a major portion of EPA's budget and doles out money to states for implementing and enforcing environmental laws, as well as for specific projects.

STAG would get just under $3.3 billion, down from the $3.5 billion spent in 2017 but significantly more than the $2.9 billion requested by the White House. Many states, facing their own budget crunches, oppose serious cuts to those grants.

One category of STAG grants, however, would see funding held steady with current levels: the popular state revolving funds that support sewer and drinking water infrastructure projects level, which would receive a combined budget of $2 billion.

The bill would also raise funding for the new Water Infrastructure Finance and Innovation Act — a new funding mechanism that has yet to make its first awards — by $5 million to a total of $25 million.

The measure also offers a rebuke of the Trump administration's move to end funding for popular regional watershed programs across the country, providing $397 million for such cleanup efforts. Details on how the dollars are allocated, from the Great Lakes to the Chesapeake Bay, are included in the yet-to-be-released bill report.

House spending bill takes aim at EPA, Interior rules Back

By Alex Guillén, Annie Snider and Esther Whieldon | 07/11/2017 04:59 PM EDT

The House's fiscal 2018 Interior-EPA spending bill would prevent the Trump administration from completing a court-ordered rule on hardrock mining and block delay several other key regulations.

As part of a settlement the Obama administration reached with environmentalists, EPA must produce a rule by December requiring hardrock miners to have enough cash on hand to clean up their sites once work is complete. The settlement came a few months after the 2015 Gold King mine spill, although the lawsuit at issue was filed before that disaster. Republicans and industry oppose the rule, and the Forest Service has raised concerns that it will duplicate similar regulations issued by that agency.

The bill also includes a rider that would shield EPA's effort to withdraw the Waters of the U.S. regulation from legal challenges, mirroring a provision from the House's proposed fiscal 2018 spending bill for the Army Corps of Engineers.

House Republicans also included several other appropriations riders that mirrored earlier proposals but did not make it into the existing omnibus spending law, including delaying implementation of the 2015 ozone standard until 2025. EPA Administrator Scott Pruitt has already said he will miss a key implementation deadline for that rule.

A handful of riders in existing law are carried over as well, including language preventing the Interior Department from listing the sage grouse as an endangered or threatened species, a provision classifying electricity generated using biomass as carbon neutral and limits on climate change rules for agriculture.

WHAT'S NEXT: The Appropriations subcommittee with jurisdiction over Interior and EPA plans to mark up the bill on Wednesday.

BOEM budget gets modest boost under House proposal Back

By Ben Lefebvre | 07/11/2017 05:11 PM EDT

The Interior Department's Bureau of Ocean Energy Management would get a modest increase under the House Appropriations Committee fiscal 2018 budget proposal released today.

The proposal that would fund the Interior Department at $11.9 billion next year — a cut of about 7 percent from current funding levels — would spend $171 million on the the agency charged with leasing out federal waters for oil and gas development. That's up slightly from the $169 million Congress allocated for 2017 and matches the figure the White House proposed as part of President Donald Trump's push to increase offshore energy production.

The budget for BLM, the agency that manages Interior's onshore land and energy production leases, is reduced by 4 percent to $1.2 billion under the appropriations proposal. Most of that cut would be through reductions in BLM's land acquisition budget.

Appropriations for BSEE, the agency charged with overseeing safety on offshore oil and gas rigs, would remain essentially flat at $136 million.

The U.S. Geological Survey budget would fall by 4 percent, to $1.04 billion.

The House would fund Chemical Safety Board funded at $11 million, rejecting a White House proposal to scrap the board that investigates accidents at refineries and other industrial sites.

WHAT'S NEXT: Senate spending committee leaders will hold their first subcommittee markups later this week.

POLITICO-Harvard poll: Just 30 percent approve of Trump's Paris pullout Back

By Anthony Adragna | 07/12/2017 05:01 AM EDT

A majority of people disapprove of President Donald Trump's decision to withdraw the U.S. from the Paris climate accord, but opinions are sharply divided by party, according to a new poll by POLITICO and the Harvard T.H. Chan School of Public Health.

Just 30 percent of the public backs Trump's intent to leave the landmark climate accord while 53 percent disapprove, according to the poll. But 65 percent of Republicans support the president's move compared to just 9 percent of Democrats.

The poll found 59 percent of the public broadly supports more interaction between the U.S. and other countries on climate issues, including 39 percent of Republicans and 75 percent of Democrats. Only 12 percent of adults said they favor less effort by the U.S. on climate issues.

Views were split on U.S. spending to help developing countries address to the effects of climate change. Thirty-six percent of respondents told pollsters they wanted the government to spend more, while 26 percent said the U.S. should spend less and 34 percent called for funding to remain about the same.

But climate change appears unlikely to alter many votes on its own. Just 30 percent of voters said the decision to pull out of Paris was "extremely important" to their voting decision, placing it behind other issues like terrorism and health care.

The survey was conducted by SSRS, an independent research company, for POLITICO and Harvard from June 14-18. It used cellphones and landlines among a nationally representative sample of 1,011 U.S. adults.

WHAT'S NEXT: Public views of these issues are likely to play a role in upcoming

congressional action and the 2018 midterms.

Trump taps JP Morgan, Berkshire officials for DOE posts Back

By Darius Dixon | 07/11/2017 07:13 PM EDT

President Donald Trump plans to nominate Paul Dabbar and Mark Menezes for two open Energy Department undersecretary positions, the White House announced tonight.

Menezes, vice president for federal relations at Berkshire Hathaway Energy, has been nominated as undersecretary at DOE. He used to head Hunton & Williams' energy practice group, where disclosure records show his clients included Berkshire and Southern Co., and before that he served as chief counsel for the House Energy and Commerce Committee. Berkshire lobbying disclosures show he de-registered as a lobbyist in January of this year.

Dabbar, a former submarine officer who is managing director for mergers and acquisitions at JPMorgan Chase, is Trump's pick for undersecretary for science at DOE. He serves on the advisory board for DOE's environmental management program, which runs the agency's defense nuclear cleanup programs.

WHAT'S NEXT: The White House also formally sent the nominations to the Senate tonight. It's up to the Senate Energy and Natural Resources Committee to schedule a hearing on the nominees.

Oil companies seek to rein in Russia sanctions Back

By Ben Lefebvre | 07/11/2017 04:07 PM EDT

U.S. oil companies nervous about the damage tougher Russian sanctions could do to their bottom lines are rallying around a proposal that could allow them to stay in business with Russian partners.

Major players like Exxon Mobil worry they could get locked out of a new wave of massive international oil fields if House Republicans do not amend a sanctions bill making its way through Congress. Industry representatives and lobbyists say they are asking lawmakers to establish a threshold level on the size of the stake in a project a Russian company would have to

own before penalties kick in.

The Senate passed the bill by a 98-2 vote in mid-June as a way to punish Russian meddling in the 2016 U.S. presidential election. As written, it would require U.S. oil companies to leave certain projects where Rosneft, Lukoil or other Russian companies own even the slightest share.

Exxon and other U.S. companies worry their global competitors could weaponize the sanctions, investing just enough in a new project to force U.S. oil companies out and then buying their vacated stakes at a discount.

While the effect on energy projects is a relatively minor issue in the bill, the industry's concerns could still exacerbate an already politically fraught process of getting President Donald Trump to sign it into law. The bill faces additional hurdles in the House and growing resistance from the White House over provisions restricting Trump's power over sanctions policy. House Foreign Affairs Chairman Ed Royce (R-Calif.) is considering writing his own Russia sanctions legislation if the impasse persists.

Senate Minority Leader Chuck Schumer on Tuesday called on the House to pass the sanctions bill, and he accused "Republicans and oil companies" of trying to "water the bill down."

One fix that companies are pushing — and that has attracted interest from House Rules Chairman Pete Sessions (R-Texas) — is setting an ownership level bar that Russian companies have to meet before triggering the sanctions, lobbyists and a senior GOP aide said.

"Maybe make it 50 percent threshold, something to say, 'Yeah, the Russians are here,'" the aide said, emphasizing that no percentage has been agreed on as the idea is still in the early stage of discussion. House leadership was expected to discuss possible fixes to the sanctions bill late Tuesday, the aide added.

Even the hint of instability from tougher sanctions targeting energy companies could convince banks and foreign companies to avoid U.S. partners in developing an oil field, said Daragh McDowell, the principal Russia analyst at Verisk Maplecroft, a global risk consulting firm.

"The big risk to U.S. companies is something like this passes, with either similar or stronger language, and banks and other market players see what direction this is taking and [say], 'This is too risky for us,'" McDowell said. "If you have the U.S. Congress passing sanctions that apply to U.S. companies ... then basically, you just placed a prohibition for U.S. companies while providing plenty of work for any other country that has an oil major that wants to get involved."

Supporters of the Senate bill have said the Trump administration could interpret its language in a way that does not harm energy companies, but the House aide said that would not be enough, stressing that clear language would be needed to prevent future administrations from using their own, rival interpretations later.

Oil companies fear that, as currently written, the sanctions bill would block U.S. firms from participating in future offshore drilling projects in South America, Europe and the Middle East —

regions where Russian companies could be expected to play a role.

Brazil is one example of a country where the sanctions could block U.S. companies from future business opportunities. The country's government invited global oil companies to help develop its reserves as part of its goal to reach of 3.4 million barrels a day of oil and natural gas production by 2021.

Houston-based oil fields service company Halliburton has already worked the region, helping to drill wells for oil companies working off Brazil's east coast. Exxon is reportedly in talks with the Brazilian government and New York-based oil driller Hess to obtain stakes in Brazil's offshore oil fields.

But now that Rosneft has shown interest in developing the area, the sanctions bill as written could throw a wrench in the American companies' plans. The Brazilian government has occasionally asked companies working in adjacent fields to pool resources, sources said, something that could cause Exxon, Halliburton or Hess to run afoul of sanctions laws if Rosneft became a mandated partner.

"We've been providing information to legislators on the potential impact on investments," Exxon spokesman Alan Jeffers said. "There's a potential there to actually benefit Russian companies if they were squeezing U.S. companies out of bidding on projects." Jeffers declined to say if Exxon is pursuing Brazilian oil projects.

The bill would also further inhibit Exxon's efforts to eventually regain access to an Arctic oil field it was in the process of developing with Rosneft before the 2014 sanctions forced them to suspend drilling, analysts said. That's because in addition to its limits on energy partnerships, the Senate bill would also allow Congress to prevent presidents from lifting existing sanctions.

Rex Tillerson, the former Exxon chief executive now heading the State Department, criticized the sanctions last month. Tillerson described the bill as possibly harming communication between the White House and Russia, saying, "I think what I wouldn't want to do is close the channels off with something new."

The American Petroleum Institute, the industry's top lobbying group, has also raised concerns about unintended consequences from the bill. "It has the potential to penalize U.S. interests across the globe and advantage Russia and other countries or entities," API spokeswoman Sabrina Fang said in a statement.

Multiple energy lobbyists and consultants said an ownership bar was being pushed as a way to soften the bill's blow on the industry, portraying it as a narrow fix that would not undermine the bill's overall goal of strengthening sanctions on Russia.

"No one has realistic expectations that the bill may go away," said David Goldwyn, president of Goldwyn Global Strategies energy consultancy and a former U.S. State Department special envoy and coordinator for international energy affairs from 2009 to 2011. But, as written, the current version "just essentially cedes the Russian market to Europeans," he said.

The question Goldwyn says companies are now asking as they lobby both sides of Congress: "Who will take the hit for 'watering down' the bill? It's not clear who's in charge."

How high a percentage Russian companies would own before triggering an American exit is an open question, however.

"Establishing a non-arbitrary ownership threshold any lower than control will be a difficult task for legislators," said Josh Zive, a senior partner at Bracewell who represents energy companies on trade issues. "Modern business structures make simple rules much more difficult in practice, and a poorly drafted standard could cause unnecessary instability and uncertainty among U.S. companies involved in global markets, particularly energy markets."

House and Senate Dems play Russia sanctions blame game Back

By Elana Schor and Heather Caygle | 07/11/2017 07:16 PM EDT

Democrats veered into internal sniping Tuesday over a stalled Russia sanctions bill that would limit President Donald Trump's power to go easy on Moscow.

Even as House leaders continued bipartisan talks over how to resolve concerns that are holding up the popular Senate-passed sanctions bill, Democrats on both sides of the Capitol pointed fingers at each other over how they managed to miss an alteration that limited the power of the House minority to tie Trump's hands on relations with Russia.

The ongoing procedural drama over the sanctions bill, which cleared the Senate 98-2 last month, threatened to distract Democrats as House Republicans continue to struggle with their own intra-party tension over the proposal to punish Russia. Senate Democrats also seized on the president's deepening Russia scandal Tuesday to push the House to quickly pass the sanctions bill, citing Donald Trump Jr.'s meeting with a Russian government lawyer to discuss damaging information about Hillary Clinton.

House GOP leaders are feeling pressure to act quickly on sanctions to avoid looking weak on Russia, despite the White House's lobbying to secure changes to the bill that are more favorable to Trump. But until Majority Leader Kevin McCarthy (R-Calif.) and House Minority Whip Steny Hoyer (D-Md.) can resolve the latest partisan dispute, the sanctions legislation remains stuck in the House — and senators in both parties are growing impatient.

"We've worked out our process — they have to work out their process," the Senate Foreign Relations Committee's top Democrat, Ben Cardin of Maryland, told reporters. "But don't use that as a justification to hold this bill up. This bill needs to pass."

Two House Democratic aides laid blame at Senate Democrats' feet for failing to catch the change to the bill that allows only Republicans to force a vote on blocking Trump from easing sanctions.

House Democrats raised concerns with the Senate before the upper chamber unanimously approved the changes to the sanctions bill, according to a third aide.

"The Senate knew they were changing House procedure and did not consult with us and that's on them," the third House Democratic aide said. "We were never okay with the procedural change that House Republicans made that would prevent the minority from forcing consideration."

One House Democratic lawmaker familiar with the negotiations also said the Senate was at fault: "We trust that the other body knows what it's doing when it sends its own bill to us. Everyone should've caught it, but it's your bill. You should've caught it; you voted for it."

But Senate Democrats say the burden rested with the House to recognize that the change, which Republicans have billed as creating parity between the two chambers, would end up robbing House Democrats of power.

"That any House staff would point the finger at the Senate is laughable at this juncture," one Senate Democratic aide said. "Even if the Senate had written a bill that in part contained a problem for the House, it would be up to the House as the resident expert on their own rules and procedures to be aware of it, flag it, and ask for it be corrected before the Senate passes the bill."

And senators on both sides of the aisle continue to urge the House to pass the Senate-passed bill as written.

"I think they'll pass a Russia sanctions bill, and I think it'll look almost identical to what we have," Senate Foreign Relations Chairman Bob Corker (R-Tenn.) told reporters, describing his work with House Foreign Affairs Chairman Ed Royce (R-Calif.) as "hand in glove."

Senate Majority Leader Chuck Schumer sought Tuesday to put the onus back on House Republicans who are also getting pressed by the oil industry to change elements of the sanctions bill, charging that they "have come up with excuses to avoid moving forward" on the legislation.

"The House, right now, needs to pass the tough, strong sanctions bill that the Senate sent them on a bipartisan 98-2 vote," Schumer told reporters. "Between these revelations and the president's horrendous handling of the meeting with Mr. Putin, it's clear that Congress needs to step in and sanction Russia."

House Republicans, for their part, say House Democrats are now the only ones holding up the sanctions package from moving forward.

"House Democrats are now standing in the way of progress on this sanctions package," said AshLee Strong, spokeswoman for Speaker Paul Ryan (R-Wis.), noting that the Senate crafted the original House procedural provision "without consulting with the House on the front end."

But House Democrats say that's false, accusing Republicans of hiding behind the Democratic finger-pointing while trying to slow walk the sanctions package at the behest of the White House.

Hoyer even offered a potential fix palatable to Democrats during negotiations over the recess — allowing either the majority leader or the minority leader to offer a resolution of disapproval that would stop Trump from easing sanctions — but Republicans have yet to agree to that, according to a source.

The Maryland Democrat said in a statement Tuesday that negotiations are ongoing despite the hang-up, adding that he hopes for action on the bill later this week.

"I continue to oppose the process House Republicans included in the bill that would only allow the Speaker of the House to force consideration of whether to allow the administration to waive sanctions," Hoyer said.

"I believe this is an issue that we can quickly resolve, and I hope that Republican leadership will work with us to address this issue and bring the bill to the floor for a strong, bipartisan vote this week."

A spokeswoman for House Minority Leader Nancy Pelosi (D-Calif.) declined to comment for this story, directing inquiries to Hoyer's office.

Pruitt: 'Red team' climate review may be televised Back

By Alex Guillén | 07/11/2017 03:53 PM EDT

EPA Administrator Scott Pruitt said his plans for a "red team" review of climate change science may be televised, according to an interview with Reuters, in which he also accused climate scientists of not answering key questions.

"It is a question about how much we contribute to it. How do we measure that with precision? And by the way, are we on an unsustainable path? And is it causing an existential threat?" he told the wire service.

Pruitt did not elaborate on how scientists would be chosen, but said there should be "a robust discussion for all the world to see." That could include via television, he said, arguing that "the American people would be very interested in consuming that."

The red team review is "not necessarily" the first step toward undoing the 2009 endangerment

finding that declared climate change a threat and led to a number of Obama-era climate regulations, Pruitt told Reuters. The service reported that Pruitt believes "there may be a legal basis to challenge the finding but would prefer Congress weigh in on the matter." There are currently at least three pending petitions with EPA seeking to overturn the finding.

Several noted climate scientists have scoffed at the idea of participating in a red team review, saying it would lend unearned legitimacy to the review. The peer-review scientific process and decades of research have provided the necessary review, scientists say.

Trump EPA moves closer to reversing Pebble Mine proposed veto Back

By Alex Guillén | 07/11/2017 03:46 PM EDT

The Trump administration is moving forward with a plan that could let the developers of the planned Pebble Mine in Alaska reapply for permits in the Bristol Bay region.

EPA is taking the first formal step toward reversing the Obama administration's effort to preemptively veto Clean Water Act permits for the mine. The agency will take public comment for 90 days on its proposal to withdraw the previously proposed veto and accompanying analysis, according to a pre-publication notice posted today on the agency's website.

The announcement is part of a court-approved deal EPA reached in May with the company behind the proposed gold, copper and molybdenum mine. Pebble's developers had alleged EPA's prior work on the matter, which halted in 2014, violated an open government law.

Senate Energy and Natural Resources Chairwoman Lisa Murkowski (R-Alaska) last month asked EPA Administrator Scott Pruitt to accept comments for at least 90 days because of the current commercial fishing season in Bristol Bay, which she said would limit the ability of local fishers to comment.

EPA's withdrawal is the first step of carrying out the settlement agreement struck with Pebble's developers. The agency has agreed not to study related water quality issues for at least four years or until the Army Corps of Engineers finishes its own environmental study. Pebble has until late 2019 to apply for a permit.

WHAT'S NEXT: The 90-day comment period will commence once the notice is published in the Federal Register.

Murkowski pushing for energy bill action this work period Back

By Anthony Adragna | 07/11/2017 03:08 PM EDT

Senate Energy and Natural Resources Chairwoman Lisa Murkowski told reporters today she's hoping a broad energy package S. 1460 (115) can secure some floor time during the current work period — which Senate Majority Leader Mitch McConnell says will extend into the middle of next month.

McConnell announced this afternoon that the Senate would cancel the first two weeks of its August recess to give Republican lawmakers more time to work through their daunting to-do list, which includes repealing Obamacare and raising the debt limit.

"We have a bipartisan product that's ready to go, and why wouldn't you want to take it up?" Murkowski said, urging lawmakers to consider the package "in these spaces that we have."

She acknowledged she'd need Democratic cooperation to prevent the legislation — which is largely unchanged from a version that passed the Senate 85-12 in April 2016 — from being bogged down by procedural hurdles.

EPA to Seek Legislative Fixes In Place of Regulations, Pruitt Says

Posted June 15, 2017, 02:44 P.M. ET

By Brian Dabbs

The EPA will proactively reach out to seek legislative fixes to environmental laws that avoid lengthy litigation akin to the Clean Power Plan and the Clean Water Rule, Administrator Scott Pruitt told lawmakers June 15.

That strategy aims to curb agency "overreach" while providing certainty to companies, Pruitt said.

"When you disrespect rule of law, and what that fundamentally means, is when you take statutes passed by Congress and act in a way that's not authorized, it creates uncertainty," Pruitt told lawmakers. "If you have not spoken to an issue, if you have not given authority to the agency, we're not to reimagine it. We're not going to create it. We're going to let you know when those deficiencies arise."

The two high-profile regulations have been wading through legal limbo in recent years, and the Environmental Protection Agency is now reconsidering the Clean Power Plan rule. That regulation, arguably the trademark of the Obama administration's environmental legacy, would require decreased carbon dioxide emissions on the fleet of existing power plants.

EPA rules have had a "devastating impact" on coal-producing communities, Rep. Hal Rogers (R-Ky.) told Pruitt. Rogers has recently complained of the Trump administration's plan to zero out the Appalachian Regional Commission, an economic development program that is receiving $152 million this fiscal year through the Energy Department's appropriations account.

EPA Approves Dow, Monsanto Gene-Silencing Tech to Fight Pests

Posted June 15, 2017, 12:09 P.M. ET

By Tiffany Stecker

Farmers will soon have access to a novel technology to fight corn rootworm, a devastating pest that has grown resistant to traditional pesticides.

The Environmental Protection Agency on June 14 approved for sale four new corn seeds from Monsanto Co. and Dow Agrosciences engineered with ribonucleic acid interference (RNAi). The technology works by "silencing" certain genes from expressing undesirable traits. In the case of the companies' SmartStax PRO seeds, the corn plants produce a pesticide that suppresses a gene that allows the worm to survive.

"We are using innovation and emerging technologies to solve problems like infestations of corn rootworm on our nation's corn crop," EPA Administrator Scott Pruitt said in a statement. "Corn rootworm has been called the 'billion-dollar pest' because it is so expensive for corn growers to control."

Corn growers have struggled to address corn rootworms that don't die from the insecticide Bacillus thuringiensis (Bt). Almost 80 percent of corn plantings in the U.S. are genetically-engineered with Bt.

Plant geneticists and farmers tout RNAi technology as a promising alternative to other forms of plant genetic engineering, which take genes from one species and inserts them into another. This genetic modification has generated considerable controversy over the past three decades, but RNAi technology has also raised concerns.

Some environmental and health groups have raised the possibility that the technology could unintentionally shut off gene function in those who eat the foods, or could have ecological consequences past the limits of a farmer's field.

The Food and Drug Administration in 2015 approved two crops made with RNAi techniques: an apple that resists browning and potatoes that produces less acrylamide, a carcinogen. An EPA Scientific Advisory Panel in 2014 had recommended more research to better assess the health and ecological implications of using the technology.

Trump's Budget Puts Climate Research Program on Thin Ice

Posted June 15, 2017, 12:18 P.M. ET

By Catherine Douglas Moran

The U.S. could fall behind on mitigating expensive and irreversible damage from climate change domestically as a result of the White House's proposed cuts to an interagency research program's budget. Funding worries for the domestic climate and climate-related research program come at a time of uncertainty about the Trump administration's priorities for climate change as it slashes funding for that work across the government. President Donald Trump has pledged that the U.S. will exit the Paris Agreement and has proposed a fiscal year 2018 budget that would discontinue more than $100 million in funding for several climate change research and partnership programs.

Margaret Leinen, director of the Scripps Institution of Oceanography at the University of California San Diego who previously served on the National Science and Technology Council's environment committee that guides the U.S. Global Change Research Program, told Bloomberg BNA that if major cuts are made to the program, the decreased funding will not stop or alter the course of climate research. But she said it may affect the country's reputation internationally and reduce the amount of domestic research.

"Other countries are not going to do the work on impact in the U.S. for us," she said. "No one else is going to do that research for us, so that's really what's at risk when we cut the U.S. climate research."

Comprised of nearly a dozen agencies and departments, Congress created the program in 1990 under the Global Change Research Act (Pub. Law No. 101-606) to better understand human-caused and natural climate changes and to develop mitigation and adaptation policies. Every three years Congress requires the submission of a strategic plan outlining goals and priorities for the next 10 years, and no less than every four years Congress and the president receive a national scientific assessment on the research program's findings.

Funding Fluctuations

The largest contributors to the program include NASA, the Energy Department, the National Oceanic and Atmospheric Administration, and the National Science Foundation.

Some of the agencies submit requests for the research program as a part of their budgets. Others calculate their contribution to the program from allotted research grants. The program's annual report that explains and breaks down the budget request is expected in a few months.

Here are the known agency funding requests for Global Change Research Program for fiscal 2018, according to the agencies:

• National Science Foundation: $264 million—a decrease of $66 million from its actual fiscal 2016 amount

• Smithsonian: $8 million—largely steady from fiscal 2014 to fiscal 2018 request

• Energy Department: $84.2 million—a decrease of $144.7 million from its fiscal 2017 enacted appropriation

• EPA: Global Change Research listed as a proposed eliminated sub-program along with other science programs

"I think it's really important that people understand that there are real risks, and the risks are not just for polar bears or for coral reefs," Leinen said. "They are for us and our economy and what our livelihood is like."

Leinen said the collaboration between the agencies is only as good as the budgets provided. The research program has tried to recover from funding dips by accepting proposals from scientists who were turned away at other agencies, but one agency will not assess the impacts of climate and environmental change for another agency's mission, she said.

Congress Could Rescue Funding

While Congress and the administration set the priorities for climate change research, Congress probably won't eliminate or "massively" cut funding for the program in the upcoming fiscal year, Leinen said.

"Each administration comes in seeing the problem of climate change with their own lens and may have different priorities," Leinen said. "I think that one of the things that was quite, quite clear in the 2017 deliberations was that Congress did protect, Congress did acknowledge the importance of

climate change research and made sure that it was funded to the best of their ability."

Overall, funding for Global Change Research Program grew 30.2 percent from fiscal 2000 to the fiscal 2017 request, peaking in 2003, according to the American Association for the Advancement of Science. After declining during President George W. Bush's administration, the program was revitalized in fiscal 2009 when the American Recovery and Reinvestment Act provided an additional $641 million.

Anthony Janetos, a Boston University biologist and next chairman of the National Academies of Science advisory committee for the U.S. Global Change Research Program, told Bloomberg BNA that there is "nothing concrete to put our fingers on" financially for fiscal 2018, until the multiple appropriations committees that handle the agency budgets piece together the funding.

"Even small changes can make a difference in what gets done," he said. "The accumulation of the kind of scientific knowledge is best served by budgets that don't radically change from year to year."

Agency Overlap and Collaboration

Two Republican committee aides familiar with the research program's reports told Bloomberg BNA that it will probably not face funding problems. However, one of the aides said the cuts might be justified by potential duplication of climate modeling and other resources at the agencies.

"Is this funding cut in one place? Is there an offset somewhere else where the federal government is already doing research into that topic?" the aide said. "The federal government doesn't need to be spending money on any sort of competing research."

One of the reasons that Congress created the research program was to reduce the redundancy between agencies, John Furlow, the deputy director for humanitarian assistance and international development at Columbia University's International Research Institute for Climate and Society, told Bloomberg BNA. He was a USAID representative to the climate change research program.

"There might be a little bit of redundancy, but I think there's more complementarity," he said. "If you cut something that NASA is doing, it might make it more difficult for NOAA to do its piece. So I mean just as a very coarse example, if NASA doesn't launch satellites, NOAA can't stick instruments on those satellites."

He said he is concerned about the uncertainty for climate funding and what that will mean for the program's future if the budgets for the EPA, NOAA, and National Science Foundation plummet.

If the climate research program's funding is slashed, Furlow said public outreach, website maintenance, and production of reports for Congress may be constrained.

"It probably would not be the end of the world but just reduce the amount of outreach that GCRP can provide," Furlow said. "I don't know what happens if the funding were to become so constrained that they couldn't pass the smell test of meeting the requirements of that law."

Political Controversies

This is not the first time that the Global Change Research Program has faced funding cuts and encountered concerns about potential political influence on its science.

One of the majority committee aides said the reports were used to further the agenda of the Obama administration by narrowly focusing on human-caused climate change instead of global change.

"I think we could agree that the politics has influenced the work of GCRP over the years," the aide said. "I think the conclusions of the National Climate Assessment are used to support climate policies specifically of the last administration and that's its job, that's its goal, that's its duty. Support the president."

Leinen said she thinks politics influence the funding, but not the science.

"Although there can be political push, there are so many other forces that I don't think the science gets steered," she said. "Does the politics get steered by the science? Sometimes."

EPA Isn't Reviewing California's Clean Air Act Waiver: Pruitt

Posted June 15, 2017, 03:49 P.M. ET

By Jennifer A. Dlouhy

EPA Administrator Scott Pruitt said the agency isn't reviewing a Clean Air Act preemption waiver granted to California that allows the state to impose air pollution control requirements that are stricter than those of the federal government.

"Currently, the waiver is not under review," Pruitt said during a June 15 House Appropriations subcommittee hearing.

Some conservatives want EPA to pull back the waiver, which would threaten California's historically influential role driving auto-emissions standards and other environmental regulations. The waiver also gives California leverage in any negotiations over standards for cars and light trucks through model year 2025, which the Trump administration is reviewing.

Pruitt said the waiver goes "back to the beginning of the Clean Air Act."

"Because of the leadership that California demonstrated it was actually preserved in the original writing of the Clean Air Act," Pruitt said. "It's important we recognize the role of the states in achieving good air quality standards, and that's something we're committed to in the agency."

EPA Task: Balance Chemical Trade Secrets With Public Data

Posted June 15, 2017, 7:00 A.M. ET

By Pat Rizzuto

The EPA says it's hard pressed to withhold the identities of certain chemicals while also making public any health, worker safety, or environmental risk information about the chemicals under the amended toxics law passed last June.

The law gave the EPA a difficult dual obligation, Derek Swick, regulatory and scientific affairs manager for the American Petroleum Institute, told Bloomberg BNA. "It's unclear how EPA will do this," Swick said.

The agency is accepting comments through July 7 on its initial ideas about fulfilling a confidentiality requirement in the 2016 Frank R. Lautenberg Chemical Safety Act. The agency must shield from public disclosure the specific identities of certain chemicals it determines qualify for that protection to guard trade secrets such as market share while at the same time making non-confidential information about the same chemicals available to the public.

"Protecting confidential business information is the bread and butter of any company," Christina Franz, senior director of regulatory and technical Affairs at the American Chemistry Council, told Bloomberg BNA. "It's critical to innovation, to creating new, important products and to maintaining or gaining a competitive advantage." For chemical makers, confidential business information (CBI) can mean keeping secret the specific identity or unique performance attributes of a chemical, she said.

But Richard Denison, lead senior scientist with the Environmental Defense Fund, told Bloomberg BNA the law's requirement is not as hard to achieve as industry and the EPA have suggested. Congress' intent was to have the EPA review CBI claims more strictly and often favor disclosure of risks the public involuntarily faces from air, water and soil pollution. The agency has navigated similar situations involving confidential identities in the past, he added.

Shift in Thinking

Thus far, it has been easy for companies to overbroadly shield many different types of information—including chemical identity—as confidential, which bars agency public disclosures, Denison said. Companies got accustomed to asserting such claims without challenge.

Information chemical manufacturers often claim as confidential includes: their manufacture or importation of a particular chemical; production or import volumes; the number of workers they estimate are exposed to it; and whether children or consumers are exposed to it.

Companies can continue to assert that much of this information as confidential under the Lautenberg Act, which overhauled the Toxic Substances Control Act. The amended law, however, requires them to provide more detailed substantiations of a company's need for confidentiality.

The TSCA amendments, however, raised the bar chemical makers will have to clear to prove to the agency that the public must be denied knowledge that a chemical exists, Denison said.

Many concerns that information disclosure could cause competitive harm can be addressed, for example, by claiming a company's relationship to a particular chemical is confidential, Denison said. This may take some getting used to for companies that have traditionally claimed everything possible as confidential, he said.

Emphasis on Public Right-to-Know?

The amended statute directs the EPA to use what the law calls a "unique identifier" for "each specific chemical identity for which the administrator approves a request for protection from disclosure." The agency can decide a chemical's identity warrants such protection if its manufacturer proves disclosure would cause competitive harm to the company by revealing, for example, commercially sensitive market share information.

EPA must apply the unique identifier consistently across data received on a compound. The agency also has annual reporting requirements for CBI-protections and related health information.

By requiring a unique identifier, Congress sought to maximize public access to information about such a chemical, Denison said. Congress "resolved any possible conflict in favor of the public's right to know," he said.

The unique identifier allows industrial hygienists, public health officials, labor organizations, first responders, researchers and the general public to link together any health, safety, and environmental effects the agency receives for the same chemical, he said.

Compiling the non-confidential safety information about a chemical can allow researchers and organizations to recognize that some chemical is raising concerns—even if they don't know the specific identity of the chemical, Denison said.

That knowledge would allow the public to demand the agency look into unwarranted health and environmental risks.

When CBI claims expire in 10 years—unless re-substantiated—then the previously submitted non-confidential health and safety information could be matched to the specific chemical.

Disclosure to Competitors

The EPA said in a May 8 Federal Register notice that it isn't sure it can both design a unique identifier that fully shields chemical identities from disclosure and use that same identifier on all non-confidential information (82 Fed. Reg. 21,386).

"EPA has identified several situations where applying the same unique identifier to every instance where information pertaining to the same chemical substance is reported under TSCA could cause confidential business information, including specific chemical identity, to be revealed," the agency wrote.

EPA's notice described scenarios where it envisions complying with the dual obligation could result in competitors being able to follow a paper trail and figure out the confidential chemical identities.

First Option

The agency discussed two possible strategies for balancing CBI with the public's right to know at a May 24 meeting.

The agency's first option would require it to review all non-confidential information about a trade-secret-protected chemical. The EPA would place the unique identifier on the information and remove any details that could result in disclosure of the chemical.

The agency would remove identity revealing information even if the person, organization or company that submitted the information to the agency did not claim confidential business protection, Pamela Myrick, director of information management in the EPA's Office of Pollution Prevention and Toxics, said during the meeting.

But screening and redacting the wide variety of information the agency receives for chemicals could be so burdensome that it may not be viable, she said.

Second Option

Under the second alternative, the EPA would use unique identifiers on non-confidential information, but only when it's submitted by the same company that originally asked that the chemical's identity be kept confidential, Myrick said.

"The public would be able to link some submissions on the same chemical, but not necessarily all submissions on that chemical," she said.

This would mean the same chemical could have different identifying numbers, which could be linked to different pieces of health, ecological and worker safety data.

EPA is proposing that each trade-secret-protected chemical identity would get multiple unique identifiers. Most of the industry groups and consultants that attended EPA's meeting said they favored the second alternative.

EDF: Options Inconsistent With Law

But Denison told meeting participants both of the EPA's options are inconsistent with the law's requirements.

"EPA finds an apparent conflict that doesn't exist in the law, and overstates a problem that it has successfully negotiated in the past," he said.

The agency has managed to balance the need to protect CBI with public access as it established policies in its new chemicals program and for the production volume, worker exposure and other information companies periodically report under the Chemical Data Reporting rule, Denison said. That rule requires periodic reporting of chemical production and import information.

Chemical identity should only qualify as CBI if companies carefully craft their trade secret protection rationales and demonstrate that identity disclosure would likely cause the company substantial competitive harms, Denison said.

Eventual Legal Challenge?

But Swick, from the American Petroleum Institute, said the law's requirements aren't black and white.

The provision requiring the unique identifier is in the amended TSCA, but so is the statute's "clear mandate to protect trade secrets and encourage innovation," he said. The agency should implement this legal requirement through rules to make sure all issues are flagged, Swick said.

Providing case studies describing the variety of chemical information it receives under TSCA and other statutes would be valuable, he said. That would help companies understand whether their CBI could be discovered through other types of required submissions.

Franz, from the American Chemistry Council, said EPA has a tough job ahead. Whatever path it chooses may be challenged in court, because of these different interpretations of what the law requires, she said.

Nuclear Waste Bill Set to Change After Subcommittee Markup

Posted June 15, 2017, 01:25 P.M. ET

By Rachel Leven and Rebecca Kern

A House subcommittee June 15 approved, along party lines, a draft bill to reboot efforts to make Yucca Mountain the nation's permanent repository for nuclear waste and a bill (H.R. 806) that would push back deadlines for Obama-era ozone standards.

Additionally, draft legislation that would reauthorize the EPA's brownfields program for the first time since 2006 was approved unanimously by the House Energy and Commerce's Subcommittee on Environment. That program aims to clean up and repurpose contaminated industrial and commercial sites.

Rep. John Shimkus (R-Ill.), the subcommittee's chairman, previously told Bloomberg BNA that he hopes the House will pass the three bills, along with a drinking water reauthorization bill, by August.

At the markup, Democrats expressed concern that the administration didn't testify on the bills.

"We do not know how the agencies that would implement these programs would interpret the language in these bills," full committee ranking member Rep. Frank Pallone (D-N.J.) said at the start of the markup. "We are being asked to vote on legislation without the opportunity to fully understand its effects and potential unintended consequences."

The Environmental Protection Agency and the Energy Department didn't immediately respond to Bloomberg BNA's messages asking why they didn't testify and whether they support these bills. A spokesman for the Nuclear Regulatory Commission said the committee didn't request that the agency testify at the hearing on the nuclear waste draft bill in April and that it has no stance on the draft bill.

The two draft bills will next be introduced and all will be sent to the full committee, a committee spokesman told Bloomberg BNA in an email. There could be changes from the draft bills discussed at the markup to the bills that are formally introduced, the spokesman said.

Pennsylvania Bill Would Hinder Bay Cleanup, State Official Says

Posted June 15, 2017, 01:08 P.M. ET

By Leslie A. Pappas

A proposed Pennsylvania budget bill would further cripple the state's Chesapeake Bay cleanup efforts by cutting funding to conservation districts that help farmers reduce water pollution, Pennsylvania Agriculture Secretary Russell Redding said today.

"It's an open question at this point how we would meet the requirements," Redding said in response to a question about how the cuts would affect Pennsylvania's Chesapeake Bay commitments to reduce nitrogen, phosphorus and sediment runoff.

House Bill 218 would cut several programs that support conservation districts, which currently partner with the state's environmental regulators to inspect farms and help farmers implement clean water practices.

The cuts would result in fewer clean water management plans, less technical support for farmers, fewer training programs and cuts in staff, Redding said in a media call.

Senate Committee Advances Nuclear Regulator Nominee Svinicki

Posted June 15, 2017, 10:54 A.M. ET

By Rebecca Kern

The Nuclear Regulatory Commission is a step closer to retaining its quorum as the Senate Environment and Public Works Committee advanced the nomination of current NRC Chairman Kristine Svinicki for a third term at the agency.

The committee voted unanimously by voice vote to favorably report Svinicki's nomination for another five-year term on the commission. Chairman John Barrasso (R-Wyo.) told Bloomberg BNA after the June 15 business meeting that he and others are working with Senate leadership to get a floor vote on Svinicki before July 1.

Svinicki's current term is set to expire on June 30, after which she will no longer be allowed to serve and the NRC will not have a quorum.

In addition to Svinicki, a Republican, the committee considered two other Republicans nominated by the Trump administration: Annie Caputo, a long-time energy policy adviser for the committee, and David Wright, a former chairman of the South Carolina Public Service Commission. The committee has not yet scheduled votes on those nominations.

The NRC is an independent agency that licenses and regulates the country's nuclear reactors. Its five commissioners serve staggered five-year terms, with three seats belonging to the political party in power in the White House. It currently has three commissioners: Svinicki, whom President Donald Trump named as chairman in January; Stephen Burns (I), the previous chairman in the Obama administration; and Jeff Baran (D).

EU Moves to Limit Chemicals in the Workplace, Electronics

Posted June 15, 2017, 02:04 P.M. ET

By Stephen Gardner

European Union member countries are backing a plan to establish bloc-wide workplace exposure limits on five cancer-causing substances that would protect more than 4 million workers at industrial sites producing chemicals, lubricants, plastics and pharmaceuticals.

Ministers from the EU's 28 nations June 15 approved the amending directive, which would write the exposure limits into Annex III of a 2004 law (Directive 2004/37/EC), requiring employers to reduce worker exposure to carcinogens and mutagens. The law also obliges employers to provide workers and authorities with information about the risks of carcinogenic substances in the workplace.

The five substances covered by the amending directive are 4,4'-methylenedianiline, epichlorohydrine, ethylene dibromide, ethylene dichloride and trichloroethylene. An impact assessment on the proposed exposure limits, published in January by the European Commission, the EU's executive arm, found that epichlorohydrine and trichloroethylene are estimated to cause a combined 95 cancer deaths of workers in the EU each year. The likely number of deaths caused by the other three substances is unknown.

The exposure limits are "not controversial" and should be straightforward to agree between the council and parliament, Evi Liaskou, a spokeswoman for the Council of the EU, the EU

institution that represents the governments of member countries, told Bloomberg BNA June 15. In addition to setting exposure limits, the amending directive introduces "skin notations" for the substances, meaning employers should monitor and take steps to prevent skin absorption. The amending directive would also add skin notations for used engine oils and polycyclic aromatic hydrocarbons.

The ministers' approval must be confirmed by the European Parliament, which has not yet voted on the amending directive. The council and parliament must also finalize a separate but similar amending directive that would set or tighten workplace exposure limits for 13 carcinogenic substances. The European Parliament's employment committee approved that amending directive in February.

Substances In Electronics

Council and parliament representatives are now set to meet June 21 seeking an agreement on technical amendments that would close loopholes in the EU's Restriction of Hazardous Substances Directive (RoHS Directive, 2011/65/EU). RoHS prohibits cadmium, hexavalent chromium, lead, mercury and some brominated flame retardants from household appliances, consumer electronics and other electrical and electronic products.

The European Commission proposed the RoHS update in January that would aim to correct oversights in the law that could result in certain medical and professional equipment and some spare parts becoming illegal on the EU market in July 2019.

Both the council and the parliament have provisionally approved the RoHS amendments. If the directive containing the amendments is agreed June 21, it would then require formal ratification by the two institutions.

EU Environment Agency Warns of 'Profound and Rapid' Arctic Changes

Posted June 15, 2017, 01:15 P.M. ET

By Stephen Gardner

The European Union should do more to relieve the pressures on the Arctic ecosystem or risk a breakdown of "the Arctic's role in global climate regulation," the European Environment Agency said June 15.

Specific measures for the 28-nation EU bloc to take could include initiatives to limit marine litter and black carbon, designation of more nature conservation areas in the European Arctic, phasing out the use of diesel generators in the Arctic in favor of renewable power, and designating low environmental impact shipping corridors, the agency said in a report.

The EU should also do more within international forums to promote protection of the Arctic environment and to ensure that economic exploitation of the Arctic's resources does not damage the region's ecosystems, the report said.

The current slowdown of investment in resource extraction in the Arctic, caused by low commodity prices, is a "window of opportunity" to introduce new more environmentally-friendly Arctic policies, the report added.

Global warming is leading to "profound and rapid changes" in the Arctic environment that could have worldwide consequences, the environment agency report said.

Of the eight countries with Arctic territory, Finland and Sweden are EU members, while Greenland is a territory of EU member Denmark.

U.S. Toughens Stance on Russian Gas as Engie Defends New Pipe

Posted June 15, 2017, 8:09 A.M. ET

By Elena Mazneva, Francois de Beaupuy and Anna Shiryaevskaya

As U.S. lawmakers targeted Russia's controversial $10-billion natural gas pipeline to Europe in a plan for expanded sanctions, French utility Engie SA defended the link that it says is vital for the region's fuel supplies.

The Nord Stream 2 pipeline to Germany will have "detrimental impacts on the European Union's energy security," and on reforms in Ukraine, the U.S. Senate said after voting in favor of tightening curbs against Russia June 14. The U.S. will "continue to oppose the link," according to the bill posted on the Senate website.

The proposals are a way for the U.S. "to try to favor its own gas" in Europe, Isabelle Kocher, the chief executive officer of France's former gas monopoly, told reporters in Paris June 15. "I don't think at all that the United States can stop this project."

Engie was among five European Union companies that planned to join the Nord Stream 2 project run by the Kremlin-backed Gazprom PJSC before the deal was scuppered last year when Poland's competition watchdog objected to the joint venture. The 1,220 kilometer (758-mile) link, designed to cut Russia's reliance on gas transit through Ukraine, would double the capacity of an existing route to Germany. The link is also opposed by politicians in Ukraine, Slovakia and the Baltic States.

Engie, together with Royal Dutch Shell Plc, BASF SE's Wintershall unit, Uniper SE and OMV AG agreed in April to provide loans for Nord Stream 2 to see it ready by the end of 2019.

Gazprom sees no impact from U.S. curbs on the link. Nord Stream 2 is a European project, developed in partnership with European companies that had already provided funding before the latest U.S. bill was approved, according to Alexander Medvedev, the deputy chief executive officer of Gazprom. The project is in compliance with all existing EU regulations, he said.

"If the senators believe that they can block Russian-American cooperation in energy and as a whole—God is their judge," he said at a conference in Berlin. Trade and political ties between the countries have already dropped "to a very low level."

Gazprom, which supplies about a third of the European Union's gas, has shrugged off the prospect of U.S. liquefied natural gas in Europe for years. While most analysts expected increased U.S.-Russia gas rivalry last year, only a few cargoes from North America have reached southern Europe.

The bill approved by the Senate says the U.S. government "should prioritize the export of United States energy resources in order to create American jobs, help United States allies and partners, and strengthen United States foreign policy."

Under the bill, the president gets the right to impose sanctions against companies that make investments or sell goods or services to Russia's export pipelines of $5 million or more during a year.

China, India Seen as $4 Trillion Opportunity for Energy by 2040

Posted June 15, 2017, 8:18 A.M. ET

By Feifei Shen and Anindya Upadhyay

China and India will be the biggest recipients for new investment in power-generating capacity by 2040, representing a $4 trillion opportunity for the energy sector.

China will require $2.8 trillion of spending for 2,547 gigawatts of new capacity, while India needs $1.2 trillion, according to a Bloomberg New Energy Finance outlook forecasting how energy markets will evolve by 2040. China's wind and solar capacity will increase eightfold through to 2040, retaining the nation's role as a global powerhouse of clean energy.

India will build 10 times more solar capacity than net additions of coal to 2040 as it shifts to lower-cost renewables to meet a more than threefold rise in energy demand. Coal generation will increase by 78 percent as the country becomes the second-biggest power system in the world.

The massive deployment of renewables in the two countries will help the region reduce its output of greenhouse gases. BNEF expects emissions from the power sector to peak at 7.2 gigatonnes in 2028 in Asia Pacific.

Interestingly, India's increasing adoption of air conditioners as it transitions to a service-oriented economy means a change in peak demand periods, aligning the nation's energy needs more closely with output from solar systems.

The London-based research company also found:

- China's coal capacity will peak in 2024 due to stricter standards for new projects and cheaper renewables.

- Renewables will attract 73 percent of the new investment spent over the next 23 years in China. Renewable capacity will account for 63 percent of the nation's overall mix in 2040, compared with 33 percent last year.

- China's electricity demand will almost double by 2040, while the electricity intensity of economic growth falls by 35 percent as the nation shifts away from an industry-heavy growth model.

- India's coal additions will be at a near-hiatus from 2023 to 2028. From 2029, new coal will be needed to meet rising demand. Even so, with an explosion in solar installations, coal is set to no longer play a dominant role in the growth of India's power-generating capacity by 2040.

- India's cumulative solar PV capacity rises from 10 gigawatts in 2016 to 670 gigawatts in 2040.

- Coal's share in India's total capacity mix falls from 59 percent in 2016 to 17 percent in 2040.

- From 2029, India's widespread use of renewables will decouple economic growth from emissions. Zero-carbon sources will provide more than half of India's electricity needs in 2040.

- India will become the Asia-Pacific's largest consumer of gas in 2038, reorienting liquefied

natural gas trade.

Solar Power Will Kill Coal Sooner Than You Think

Posted June 15, 2017, 8:20 A.M. ET

By Jess Shankleman and Hayley Warren

Solar power, once so costly it only made economic sense in spaceships, is becoming cheap enough that it will push coal and even natural-gas plants out of business faster than previously forecast. That's the conclusion of a Bloomberg New Energy Finance outlook for how fuel and electricity markets will evolve by 2040. The research group estimated solar already rivals the cost of new coal power plants in Germany and the U.S. and by 2021 will do so in quick-growing markets such as China and India.

The scenario suggests green energy is taking root more quickly than most experts anticipate. It would mean that global carbon dioxide pollution from fossil fuels may decline after 2026, a contrast with the International Energy Agency's central forecast, which sees emissions rising steadily for decades to come. "Costs of new energy technologies are falling in a way that it's more a matter of when than if," said Seb Henbest, a researcher at BNEF in London and lead author of the report.

The report also found that through 2040:

• China and India represent the biggest markets for new power generation, drawing $4 trillion, or about 39 percent all investment in the industry.

• The cost of offshore wind farms, until recently the most expensive mainstream renewable technology, will slide 71 percent, making turbines based at sea another competitive form of generation.

• At least $239 billion will be invested in lithium-ion batteries, making energy storage devices a practical way to keep homes and power grids supplied efficiently and spreading the use of electric cars.

• Natural gas will reap $804 billion, bringing 16 percent more generation capacity and making the fuel central to balancing a grid that's increasingly dependent on power flowing from intermittent sources, like wind and solar.

BNEF's conclusions about renewables and their impact on fossil fuels are most dramatic. Electricity from photovoltaic panels costs almost a quarter of what it did in 2009 and is likely to fall another 66 percent by 2040. Onshore wind, which has dropped 30 percent in price in the past eight years, will fall another 47 percent by the end of BNEF's forecast horizon.

That means even in places like China and India, which are rapidly installing coal plants, solar will start providing cheaper electricity as soon as the early 2020s.

"These tipping points are all happening earlier and we just can't deny that this technology is getting cheaper than we previously thought," said Henbest.

Coal will be the biggest victim, with 369 gigawatts of projects standing to be cancelled, according to BNEF. That's about the entire generation capacity of Germany and Brazil

combined.

Capacity of coal will plunge even in the U.S., where President Donald Trump is seeking to stimulate fossil fuels. BNEF expects the nation's coal-power capacity in 2040 will be about half of what it is now after older plants come offline and are replaced by cheaper and less-polluting sources such as gas and renewables.

In Europe, capacity will fall by 87 percent as environmental laws boost the cost of burning fossil fuels. BNEF expects the world's hunger for coal to abate starting around 2026 as governments work to reduce emissions in step with promises under the Paris Agreement on climate change.

"Beyond the term of a president, Donald Trump can't change the structure of the global energy sector single-handedly," said Henbest.

All told, the growth of zero-emission energy technologies means the industry will tackle pollution faster than generally accepted. While that will slow the pace of global warming, another $5.3 trillion of investment would be needed to bring enough generation capacity to keep temperature increases by the end of the century to a manageable 2 degrees Celsius (3.6 degrees Fahrenheit), the report said.

The data suggest wind and solar are quickly becoming major sources of electricity, brushing aside perceptions that they're too expensive to rival traditional fuels.

By 2040, wind and solar will make up almost half of the world's installed generation capacity, up from just 12 percent now, and account for 34 percent of all the power generated, compared with 5 percent at the moment, BNEF concluded.

Subject: Senate EPW to take up White, Wheeler nominations next week

By Anthony Adragna

11/01/2017 05:48 PM EDT

The Senate Environment and Public Works Committee plans to hold a confirmation hearing on Nov. 8 regarding Kathleen Hartnett White's nomination to run the White House Council on Environmental Quality.

In addition, the panel plans to consider Andrew Wheeler's selection to serve as EPA deputy administrator on the same day.

Subject: BREAKING NEWS: Ninth Circuit upholds block on Trump's travel ban

President Donald Trump's travel ban executive order suffered another legal blow Monday as a second federal appeals court weighed in against the legality of the directive.

A three-judge 9th Circuit panel unanimously turned down a Trump administration request to lift an injunction blocking key parts of Trump's revised order from taking effect.

Trump "exceeded the scope of the authority delegated to him by Congress" to oversee immigration, the court ruled. "Immigration, even for the President, is not a one-person show," the three judges wrote in a joint opinion.

Last month, another federal appeals court-the 4th Circuit-also rebuffed Trump's effort to move forward with the directive, which he contends is an anti-terrorism measure.

The Supreme Court is already considering the Justice Department's requests to consider the issue and allow Trump's order to take effect in the meantime.

EHS Federal Regulatory Alert

August 28, 2017 - Number 165

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

Summaries

AIR
Alaska SIP/Minor Source Permitting, Transportation Conformity
AIR

Final rule of the EPA approves revisions to the Alaska SIP that update the version of incorporated federal regulations, update minor source permitting requirements, and remove obsolete source-specific requirements. The revisions also update certain general conformity and transportation conformity provisions concerning interagency consultation and public involvement. The rule is effective Sept. 27, 2017. Contact: Randall Ruddick; EPA Region 10, Office of Air and Waste; 206-553-1999; ruddick.randall@epa.gov. Citations: 40 CFR 52.70

82 FR 40712 (08/28/2017)

Regulatory Update

AIR
Kentucky SIP/Louisville Metro Air Pollution Control District
AIR

Final rule of the EPA approves portions of revisions to the Kentucky SIP concerning the Louisville Metro Air Pollution Control District's stationary source emissions monitoring and reporting requirements. The revisions authorize the district to require emissions monitoring at stationary sources and require specified sources to maintain emissions records and provide annual emissions statements to the district. The rule is effective Sept. 27, 2017. Contact: Richard Wong, EPA Region 4, Air Planning and Implementation Branch; 404-562-8726; wong.richard@epa.gov. Citations: 40 CFR 52.920

82 FR 40701 (08/28/2017)

Regulatory Update

AIR
Maryland SIP/National Gypsum Co. Permit
AIR

Direct final rule of the EPA approves revisions to the Maryland SIP concerning alternative volatile organic compound (VOC) emission standards for the National Gypsum Co. facility near Baltimore. The revisions concern an alternative VOC emission limit in the state permit-to-construct and the conditions to ensure that National Gypsum remains a minor stationary source of VOCs. The rule is effective Nov. 27, 2017, unless adverse comments are received by Sept. 27, 2017. Contact: Gregory Becoat; EPA Region 3; 215-814-2036 becoat.gregory@epa.gov. Citations: 40 CFR 52.1070

82 FR 40715 (08/28/2017)

Regulatory Update

AIR
Maryland SIP/National Gypsum Co. Permit
AIR

Proposed rule of the EPA would approve revisions to the Maryland SIP concerning alternative volatile organic compound (VOC) emission standards for the National Gypsum Co. facility near Baltimore. The revisions concern an alternative VOC emission limit in the state permit-to-construct and the conditions to ensure that National Gypsum remains a minor stationary source of VOCs. A concurrent direct final rule adopts the revisions, effective Nov. 27, 2017. Comments are due Sept. 27, 2017. Contact: Gregory Becoat; EPA Region 3; 215-814-2036 becoat.gregory@epa.gov. Citations: 40 CFR 52.1070

82 FR 40743 (08/28/2017)

Regulatory Update

AIR
Maryland SIP/Permitting
AIR

Final rule of the EPA approves revisions to the Maryland SIP regarding procedures for issuance, denial, and appeal of permits. The revisions eliminate the contested case process and the Office of Administrative Hearings' adjudicatory hearing process for major permits and substitute direct judicial review. The revisions also expand standing for challenges to major permits and include public notice requirements for certain sources. The rule is effective Sept. 27, 2017. Contact: David Talley; EPA Region 3; 215-814-2117; talley.david@epa.gov. Citations: 40 CFR 52.1070

82 FR 40710 (08/28/2017)

Regulatory Update

AIR
Tennessee SIP/Knoxville PM-2.5 Nonattainment Area
AIR

Final rule of the EPA redesignates the Knoxville-Sevierville-La Follette, Tenn., fine particulate matter (PM-2.5) nonattainment area to attainment for the 2006 24-hour PM-2.5 NAAQS. The agency has determined that the area has attained the NAAQS based on 2013-2015 monitoring data. The rule also approves and incorporates into the SIP the state's reasonably available control measures determination for the area. In addition, the rule approves the maintenance plan, including motor vehicle emission budgets for nitrogen oxides and PM-2.5 for 2014 and 2028. The rule is effective Sept. 27, 2017. Contact: Sean Lakeman; EPA Region 4, Air Planning and Implementation Branch; 404-562-9043; lakeman.sean@epa.govCitations: 40 CFR 52.2220, 81.343

82 FR 40718 (08/28/2017)

Regulatory Update

AIR
Virginia SIP/Major New Source Review
AIR

Final rule of the EPA approves revisions to the Virginia SIP regarding major source new source review (NSR) standards. The revisions allow the use of a 10-year lookback period to calculate pre-change emissions for sources other than electric utility steam generating units and the use of different lookback periods for different regulated NSR pollutants. The revisions also extend the effective period for plantwide applicability limits to 10 years and allow replacement units to be treated as existing units, providing the ability to use baseline actual and projected actual emissions when determining applicability. The rule is effective Sept. 27, 2017. Contact: David Talley; EPA Region 3; 215-814-2117; talley.david@epa.gov. Citations: 40 CFR 52.2420

Regulatory Update

COASTAL ZONE
Puerto Rico/Jobos Bay National Estuarine Research Reserve
COASTAL ZONE

Notice of NOAA, Office for Coastal Management, announces a request for comments on the revised management plan for the Jobos Bay National Estuarine Research Reserve in Puerto Rico. The revised plan describes the administrative structure, research and monitoring, stewardship, education and training programs, and priorities of the reserve; plans for a proposed boundary expansion through future land acquisition; and facility development priorities. The revised plan also reflects a reduction in the acreage within the reserve to 2,800 acres and updates to monitoring, education, and other programs since the last plan was approved in 2000. Comments are due Sept. 27, 2017. Contact: Nina Garfield; NOAA, Office for Coastal Management; 240-533-0817

82 FR 40752 (08/28/2017)

Regulatory Update

COASTAL ZONE
Washington State/Padilla Bay National Estuarine Research Reserve
COASTAL ZONE

Notice of the Office for Coastal Management announces a meeting to discuss the performance evaluation of the Padilla Bay National Estuarine Research Reserve in Washington state. The office will consider the extent to which the state has met national objectives and adhered to its approved management plan and the terms of financial assistance under the Coastal Zone Management Act. The meeting is scheduled for Sept. 27, 2017, in Mount Vernon, Wash. Comments are due Oct. 6, 2017. Contact: Ralph Cantral; NOAA, Office for Coastal Management; 240-533-0729; Ralph.Cantral@noaa.gov

FOOD SAFETY

National Advisory Committee on Microbiological Criteria for Foods Nominations
FOOD SAFETY

Notice of the Food Safety and Inspection Service announces the reopening of the nomination period (81 FR 88197; 12/07/2016) for membership on the National Advisory Committee on Microbiological Criteria for Foods. The committee advises the secretaries of the departments of Agriculture and Health and Human Services on the development of microbiological criteria for the assessment of the safety and wholesomeness of food. Nominations are sought from individuals with expertise in the fields of epidemiology, food technology, microbiology, toxicology, risk assessment, infectious disease, biostatistics, and related sciences. The agency has reopened the period due to an increase in committee vacancies from 15 to 17. Nominations submitted during the original period do not need to be resubmitted. Nominations now are due Sept. 27, 2017. Contact: Karen Thomas-Sharp; FSIS; 202-690-6620; karen.thomas-sharp@fsis.usda.gov

GENERAL ENVIRONMENT AND SAFETY

Affirmative Procurement of Biobased Products
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Defense Department, General Services Administration, and National Aeronautics and Space Administration to seek OMB approval for a continuing information collection request regarding affirmative procurement of biobased products under services and construction contracts. The collection addresses requirements for prime contractors to annually report product types and dollar values of Agriculture Department-designated biobased products purchased to the System for Award Management website. The information collected allows federal agencies to annually report to the Office of Federal Procurement Policy on actions taken to implement and measure progress in carrying out the preference for biobased products. Comments are due Oct. 27, 2017. Contact: Charles Gray; GSA, Office of Governmentwide Acquisition Policy; 703-795-6328; charles.gray@gsa.gov. Citations: 48 CFR 52.223-2

GENERAL ENVIRONMENT AND SAFETY

Bone, Reproductive and Urologic Drugs Advisory Committee Meeting

GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a meeting of the Bone, Reproductive and Urologic Drugs Advisory Committee. The agenda includes discussion of appropriate patient selection criteria and clinical trial design features and acceptable endpoints for demonstrating clinical benefit for drugs intended to treat interstitial cystitis and bladder pain syndrome. The agenda also includes discussion of whether bladder pain syndrome and interstitial cystitis reflect overlapping or different populations and whether it is appropriate to assess efficacy in the same way for both conditions. The meeting is scheduled for Dec. 7, 2017, in Silver Spring, Md. Comments are due Nov. 22, 2017. Contact: Kalyani Bhatt; FDA, Center for Drug Evaluation and Research; 301-796-9001; kalyani.bhatt@fda.hhs.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY

Idaho/Gateway West Transmission Line Project

GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Bureau of Land Management to prepare an environmental assessment to reconsider the Jan. 19, 2017, record of decision approving the right-of-way application from PacifiCorp, of Portland, Ore., for Segments 8 and 9 of the Gateway West 500-kilovolt Transmission Line Project in Idaho. The bureau will identify issues associated with the reconsideration, including the potential amendment of several resource management plans and management framework plans in the project area. The reconsideration is due to the enactment of the Morley Nelson Snake River Birds of Prey NCA Boundary Modification Act, which directed the bureau to issue a right-of-way grant for portions of the project specified in Alternative 1 from the 2016 final supplemental EIS (81 FR 69845; 10/07/2016). Comments are due Sept. 27, 2017. Contact: Courtney Busse; BLM, Boise District Office; 208-373-3872; cbusse@blm.gov

82 FR 40797 (08/28/2017)

HAZARDOUS MATERIALS TRANSPORTATION
Improving Motor Carrier Safety Measurement Report
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Federal Motor Carrier Safety Administration announces the availability of a report by the National Academy of Sciences concerning motor carrier safety measurement. The document reviews the accuracy and methodologies of FMCSA's Compliance, Safety, Accountability program and the Safety Measurement System for identifying noncompliance and prioritizing motor carriers for interventions. The document also includes recommendations and an action plan for improvement of the system. A meeting is scheduled for Sept. 8, 2017, in Arlington, Va. Comments are due Sept, 27, 2017. Contact: Theresa Rowlett; FMCSA; 202-360-2924; Theresa.Rowlett@dot.gov

82 FR 40828 (08/28/2017)

Regulatory Update

RADIATION
Licensing for Land Disposal of Low-Level Radioactive Waste
RADIATION

Notice of the NRC announces the submission of a continuing information collection request to the OMB regarding licensing requirements for land disposal of radioactive waste. The collection addresses applications for licenses for land disposal of low-level radioactive waste by licensees, including agreement state licensees. Comments are due Sept. 27, 2017. Contact: David Cullison; NRC; 301-415-2084; INFOCOLLECTS.Resource@nrc.gov. Citations: 10 CFR 61

82 FR 40808 (08/28/2017)

Regulatory Update

RADIATION
Registration for In Vitro Testing with Byproduct Material Under General License
RADIATION

Notice announces the intention of the NRC to seek OMB approval for a revised information collection request concerning registration for in vitro testing with byproduct material under a general license. The collection concerns one-time submittal of NRC Form 483 for registration by any physician, veterinarian, clinical laboratory, or hospital for a general license to receive, acquire, possess, transfer, or use specified units of byproduct material in certain in vitro clinical or laboratory tests. The revisions update instructions and regulatory language. Comments are due Oct. 27, 2017. Contact: David Cullison; NRC; 301-415-2084; INFOCOLLECTS.Resource@NRC.GOV

82 FR 40809 (08/28/2017)

Regulatory Update

WATER
Definition of Waters of the U.S. Under the CWA
WATER

Notice of the U.S. Army Corps of Engineers and the EPA announces meetings to hear recommendations from stakeholders on revising the definition of "waters of the United States" under the Clean Water Act. There will be 10 teleconferences, with nine tailored to specific industries and one open to the general public, and one in-person meeting with small entities. The current action is intended to lead to a proposed rule to revise the definition and is part of the second step in a two-step process to implement Executive Order 13778 (82 FR 12497; 03/03/2017). The first step is being taken in a July 27, 2017, proposed rule (82 FR 34899) that would restore the definition to what it was prior to a June 29, 2015, final rule (80 FR 37054). The teleconferences will be held every Tuesday from Sept. 19 through Nov. 21, 2017. The in-person meeting with small entities is scheduled for Oct. 23, 2017, in Washington, D.C. Comments are due Nov. 28, 2017. Contact: Damaris Christensen; EPA, Office of Water; 202-566-2428; CWAwotus@epa.gov. Citations: 33 CFR 328; 40 CFR 110 through 401 (nonconsecutive)

82 FR 40742 (08/28/2017)

Regulatory Update

WATER
Wastewater Analysis and Sampling Test Procedures
WATER

Final rule of the EPA revises the test procedures for analysis and sampling of pollutants in applications and reports required under the Clean Water Act NPDES program and state certifications under CWA Section 401. The rule adds analytical methods developed by the EPA and voluntary consensus standard bodies and updates versions of currently approved methods. The rule also approves six methods reviewed under the alternative test procedures program (ATP), clarifies the process for approval of nationwide ATP approvals and the regional ATP coordinator's role in limited use ATP approvals, and corrects previously approved methods. In addition, the rule revises the procedure for determination of the method detection limits to address laboratory contamination and to account for intra-laboratory variability. The rule is effective Sept. 27, 2017. Contact: Adrian Hanley; EPA, Engineering and Analysis Division; 202-564-1564; hanley.adrian@epa.gov. Citations: 40 CFR 136.1 through 136.6, Appendices A, B

Subject: POLITICO's Morning Score: Special election day: Ossoff, Handel face off in Georgia — Norman heavily favored in South Carolina — Rosen to run against Heller in Nevada

By Kevin Robillard | 06/20/2017 10:00 AM EDT

With Scott Bland

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

LIVE FROM MARIETTA - "Georgia special election comes to a messy end," by POLITICO's Gabriel Debenedetti: "In the final hours before voters go to the polls in Georgia's special election Tuesday, national attention focused on a polarizing ad that almost no one in this Atlanta-area district saw - a cable television spot that ties Democrat Jon Ossoff to the 'violent left' in the wake of last week's shooting of GOP House Majority Whip Steve Scalise. It's a fitting conclusion to a race that's been nationalized from the start. ... For Handel, the final day meant a three-stop rumble through friendly territory, her last-minute play to jack up turnout in GOP strongholds. The campaign supporters who surrounded her wore stickers reminding, 'REPUBLICANS who stay home elect DEMOCRATS.' ... Ossoff avoided talk of Trump during his brief remarks Monday, instead turning his focus to former Missouri Secretary of State Jason Kander, who campaigned with him Monday. Kander, who narrowly lost a Senate race in November, was one of the few national party figures whom Ossoff's team would use as surrogates given the party's tenuous brand in the district." **Full story.**

- WHAT'S THE DAMAGE? The final spending tally is over $50 million, including $750,000 from national groups in the last five days. What wasn't money spent on? The same "violent left" ad, which features House Majority Whip Steve Scalise on a stretcher and was backed by just a five-figure buy.

- BECAUSE FIVE THINGS ISN'T ENOUGH - "Georgia special election: 7 things to watch," by Elena Schneider: "How high will turnout go? ... [T]here's a big question outstanding for Handel: Did the push to get Republicans to vote early just accelerate GOP voting instead of adding to it? Handel will almost certainly do better in the early vote than Republicans did against Ossoff in April, but the Democrat could still win the election anyway. ... Ossoff's moderate message ... The national stakes ... Will last week's congressional shooting affect the vote? ... Recruitments and retirements ... Special elections are still special." **Full story.**

- Polls close in both special elections at 7 p.m. Tune in for live results from GA-06 on POLITICO.com Tuesday evening. In the meantime, we've got preview maps here.

MEANWHILE, IN SOUTH CAROLINA - "Norman favored in SC-05 special," by Kevin Robillard: "The Democratic Congressional Campaign Committee has sent just under $300,000

to the district, and some big Democrats looking at 2020 presidential bids have helped out Parnell. Sens. Cory Booker and Kamala Harris have both donated campaign cash, former Maryland Gov. Martin O'Malley and Ohio Rep. Tim Ryan have both campaigned with him and former Vice President Joe Biden recorded a robocall for him. ... Jamie Harrison, the former chair of the Democratic party in the state ... said black voters will need to make up about 35 percent of a small electorate to pull off an upset. Republicans view that as a pipe dream. 'Republican strategists are more worried about summer vacations than anything else,' said Matt Moore, a former chair of the state GOP." **Full story.**

-The script of Biden's robocall for Parnell is very Biden-y: "There's a special election for Congress coming up on Tuesday, June the 20th, and I've got to tell you, Archie Parnell is the real deal. He was born and raised in Sumter, and he's never forgotten where he came from. And Archie will fight - he'll fight to save health care, protect Social Security and make the tax code simpler and fairer for ordinary people. The choice could not be clearer. Make sure you get out and vote - and vote for Archie Parnell - on June 20."

2018 WATCH - Sources: Rosen to make 2018 Senate bid against Heller in Nevada, by POLITICO's Seung Min Kim and Burgess Everett: "Rep. Jacky Rosen (D-Nev.) plans to run against Republican Sen. Dean Heller for his Senate seat in Nevada, according to multiple people familiar with her plans. Heller ... is the only GOP senator this cycle who represents a state won by Hillary Clinton in 2016. ... The recruitment of Rosen has the strong imprint of former Senate Democratic Leader Harry Reid of Nevada, who was entrusted by the party establishment to identify the strongest candidate to challenge Heller. Reid settled on Rosen, figuring that she's a fresh face with little political baggage and would be the most formidable opponent, according to a person familiar with the matter. After Reid settled on Rosen, Senate Minority Leader Chuck Schumer (D-N.Y.) 'closed the deal' and talked to Rosen four or five times to convince her to run, that person said. Schumer's office declined to comment." **Full story.**

- Rosen's move will leave battleground NV-03 open again in 2018 , two years after Rosen captured the seat left open when GOP Rep. Joe Heck tried to move up to the Senate. This is the one of the nation's prototypical swing districts; former President Barack Obama won it twice and Heck held it down for three terms, while President Donald Trump narrowly carried it in 2016 - 48 percent to 47 percent - has Rosen won it. It was already a major target for House Republicans, but it will climb up the list now that it's an open seat. (The 2016 race for this seat also set a record for House outside spending at $16.7 million, according to the Center for Responsive Politics. Georgia's 6th has since consigned that record to the dustbin of history.)

Days until the 2017 election: 140

Days until the 2018 election: 504

OFF MESSAGE PODCAST: Senator Ben Cardin thinks America is "absolutely" in danger of stumbling into war. Or wars. In the latest episode of Off Message, Isaac Dovere sits down with the ranking Democrat on the Senate Foreign Relations Committee, "[There are] many areas where there could be a miscalculation that could lead to a shooting war. In every one of those circumstances, the Trump administration has not given us a strategy." Listen and subscribe: iTunes | Panoply | Stitcher

HEALTH CARE FIGHT ON TAP NEXT WEEK - "Sources: Senate GOP prepares for Obamacare repeal vote next week," by Burgess Everett and Jennifer Haberkorn: "Senate Republicans are preparing to vote on Obamacare repeal next week, according to multiple sources familiar with the negotiations, potentially leaving rank-and-file lawmakers with no more than a week to review legislation that would affect millions of Americans and one-sixth of the U.S. economy. Senators are expected to see the text of the bill as soon as the end of this week, those sources said, provided this week's work goes smoothly. The timeline could change based on the response from individual senators toward the proposal at party meetings, but Republicans are increasingly optimistic they can hold a vote next week if this week's lunch talks go well." **Full story.**

- DSCC runs takeover ads vs. Heller, Flake, Cruz, Scott: The spots, part of a six-figure digital buy, are some of Google's new takeover ads. They link to the DSCC's ad, "The Price" which aims to show the cost of the GOP health care plan. The ads are targeted at Heller, Arizona Sen. Jeff Flake, Texas Sen. Ted Cruz and Florida Gov. Rick Scott. The DSCC is the first campaign group to use the ad format, which is designed to reach mobile viewers and cord cutters.

REDISTRICTING GOES TO COURT - "U.S. Supreme Court to hear Wisconsin's redistricting case but blocks redrawing of maps," by the Milwaukee Journal Sentinel's Patrick Marley: "In a related ruling Monday, the high court handed Republicans a victory by blocking a lower court ruling that the state develop new maps by Nov. 1. Democrats and those aligned with them took that order as a sign they could lose the case. The case is being watched nationally because it will likely resolve whether maps of lawmakers' districts can be so one-sided that they violate the constitutional rights of voters. The question has eluded courts for decades. ... "The grant of stay makes it considerably less likely the court will rein in partisan gerrymandering via WI case," [University of California, Irvine law professor Rick Hasen] wrote on Twitter. ... Both sides will be pitching their arguments to Kennedy. He has written that maps can be so partisan that they violate voters' rights, but that a standard has not been developed that courts can use to measure when maps should be thrown out because they result in unconstitutional political gerrymandering. ... The justices will likely hear arguments in October, according to the plaintiffs." **Full story.**

MORE 2018 WATCH - "Mike DeWine expected to announce run for Ohio governor this Sunday," by the Cleveland Plain Dealer's Andrew J. Tobias: "Republican Ohio Attorney General Mike DeWine plans to make a 'special announcement' at his annual ice-cream social event at his family's Greene County home this Sunday, a top campaign official says. The official, Dave Luketic, declined to comment further. But translating the vernacular of political campaign ritual, it's safe to say DeWine will make official his not-exactly-subtle plans to run for governor

in 2018, and shift the Republican gubernatorial primary into a more active phase." **Full story.**

- Democrat Randy Bryce announces challenge to House Speaker Paul Ryan: Randy Bryce, a veteran, cancer survivor and member of the local Ironworkers' Union, announced a run against Ryan. He's working with Democratic consultant Bill Hyers. **Watch his announcement video here.**

ADMINISTRATION SPEED READ - "Spicer searching for candidates to take over White House briefing," by POLITICO's Tara Palmeri: "Last week, Spicer and White House chief of staff Reince Priebus reached out to Fox News personality Laura Ingraham about the role of press secretary and Daily Mail editor David Martosko about the role of communications director, according to a White House official. Spicer and Priebus have had preliminary discussions with Ingraham and Martosko met with chief strategist Steve Bannon last week, according to the White House official." **Full story.**

CODA - QUOTE OF THE DAY: "It's all going to come down to turnout." - Democrat Jon Ossoff.

Subject: BREAKING NEWS: No Obamacare mandate repeal in latest House tax bill

A new version of the House Republican tax overhaul bill does not include a repeal of the Obamacare individual mandate, according to two sources familiar with the measure.

President Donald Trump has pushed for the provision as a way to get rid of the unpopular Affordable Care Act and to help pay for tax cuts. But a manager's amendment released today by House Ways and Means Chairman Kevin Brady does not include it, nor does a tax bill being released today in the Senate.

ENDANGERED SPECIES
Florida/Exemption from Threatened Species Permits
ENDANGERED SPECIES

Notice of the U.S. Fish and Wildlife Service announces the issuance of an exemption to threatened species permit requirements for beluga sturgeon (50 CFR 17.32 and 17.44). The exemption, which is for the Sturgeon AquaFarms aquaculture facility in Bascom, Fla., authorizes the facility to take sturgeon from its aquacultured stock for the purpose of harvesting meat and to engage in interstate commerce and export of beluga sturgeon meat. The exemption does not apply to beluga caviar or live beluga sturgeon. Contact: Rosemarie Gnam; USFWS; 703-358-1708; Rosemarie_Gnam@fws.gov

ENDANGERED SPECIES
Giant Clam Endangered/Threatened Status Petition
ENDANGERED SPECIES

Notice of the National Oceanic and Atmospheric Administration, National Marine Fisheries Service, announces a 90-day finding on a petition to list 10 species of giant clam, including eight Tridacna species and two Hippopus species, as endangered or threatened under the Endangered Species Act. NMFS finds that the petition presents substantial scientific or commercial information indicating that listing may be warranted for seven of the species. The notice also announces the commencement of status review for those seven species. Comments are requested regarding historical and current distribution and abundance of the species; population trends; life history in marine environments; historical and current data on the commercial trade of giant clam products and on giant clam fisheries; current or planned activities that may adversely or positively impact the species; population structure information; and management, regulatory, and enforcement information. A finding as to whether listing the species as endangered or threatened is warranted will be made by Aug. 7, 2017. Comments are due Aug. 25, 2017. Contact: Lisa Manning; NMFS, Office of Protected Resources; 301-427-8403

Taiwanese Humpback Dolphin Endangered Status
ENDANGERED SPECIES

Proposed rule of the National Oceanic and Atmospheric Administration, National Marine Fisheries Service, amends regulations under 50 CFR 224.101 to list as endangered the Taiwanese humpback dolphin, a subspecies of the Indo-Pacific humpback dolphin that occurs in a restricted area off the western coast of Taiwan. The agency seeks public comment on the range, distribution, and abundance of the subspecies; the genetics and population structure of the subspecies; habitat within the range that was present in the past but may have been lost over time; threats to the subspecies and protection efforts; current or planned activities within the range and their possible impact on the subspecies; and recent observations or sampling of the subspecies. Hearing requests are due Aug. 10, 2017. Comments are due Aug. 25, 2017. Contact: Chelsey Young; NMFS, Office of Protected Resources; 301-427-8403

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Oregon/Jordan Cove LNG Terminal, Pacific Connector Gas Pipeline
GENERAL ENVIRONMENT AND SAFETY

Notice announces the intention of the Federal Energy Regulatory Commission to prepare an environmental impact statement for the proposed Jordan Cove Liquefied Natural Gas (LNG) Terminal in Coos County and the Pacific Connector Gas Pipeline projects in Coos, Douglas, Jackson, and Klamath counties in Oregon. The terminal would be designed to liquefy approximately 1.04 billion cubic feet per day of LNG for export to Pacific Rim markets and include construction of a gas inlet facilities, a gas conditioning plant, ship loading facilities, and a new access channel. The pipeline would be approximately 235 miles long and be capable of transporting approximately 1.2 billion cubic feet of natural gas per day. FERC is the lead agency in preparing the draft EIS in cooperation with six federal agencies and seeks general comments on the project. The U.S. Forest Service seeks comments specific to the 2012 planning requirements under 36 CFR 219.8 through .11. Hearings are scheduled for June 27, 28, and 29, 2017, in Coos Bay, Roseburg, and Klamath Falls, respectively. Comments are due July 10, 2017. Wisconsin/Kaukauna City Plant Hydropower Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Federal Energy Regulatory Commission announces the filing of an application by Kaukauna Utilities, of Kaukauna, Wis., for a new major license for the Kaukauna City Plant Hydropower Project, on the Fox River in Outagamie County, Wis. The project consists of a 14-foot-high dam that includes rubble masonry retaining wall sections, a concrete intake and powerhouse section, a gated spillway section with two spillway gates, and an overflow spillway section that includes a concrete ogee section. The project also consists of natural rock and concrete gravity sections, an impoundment, an intake structure with two head gates and two trashracks with clear-bar spacing, and a powerhouse containing two turbine-generator units. In addition, the project consists of an excavated tail race, two kilovolt generator leads that connect the turbine-generator units to the regional distribution line, and appurtenant facilities with an annual average generation of approximately 29,704 megawatt-hours. The commission seeks comments concerning Scoping Document 1 that includes the information to be addressed in the environmental assessment. Comments are due Aug. 21, 2017. Subject: POLITICO's Morning Score: Strange pummels Brooks ahead of Alabama primary — Brooks defends running ad on Scalise shooting — McCain to make dramatic return for Obamacare vote

By Elena Schneider | 07/25/2017 10:00 AM EDT

With Zach Montellaro and Daniel Strauss

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

THREE WEEKS OUT - "Strange pummels Brooks ahead of Alabama primary," by Campaign Pro's Daniel Strauss: "Rep. Mo Brooks is the center of attention - and not the good kind of attention - with three weeks to go until Alabama's special Senate primaries. Sen. Luther Strange and his allies have singled Brooks out of the crowded Republican primary to complete Attorney General Jeff Sessions' Senate term, highlighting inconsistencies in his record and airing ads making Brooks out as a flip-flopper and an opponent of President Donald Trump - a cardinal sin among Alabama Republican voters. One would be forgiven for thinking Brooks was Strange's only opponent given the intense blast of news, TV ads and other attacks targeting the congressman. But it's a reflection of the theory that while former state Supreme Court Justice Roy Moore's supporters are fairly locked in, Brooks is the other main competitor for a slot in a September top-two primary runoff, and one of Strange or Brooks is considered most likely to miss out." **Full story.**

- ICYMI - "Brooks defends campaign ad on Scalise shooting," by Campaign Pro's Daniel Strauss: "Alabama Rep. Mo Brooks on Monday defended a new ad from his Senate campaign that used footage of the aftermath of the shooting rampage that wounded House Majority Whip Steve Scalise last month. Brooks, who is running in the Aug. 15 special Republican primary for Senate in Alabama, told POLITICO that the ad , which features sounds of gunshots and shouts before playing clips of a Brooks interview, was meant to highlight his support for the Second Amendment. ... But Scalise's chief of staff, Brett Horton, tweeted that the spot made his 'stomach turn,' as Brooks faced criticism for politicizing a tragedy." **Full story.**

IDENTITY ISSUES - "Democrats sidestep social issues in new economic push," by POLITICO's Heather Caygle and Elana Schor in Berryville, Va.: "Congressional Democratic leaders descended upon this rural Virginia town Monday to unveil a progressive economic package they say can win back working-class voters next November, even in red states. And noticeably missing, amid the talk of raising wages and reining in corporate interests, were the left-leaning stances on social issues that help form the backbone of the party, including immigration, abortion and LGBT rights. Senate Minority Leader Chuck Schumer (D-N.Y.) vowed that his party's red-state incumbents would largely embrace the new agenda - which, he acknowledged, purposefully avoids the social issues that have already opened a rift this year between the party's liberal base and centrist bloc." **Full story.**

ON THE HILL - "McCain to make dramatic return for Obamacare vote," by POLITICO's Burgess Everett, Seung Min Kim and Jennifer Haberkorn: "The Senate GOP bid to kill Obamacare - itself left for dead as of Monday morning - saw a flicker of life late in the day after a furious pressure campaign by President Donald Trump and Mitch McConnell heading into a critical Tuesday vote. McConnell spent the day cajoling his members and meeting with Vice President Mike Pence to plot strategy. The majority leader was still short of the votes to even open debate, and Republicans still don't know what they'd be voting to allow debate on if they agree to go along with McConnell on the procedural vote. But Sen. John McCain (R-Ariz.), recently diagnosed with brain cancer and recovering from surgery, announced that he would return to the Senate on Tuesday, giving GOP leaders a critical vote in the up-and-down battle over repealing Obamacare. But the Senate leader isn't being counted out." **Full story.**

Days until the 2017 election: 104.

Days until the 2018 election: 468.

Playbook Exchange Denver - Join POLITICO Playbook co-authors Anna Palmer and Jake Sherman for a special Playbook Exchange event in Denver with Colorado Gov. John Hickenlooper. Aug. 1 - 5:30 p.m. MDT / 7:30 p.m. EDT - S&P Global, 1800 Larimer St., 2nd Floor, Denver. RSVP: Here. Watch it live: Here.

2020 WATCH - "Sherrod Brown thinks he could have helped Democrats win in 2016. But what about 2020?" by The Washington Post's Ben Terris: "...'It's not out of the question that in 2020, if nothing changes, Democrats could win the popular vote by 5 million and lose the electoral college because of the Great Lakes states,' Brown said. So, because many of his constituents voted for Trump - and, frankly, because it seemed like a good reelection strategy - Brown's first instinct was to work with the president. ...He certainly is one of the Senate's most endangered Democrats. And if he loses, it could be the last anyone will hear from Sen. Sherrod Brown. But, if he wins ... 'We are constantly being asked by others if he'll run for president in 2020," Schultz said. 'In a way that we never have before.'" **Full story.**

MONEY, MONEY, MONEY - "Democratic House Freshmen Show Fundraising Edge Over GOP Classmates," by Roll Call's Sean McMinn : "With their first two fundraising deadlines behind them, Democratic newbies in the chamber are demonstrating their ability to out fundraise their Republican colleagues. Among first-term lawmakers in the chamber who will likely run for re-election next year, Democrats have taken in, on average, about 50 percent more in receipts per member than Republicans, according to a Roll Call analysis of Federal Election Commission filings. The margin between the two parties was largest during the first quarter of

the year, when Democrats raised an average of $348,000 per freshman member, compared to $226,000 among Republicans. The disparity shrank slightly in the second quarter, but Democrats kept a sizable advantage." **Full story.**

- The RGA is donating another $2 million to Republican Ed Gillespie's campaign in Virginia: The cash infusion follows $1 million delivered to the campaign shortly after he won the GOP primary.

- POLLING DATA - Monmouth poll finds Gillespie 44, Northam 44: "Democratic Lt. Gov. Ralph Northam and Republican Ed Gillespie are tied in the latest poll of Virginia's race for governor, with President Donald Trump dragging voters away from the Republican, according to a new survey from Monmouth University. Northam and Gillespie each earned 44 percent of the vote in the survey. Libertarian Cliff Hyra got 3 percent and 9 percent were undecided." **Full story.**

FUNNY BEDFELLOWS - First Family lawyer keeps donating to Democrats: Jamie Gorelick, a Democratic lawyer who is representing Jared Kushner and Ivanka Trump (and getting some grief from Democratic friends for doing so), has continued to donate to a handful of congressional Democrats in 2017, even as those candidates heavily criticize the Trump administration. Gorelick gave $1,000 to one House candidate, Lindsey Davis Stover, who's running to take on GOP Rep. Barbara Comstock in northern Virginia. Gorelick also gave to Minnesota Sen. Amy Klobuchar and Montana Sen. Jon Tester.

SHOW-ME SHOWDOWN? - "Missouri state rep eyes run against McCaskill after encouragement from Wagner," by the Kansas City Star's Bryan Lowry: "Missouri state Rep. Marsha Haefner says she's weighing a run for U.S. Sen. Claire McCaskill's seat after being encouraged by U.S. Rep. Ann Wagner. Haefner, a St. Louis Republican, said she plans to travel to Washington, D.C., in the near future to meet with national party officials about her interest in a run. 'I would hope that the Republican Party would support someone who is not a white male,' said Haefner, a 66-year-old grandmother who owns a greenhouse and garden center. ... Haefner had been planning to run for Wagner's congressional seat if Wagner had pursued a run against McCaskill, the incumbent Democrat, as most political observers in Missouri expected." **Full story.**

ADMINISTRATION SPEED READ - "Trump tests the loyalty of the Ohio Democrats he won," by POLITICO's Annie Karni: "Down-and-out Youngstown, Ohio, last year became emblematic of the power of Donald Trump's campaign. With his populist message targeting white working-class voters, he outperformed every GOP nominee since Richard Nixon won the Democratic stronghold of Mahoning County. Today, the blue-collar town represents one of the looming challenges of Trump's presidency, six months in: how to keep the support he won as a populist candidate, when he flipped disgruntled Democrats and independents to his side of the ledger, while in many cases governing like a plutocrat who has so far failed to deliver on many of his campaign promises. Trump will test the waters Tuesday night when he takes the stage in Youngstown at the Covelli Centre, a large arena that typically hosts events like ice hockey games, WWE wrestling matches, and monster truck tours. The campaign rally is designed to energize the president, excite his base, and offer Trump a chance to tack away from the Russia

scandal that never stops brewing in Washington - one that his advisers claim no regular, outside-the-beltway Americans really care about." **Full story.**

CODA - QUOTE OF THE DAY: "Who the hell wants to speak about politics when I'm in front of the Boy Scouts?" - President Trump, who later talked about politics, POLITICO reported.

September 11, 2017 - Number 175

News

Climate Regulation
EU Is Said to Draft Measures to Brexit-Proof Carbon Market
The European Union is preparing to make its emissions-trading system immune to a supply turmoil that may happen if Brexit talks fail and the U.K. leaves the world's largest carbon market.

Coal Mining
Arch Coal Closer to Expanding Mine in Colorado Roadless Area
Arch Coal is one step closer to expanding its coal mine in a roadless area of western Colorado following a U.S. Forest Service draft decision.

Energy
China Fossil Fuel Deadline Shifts Focus to Electric Car Race
China will set a deadline for automakers to end sales of fossil-fuel-powered vehicles, becoming the biggest market to do so in a move that will accelerate the push into the electric car market led by companies including BYD Co. and BAIC Motor Corp.

Energy
Irma Cuts Power to 6.4 Million, Shuts Ports, Imperils Crops
Hurricane Irma has knocked out power to at least 6.4 million customers, paralyzed tanker traffic, shuttered gasoline stations and suppressed demand for natural gas. As the stormheaded up Florida's west coast, it also threatened more than $1 billion worth of crops.

International Climate
Poland Sets Expiry Date on Its Love for Coal as EU Limits Beckon
After decades of trying to persuade the rest of Europe that coal was vital for the region's energy security, Poland is showing the first signs of admitting that it might have been wrong.

Motor Vehicles
China Set to Unveil Cap-and-Trade Auto Emission, Mileage Rules
China will soon unveil a mandatory cap-and-trade credit program for electric cars, starting the countdown for automakers to be in compliance with stricter rules on emissions and fuel economy, according to the country's state-backed auto association.

Motor Vehicles
Fuel Efficiency Standards Rule Delay Leads Five States to Sue
California has joined New York and three other states in a lawsuit against the Trump administration over vehicle fuel efficiency regulations.

Motor Vehicles

VW CEO Vows to Offer Electric Version of All Models by 2030

Volkswagen AG Chief Executive Officer Matthias Mueller announced sweeping plans to build electric versions of all models in the group's lineup as the world's largest automaker accelerates the shift away from combustion engines and tries to draw a line under the emissions-cheating scandal.

Renewable Energy

Energy Storage Permits Would Get Easier With California Bill

Local permitting of the energy storage systems California needs to help meet its clean energy goals should get easier under a bill headed to the desk of Gov. Jerry Brown (D).

Renewable Energy

Offshore Wind Costs Fall Below New Nuclear Plants in U.K.

The cost of generating electricity from offshore wind farms fell sharply in the U.K. to below the price the next nuclear reactors will charge, making the form of clean energy one of the cheapest ways to supply the grid.

Stormwater

Irma's Environmental Toll Could Be Less Than Harvey's

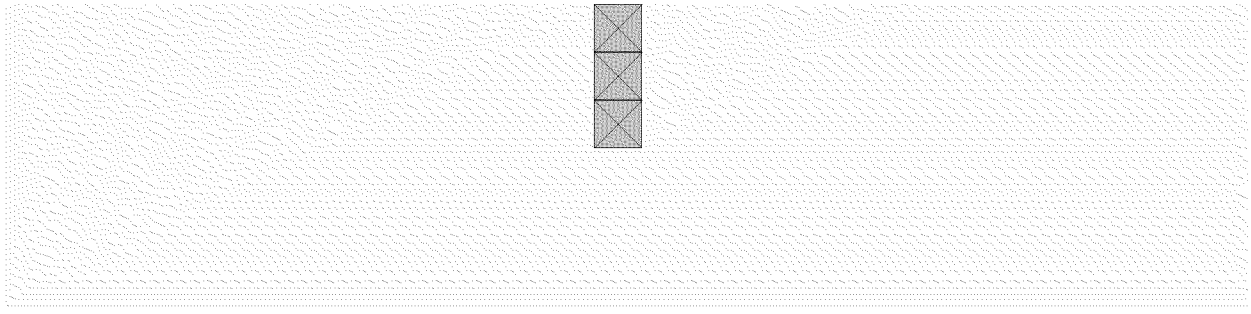
The environmental toll from Hurricane Irma in Florida may not be as harsh as the problems caused by Hurricane Harvey in Texas, according to scientists and water utility officials.

Toxic Substances

Abandoned Kerr-McGee Oil Well Fouled Water, Suit Says

Kerr-McGee Oil & Gas Onshore LP failed to take proper steps to clean up a crude oil leak at an abandoned Colorado oil well, according to a complaint filed Sept. 8 in the District of Colorado (Murray v. Kerr-McGee Oil & Gas Onshore, LP, D. Colo., No. 17-cv-02174, filed 9/8/17).

U.S. Solar Bracing for First Decline as Rooftop Demand Slumps



The U.S. is poised to experience its first annual decline in solar-panel installations, as a drop in rooftop demand slows growth in the world's second-biggest market.

Subject: [SPAM] Federal Insider: Federal employee civil service protections outdated? The experts speak.

Federal employee civil service protections outdated? The experts speak.

By Joe Davidson

President Trump speaks during a bill-signing event for the Department of Veterans Affairs Accountability and Whistleblower Protection Act of 2017 in the East Room of the White House on June 23. (Jabin Botsford/TWP)

The Department of Veterans Affairs Accountability and Whistleblower Protection Act is a game-changer for the federal workforce and a reason to worry about the future of due process for federal employees.

At the legislation's recent White House signing ceremony, President Trump put the government's workforce in general on notice when he said "outdated laws kept the government from holding those who failed our veterans accountable."

Trump is not alone when complaining about outdated civil service laws. While they might not agree with him, it's notable that only 29 percent of feds think "steps are taken to deal with a poor performer who cannot or will not improve," according to the 2016 Federal Employee Viewpoint Survey.

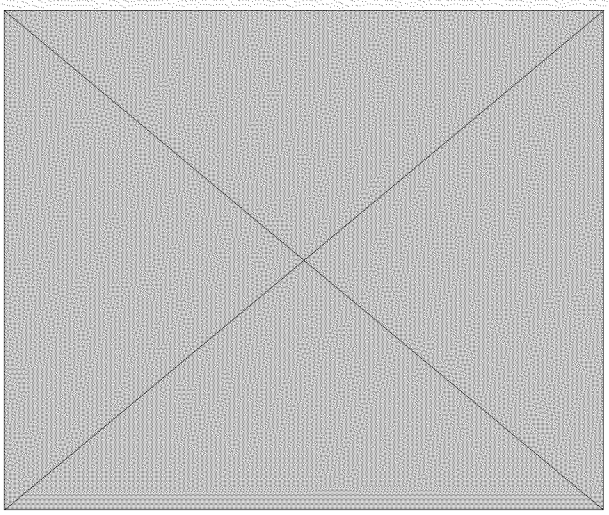
The new law is the latest move to fire feds faster by cutting their appeals process. It seriously damages civil service protections for VA employees, especially senior executives, and opens the door for similar measures to spread across the government. By eliminating the right of VA Senior Executive Service members to appeal adverse actions such as terminations, suspensions and demotions to an outside agency, the law eviscerated the long-standing principle of neutral review by a third party.

The time to appeal adverse actions was cut for all department staffers. Managers now can base those actions on weaker evidence than was allowed previously. It's important to note that fired employees are off the rolls

ADVERTISEMENT

and not paid before appeals are considered by the Merit Systems Protection Board (MSPB), an independent agency that hears claims from federal employees.

Significantly, the bill won overwhelming bipartisan support. It passed the House 368 to 55, with Democrats providing all but one of the dissenting votes.



But with 137 Democrats approving the legislation, federal employee unions that strongly opposed the measure must know they can't always count on their blue congressional allies.

One way to speed the process is to boost the MSPB, which rules against employees about 84 percent of the time. The average case processing time for initial appeals jumped from 89 days in fiscal 2010 to 499 days in 2015. Thousands of furlough appeals caused the increase, and there was a drop to 331 days in 2016. Yet, with layoffs planned under Trump's proposed budget, appeals could rise again. Increasing MSPB staffing could speed the process.

As part of the Federal Insider's ongoing look at efforts to undermine federal workplace protections, we sought the views of several experts, including those who might disagree with that characterization. We asked if civil service protections are "outdated" and how the federal disciplinary process could improve.

Here is some of what they had to say.

Teresa W. Gerton, the National Academy of Public Administration: "Civil service protections remain an absolutely essential bedrock for our professional public service workforce… With that premise, it is absolutely essential that we stop conflating the term 'accountability' in the public workforce with 'the ability to fire.' Instead, we should reclaim the idea that our leaders should be held responsible for achieving results and provide them a civil service system that allows them to get hiring, training, and retaining right."

Robert M. Tobias, American University: “The question is whether increasing the speed of reviewing decisions to discharge VA employees will increase organizational performance? I think the answer is no.” Existing law is not “a barrier to promptly discharging poor performers.”

Dan G. Blair, former Office of Personnel Management acting director under former president George W. Bush: “Firing and disciplining a federal employee can be done … Yet the current process is tilted in favor of the employee … Due process and fundamental fairness can be … achieved by streamlining this process.”

Matt Biggs, International Federation of Professional and Technical Engineers: “The point is that managers already have the authority to discipline and ultimately fire employees, but in order to do so they actually need to use the many authorities they already have. The due process protections are correctly there so good employees are not victims of unjust retaliation.”

Randy L. Erwin, National Federation of Federal Employees: “Federal Civil Service protections are absolutely not outdated. In this political climate and with this Administration … the apolitical federal workforce needs better protections so the work being done for the American people is not compromised for personal or political gain.”

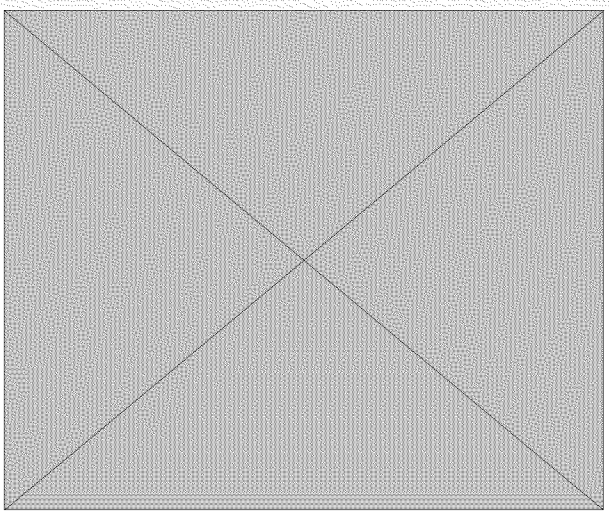
Bill Valdez, Senior Executives Association: “While due process protections for civil servants are critical, a federal manager should not need lawyers involved to effectuate minor discipline. More important than the accountability processes is organizational culture that supports and enables

ADVERTISEMENT

managers holding all employees accountable — both the positive and negative sides of accountability."

James Pfiffner, George Mason University: "My advice would be to shorten the time to appeal and ensure that agency and MSPB criteria were based on a 'reasonable person' standard. But this is premised on ensuring the MSPB is as nonpartisan as possible, which may be impossible, given the current state of polarization in Congress."

Max Stier, Partnership for Public Service: "If the focus is on modernizing the way government hires and engages its employees, we will have fewer instances of needing to fire poor performers … it is important to understand that the government's outdated personnel system is the real barrier to greater accountability … A core principle of the federal civil service rules is and should continue to be that we have a merit-based system in which politically motivated actions are treated as improper. The current disciplinary process is not necessary in all of its elements to support this principle."



This is not the last word. Tell us what you think. Do civil service protections need updating, and if so, how? Send your thoughts to joe.davidson@washpost.com with "civil service protections" in the subject line.

Subject: EPA urges court not to lift stay of methane rule for new oil, gas wells

By Alex Guillén

06/15/2017 03:55 PM EDT

EPA today urged the D.C. Circuit Court of Appeals not to reverse its decision to pause leak detection and repair requirements and other key parts of the agency's rule limiting methane emissions from new oil and gas wells.

Environmental groups sued last week and filed an emergency motion seeking the court's reversal of EPA's stay. The agency this week proposed a two-year delay of those requirements, increasing this lawsuit's tension.

"There is no emergency," and the environmental groups cannot meet the requirements to obtain court action, EPA argued in its brief today.

The leak detection requirements would prevent just 0.046 percent of annual oil and gas industry methane emissions, according to EPA. And pausing other requirements dealing with equipment and certification requirements does not present any imminent harm, the agency said.

EPA called the green groups' request "a sideways effort to attack EPA's decision to convene reconsideration proceedings" on the methane rule.

The public interest goes beyond environmental concerns to include economic growth and "productive capacity," the agency argued.

"EPA's short-term stay strikes a balance among these interests by allowing the Agency to consider whether to refine aspects of the 2016 Rule to better account for issues that the Agency did not consider and concerns among the regulated community that EPA did not foresee," the agency wrote.

WHAT'S NEXT: The green groups' response is due June 20, with a court decision likely sometime after that.

WATER
Water Resources/Water Well Construction
Colorado WATER

Notice of the Department of Natural Resources, Division of Water Resources, announces corrections to a June 10, 2016, final rule to amend regulations under 2 CCR 402-2 regarding water well construction. The rule revised groundwater protections; set forth minimum standards for construction, repair, plugging, sealing and abandonment of wells, pumps and cisterns; and allowed certain types of monitoring holes and wells to be constructed by persons other than licensed contractors. The rule also specified dewatering well construction and abandonment standards, revised new well permitting requirements, revised minimum distances from contamination sources, specified minimum casing requirements, added notification requirements, and updated references and definitions. The corrections revise erroneous references and update figure labels. Contact: Kevin Donegan; DNR, Division of Water Resources; 303-866-3581

RADIATION
Radiation Control
Kansas RADIATION

Proposed rule of the Department of Health and Environment amends regulations under KAR 28-35-135 through -504 (nonconsecutive); adopts regulations under KAR 28-35-181, -192, -197, and -700; and repeals regulations under KAR 28-35-197 and -230 regarding radiation control to comply with Nuclear Regulatory Commission standards. The rule adds requirements for the initial transfer of source material for use under the small quantities of source material general license, establishes exemptions for certain industrial devices, adds Schedule B exempt quantities of radioactive material, and adopts standards for physical protection of byproduct material. The rule also specifies exemptions for carriers; adds requirements for general licenses for uranium and thorium; updates requirements for general licenses for certain units of radium-226; and clarifies provisions concerning designation of an authorized nuclear pharmacist, including positron emission tomography (PET) radioactive drugs. In addition, the rule clarifies requirements for financial assurance for decommissioning, adopts standards for certain specific licenses, requires notification of Indian tribes regarding certain material shipments, and clarifies general monitoring requirements for personnel dosimeters. Finally, the rule removes redundant and conflicting requirements for individual monitoring. A hearing is scheduled for Nov. 2, 2017, in Topeka. Comments are due Nov. 2, 2017. Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: Tesla crash details emerge — Clearing the decks for infrastructure? — Securing Mar-A-Lago

By Lauren Gardner and Tanya Snyder | 06/20/2017 10:00 AM EDT

With help from Brianna Gurciullo and Stephanie Beasley

TESLA CRASH DETAILS: The NTSB published its factual docket Monday on the deadly Tesla crash in Florida last May that ratcheted up fears about the safety of self-driving car systems. At the time of the crash, suspicions of fault were on the driver and what appeared to be over-reliance on the autopilot system - a theory that appears to be reinforced by data released by NTSB Monday. For the vast majority of the trip - more than 37 minutes - the driver assistance system status was " hands required not detected." A visual warning came on seven times, followed by auditory chimes. The driver's hands were only on the wheel for 25 seconds of that time. At the time of the crash - and even immediately afterward - the car was going 74 mph. In January, NHTSA ruled that Tesla wasn't to blame for the crash.

System failure: Still, NTSB's report revives serious questions about the car's key collision-avoidance features - forward collision warning and automatic emergency braking - which didn't kick in to keep the Tesla from crashing into a tractor-trailer that was turning into its path. The airbags also failed to deploy when the car crashed into the truck, engaging only later, after it ran into a pole. NTSB's information dump Monday contained no conclusions about the crash's cause. But considering industry officials predict that fully autonomous cars will be on the road within two to three years, reports like these will continue to make the public jittery about self-driving cars, which boosters say will reduce fatalities.

'Well, the car didn't stop': A witness interview included in the docket describes how the Tesla kept going, even after the car emerged from under the truck with the driver "flopped" over. At first, the witness said, he thought the Tesla driver had ducked and escaped the crash unscathed - "I just thought he ducked and he was going to stop. Well, the car didn't stop ... I mean, my first thought was it's not stopping." The witness turned around to follow the out-of-control Tesla until it finally drove off the road and into a pole.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren and Tanya are sharing MT duties, so please send us tips, feedback and lyrics: tsnyder@politico.com or @TSnyderDC and lgardner@politico.com or @Gardner_LM.

Stickshifts and safetybelts / Bucket seats have all got to go / When we're driving in the car / It makes my baby seem so far / I need you here with me / Not way over in a bucket seat." h/t Bill Higgins, California Association of Councils of Governments

Want to keep up with MT's song picks? We only need four more followers to hit 100 on our Spotify playlist - get listening!

CLEARING THE DECKS? Senate Republicans are planning to vote on a bill to repeal Obamacare next week, provided talks this week go well, POLITICO's Burgess Everett and Jennifer Haberkorn report. Should everything go according to plan, that clears the Senate schedule of one of the GOP's priorities that's keeping an infrastructure plan on the back bench. But remember that a tax code overhaul is still on Republicans' minds as next in line. Senate Majority Leader Mitch McConnell "has made clear to associates he prefers not to let the bill linger so the Senate can turn to funding the government, raising the debt ceiling and rewriting the tax code, according to people that speak with him regularly," per Burgess and Jen.

DHS BILL MANIA ON HOUSE FLOOR: The House is expected to vote today on six homeland security-related bills, including a measure (H.R. 2132) sponsored by Rep. John Katko (R-N.Y.) that would require TSA to devote more resources to responding to individuals who have frequently been selected for additional airport screening. Language from the bill was also included in a DHS authorization bill approved by the House Homeland Security Committee last week and that Chairman Michael McCaul (R-Texas) said might also reach the floor later this month.

Lawmakers take aim at DHS oversight: Also up for a vote is a bill (H.R. 2131) that would establish a DHS-wide policy for investigating employee misconduct and another (H.R. 2283) that would create a DHS employee engagement steering committee. And H.R. 1282 would establish a board to oversee the department's acquisition review process.

DMV CHUGS ALONG ON WMATA SAFETY: FTA is urging 30 states to get moving to meet an April 15, 2019, deadline to establish state safety oversight agencies that comply with new federal requirements, and the Washington region is actually further along than other areas with large rail transit systems, Lauren reports for Pros. Nine states - including Illinois, New Jersey and New York - still haven't passed legislation to ensure their oversight bodies align with requirements outlined in the 2012 highway and transit law that bestowed upon FTA new regulatory powers on safety matters. Regulators are warning states that it takes time to get through the feds' certification process, and that they legally can't funnel transit funds to transit agencies within their borders if they blow the deadline.

NO WAKE ZONE: The Coast Guard is taking public comment on proposed limits on boat traffic near President Donald Trump's Mar-a-Lago resort in Florida, POLITICO's Josh Gerstein writes. The service is suggesting security restrictions in three zones, but only when those requiring Secret Service protection - like the president and the first lady - are visiting the "winter White House."

** **A message from Delta Air Lines:** Delta is committed to raising the standard of air travel. This commitment includes a continued investment in all 80,000 of their employees globally. Learn more at delta.com/dca **

MISSION: CERTIFICATION: The Eno Center for Transportation recommended Monday that the FAA delegate some of its aircraft certification authority to manufacturers. Together with the proposal to spin air traffic control out of the FAA - another Eno priority - this suggestion would

take some authority away from the FAA and hand it over, at least in part, to industry. This would allow the agency to "focus on its core mission: overseeing the safety of the national airspace," Eno said. Eno acknowledges the FAA's "stellar," "impeccable" safety record but says "the aviation industry is rapidly changing and growing, and the FAA is not equipped to respond to these challenges."

KEEP CLIMBING: A Delta Air Lines executive may be in the mix for a Republican seat on the Federal Trade Commission, Pro Technology's John Hendel and Ashley Gold report. Christine Wilson, a senior vice president at the airline, served as chief of staff to former FTC Chairman Tim Muris.

MT MAILBAG: A bipartisan group of nine senators, led by Sen. Deb Fischer (R-Neb.), sent a letter Monday to Transportation Secretary Elaine Chao, asking for her support for the Essential Air Service program, instead of cutting it as the administration proposed in its budget. At a Commerce Committee hearing earlier this month, Chao expressed her disappointment at the way EAS is structured but said she was "working within the administration to see how we can address that" and was "hopeful that I will have a partial solution, very shortly."

- The National Air Transportation Association wrote to House appropriators Monday to reiterate its opposition to splitting up the FAA.

ARRIVALS AND DEPARTURES: Brittany Bramell started this week at TSA as assistant administrator of public affairs after a stint at Uber (h/t POLITICO Playbook). And Mike Joyce recently left the American Trucking Associations.

IT'S NOT GOODBYE: After 14 years as president of the Transportation Trades Department, AFL-CIO, Ed Wytkind will step aside on July 18. TTD plans to hold a reception for Wytkind on that day. MT is staying tuned for word on where he is heading.

Subject: Playbook Power Briefing, presented by Morgan Stanley: SENATE TAX BILL to delay corporate tax cuts until 2019 -- GOODLATTE to retire -- SCOOP: 1,000-plus ex-Hill staffers sign letter pushing for sex harassment policy overhaul

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Morgan Stanley

By ANNA PALMER (anna@politico.com; @apalmerdc), JAKE SHERMAN (sherman@politico.com; @JakeSherman), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good Thursday afternoon. TAX REFORM UPDATE -- THE MANAGER'S AMENDMENT to the tax reform bill -- a big package of changes -- is expected this afternoon. Ways and Means is expected to pass the bill shortly after that. And the Senate tax bill -- which will be quite different than the House's -- is expected this afternoon.

-- UPDATE ON THE OTHER SIDE OF THE DOME: "Senate tax bill expected to delay corporate rate cut until 2019," by Ben White and Josh Dawsey: "The Senate tax reform bill expected today will likely include a delay in the implementation of a lower corporate tax rate until 2019, two people familiar with the matter said. The change from the House bill, which would institute a 20 percent corporate rate in 2018, is likely to upset President Donald Trump and the White House, which wants the change to happen as soon as possible." http://politi.co/2hnMwAX

THE DOW DROPPED more than 200 points on this news.

DELAYING THE CORPORATE CUT would be a huge problem for many House Republicans. As would dropping the state and local tax deduction. Keep an eye on those two provisions.

-- SUNDAY SO FAR: "Fox News Sunday": Ways and Means Chairman Kevin Brady (R-Texas). Panel: Michael Needham, Julie Pace, Gillian Turner and Charles Lane.

AND... ANOTHER ONE BITES THE DUST -- VIRGINIA REP. BOB GOODLATTE announced this morning that he will not seek reelection. We announced that he would retire a few days ago in Playbook. He was term limited as chairman of Judiciary at the end of the Congress. *His letter*

-- WHAT DOES THIS MEAN -- Republican operatives signaled to us earlier this week that we should expect a number of retirements in the coming days. This week alone, Reps. Ted Poe (Texas), Frank LoBiondo (N.J.) and Goodlatte have all called it quits.

None of those exits are surprising. But we are watching closely if other members make the move after Republicans' disappointing election results on Tuesday.

FIRST IN PLAYBOOK -- More than 1,200 former Capitol Hill staffers have signed a letter asking congressional leaders to overhaul the sexual harassment policies on Capitol Hill. The co-signers urge House and Senate leaders to change its policy to require mandatory harassment training, make counseling available and mediation voluntary if individuals file a complaint with the Office of Compliance. It also asks Congress to survey congressional staff every two years to better understand harassment on Capitol Hill and figure out how well the programs are working, according to the letter organized by Travis Moore with Tech Congress.

In asking former aides to sign onto the effort, Moore wrote that "it would be extremely difficult for current staff to advocate for changes themselves, given the political constraints, some of us decided to organize a letter from former staff asking for reform." *The letter* http://politi.co/2iletA9

SCOOP -- "White House chief of staff tried to pressure acting DHS secretary to expel thousands of Hondurans, officials say," by WaPo's Nick Miroff: "On Monday, as the Department of Homeland Security prepared to extend the residency permits of tens of thousands of Honduran immigrants living in the United States, White House Chief of Staff John F. Kelly called Acting Secretary Elaine Duke to pressure her to expel them, according to current and former administration officials. Duke refused to reverse her decision and was angered by what she felt was a politically driven intrusion by Kelly and Tom Bossert, the White House homeland security adviser, who also called her about the matter, according to officials with knowledge of Monday's events, who spoke on the condition of anonymity to discuss internal deliberations. ... Duke, who was confirmed by the Senate in April, has informed Kelly she plans to resign, said the officials. Hoffman said there is 'zero factual basis' to the claim that Duke has said she'll step down." http://wapo.st/2AozmYg

THE FEUD THAT NEVER ENDS -- STOP ME IF YOU'VE HEARD THIS BEFORE .... "Bannon: Mitch McConnell should resign," by Louis Nelson: "'I'm to the point that I think Mitch McConnell, to really bring unity to the Republican Party and get things done, I think Mitch McConnell ought to tender his resignation,' Bannon, who returned to his job heading the conservative media outlet Breitbart News upon leaving the White House, told Fox News's Sean Hannity on Wednesday. 'What he ought to do is offer to resign as soon as taxes are done. We can't do it in the middle of taxes... Because I've got to tell you, there needs to be a sense of urgency in the Senate.'" http://politi.co/2home1B

HMM -- "Trump voter fraud panel sued by its own member," by Josh Gerstein: "President Donald Trump's beleaguered voter-fraud commission was hit with a new federal lawsuit Thursday, but this time from an unusual source: one of the panel's own members. Maine Secretary of State Matt Dunlap, one of four Democrats on the 11-member board, filed a suit claiming that he's being denied access to the commission's records and effectively frozen out of its activities.

"The suit, which is at least the sixth legal case filed against the panel, comes as questions are swirling about the commission's future and whether the Trump administration might simply abandon the effort. A commission meeting in New Hampshire led to a high-profile dispute between the board's vice chairman, Kansas Secretary of State Kris Kobach, and another panelist, New Hampshire Secretary of State Bill Gardner, over allegations of voting by non-residents in the Granite State's first-in-the-nation primary." http://politi.co/2zpS0C3

ON RUSSIA -- "Russia Twitter trolls deflected Trump bad news," by AP's Ryan Nakashima and Barbara Ortutay: "Disguised Russian agents on Twitter rushed to deflect scandalous news about Donald Trump just before last year's presidential election while straining to refocus criticism on the mainstream media and Hillary Clinton's campaign, according to an Associated Press analysis of since-deleted accounts. Tweets by Russia-backed accounts such as 'America_1st_' and 'BatonRougeVoice' on Oct. 7, 2016, actively pivoted away from news of an audio recording in which Trump made crude comments about groping women, and instead touted damaging emails hacked from Clinton's campaign chairman John Podesta.

"Since early this year, the extent of Russian intrusion to help Trump and hurt Clinton in the election has been the subject of both congressional scrutiny and a criminal investigation by special counsel Robert Mueller. In particular, those investigations are looking into the possibility of collusion between the Trump campaign and the Russians. AP's analysis illuminates the obvious strategy behind the Russian cyber meddling: swiftly react, distort and distract attention from any negative Trump news." http://bit.ly/2yLdwSu

--"He Solved The DNC Hack. Now He's Telling His Story For The First Time," by BuzzFeed's Jason Leopold: "One late morning in May 2016, the leaders of the [DNC] huddled around a packed conference table and stared at Robert Johnston. The former Marine Corps captain gave his briefing with unemotional military precision, but what he said was so unnerving that a high-level DNC official curled up in a ball on her conference room chair as if watching a horror movie.

"At 30, Johnston was already an accomplished digital detective who had just left the military's elite Cyber Command, where he had helped stanch a Russian hack on the US military's top leadership. Now, working for a private cybersecurity company, he had to brief the DNC - while it was in the middle of a white-knuckle presidential campaign - about what he'd found in the organization's computer networks. Their reaction was 'pure shock,' Johnston recalled. 'It was their worst day.'" http://bzfd.it/2hVaTD2

AFTERNOON READ -- MICHAEL GRUNWALD in POLITICO Magazine, **"How Trump Learned to Love the Swamp:** A year after the election he's still campaigning as a populist, but he's governing for the big interests he ran against": "One year after Trump's rhetorical war on elites produced a shocking electoral victory, the president still talks and tweets like a populist, promising lower taxes, better health care and terrific

infrastructure for hardworking families. But ... a review of his executive orders, personnel picks, budget choices and regulatory actions, as well as the legislation he has backed from the White House, show that he has mostly governed as a corporatist, siding with big businesses, wealthy individuals, and the Republican establishment on almost every domestic issue.

"His agenda has neatly fit the playbook of the K Street lobbyists and conservative ideologues he attacked and mocked last year on the campaign trail, pushing to slash funding for nursing homes and student loans, gut rules protecting workers from toxic chemicals, and cut taxes for the rich." http://politi.co/2m8w6xZ

AIR WARS - 45Committee, which is partly backed by Sheldon Adelson and Joe Ricketts, started running TV ads today urging constituents to call Sens. Heidi Heitkamp (D-N.D.), Joe Donnelly (D-Ind.) and Joe Manchin (D-W.Va.) and urge them to support tax reform. The ads are part of an 8-figure campaign, according to a spokesman for the group. *One of the spots* http://bit.ly/2Anmr96

ON THE WORLD STAGE -- "U.K. Minister Resigns Over Unauthorized Meetings With Israeli Officials," by WSJ's Jenny Gross: "The second minister in just over a week resigned from Prime Minister Theresa May's government, as the British leader tried to regain command after a series of blunders by members of her cabinet. Mrs. May summoned Priti Patel, the international development secretary, back to London from an official trip to Uganda after details emerged about unauthorized meetings Ms. Patel had in August and September with Israeli officials, including Prime Minister Benjamin Netanyahu. Mrs. May said in a letter to Ms. Patel that work with Israel should be done 'formally and through official channels.'

"The development is the latest in a quick succession of challenges for Mrs. May, who has struggled to contain political fires and rein in ministers since losing her party's majority in a June election gamble." http://on.wsj.com/2hlDOmN

--"Lebanon believes Saudi holds Hariri, demands return," by Reuters' Laila Bassam and Tom Perry in Beirut: "Lebanon believes Saad al-Hariri is held in Saudi Arabia, from where he resigned as prime minister, two top Lebanese government officials said, amid a deepening crisis pushing Lebanon onto the frontlines of a power struggle between Saudi Arabia and Iran. A third source, a senior politician close to Saudi-allied Hariri, said Saudi Arabia had ordered him to resign and put him under house arrest." http://reut.rs/2jgTatu

--"Saudi Billionaires Look to Move Funds to Escape Asset Freeze," by Bloomberg's Archana Narayanan, Matthew Martin, Zainab Fattah, and Ruth David: https://bloom.bg/2AwIsTF

RAHM EMANUEL and **BRUCE REED** in WaPo, **"Democrats can keep winning:** Just copy (Bill) Clinton": "Fix your party's problems or you'll never fix the country's. ... Show Americans what you're for. ... Leave no vote unturned." http://wapo.st/2zv9QBs

INTERESTING -- "This lawmaker isn't sure that God exists. Now, he's finally decided to tell people," by WaPo's Michelle Boorstein: "On Thursday, [Rep. Jared Huffman (D-Calif.)] will release a statement saying he is a humanist, a loose philosophy based on the idea that humans should work to improve society and live ethically, guided by reason, not necessarily by anything supernatural. While there are some humanist organizations and congregations, generally it describes a worldview, not an affiliation.

"The definition of 'atheism' is simply the absence of belief in any deities. Experts on religious identity in Congress say Huffman seems to be only the second member in contemporary records to describe his ethical system as not being God-based." http://wapo.st/2hmVG0n

****** **A message from Morgan Stanley:** Startup Landit seeks to launch a technology platform that would enable companies to further the success of women in the workplace. Through the Morgan Stanley Innovation Lab, the firm's in-house technology startup accelerator program, Landit was able to access our networks and resources to connect with investors. Read more. ******

PARADISE PAPERS -- "Endowments Boom as Colleges Bury Earnings Overseas: American universities are using offshore strategies to swell their coffers, skirt taxes and obscure investments that could spark campus protests," by NYT's Stephanie Saul: "A trove of millions of leaked documents from a Bermuda-based law firm, Appleby, reflects some of the tax wizardry used by American colleges and universities. Schools have increasingly turned to secretive offshore investments, the files show, which let them swell their endowments with blocker corporations, and avoid scrutiny of ventures involving fossil fuels or other issues that could set off campus controversy. Buoyed by lucrative tax breaks, college endowments have amassed more than $500 billion nationwide." http://nyti.ms/2jbByix

MEDIAWATCH -- "Fox, facing new competitors, clings tighter to Trump," by Jason Schwartz: "The network's new prime-time lineup, featuring [Laura] Ingraham, Sean Hannity and Tucker Carlson, who was added in April, forms a three-hour nightly block of solid Trump cheerleading. Factor in the Trump-friendly morning show, 'Fox & Friends,' on from 6 a.m. to 9 a.m., and during the network's most-watched hours, seldom is heard a discouraging Trump word.

"'I've read the stories about how the Murdochs have soured on Donald Trump, but you would not know it from their programming decisions,' said Charlie Sykes, the longtime conservative radio host and MSNBC contributor. 'It certainly reflects the business model of conservative media right now. Pro-Trump viewers want a safe space. They want a reliable outlet that will defend the president and attack his critics and Fox has apparently decided that it's going to give them that.'" http://politi.co/2hnv0wM

COMING ATTRACTIONS - JAKE TAPPER will host the third annual Veterans Awards Jan. 20 at the Mayflower.

RET. ADM. MIKE MULLEN, J.D. VANCE, RICHARD HAASS, and **JOE KLEIN** are among the advisory board members of a new organization that launched today called With Honor that is recruiting post-9/11 veterans to run for Congress.

VALLEY TALK -- "Uber whistleblower Susan Fowler has a book deal" - AP: "Viking told The Associated Press on Thursday that it had acquired a memoir by Susan Fowler. The book is currently untitled and a release date has not yet been determined. Fowler is an engineer based in the Bay Area who in February detailed how she was propositioned by her boss at Uber and her complaints to human resources were ignored." http://bit.ly/2hWZ8vN

TRANSITIONS -- Rachel Nagler, who has spent six years heading communications for Bloomberg Businessweek, is moving to lead communications at Bloomberg Philanthropies. ... **Jason Phelps** has started as national press secretary for Giffords, formerly Americans for Responsible Solutions. He previously was communications director for Rep. Derek Kilmer (D-Wash.). ...

... Bart Oosterveld has been named the new director of the global business and economics program and the C. Boyden Gray Fellow on global finance and growth at the Atlantic Council. He most recently was managing director and chief credit officer for the Americas at Moody's Investors Service. ... **Todd Davenport** has joined Buckley Sandler as chief of communications and client development. He most recently led communications and marketing at Promontory Financial Group, and was previously an editor and columnist at the American Banker.

SPOTTED: Sens. Todd Young (R-Ind.) and Jeff Merkley (D-Ore.) getting the Humanitarian Hero Awards last night from Mercy Corps last night at the Whittemore House in Dupont Circle

OUT AND ABOUT -- SPOTTED at last night's D.C. premiere at the Newseum of HBO's upcoming documentary "The Newspaperman: The Life and Times of Ben Bradlee," hosted by Richard Plepler and Sally Quinn: Carl Bernstein, Bob Woodward, Reps. Nancy Pelosi (D-Calif.) and Debbie Dingell (D-Mich.), Sen. Ed Markey (D-Mass.) and Susan Blumenthal, John Maggio, Richard Cohen, Peter, George, and Teddy Kunhardt, Quinn Bradlee, Wolf Blitzer, Chris Dodd , Robert Kaiser, Tammy Haddad, Laura Meckler, Peter Nicholas, Fred Ryan, Ruth Marcus, Bob Costa, Patrick Steel, Hilary Rosen, Fred Hiatt, Polson Kanneth, Maureen Orth, Tony Kornheiser, Len Downie, David Simon, Sheila Johnson, Bob Barnett, Annie Linskey, Ryan Williams, Kellie Meyer, Michael Falcone, Ruby Mellen and Meridith McGraw.

SPOTTED at the kickoff last night of the new Jewish Democratic group JDCA, which is being run by Steve Rabinowitz, Fran Katz Watson, Aaron Keyak and Lauren France: House Minority Leader Nancy Pelosi (*pic* http://politi.co/2yoFCyr), Israeli Amb. to the U.S. Ron Dermer, Sens. Bob Casey (D-Pa..), Maria Cantwell (D-Wash.), Ben Cardin (D-Md.), Michael Bennet (D-Colo.), Sherrod Brown (D-Ohio), Tim Kaine (D-Va.), Chris

Murphy (D-Conn.), Debbie Stabenow (D-Mich.), and Chris Van Hollen (D-Md.), House Minority Whip Steny Hoyer, Reps. Charlie Crist (D-Fla.), Eliot Engel (D-N.Y.), Joe Kennedy III (D-Mass.), Nita Lowey (D-N.Y.), Jerry Nadler (D-N.Y.), Jared Polis (D-Colo.), Debbie Wasserman Schultz (D-Fla.) and Brad Sherman (D-Calif.).

****** **A message from Morgan Stanley:** How can technology help drive success? In the Morgan Stanley Innovation Lab, our in-house technology startup accelerator program, startup Landit seeks to use their tech platform to enable companies to further the success of women in the workplace. One of five startups participating in the program, Landit believes the partnership has the potential to accelerate their curve and expand their opportunities. "Only a small fraction of all venture capital money is given to multicultural and women entrepreneurs," explains Carla Harris, a Vice Chairwoman of Morgan Stanley and Head of its Multicultural Client Strategy Group. "Meanwhile, Morgan Stanley is a leader at the intersection of what these companies need: capital, connections, and investment banking content. We have the resources, access to relationships, and the expertise that can help refine these businesses and hopefully attract capital to scale up in size." Read more. ******

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

June 26, 2017

Latest News

Backing EPA's SEP Policy, DOJ Seeks To Ease Fears Over Settlement Bar

The Justice Department (DOJ) is seeking to ease fears that Attorney General Jeff Sessions' recent memo barring third-parties from receiving monetary payments in legal settlements will undercut EPA's popular supplemental environmental projects (SEPs), saying that projects that comply with EPA policy, which already prohibits third-party payments, will not be affected by Sessions' memo.

Court Urged To Reject EPA 'Determination' In Novel Water Standards Suit

Environmentalists are urging a federal court to reject EPA's recent "determination" that changes to California's rules during the state's drought did not amount to a change in water quality standards (WQS), in a bid to set a precedent that could expand the universe of state water rules that are subject to mandatory federal review under the Clean Water Act (CWA).

Beech-Nut Resists Cleanup UAO, Posing Rare Test For EPA Superfund Power

Baby food manufacturer Beech-Nut Nutrition Company is taking the rare step of refusing to comply with a unilateral EPA order to clean up a contaminated property it once owned, prompting a risky legal fight under the Superfund law, though one source says the company's actions suggest an "aggressive posture" that could be emboldened by signs of eased enforcement from the Trump administration.

Nanotech Sector Urges Trump EPA To Delay, Revise TSCA Reporting Rule

Nanomaterial users and producers are urging the Trump EPA to further delay and overhaul an Obama administration nanotech reporting rule, arguing that the agency's recent draft guidance on the rule fails to adequately clarify compliance obligations and saying EPA's delays of other Obama-era rules help to justify their request on the nano rule.

Latest EPA Drafts Of ETBE, TBA Assessments Maintain Risk Estimates

The Trump EPA has released updated draft Integrated Risk Information System

(IRIS) assessments for two petro-fuels chemicals that include only minor differences from earlier drafts released last year by the Obama administration, a finding that is likely to disappoint industries that have lobbied EPA to drop the assessments.

Daily Feed

Court denies rehearing on Puerto Rico cities' coal ash bans

The 1st Circuit let stand a decision that blocked local governments' ability to ban coal ash disposal after state regulators issue rules allowing the practice.

D.C. Circuit sets argument in Trump '2-1' order lawsuit

Judge Randolph Moss schedules Aug. 10 arguments in litigation over President Trump's order that requires EPA to repeal two rules for every new measure issued.

EPA unveils highly anticipated TSCA framework rules

EPA releases it TSCA framework rules for “existing” chemicals.

Judge signals looming decision on CWA coal ash appeal timing

A federal district court judge could soon decide whether a fight over Clean Water Act restrictions on coal ash disposal will move quickly to appellate court.

Excess nutrient levels seen nationwide

In today's Ewire: From the Gulf of Mexico, to the Chesapeake Bay and beyond, concerns are growing nationwide about excess nutrient levels -- though the issue appears to be on EPA's backburner.

D.C. Circuit sets argument in ozone implementation rule suit

The U.S. Court of Appeals for the District of Columbia Circuit will hear argument Sept. 14 in litigation over the Obama EPA's rule for implementing the 2008 ozone air standard.

From: Morning Transportation
Sent: Tue 7/25/2017 2:35:44 PM
Subject: POLITICO's Morning Transportation, presented by American Public Transportation Association: PFC watch — NTSB meets on grade-crossing crash — Out with the old

By Lauren Gardner and Stephanie Beasley | 07/25/2017 10:00 AM EDT

With help from Kathryn A. Wolfe

HEADS UP: The Senate Appropriations subcommittee in charge of transportation spending will mark up its draft fiscal 2018 funding bill today, and according to an action alert distributed by the American Association of Airport Executives and obtained by POLITICO, the mark may contain a long-sought hike for the cap on Passenger Facility Charges. The group says they're expecting the draft to raise the cap from $4.50 to $8.50 - along with a $250 million bump for the Airport Improvement Program, with some caveats. The alert calls on members to press their senators to keep the language, as the "airlines and their allies are already hard at work trying to make sure any proposed PFC increase is defeated soundly."

Someone else got the message: Americans for Tax Reform reiterated its opposition to a fee hike in a letter to appropriators Monday. Read it here.

Check's in the mail: Based on that subcommittee's recent hearing on transportation spending, we're expecting some big differences (per usual) from the House measure. For one, don't expect subcommittee cardinal Susan Collins (R-Maine) to sacrifice the TIGER grant program, which has been consistently funded at the $500 million mark annually, for other priorities - she's on-record as a big booster of the program despite the Trump administration's desire to do away with it. That being said, we'll be looking for the panel to propose some way - as the House did - to send a chunk of money to the Gateway program, a top priority for Senate Minority Leader Chuck Schumer (D-N.Y.) and other Northeast lawmakers. While the Senate subcommittee has a few billion more to play with than the House did at about $60.1 billion total, keep in mind this bill also has to fund housing programs.

Trains and planes: Collins has been historically friendly to Amtrak, which has a state-supported route running through her home state, and to transit grant programs. Once the text is released (later this week, after the full committee marks up on Thursday), we'll be watching for how the committee words DOT's responsibilities for carrying out the Capital Investment Grant program, which the administration has suggested winding down. And the Essential Air Service, another rural-focused program Trump proposed for the chopping block, is unlikely to be slashed dramatically, if at all.

About that recess ... : Meanwhile, House GOP appropriators are agitating for leadership to delay the August recess so the chamber can consider a trillion-dollar omnibus spending package catering to the party's base, POLITICO's Rachael Bade, John Bresnahan and Sarah Ferris write. "If leadership decides to reverse course and pursue a full GOP spending package, it's likely the House will stay in session for another week, delaying the first week of recess," they report.

IT'S TUESDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren is in the MT driver's seat with Steph, so please send along tips, feedback and lyrics to lgardner@politico.com or @Gardner_LM and sbeasley@politico.com or @Steph_Beasley.

"They call me Baby Driver/And once upon a pair of wheels/I hit the road and I'm gone/What's my number?/ I wonder how your engines feel."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

NTSB MEETS ON GRADE-CROSSING CRASH: The NTSB meets this morning to determine the probable cause of a 2015 train crash in suburban New York that killed five Metro-North passengers and the driver of an SUV that had stopped on the tracks at a grade crossing. The meeting has been a long time coming - NTSB investigations typically take between 12 months and 18 months to complete, and this one clocks in at nearly 18 - and The Journal News has a primer here with background and some things to expect. Sarah Feinberg, the most recent FRA administrator, focused a significant portion of her tenure on improving safety at grade-crossings. Ron Batory, who's been nominated as her successor for the Trump administration, appears before the Senate Commerce Committee Wednesday, and we wouldn't be surprised if someone like Sen. Richard Blumenthal (D-Conn.) decides to interrogate him about how he plans to address NTSB's recommendations for improving rail safety (in this case or for any number of train accidents that have happened in the last few years - including many in his state).

WAY BETTER DEAL? Congressional Democrats unveiled their "Better Deal" agenda (which House Republicans wasted little time ripping for sounding a lot like Speaker Paul Ryan 's "Better Way" platform) Monday in exurban Northern Virginia. They vowed to propose at least one more infrastructure-focused policy idea in the coming weeks that could be bolted onto the $1 trillion plan Senate Democrats unveiled months ago. "Now, in future weeks we'll offer additional ideas, from rebuilding rural America to fundamentally changing our trade laws to benefit workers, not multinational corporations," Schumer said. House Minority Leader Nancy Pelosi (D-Calif.) also couldn't resist dinging President Donald Trump for not yet following through on his infrastructure pledge. "We are here with no jobs bill, no infrastructure bill, no tax reform legislation, no plan to avert the debt default," she said.

** **A message from American Public Transportation Association:** Public transportation is a vital part of an integrated transportation network that drives our economy forward, creating 50,000 jobs for every $1 billion invested. Without public transit, America simply can't move forward. And in order to improve our public transportation systems, states and localities need continued federal investment. Learn more at APTA.com/InvestNow. **

OUT WITH THE OLD ... : Transportation Secretary Elaine Chao on Monday appointed David Horner and Steve McMillin to the board of directors for the Washington Metropolitan Area Transit Authority, replacing two Obama-era appointees that had not finished their terms, our Brianna Gurciullo reports . Horner is a partner at Hunton & Williams and focuses on public-private partnerships. McMillin is a partner at U.S. Policy Metrics and former deputy director of

the Office of Management and Budget. The two take over for Carol Carmody and David Strickland, both former federal transportation safety officials and both appointed to multi-year terms last year by former DOT Secretary Anthony Foxx. They were asked to step down from their positions as two of the board's eight voting members.

Chao's stamp: Board members told the Washington Post that they were aware of Chao's plans to make the switch this week. Chao said in a statement that she was pleased to have appointed two "distinguished and experienced individuals" who would help "improve the performance and reliability of this vital transit system in the nation's capital." However, former Metro Special Advisor Katie Thomson (who was also appointed by Foxx) said replacing former NTSB member Carmody, in particular, was a "huge mistake" if safety was a priority for DOT.

TOOT TOOT: Tugboats, towboats and barges are moving about 763 million tons of cargo and generating more than $33.8 billion in gross domestic product, according to a new study from the American Waterways Operators and Pricewaterhouse Coopers highlighting the importance of waterway infrastructure. AWO has been pressing lawmakers to include funding for inland and coastal waterway repairs in any infrastructure package that might be developed over the next year. The group also has pressed Congress to pass legislation that would put the U.S. Coast Guard in charge of determining how commercial vessels should get rid of wastewater, the American Waterways Operators said. The group issued a list of policy priorities that included passage of the Commercial Vessel Incidental Discharge Act (S. 168 (115)) - a bill introduced by Sen. Roger Wicker (R-Miss.) that would give the Coast Guard authority to consolidate and issue new federal regulations for ballast water discharge standards.

MT MAILBAG: The U.S. Chamber of Commerce sent House Energy and Commerce leaders a letter Monday voicing support for their draft self-driving vehicle bill, which a subcommittee approved last week. "This legislation is a critical step towards capitalizing on the opportunities of this technology as long as it continues to be technologically neutral, promote coordination in legislation, and support innovation and market competition," Chamber reps wrote to committee Chairman Greg Walden (R-Ore.) and ranking Democrat Frank Pallone of New Jersey.

SHIFTING GEARS: The National Restaurant Association has hired Jessica Falborn as a senior adviser and Adam Hasley as director of advocacy research and insights. Roy Charles Brooks, the commissioner of Texas' Tarrant County, is now president of the National Association of Counties.

THE AUTOBAHN:

- "New York Rail Design Cited for Boosting Death Toll in 2015 Crash." Bloomberg.

- "New distracted driving law in Washington makes it illegal to hold phone while driving." USA Today.

- "U.S. charges driver after dead discovered in stifling truck in Texas." Reuters.

- "Iowa firm tied to truck deaths has history of legal problems." The Associated Press.

- "NASA has a way to cut your flight time in half." Bloomberg.

- "The TSA is fighting United on Twitter over ... comic books?" New York Magazine.

THE COUNTDOWN: DOT appropriations run out in 67 days. The FAA reauthorization expires in 67 days. Highway and transit policy is up for renewal in 1,163 days.

** **A message from American Public Transportation Association:** Our nation's public transit systems do more than carry Americans to work-they're a critical part of an integrated transportation network that drives our economy forward. That's why states and localities have partnered with the federal government for more than 35 years to repair and expand services. But President Trump's budget would eliminate funding for vital public transportation projects-and put 800,000 jobs at risk, including more than 500,000 construction-related jobs. Communities can't improve public transportation alone. To protect our future, we need continued federal investment in public transportation. Congress: Fully fund the FAST Act, and include public transportation in any infrastructure bill. Visit APTA.com/InvestNow to learn more. **

Subject: [SPAM] Federal Insider: Special Counsel Lerner leaves office as Trump rejects highly praised whistleblower advocate

Special Counsel Lerner leaves office as Trump rejects highly praised whistleblower advocate

By Joe Davidson

Shirine Moazed and Elizabeth McMurray (L-R) look on as Special Counsel Carolyn Lerner hands whistleblower James Parsons an honorary award in 2012. Parsons works at the Dover Mortuary. The whistleblowers' case resulted in major changes in the way soldiers' remains are treated at the Dover Air Force Base mortuary. (Photo by Daniel C. Britt / The Washington Post)

The defining moment for the Office of Special Counsel (OSC) after Carolyn Lerner became head of the agency was a gruesome one about body parts and a dismembered Marine.

It's not the usual fare for the office on M Street NW that deals with Hatch Act violations and prohibited personnel practices. But protecting whistleblowers is where OSC makes its reputation — as in the 2011 case involving the Defense Department's Port Mortuary in Dover, Del.

Soon this little but powerful office will have a new special counsel. Rejecting the advice of Republicans and Democrats to keep Lerner, President Trump has nominated Henry Kerner to take her place. He is a former Republican congressional staffer and currently assistant vice president at the Cause of Action Institute, a small-government advocacy organization.

Lerner, who leaves office on June 14, had been on the job only a few months when she revealed reports by federal employees of grisly transgressions at the morgue operated by the Air Force. Body parts were lost in two cases, and in another, the office reported that the mangled body of a Marine "was dismembered with a saw in order to make the body fit inside a military uniform, without the consent or notification of the family."

With a staff that wouldn't begin to fill one Pentagon hallway, Lerner humbled and embarrassed the Defense Department, the government's largest agency. Lawmakers were appalled. The Air Force secretary at the time

expressed his sincere “regret” for “lapses in our standards at Dover,” a non-apologetic understatement.

The action of the Office of Special Counsel — no relation to a special prosecutor or to Robert S. Mueller III, the special counsel investigating Russian meddling in the 2016 presidential election — secured mortuary reforms and protected the employees who were targets of Air Force retaliation.

“I think that we have sent the federal community a message that whistleblowers should be valued,” Lerner said Monday in her office overlooking St. Matthew’s Cathedral. “Whistleblowers now feel comfortable coming forward, and that is helping our government.”

The Port Mortuary case “really helped the federal community understand that OSC was robust enforcer of whistleblower laws,” she added.

Considering the widespread retaliation against federal whistleblowers, her assessment of their comfort might be optimistic, but there is no doubt that the Office of Special Counsel is a more robust agency than the moribund place they found before she got there.

It moved “from last-resort option to first choice for getting relief for whistleblowers,” said Tom Devine, legal director of the Government Accountability Project, a whistleblower advocacy organization.

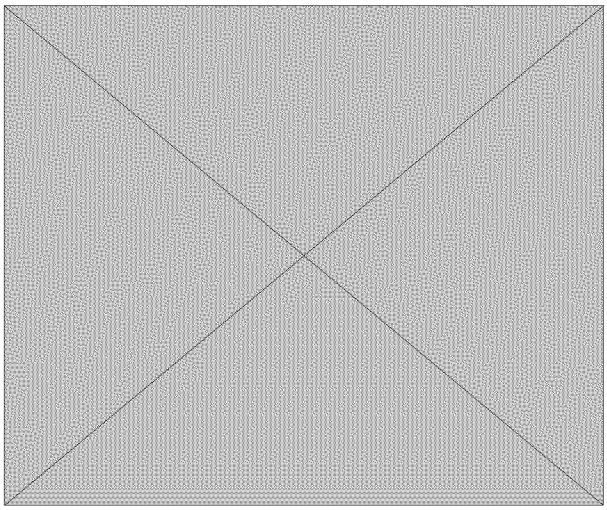
Relief for individual whistleblowers also can mean systemic improvements for federal agencies and taxpayers. The Department of Veterans Affairs is the obvious example. Congress approved VA improvements following a 2014 scandal over the coverup of long patient wait times, which was revealed by whistleblowers. Whistleblower disclosures also led to a new overtime pay system for Border Patrol agents. Lerner’s office was instrumental in both.

Devine’s strong praise for OSC is not unqualified. “The bad news is they operate at a molasses pace” in some instances, he said. He added that he would like Lerner to be more aggressive about taking legal action against federal agencies that violate whistleblower rights.

Despite the slow pace, agency statistics show impressive gains. There were 276 favorable actions for whistleblowers and other victims of PPPs.

Ironic criticism comes from James J. Wilson, the agency’s chief human capital officer. He filed a whistleblower retaliation complaint against Lerner with the Merit Systems Protection Board after failing to find success before the Council of the Inspectors General on Integrity and Efficiency. Regarding his complaints to the council, Wilson, who previously filed grievances against former employers at two other agencies, signed an affidavit saying, “I received final decisions closing these four matters with no further action being taken.”

Whatever the criticism of Lerner, it is outweighed by praise from whistleblowers and members of Congress.



“She’s fearless,” Robert MacLean, an air marshal whistleblower, told me earlier this year. His was the first federal whistleblower case heard by the Supreme Court and MacLean credits his victory largely to work done by OSC.

Unusual in this era of hyper-polarization, she is lauded by both sides of the aisle.

“Leading the Office of Special Counsel requires a deep appreciation for the patriotic work that whistleblowers do to shine a light on fraud or misconduct in government. Carolyn Lerner has been a steadfast advocate for government whistleblowers, and I am grateful for her service at OSC,” said

[prohibited personnel practices] this past year, more than double the annual average," the office said in its budget justification to Congress. "In the last two years, OSC has achieved *five* times the number of favorable actions in whistleblower retaliation complaints than in any prior two-year period in agency history…. In FY 2016, for the second straight year, OSC received upwards of 6,000 new matters, a 25 percent increase over the prior two-year period."

ADVERTISEMENT

Sen. Charles E. Grassley (R-Iowa), chairman of the Senate Judiciary Committee. "Her leadership should be a road map for future leaders of this office."

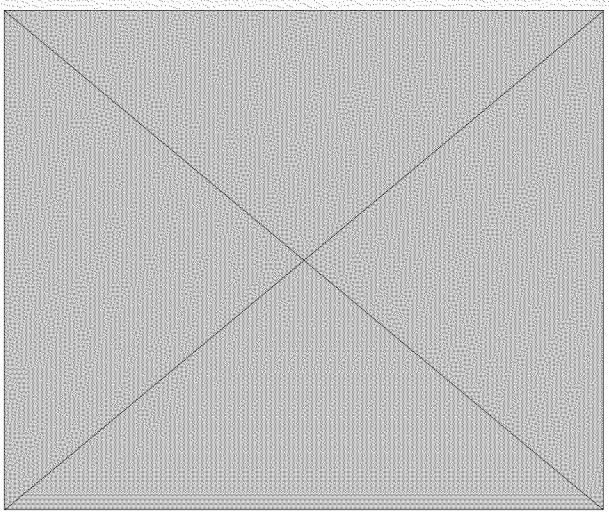
The Senate Whistleblower Protection Caucus, founded by Grassley and Sen. Ron Wyden (D-Ore.), had urged the Trump administration to retain Lerner.

"I am disappointed the president chose not to take Sen. Grassley's and my recommendation to renominate Carolyn Lerner, who is an experienced leader with bipartisan support," said Wyden.

It's also bicameral. Before Trump's decision, Rep. Rod Blum (Iowa), Republican chairman of the House Whistleblower Protection Caucus, led a bipartisan House letter saying Lerner deserved another term. Among those who signed was Rep. Elijah Cummings (Md.), the ranking Democrat on the House Oversight and Government Reform Committee.

Lerner turned the Office of Special Counsel "into a model agency and set the bar as the head of that office," Cummings said by email Monday. "She

ADVERTISEMENT



served with independence and tenacity to hold agency officials accountable when they retaliated against whistleblowers."

Carper Weighs Bipartisan Letter Seeking Talks On 2030 Vehicle GHG Rules

Sen. Tom Carper (D-DE) is said to be in the early stages of developing a bipartisan letter that could urge the Trump administration to negotiate light-duty vehicle greenhouse gas and fuel economy limits out to 2030 -- potentially offering an eased political path to giving automakers some flexibility in current rules through 2025 in exchange for continued progress in later years.

Subject: Playbook Power Briefing, presented by the Coalition for Affordable Prescription Drugs (CAPD): TRUMP meets with South Korea's president, will visit country later this year -- Germany approves same-sex marriage -- JAKE and ANNA on 'This Week' on SUNDAY

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by the Coalition for Affordable Prescription Drugs (CAPD)

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman), ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

THIS MORNING was a perfect encapsulation of what drives Republicans in Washington absolutely nuts. **PRESIDENT DONALD TRUMP** tweeted this morning: "If Republican Senators are unable to pass what they are working on now, they should immediately REPEAL, and then REPLACE at a later date!" **TOP REPUBLICANS** considered and dismissed this idea a long time ago. They've proceeded on another track, which is a simultaneous repeal and replace of Obamacare that was actually pushed by many conservatives, and embraced by Trump.

BUT TRUMP has revived the repeal then replace strategy - without telling GOP leaders. The hurdles are plentiful: Republicans hardly have any idea what their replace would look like in this context. There are procedural issues. The politics of repealing now and replacing later is tricky - Republicans got walloped for a half-dozen years for repealing and not replacing. This episode is yet another example of the shifting winds that drive Republicans crazy.

-- SNEAK PEEK from **@mikedebonis** of WaPo, who interviewed Ways and Means Chairman Kevin Brady (R-Texas) today for CSPAN's "Newsmakers." Brady essentially says isn't happening. http://bit.ly/2us7Vtv

ALSO -- It almost doesn't matter what Trump says on this, since he doesn't really have control of congressional strategy.

FIRST TIME IN A LONG TIME? NOT WHAT WE HEAR! -- @realDonaldTrump at 8:55 a.m.: "Watched low rated @Morning_Joe for first time in long time. FAKE NEWS. He called me to stop a National Enquirer article. I said no! Bad show."

BEHIND THE SCENES -- GABE SHERMAN in **N.Y. MAGAZINE:** "In mid-April, Scarborough texted with Trump son-in-law Jared Kushner about the pending Enquirer story. Kushner told Scarborough that he would need to personally apologize to Trump in exchange for getting Enquirer owner David Pecker to stop the story. (A spokesperson

for Kushner declined to comment). Scarborough says he refused, and the Enquirer published the story in print on June 5, headlined 'Morning Joe Sleazy Cheating Scandal!'" http://nym.ag/2sZo77A

-- WHAT THE WHITE HOUSE THINKS: "Conway: Media coverage of Trump 'neither productive nor patriotic,'" by Louis Nelson: "Counselor to the president Kellyanne Conway said Friday that she supports President Donald Trump's use of social media to attack his opponents, especially when so much of the media coverage of him is 'neither productive nor patriotic.' ...

"'I like the fact that the president uses social media platforms to connect directly with Americans and in this case, what [White House spokeswoman] Sarah Sanders said yesterday is true, that the president normally does not draw first blood. He is a counterpuncher as he said on the campaign trail,' Conway said. 'There are personal attacks about his physicalities, about his fitness for office. He's called a goon, thug, mentally ill, talking about dementia, armchair psychologists all over television every day. 'It doesn't help the American people to have a president covered in this light,' she continued. 'I'm sorry. It's neither productive nor patriotic. The toxicity is over the top.'" http://politi.co/2sYVqbc

-- @AaronBlake: "Kellyanne Conway saying tough media coverage isn't 'patriotic' is a hugely dangerous thing to say"

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study projects pharmacy benefit managers (PBMs) will save Medicare Part D $896 billion over ten years. PBMs drive savings for taxpayers and seniors by negotiating discounts from drug manufacturers; by encouraging the use of lower cost, clinically equivalent drugs; and by providing clinical programs that improve health outcomes. Learn more at affordableprescriptiondrugs.org ******

HERE'S JARED -- "Jared Kushner Told Joe Scarborough: Talk to President Trump About 'Enquirer' Dirt," by The Daily Beast's Lachlan Markay and Asawin Suebsaeng: "On Friday, MSNBC hosts Mika Brzezinski and Joe Scarborough made the explosive claim that three of President Donald Trump's most senior White House aides 'warned' the couple that the tabloid The National Enquirer would publish dirt on them unless they "begged" the president to intervene. The Morning Joe co-hosts declined to name the multiple White House officials involved in this bizarre, ongoing feud. But one of those 'top White House staff members' was senior advisor and Trump's son-in-law Jared Kushner, two White House officials confirmed to The Daily Beast.

"According to these officials, Kushner and Scarborough had spoken 'many weeks ago' regarding a then upcoming negative Enquirer article on Scarborough and Brzezinski. Scarborough had 'calmly sought' advice from Kushner, who 'recommended he speak with the president.' But White House sources' accounts of the conversation differed from Scarborough's description and suggestions of more sinister interactions. No hostile threat or attempt at blackmail was made, according to these officials."

http://thebea.st/2u7pvnd

PLAYBOOK POLL -- ANY GUESSES on who is the Trump campaign official Joe and Mika wrote in their WaPo op-ed had complained about their boss' "erratic behavior" and is "as close to the Republican candidate as anyone"? ***Take our anonymous Playbook poll:*** http://bit.ly/2tsxLAi

TRUMP'S MEETING WITH THE SOUTH KOREAN PRESIDENT -- President Trump greeted South Korean President Moon Jae-in outside the White House a little after 10:15 a.m., and the pool was quickly ushered into the Oval Office.

-- PRESIDENT TRUMP: "We are renegotiating a trade deal right now with South Korea, and hopefully it will be an equitable deal. It will be a fair deal for both parties. It's been a rough deal for the U.S., but I think that it will be much different and will be good for both parties," per pooler Anita Kumar of McClatchy. The president also addressed North Korea, saying "we have many options with respect to North Korea." The pair later gave a joint statement in the Rose Garden.

TRUMP is going to South Korea this year, according to President Moon Jae-In.

JAKE and **ANNA** will be on **ABC's "This Week"** Sunday from Washington.

-- TONIGHT ON PBS's Washington Week, hosted by Robert Costa: The New York Times' Yamiche Alcindor, Vox's Sarah Kliff, CBS News' Nancy Cordes and TIME's Michael Scherer.

JARED and **IVANKA** appear to be heading out of town. http://dailym.ai/2survUv

D.C. SUMMER CAMP - DANIEL'S POSTCARD FROM ASPEN IDEAS FESTIVAL - Theo Padnos, the freelance journalist who was in captivity for years in Syria, yesterday told David Bradley (who helped with securing his release) to describe when he knew he was in trouble: "There is no marker on the ground. When you cross into that dangerous place, you don't see it until it's much too late. I didn't know what was going on until they were hitting me in the face and I heard somebody say ... 'bring the handcuffs.' And 'where is your pistol?' And I was like: This isn't good. [Laughter] It's a very invisible and hard to detect change and by the time you notice it, it's too late."

-- JULIA IOFFE, an Atlantic staff writer, on a national security panel with David Petraeus and Peter Feaver yesterday: "Trump has been in our lives for about two years. Can we please stop with the battered girlfriend syndrome? ... [T]his constantly waiting for him to become another man at age 70-something, it's just not going to happen. He'll get the nomination, he'll become more presidential. OK. He'll win, he'll become more presidential. Never mind. Once he's inaugurated, he'll certainly become more presidential because he's the president in fact. No, it doesn't happen. The learning curve is steep because throughout his seven decades on this earth, he's been profoundly incurious about the world in which he lives. On which we all live,

unfortunately, with him."

-- SPOTTED IN ASPEN: David Petraeus having dinner last night at American bistro Element 47 in the Little Nell hotel. David Bradley dined at a separate table outside.

-- PETRAEUS ASPEN INTERVIEW - Daniel yesterday interviewed former CIA director Gen. David Petraeus for a Facebook Live video, asking him about ISIS, Syria, Afghanistan and how he would respond if he was asked to serve in the Trump administration: http://bit.ly/2t9dqy0

IN GERMANY -- "Germany's Bundestag passes bill on same-sex marriage," by Deutsche Welle's Timothy Jones: "The German parliament, or Bundestag, on Friday passed a bill legalizing same-sex marriages in a snap vote that made it onto the agenda before the summer break after a surprise shift by Chancellor Angela Merkel. The bill passed by 393 to 226, with four abstentions. Merkel herself voted against the bill, although her comments helped bring it about.

"However, more than 70 members of Merkel's conservative bloc must have voted in favor of the bill for it to pass. Merkel later explained her 'no' vote by saying that she understood the definition of marriage in the German constitution as referring solely to unions between men and women. She said, however, that she hoped the vote to approve gay marriage would lead to 'more social peace.'" http://bit.ly/2txNcbv

HMM... -- @EricHolder: "To the career men & women at DOJ/FBI: your actions and integrity will be unfairly questioned. Be prepared, be strong. Duty. Honor. Country." ... **@blakehounshell:** "Mysterious 3 a.m. tweet from former attorney general. What's he warning about?"

AFTERNOON READ -- "The Short, Unhappy Life of a Libertarian Paradise," by Caleb Hannan in the July/August issue of POLITICO Magazine: "For a city, like the country at large, that was hurting economically, Steve Bach seemed like a man with an answer. What he promised sounded radically simple: Wasteful government is the root of the pain, and if you just run government like the best businesses, the pain will go away. Easy. Because he had never held office before and because he actually had been a successful entrepreneur, people were inclined to believe he really could reinvent the way a city was governed.

"The city's experiment was fascinating because it offered a chance to observe some of the most extreme conservative principles in action in a real-world laboratory. Producers from '60 Minutes' flew out to talk with the town's leaders. The New York Times found a woman in a pitch-black trailer park pawning her flatscreen TV to buy a shotgun for protection [http://nyti.ms/2ursZAj]. 'This American Life' did a segment [http://bit.ly/2t8XWKe] portraying Springs citizens as the ultimate anti-tax zealots, willing to pay $125 in a new 'Adopt a Streetlight' program to illuminate their own neighborhoods, but not willing to spend the same to do so for the entire city. ...

"But it has been five years since 'This American Life' packed up its mics. A lot has changed in that time, not least of which is that the local economy, which nearly drowned the city like a concrete block tied around its balance sheet, is buoyant once again. Sales tax revenue has made the books plump with surplus. Enough to turn those famous streetlights back on. Seven years after the experiment began, the verdict is in-and it's not at all what its architects planned. One of the lessons: There's a real cost to saving money." http://politi.co/2txtblg

REMINDER FOR THE FOURTH -- "Here Are Some of the Worst Fireworks-Related Injuries Ever Recorded," by Gizmodo's Ryan Mandelbaum http://bit.ly/2ty6gWV

TRANSITIONS -- Tom Perriello, the former congressman and gubernatorial candidate from Virginia, joined Win Virginia -- a PAC looking to elect Democrats to Virginia's House of Delegates -- as CEO.

WELCOME PARTY -- The Ambassador of the Kingdom of Belgium, Dirk Wouters and Mrs. Katrin Wouters last night hosted at their Foxhall Road residence a welcome to the neighborhood party for American University President Sylvia Burwell. **SPOTTED:** Ambassador of Cyprus and Mrs. Diane Konstantinidi, Ambassador of Afghanistan and Mrs. Lael Mohib, Susan Rice and Ian Cameron, Coach Kathy Kemper, Ambassador of Austria and Mrs. Gudrun Waldner, Ambassador of Kazakhstan and Mrs. Kazykhanov, Rep. Debbie Dingell (D-Mich.), Greg Myre, Ann and Lloyd Hand, Ambassador of Switzerland and Mrs. Anita Dahinden, Ambassador of the Principality of Liechtenstein and Mrs. Jaeger, Al Hunt, Alphonso and Marcia Jackson.

OUT AND ABOUT -- Democracy Fund celebrated its third anniversary last night with an Independence Day party on the rooftop of its downtown office. Guests enjoyed red, white and blue sunglasses, specialty cocktail "Americana" and ice pops. **SPOTTED:** Democracy Fund's Joe Goldman, Lauren Strayer and Karla McLean, Ashley Spillane, Mo Elleithee, Adrienne Elrod, Garance Franke Ruta, Veronica Wilson, Todd Flournoy, Christina Sevilla, Neil Grace, Shawna Thomas, Andrea Hailey and David Williamson, Francesca Chambers, David Becker, Mark Strand

SPOTTED at the National Confectioners Association and FamousDC's National Candy Month celebration at Sonoma last night: Rep. Dutch Ruppersberger (D-M.D.), Rep. Jackie Walorski (R-Ind.), Rep. Derek Kilmer (D-Wash.), Tony Fratto, Michael Steel, Matt Wolking, Megan Whittemore, Katie Boyd, Amos Snead, Stephanie Genco, Andrew Kovalcin, Joe Maloney, Ben Jenkins, Nathan Imperiale and Josh Schultz.

WELCOME TO THE WORLD -- Ben Marter , communications director for Senate Minority Whip Dick Durbin (D-Ill.), and his wife, **Jean Marter**, director of committee operations for House Foreign Affairs Chairman Ed Royce (R-Calif.), welcomed baby Kerry Jane on Wednesday. "It's our second and a good thing big brother George already knows the words to Let It Go..." ***Pic*** http://politi.co/2u5wP2F (h/t Huddle)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A

new study estimates that Medicare Part D costs would be 58 percent higher without pharmacy benefit managers' (PBMs') clinical tools and price negotiations with drug manufacturers and pharmacies. The study shows PBMs significantly lower premiums and out-of-pocket costs for Medicare beneficiaries. In fact, PBMs are projected to save Medicare Part D $896 billion over the next decade. Thanks to PBMs, Medicare Part D continues to drive savings and value for taxpayers and beneficiaries, ensuring that more than 39 million American seniors can access the prescription drugs they need. Subject: [SPAM] Federal Insider: VA fires more than 500 feds under Trump, even before new accountability law

VA fires more than 500 feds under Trump, even before new accountability law

By Joe Davidson

President Trump signs the Department of Veterans Affairs Accountability and Whistleblower Protection Act of 2017, aiming to innovate veterans' health care access on June 23. (The Washington Post)

The agency that has been the main target of efforts to fire feds faster dismissed more than 500 employees this year — even before a new accountability law took effect.

Since the Department of Veterans Affairs (VA) shamed itself in 2014 with a scandal over the coverup of long patient wait times, Capitol Hill politicians have demanded that the agency accelerate sacking — as if that were the main measure of good personnel administration. Department leaders joined the call and perpetuated the impression that life would be better if only more derelicts could be dumped.

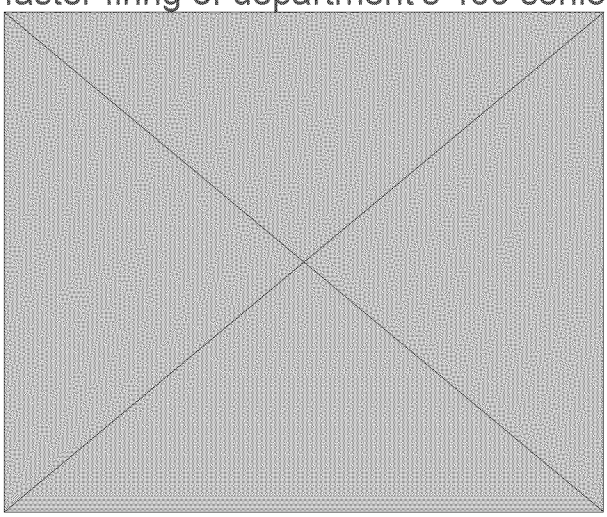
Now we know that VA has dumped plenty.

Its first public posting, released Friday, of adverse actions against employees, terminations, suspensions and demotions, showed that the department fired 525 staffers from Jan. 20, when President Trump took office, through July 3.

The number of staffers dismissed should not be confused with effective human resource management. A certain percentage of terminations is inevitable in any organization, particularly during probationary periods. Yet, an excessive and perverse focus on firing makes that a valued metric, instead of more attention on measures encouraging the agency, its managers and its employees to succeed.

VA's 26-page list is filled with "removals," which is government-speak for

ADVERTISEMENT



firings, of staffers, including doctors, nurses, housekeepers, grave diggers.

"Under this administration, VA is committed to becoming the most transparent organization in government," Secretary David Shulkin said. "… Veterans and taxpayers have a right to know what we're doing to hold our employees accountable and make our personnel actions transparent. Posting this information online for all to see, and updating it weekly, will do just that."

This transparency also busts the myth that feds can't be fired. Terminating more than 500 people in less than six months, even from a 345,000-strong department workforce, should be enough to make the cruelest boss content.

Governmentwide, more than 77,000 feds were fired for performance or conduct issues during fiscal 2000-2014, according to the Merit Systems Protection Board (MSPB), an average of more than 5,000 a year. Out of a current workforce of about 2 million, that's not much, but it's not supposed to be. Plus, 5,000 is not nothing.

The list of adverse actions was compiled before Trump signed the VA Accountability and Whistleblower Protection Act last month. It erodes civil service due process protections for all VA employees and pointedly facilitates faster firing of department's 469 senior executives.

"Some of the employees involved in these [wait list] scandals remained on the payrolls," Trump lamented at the signing ceremony. "Outdated laws kept the government from holding those who failed our veterans accountable."

But the adverse-action list demonstrates than many VA employees were held accountable before the act became law, despite comments by Trump and Shulkin giving the opposite impression.

"It is clear that there is sadly a pervasive lack of accountability," Shulkin said at a Senate Veterans' Affairs Committee hearing in May. He cited an employee who "was caught watching pornography on the job." That employee, a psychiatrist, was fired, just not as quickly as Shulkin wanted.

Like democracy, due process takes time.

Under the new accountability law, due process for VA employees, such as it is, will take less time and they can be bounced on less evidence. Shulkin can design an in-house process that makes him the prosecutor, judge and appellate court for senior executives. He is responsible for charging them with an offense, determining the punishment and hearing employee appeals of the sentence. The law abolished their right, available to other federal employees, to a neutral, third-party review by the MSPB or another agency. "This change will make it more difficult for employees to appeal adverse actions," spokesman James Hutton, "and to more easily defend its actions on appeal, as [MSPB administrative] judges must now afford deference to VA's choice of penalty and must uphold actions when VA proves misconduct by substantial evidence," a lower bar than the previously required "preponderance of evidence."

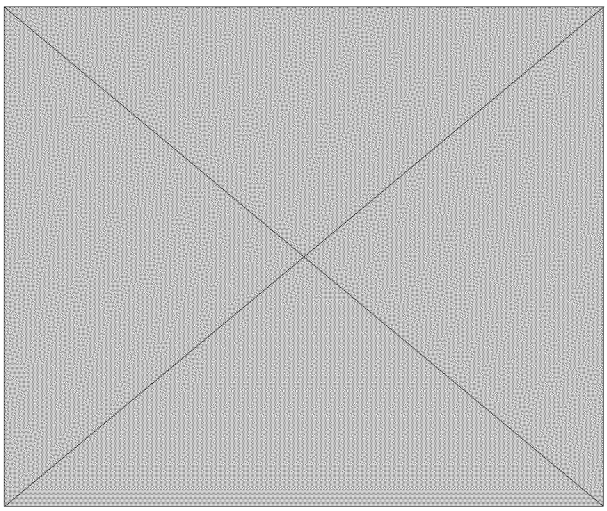
Leaders of employee organizations differ on Shulkin's decision to release the list of adverse actions.

J. David Cox Sr., president of the American Federation of Government Employees, which represents more than 70 percent of VA's employees, said the list "isn't transparency. It's an intimidation tactic. … As former VA Secretary Bob McDonald said, you can't fire your way to excellence."

I side more with Bill Valdez, president of the Senior Executives Association. Rather than intimidation, the list demonstrates "it's not so hard to remove feds and it happens all the time," he said. "Why in the world did they need more authority to fire feds when they can to it at this rate?"



The list, Valdez added, is "a great demonstration to the American public that

ADVERTISEMENT

feds are held accountable and can be held accountable."

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

July 26, 2017

Latest News

Pruitt Endorses Sweeping Superfund Overhaul Using Cleanup Incentives

EPA Administrator Scott Pruitt is endorsing 42 recommendations from an agency task force for a sweeping overhaul of the Superfund program that would rely heavily on the novel use of third-party investments in cleanups and seek to accelerate site projects with incentives such as reducing oversight costs charged to responsible parties.

Trump DOJ Environment Pick Vows To 'Vigorously Enforce' Federal Law

Jeffrey Clark, the Trump administration's pick to head the Department of Justice's (DOJ) environment division, is offering general assurances to senators that he will "vigorously enforce federal law," while at the same time cooperating with states on environmental enforcement.

Democratic States Defend Legal Standing For Role In Ozone NAAQS Suit

A coalition of Democratic-led states is defending its legal standing to intervene in litigation to defend the Obama EPA's stricter ozone national ambient air quality standard (NAAQS), saying the states face harm if an appellate court vacates the standard and rejecting the Trump administration's claim that they face a strict test to win a role in the suit.

Schnare, Former Transition Official, On His Departure, EPA Climate Science Review

Editor's Note: *David Schnare, the former EPA transition official who wrote this article, left the agency earlier this year over concerns about infighting among administration appointees and Administrator Scott Pruitt's alleged lack of engagement. In it, his first since departing the agency, he discusses his reasons for leaving and his views on EPA's upcoming climate science review. The views expressed here are his.*

Former EPA Transition Official Questions Pruitt's Plan For Climate Debate

A former Trump EPA transition team official is taking issue with EPA Administrator Scott Pruitt's plans to conduct a "red team, blue team" debate of climate change science, arguing the approach would politicize the issue, is outside of EPA's authority and would result in too shallow of a critique of mainstream findings that human-released greenhouse gases are the primary cause of global warming.

Daily Feed

Lawsuit claims Trump's infrastructure panel violates FACA

Environmentalists claim President Donald Trump's advisory panel on environmental policy and infrastructure violates the Federal Advisory Committee Act (FACA).

House Democrat open to bill reforming EPA consent decrees

A House Democrat is voicing support for potential legislation to reform how EPA can direct fines through enforcement settlements.

Experts outline federal role to advance CCS, nuclear technology

National laboratory experts and other researchers highlight a continued need for federal funding for research and development of CCS and nuclear, while also noting a need for regulatory certainty.

Ewire: California's Brown to sign landmark cap & trade extension

In today's Ewire: California Gov. Jerry Brown (D) will today sign landmark legislation extending the state's greenhouse gas cap-and-trade program out to 2030. Plus: A look at environmental justice in the Trump era.

Environmentalists fault EPA bid to delay ozone suit

But they stop short of asking the court to change the suit's posture.

Subject: Black: GOP budget resolution will reach House floor

By Sarah Ferris

07/18/2017 11:59 AM EDT

House Budget Chairwoman Diane Black insists her newly unveiled blueprint will reach the House floor, but she has stopped short of committing to passage.

"I can tell you that this budget will come out of our committee tomorrow," Black told reporters this morning. "It will be a budget that will then come to the House floor."

The GOP budget resolution, unveiled today, has been stalled for months as Black struggled to win over dozens of holdouts from the divided House Republican caucus, which also failed to pass a budget resolution on the floor last year.

Black said she is still meeting with GOP lawmakers outside her committee "to help them understand" the full scope of the budget resolution — and the implications of not passing it.

"We will be working all the members and making sure they understand the significance and importance of what we put into this document," she said.

The partisan resolution stands no chance of securing Democratic votes, so Republicans can only afford 22 Republican naysayers on the floor.

Already, about 30 GOP moderates have vowed to oppose the plan because it calls for $200 billion in mandatory cuts they believe could jeopardize tax reform. The House Freedom Caucus, which has about two dozen members, has also threatened to block the budget as the group presses for steeper cuts and a clearer picture of their party's tax overhaul strategy.

Summaries

AIR
Maine SIP/New Motor Vehicle Emission Standards
AIR

Final rule of the EPA approves revisions to the Maine SIP concerning new motor vehicle emission standards. The revisions incorporate the California low emission vehicle (LEV II) greenhouse gas (GHG) program beginning with model year 2009 and the California LEV III program beginning with model year 2015. The revisions also incorporate the California GHG emission standard beginning with model year 2017 and the California zero emission vehicle provision updated in 2012. Updated heavy-duty diesel engine and diesel auxiliary unit emission standards are approved and all aftermarket catalytic converters are required to be certified by the California Air Resources Board as of June 1, 2018. The requirement for the state to implement the Ozone Transport Commission LEV program also has been removed because the state has satisfied the requirement, and the EPA has determined that it is obsolete. The rule is effective Oct. 10, 2017. Contact: Eric Rackauskas; EPA Region 1, Air Quality Planning Unit; 617-918-1628; rackauskas.eric@epa.gov. Citations: 40 CFR 51.120, 52.1020

GENERAL ENVIRONMENT AND SAFETY
Deviation Reporting for Human Cells, Tissues, and Cellular and Tissue-Based Products
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a final guidance for industry regarding deviation reporting for human cells, tissues, and cellular and tissue-based products (HCT/Ps) regulated under Section 361 of the Public Health Service Act. The guidance provides establishments that manufacture nonreproductive HCT/Ps with recommendations and relevant examples for complying with the requirements to report HCT/P deviations. The guidance does not apply to reproductive HCT/Ps or to HCT/Ps recovered before May 25, 2005; to healthcare professionals who implant, transplant, infuse, or transfer HCT/Ps into recipients; to HCT/Ps that are regulated as drugs, devices, and/or biological products under Section 351 of the PHS Act or the Federal Food, Drug, and Cosmetic Act; or to investigational HCT/Ps subject to an investigational new drug application or an investigational device exemption. Comments may be submitted at any time. Contact: Tami Belouin; FDA, Center for Biologics Evaluation and Research; 240-402-7911. Citations: 21 CFR 1271

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Ohio/Crawford Counterstorage Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the filing of a prior notice request by Columbia Gas Transmission LLC, of Houston, to install facilities and appurtenances and to make other modifications at its Crawford Compressor Station in Fairfield County, Ohio. The applicant proposes to install one Cat 3520/Ariel high-speed reciprocating compressor unit and designate as standby two existing Waukesha reciprocating compressor units. The applicant also proposes to construct a new compressor building, dehydration system, gas cooler, separators, scrubbers, control room building, and station piping that will result in an increase in counterstorage compression of 980 horsepower. The notice specifies that the agency will complete an environmental assessment or issue a notice of schedule of environmental review by Nov. 29, 2017. Protests and motions to intervene are due Oct. 30, 2017. Comments are due Oct. 31, 2017. Contact: FERC, Office of External Affairs; 866-208-3676; FercOnlineSupport@ferc.gov

82 FR 42340 (09/07/2017)

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Hours of Service Exemption/National Asphalt Pavement Association
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Federal Motor Carrier Safety Administration announces the receipt of an application from the National Asphalt Pavement Association for exemptions from hours-of-service requirements for all drivers of member companies transporting asphalt and related materials and

equipment. The applicant requests an exemption from the 30-minute rest break provision to enable drivers engaged in the transportation of asphalt and related materials to use 30 minutes or more of on-duty "waiting time" to satisfy the requirement for the 30-minute rest break. The applicant also requests an exemption from the requirement that short-haul drivers utilizing the record of duty status exception return to their work-reporting location within 12 hours of coming on duty to instead permit drivers to return to their work-reporting location within 14 hours. The requested exemptions are for a period of five years. Comments are due Oct. 10, 2017. Contact: Tom Yager; FMCSA, Driver and Carrier Operations Division; 614-942-6477; MCPSD@dot.gov. Regulatory Update

PESTICIDES
Pesticide Tolerance Exemption/Alkyl Alcohol Alkoxylates
PESTICIDES

Final rule of the EPA amends an exemption from the requirement of a tolerance for residues of specified alkyl alcohol alkoxylates to include poly(oxy-1,2-ethanediyl), α-isooctyl-ω-hydroxy (CAS Reg. No. 61723-78-2) when used as an inert ingredient in pesticide formulations applied to growing crops, animals, or food contact surfaces. The rule is issued in response to a petition filed by Spring Trading Co., of Magnolia, Texas, on behalf of Sasol Chemicals, of Houston. The rule is effective Sept. 7, 2017. Objections and hearing requests are due Nov. 6, 2017. Contact: Michael Goodis; EPA, Office of Pesticide Programs; 703-305-7090; RDFRNotices@epa.gov. Citations: 40 CFR 180.910, 180.930, 180.940, 180.960

82 FR 42277 (09/07/2017)

Regulatory Update

WATER
Special Use Permits/Desalination Facilities
WATER

Notice of the Office of National Marine Sanctuaries announces the adoption of a new special use permit (SUP) category for the continued presence of a pipeline transporting seawater to or from a

desalination facility. On Jan. 12, 2017, the agency proposed to adopt two new SUP categories for the construction and operation of desalination facilities near marine sanctuaries (82 FR 3751). The proposed second category for the use of sediment to filter seawater for desalination has been removed. The notice also includes background information on the use of desalination in Monterey Bay National Marine Sanctuary (MBNMS) and ONMS regulations applicable to activities that disturb submerged lands or discharge into sanctuaries. The new SUP category only applies to MBNMS. The notice is effective Sept. 7, 2017. Contact: Bridget Hoover; ONMS, Monterey Bay National Marine Sanctuary; 831-647-4217, bridget.hoover@noaa.gov. TRUMP'S EPA: Agency at a crossroads -- Complete coverage

May 31, 2017

Latest News

Legal Attack On CWA Guide May Complicate EPA Jurisdiction Rule Repeal

Plaintiffs in a closely-watched Clean Water Act (CWA) jurisdiction suit are raising new claims that EPA is illegally applying George W. Bush-era guidance on the water law's scope as a rule, potentially complicating the Trump EPA's plan to formally revive the guidance while it works on repealing the Obama EPA's CWA jurisdiction rule.

Attorneys Reject Claim That Staying In Paris Deal Creates Legal Risk For Trump

Environmental attorneys are dismissing warnings from GOP senators and state officials opposed to the Paris Agreement that continued United States participation in the global climate deal creates a risk that the Trump EPA could ultimately be forced to regulate greenhouse gases through an economy-wide framework under section 115 of the air act.

D.C. Circuit Rejects Environmentalists' FOIA Suit Seeking Utility ELG Data

The U.S. Court of Appeals for the District of Columbia Circuit has rejected environmentalists' suit aiming to force release of data EPA gathered for its Clean Water Act (CWA) utility effluent rule, saying a Freedom of Information Act (FOIA) exemption against releasing “confidential” data overrides a CWA mandate on disclosing the data.

Hudson Cleanup Review May Test Pruitt’s Plan For Superfund Cleanups

EPA Administrator Scott Pruitt's promise to streamline and speed Superfund cleanups may be put to the test in the coming days as the agency decides whether to expand the scope of cleanup at the massive Hudson River, NY, site -- as sought by New York state and area lawmakers -- or to declare the sediment cleanup conducted so far to be sufficient.

Legal Fight Could Set Precedent For Expanding Citizens' Say In Cleanups

Legal advocacy groups for citizens around a high-profile Superfund site in Indiana are

asking a federal district court to set aside a magistrate judge's order rejecting their attempt to intervene in a cost recovery cleanup settlement there, with the groups seeking a ruling that could set precedent in boosting citizens' say in such cleanup accords.

Industry Argues EPA's Draft TSCA Bans Do Not Meet Law's Requirements

Chemical industry groups are arguing that the Obama EPA's proposed restrictions on certain uses of the solvent trichloroethylene (TCE) and two paint stripping chemicals do not meet legal requirements of the Toxic Substances Control Act (TSCA) and should be withdrawn, while environmentalists are urging the Trump administration to finalize the rules.

Industry Cautions EPA Against OSHA Overlap In Chemical Reporting Rule

A petrochemical industry official serving on a panel convened to inform a future EPA Toxic Substances Control Act (TSCA) rule limiting reporting requirements on certain substances is urging the agency not to encroach on the Occupational Safety and Health Administration's (OSHA) authority to protect workers and suggesting reduced reporting for substances with no consumer exposure.

Daily Feed

EPA may soon seek inter-agency review for CPP repeal

EPA's court-required status report on the review of the Clean Power Plan says the agency "may be prepared to begin the interagency review process of a resulting proposed regulatory action in the near future."

9th Circuit vacates EPA conditional registration of nano-pesticide

A federal appeals court panel has vacated EPA's conditional registration of a pesticide containing nanosilver, saying the agency failed to show the product would reduce pollution or is in the public interest.

Home builders join suits over New Hampshire stormwater permit

The National Association of Home Builders' suit increases the likelihood that the U.S. Court of Appeals for the District of Columbia Circuit will hear consolidated challenges to the permit.

California's Brown blasts vehicle GHG 'harmonization' bill

"This measure of so-called harmonization is, more than anything else, perfume to cover the odorous maneuver on which they've now embarked," Brown said of the newly introduced bill.

Our most read: Mostly about the ins and outs of EPA's FY18 budget plan

Three of the top five involve the FY18 budget, as proposed by the Trump administration and declared a non-starter by at least one key Republican.

Ewire: A daily news roundup

The White House seeks to limit Pruitt's profile on Paris withdrawal ahead of Trump's decision. Plus, TSCA backlog and EPA's budget.

Coal firms say EPA plan for 'jobs' reviews undermines appeal

Companies suing to force EPA to study employment impacts of Obama-era air rules are citing a top administration official's comments to *Inside EPA* to support their case on appeal.

Subject: Smith defends EPA on science adviser's testimony as Democrats seek probe

By Alex Guillén

06/27/2017 04:46 PM EDT

House Science Chairman Lamar Smith today defended EPA for reportedly seeking to control what scientist Deborah Swackhamer, chair of the agency's Board of Scientific Counselors, said at a hearing last month.

Swackhamer was invited by the panel's Democrats for a hearing on state roles in environmental regulations shortly after EPA made waves by declining to automatically re-appoint a number of BOSC members. The New York Times on Monday reported that EPA chief of staff Ryan Jackson pressured her to stick to "talking points" on BOSC issues and that Swackhamer said she "felt bullied."

Top Science Committee Democrats have asked EPA's inspector general to investigate the matter. "It seems clear that Mr. Jackson was seeking to influence Dr. Swackhamer's testimony to Congress," they wrote in their request.

The Democrats also wrote separately to EPA Administrator Scott Pruitt about their concerns. Pruitt said he was unfamiliar with the issue at a hearing this morning, at which he was accompanied by Jackson.

Smith said in a statement that after reviewing emails between Swackhamer, Jackson and other EPA officials, he believes EPA "was pursuing a course of due diligence and ensuring that information provided in witness testimony before Congress was accurate and without factual error." He charged Democrats with trying to "hijack" the hearing "for their own politically motivated agenda."

"The American people are smart enough to see past the Minority's highly politicized tactics," Smith added.

Subject: Today on Climate Beat

July 11, 2017

Today on Climate Beat . . .

. . . we went a mile high, where Colorado Gov. John Hickenlooper (D) announced his state is the latest to join a state coalition committed to upholding the Paris Agreement, while also announcing a series of non-regulatory steps to reduce greenhouse gases in the utility, transportation and buildings sectors.

Staying out West, California officials released their latest legislative package to extend the state's GHG cap-and-trade program out to 2030, which could see floor consideration this week as Gov. Jerry Brown (D) seeks a two-thirds vote to protect against legal challenges.

EPA Administrator Scott Pruitt made some news in an interview with Reuters, reportedly saying there could be a legal basis to challenge EPA's GHG endangerment finding though he would rather Congress address the issue. He also suggested his planned "critique" of climate science could be involve a televised debate.

In Congress, 27 Democratic senators are urging President Donald Trump to "fully implement" EPA and Bureau of Land Management regulations iissued by the Obama administration to limit emissions of the potent GHG methane from oil and gas operations.

In vehicle news, the Department of Transportation is reconsidering Obama-era fine increases for automakers that fail to meet fuel economy standards, the latest signal that the Trump administration might weaken environmental and other regulations that affect the industry.

And our daily news roundup looked at the "deep industry ties" in the deregulatory teams at the Trump administration's EPA and other federal agencies.

Good Monday afternoon. DEJA VU -- ATTORNEY GENERAL JEFF SESSIONS will testify in an open hearing Tuesday, once again ensuring that at least one day this week will be eaten up by live coverage of senators from both parties questioning a witness about the president of the United States and his relationship with Russia. ***More from Seung Min Kim and Kyle Cheney*** http://politi.co/2tdh092

-- ABC's MIKE LEVINE (@MLevineReports): "Source: Sessions not expected to answer Senate questions about talks he had w/ @POTUS before Comey's firing; expected to cite exec privilege"

BREAKING -- Reuters' **Lawrence Hurley (@lawrencehurley):** "BREAKING: 9th Circuit says it will issue travel ban ruling today"

INSIDE THE WEST WING -- TARA PALMERI: "Trump gives Priebus until July 4th to clean up White House: The president has threatened to oust his chief of staff if major changes are not made, but many are skeptical he'll follow through": "While Trump has set deadlines for staff changes before, only to let them pass without pulling the trigger, the president is under more scrutiny than ever regarding the sprawling Russia investigation, which is intensifying the pressure on his White House team. ...

"Trump had been mulling bringing on [David] Bossie as his deputy White House chief of staff and [Corey] Lewandowski as a White House senior adviser with a portfolio that includes Russia, but told the two at that meeting that they would not be joining the White House until Priebus had a fair chance to clean up shop, according to the sources. 'I'm giving you until July 4,' Trump said, according to a person with knowledge of the conversation. 'I don't want them to come into this mess. If I'm going to clean house, they will come in as fresh blood.'

"White House press secretary Sean Spicer, in a statement on Sunday, disputed the idea that Priebus is facing a July 4 deadline. 'Whoever is saying that is either a liar or out of the loop,' Spicer said." http://politi.co/2rnczqG

THE BIG READ -- THE WOMEN RULE INVESTIGATION -- AMANDA RIPLEY on

"What it will take for women to to win" : "The United States has flatlined when it comes to electing women: At the local, state and federal level, women hold fewer than 1 in every 4 elected offices, and the ratio hasn't budged much lately. The U.S. ranks 101st, below China, Iraq and Afghanistan, when it comes to gender equity in our national legislature -- down from 52nd two decades ago.

"Studies show that women tend to win elections at the same rate as men-but they are far less likely to run at all. A POLITICO investigation into the causes of gender inequality in electoral politics found that the traditional explanations-fundraising imbalances, sexism in the media and the voting booth, unyielding party bureaucracies and more -- have faded in importance. Today, the greatest obstacle may be less conspicuous: America has a shortage of female politicians because, to put it simply, women don't want the job." http://politi.co/2s2DrOQ

-- NEWSROOM MEMO FROM CARRIE BUDOFF BROWN (whose birthday is today): "We are excited to launch this morning POLITICO's inaugural 'Women Rule' investigation, marking the first time this popular live-event series has expanded into ground-breaking enterprise journalism. ... This was a big team effort overseen by Luiza Savage and Peter Canellos and built out into a beautiful digital home by Lily Mihalik with art direction from Janet Michaud. ...

"This journalism was only possible thanks to our business colleagues who have worked hard to expand the vision and financial support around the Women Rule series: Alexis Williams, Katharine Ragsdale, Nicole Adams and Cally Baute. The series now includes events, a Summit, a newsletter and a podcast produced with support from Lindsay Monaghan and Reena Flores. It's a great model for how POLITICO's convening power and journalistic strength can go hand-in-hand to build big things. We'll be showcasing the project at a live event on June 20 and discussing the poll at a live event with AU on June 26."

FROM OUR FRIENDS AT MORNING TECH -- "MORE DEETS ON TECH WEEK -- Add more names to the lineup of tech executives attending the inaugural meeting of the White House's American Technology Council on June 19: Qualcomm CEO Steve Mollenkopf and SVP of government affairs Nate Tibbits will be there, according to the company. Bloomberg previously reported (https://bloom.bg/2s33d5x) that Apple CEO Tim Cook, Amazon CEO Jeff Bezos and Alphabet Executive Chairman Eric Schmidt will take part in the high-profile gathering; Oracle CEO Safra Catz and Cisco CEO Chuck Robbins have confirmed their attendance."

PRESIDENT TRUMP held his first full Cabinet meeting today and announced that he

will hold a press conference on the fight against Islamic State "in two weeks." [Bloomberg News, last week: "In Trump's White House, Everything's Coming in 'Two Weeks.' (https://bloom.bg/2rP1hja).]

Trump also blamed Democrats and "the ethics committee" for holding up various nominees at different levels of government. He also said "never has there been a president, with few exceptions -- in the case of FDR he had a major depression to handle -- who has passed more legislation and done more things than what we have done." The Cabinet then went around the room praising the president.

TRUMP'S BUDGET GUY -- "Trump budget cutter Mick Mulvaney has 'coolest job in Washington,'" by the Washington Examiner's Alex Pappas: "He said he still advocates, as he did as a congressman, for a balanced budget amendment and term limits for members of Congress, but he hasn't pressed Trump on those issues yet. Yet Mulvaney says he doesn't miss being in Congress and insists he's done with electoral politics. 'I'm never going back ... I don't go to fundraisers. I don't read with third-graders. I don't go to ribbon cuttings. I liked all that stuff but, at the end of the day, it doesn't really change the direction of the country.'

"He laughs about a former Freedom Caucus colleague in the House who recently quipped that Mulvaney seems to be fighting losing battles these days. 'I'm like, yeah, but I'm losing at the very highest level. I used to lose in the Tortilla Coast basement,' he said of the famed Capitol Hill meeting spot of House conservatives. 'Now I am losing in the Oval Office from time to time, but that's fine.'" http://washex.am/2tdiLmy

-- @justinamash: "We miss shooting down your ideas over chips and salsa, Mick."

HILL PALACE INTRIGUE -- "Dems already fighting over Conyers' Judiciary post," by Margaret Harding McGill and John Bresnahan: "A fight has broken out among top Democrats on the House Judiciary Committee over replacing Rep. John Conyers as the ranking member of the panel, even though the 88-year-old Michigan Democrat says he's not going anywhere. ... In a June 8 letter obtained by POLITICO, Rep. Zoe Lofgren (Calif.) - the third highest ranking Democrat on Judiciary - warned Rep. Jerry Nadler (N.Y.), who is No. 2 behind Conyers, that she has heard Nadler is meeting with fellow Democrats about replacing Conyers. Lofgren warned Nadler that there is no current vacancy atop Judiciary, but if it does happen, she would be interested in the job, too." http://politi.co/2tcXLwk

GIANFORTE'S CONSEQUENCES -- The Bozeman Daily Chronicle's **Whitney Bermes (@wabermes):** "[Congressman-elect Greg] Gianforte pleads guilty to misdemeanor assault. #mtpol #mtal ... [The Guardian's Ben] Jacobs on apology: 'I fully expect his thoughtful words to be followed by concrete actions once he takes his seat in congress.' ... Gianforte's sentence is 6 months deferred, 40 hours community service, 20 hours anger management, $385 fine/fees. ... If Gianforte doesn't violate conditions of his deferred sentence, attorneys can move to have charge dismissed after 6 months. ... Gianforte must complete his community service by Nov. 28." ***Follow Whitney for***

TRUMP'S EPA: Agency at a crossroads -- Complete coverage

August 28, 2017

Latest News

SAB, Biomass Panel Remain At Odds Over Time Scale For Measuring CO2

EPA's Science Advisory Board (SAB) remains at odds with a panel that has been reviewing EPA's framework for estimating carbon emissions from biomass power on the key question of the time scale used to assess such emissions, raising the prospect that the board might be unable to provide consensus advice to EPA when it meets on the issue early next week.

EPA Weighs Regulatory 'Relief' Options For Ozone NAAQS Implementation

EPA is weighing several options to provide states and industries regulatory "relief" when implementing the Obama-era's 2015 rule tightening the ozone national ambient air quality standard (NAAQS), including streamlining Clean Air Act permitting reviews, revising monitoring procedures, and more according to a report to Congress.

HFC Rule Supporters Eye Rehearing Bid Despite Risk Of Deference Limits

Supporters of a scrapped Obama EPA rule on reducing ozone-depleting substances are eyeing requests for a federal appeals court to rehear the suit that vacated the rule, despite some observers' suggestions that a successful rehearing bid could help EPA to defend deregulatory actions or aid GOP efforts to limit courts' deference to agencies.

Despite Trump Order, Draft NEPA Review Assesses Drilling Project's GHGs

An Interior Department (DOI) draft environmental review of an offshore drilling project near Alaska is assessing the downstream greenhouse gas impact of burning the project's fossil fuels using tools developed by the Obama administration, despite directives from President Donald Trump scrapping the tools.

IG Reviewing TSCA Reporting Rule Compliance Ahead Of Program Updates

EPA's inspector general is beginning an assessment of industry compliance with EPA's chemical data reporting (CDR) rule and the agency's use of any data it receives to prioritize chemicals for regulation under the Toxic Substances Control Act

(TSCA), an inquiry that could provide oversight of the program just as the agency is overhauling it.

Daily Feed

PEER warns of falling EPA criminal enforcement cases

If Pruitt continues cutting enforcement resources, the group says, it would prompt environmental groups to bring a new wave of citizen suits.

Environmentalists sue EPA over regulatory reform records

A new FOIA suit aims to force EPA to release documents on how it is complying with President Donald Trump's regulatory reform executive order.

EPA proposes relaxed air toxics rules for laminate resins

EPA is proposing to weaken air toxics limits for laminate resin manufacturing, justified by new industry data and cost savings for the sector.

Ewire: DOE grid study targets EPA's NSR rules

The Energy Department takes aim at EPA's controversial NSR program. Plus, EPA's worker safety record at a massive coal ash cleanup.

EPA issues latest round of SO2 attainment designations

EPA's third wave of SO2 area designations brings the agency closer to its goal of issuing sulfur dioxide air standard attainment findings for the entire United States.

G-20 Seeks to Contain Trump by Avoiding Climate Mention

Posted July 06, 2017, 9:51 A.M. ET

By Peter Martin and Jessica Shankleman

German Chancellor Angela Merkel is seeking to unite the Group of 20 nations on key environmental goals by steering clear of references to climate change wherever possible, according to a draft being circulated ahead of a summit of world leaders.

A section of the current draft seen by Bloomberg notes the decision of the U.S. to withdraw from the landmark Paris Agreement, while promising collaboration on other less controversial areas such as innovation, sustainable growth, and competitiveness.

Climate change has become one of the biggest issues at stake during the G-20 summit, after President Donald Trump last month decided to pull the U.S. out of the 2015 Paris deal that promised to keep global warming "well below" 2 degrees Celsius. Trump has questioned the scientific consensus of climate change, even once suggesting it was a hoax created by China.

"This is about trying to contain Trump and not provoke him," said Nick Mabey, who used to advise the U.K. government on climate issues and now runs E3G, a policy-research group. "This language would show that he's isolated on climate change but leave him with a bit of dignity."

Investor Concern

As the world's second largest emitter, the U.S.'s involvement in the Paris deal is seen as crucial to global efforts to tackle climate change. Investors are concerned that a U.S. exit could have a domino effect around the world, yet no other country has said they will follow Trump in leaving the accord.

While previous G-20 leaders' summits promised strong action on climate change, the communique currently being considered doesn't appear to mention the phrase, instead noting the opportunities for job creation "of increased investment into sustainable and clean energy technologies and infrastructure." It also promotes energy security, a key issue for Trump. The statement is not final and can still change.

As president of the G-20 this year, Germany is seeking to avoid leaving the U.S. as a footnote on the issue of climate change. Merkel wants to avoid a repeat of Group of Seven talks in Italy in May

that confirmed a crack between six member states and the U.S. after environment ministers were unable to find common ground on climate measures.

Steffen Seibert, Merkel's chief spokesman, declined to comment on the G-20 draft's substance. "Nothing is decided for now," he said by email. "There are many options."

While the main communique won't affirm the group's commitment to tackling climate change, the section of the draft said the remaining 19 parties will endorse a separate climate and energy action plan, which will act as an annex.

The other heads of state and government from G-20 countries, as well as the European Union's leaders, will affirm their belief that the 2030 Agenda for Sustainable Development and the Paris Agreement are irreversible.

G-20 Energy Efficiency, Greenhouse Gases Both Rise, Report Says

Posted July 06, 2017, 7:49 A.M. ET

By Eric J. Lyman

The world's industrial powers are becoming more energy efficient, but greenhouse gas emissions continue to rise in those countries because of growing economies, according to an assessment of the Group of 20 nations by a climate advocacy group.

Overall, the G-20 nations saw greenhouse gas emissions increase by 34 percent between 1990 and 2014, while their economies grew 117 percent during that period, illustrating increased efficiency, the report said.

But the G-20 countries—which account for three-fourths of the world's greenhouse gas emissions—are not taking action strong enough to limit global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) compared to pre-industrial levels, the central goal of the 2015 Paris Agreement, said the report, released ahead of the July 7-8 meeting of G-20 leaders in Hamburg, Germany.

Of the G-20 members, "Australia, Canada, Saudi Arabia and the United States stand out with by far the highest per capita energy-related CO2 emissions," said the report from the umbrella group Climate Transparency, which wants G-20 countries to take more ambitious steps to fight climate change.

'Underlying Message'

The report is not a response to President Donald Trump's decision to pull the U.S. out of the Paris Agreement, said Niklas Hohne, a report co-author.

"The decision of the U.S. to withdraw creates some uncertainty, and it means the other 19 members of the G-20 will have more work to do," Hohne told Bloomberg BNA. "But it doesn't change the underlying message that the world is moving in the right direction, but doing so too slowly."

Hohne noted that at a 2009 G-20 summit in Pittsburgh, leaders committed to "phase out over the medium term inefficient fossil fuel subsidies that encourage wasteful consumption."

"As our latest report shows, there is still a lot of work to do in this area, but this is an ongoing discussion that started at the G-20," Hohne said. "The G-20 can play a key role in sending a message to the world about what is important."

The G-20 is comprised of the European Union and 19 countries: Argentina, Australia, Brazil, Britain, Canada, China, France, Germany, India, Indonesia, Italy, Japan, Mexico, Russia, Saudi Arabia, South Africa, South Korea, Turkey and the U.S.

The report's authors came from 10 of the countries in the G-20, though none were from the U.S.

Interior's Zinke Wants Oil and Gas Permitting Streamlined

Posted July 06, 2017, 02:14 P.M. ET

By Alan Kovski

Oil and gas companies could get more leasing opportunities and faster permitting for work on federal onshore lands under an order announced June 6 by Interior Secretary Ryan Zinke.

Zinke told reporters he was issuing a secretarial order to simplify and streamline the leasing and permitting process and stabilize it in terms of honoring lease commitments, all without skirting the obligations of the National Environmental Policy Act.

Drilling permit processing averaged 257 days last year. Zinke said he was aiming to meet the statutory mandate for issuing drilling permits in 30 days, although he acknowledged the government might not get there.

Southern's Clean Coal Tryout Officially Dead Upon State Order

Posted July 06, 2017, 12:48 P.M. ET

By Mark Chediak

A seven-year, $7.5 billion effort to build a first-of-its-kind "clean coal" power plant in Mississippi is officially over.

Mississippi regulators ordered utility owner Southern Co. on July 6 to come up with a deal that'll have the Kemper plant—once hailed by the Obama administration as the future of coal—running as a natural gas-fired generator instead. The Mississippi Public Service Commission directed Southern to come up with a settlement within 90 days that has the plant burning gas and protects customers from the ballooning costs of the project.

The state's ruling only stands to seal the fate of the Kemper plant. Southern already said last week that it was pulling the plug on the coal part of the complex, and the July 6 vote only memorializes the state utility commission's call last month for the company to give up on "unproven" technologies at the plant.

The death of the clean-coal project represents a major setback for the very technologies that the Trump administration has promoted it as a way to help save mining jobs. It also marks the end of a high-profile project that was plagued by construction slowdowns, equipment failures and sliding natural gas prices. The plant's already years behind schedule and more than $4 billion over budget.

Southern warned investors that it may take a $3.4 billion second-quarter charge if the company isn't authorized to recover the costs of the project from customers.

Kemper was supposed to turn coal into gas to produce electricity—all while removing carbon dioxide emissions linked to global warming. At least that was idea as the U.S. government poured $382 million of grants into the project and then-Energy Secretary Steven Chu stressed its "national importance." Now, the project's only claim to fame is becoming quite possibly the most expensive gas plant ever built.

When the Kemper project was first conceived, America's gas resources were thought to be becoming scarcer. Southern pitched the plant as a valuable hedge against volatile commodity prices. The shale boom has since unleashed so much gas that it's glutted markets and sent prices plummeting to the lowest level since the 1990s.

Viable With Gas

By February, Southern was estimating that running the Kemper plant on natural gas was more economically viable than running it off coal under two of three gas price scenarios analyzed.

The company has 45 days to propose a settlement to the commission, with another 45 days afforded for public comment and discussion, Public Service Commission Chairman Brandon Presley said before the panel voted on an order Thursday. Any deal must fit the terms laid out by the commission last month, he said. A printed copy of the order wasn't immediately available.

Tesla Seen Pulling Away from GM for Clear U.S. Electric Car Lead

Posted July 06, 2017, 8:43 A.M. ET

By Claire Ballentine

More than a dozen automakers are jostling to lead the U.S. electric-car race, but Bloomberg New Energy Finance sees a clear winner separating from the pack: Tesla Inc.

The automaker led by Chief Executive Officer Elon Musk will emerge as "the stand-out" in total cumulative deliveries through 2021, reaching nearly 709,000 vehicles, according to BNEF's Long-Term Electric Vehicle Outlook released July 7. Tesla is projected to pull away from current leader General Motors Co., which may slip behind Volkswagen AG's aggregate sales of plug-in hybrid and fully electric autos in four years' time.

The report reinforces the optimism among some analysts that Tesla will be able to distance itself from established automakers and dominate many of the world's biggest markets for battery-powered vehicles. Investors have bid the company's shares up 53 percent this year in anticipation

of Musk debuting the Model 3 sedan, a more affordable car he's counting on to crack the mass market.

"If they can stick to the Model 3 timeline, they're going to be at the front edge of this for a while," BNEF analyst Colin McKerracher said of Tesla in a phone interview.

While BNEF expects Tesla, VW and GM will lead the EV charge in 2021, the research group owned by Bloomberg LP predicts at least three other automakers will have also surpassed the 200,000 cumulative sales mark in the U.S. by that year. After crossing that threshold, buyers are no longer eligible for the full federal $7,500 tax credit toward purchases of vehicles from those manufacturers.

Hitting the 200,000 unit milestone would portend more sustainable demand for electric vehicles. Though BNEF does expect some impact from the federal tax credit phase-out, industry sales could be even higher because the analysts' short-term forecasts are based only on electrified models disclosed to date.

Product introduction schedules for 2020 and 2021 are still taking shape. BNEF made its forecasts before Volvo Car Group announced plans July 5 to offer only hybrid or full-electric motors on every new model launched starting in 2019.

The prediction BNEF settled on that Volkswagen could climb to the No. 2 spot by 2021 was the "the most contentious" of the research group's projections, McKerracher said. The German automaker doesn't yet have the same presence in the U.S. market as other electric-focused automakers, though the opportunity is there for the company to rank among the leaders based on all the vehicle launches it's announced.

Hybrid Outlook

The expected rise in pure electric vehicle demand in the U.S. will come at the expense of some hybrid vehicle demand, BNEF said. This could pose a challenge for the likes of Toyota Motor Corp., known for gasoline-electric cars like the Prius. The company sold about 1.4 million traditional and plug-in hybrid vehicles last year and has delivered more than 10 million cumulatively since the first Prius debuted in 1997.

Battery electric cars have already surpassed plug-in electric hybrids in the U.S., with about 85,000 and 73,000 sold last year respectively, BNEF data show. The trend also holds globally, with 412,000 battery electric vehicles sold last year to 283,000 plug-in hybrids.BNEF expects Toyota's Prius Prime plug-in hybrid to be the exception and hold the title of best-selling electrified vehicle in the U.S. this year. Tesla will get off to too late of a start with its Model 3 to catch up, with Musk planning to hold a handover party for its first 30 sedan customers on July 28. The company is aiming to ramp-up production to a rate of 20,000 cars per month in December.

"In the long term, we see battery electric vehicles winning because of the battery cost curve," McKerracher said.

Simplifying Energy Tax Code System Proving Not So Simple

Posted July 06, 2017, 7:00 A.M. ET

By Laura Davison and Brian Dabbs

Proposals to simplify energy tax credits are garnering interest from Senate Democrats and House Republicans as congressional leaders contemplate comprehensive tax reform. Lawmakers are looking at tax reform or a bill to extend nuclear production tax credits as possible vehicles to help them untangle the current energy tax system, lawmakers and industry officials told Bloomberg BNA.

One idea involves moving to a "technology-neutral" tax credit. The subsidy would apply to all forms of renewable energy, such as wind, solar, and geothermal, to prevent Congress from having to create credits for new technologies as the industry innovates. Supporters laud the proposal for simplifying a complex energy tax quilt.

"It will prevent the need to shoehorn new technologies into statutory definitions, some of which have been written decades ago," said David K. Burton, a partner at Mayer Brown LLP who leads the firm's renewable energy group.

The effort comes as lawmakers are aiming to overhaul the tax code by year-end—an ambition that faces big hurdles, since Republicans have failed so far to agree on a framework. House Ways and Means Committee Chairman Kevin Brady (R-Texas) said he expects energy tax credits to be included in the legislation. Some lawmakers also hope technology-neutral provisions could be attached an extension of the nuclear production tax credit—a bill (S. 666) lawmakers from South Carolina and Georgia are looking to push through Congress quickly.

Sen. Ron Wyden (D-Ore.), ranking member of the Finance Committee, has been pushing the idea of streamlining the energy sections of the tax code with a technology-neutral credit for several years. His bill, Clean Energy for America Act (S. 1068), would let taxpayers choose between a production or an investment tax credit, scaled according to the amount of carbon emissions. It has 21 co-sponsors in the Senate, none of whom are Republicans.

Renewable energy groups, including the Solar Energy Industries Association and the American Council on Renewable Energy, have expressed support for the Wyden bill.

The tension between Democrats and Republicans on technology neutrality hinges on which energy sources will qualify for the credit. Wyden's bill allows zero-emission technologies, such as wind and solar, to qualify for the maximum credits, either 2.3 cents per kilowatt hour for the production credit or an investment tax credit of up to 30 percent. Rep. Tom Reed (R-N.Y.) has been exploring ways to create a Republican-friendly alternative that doesn't base eligibility on carbon.

"In a perfect world, you would start with a technology-neutral credit," rather than the patchwork of incentives that exists now, a GOP aide said.

Energy Priorities

For now, the strongest push in the Senate is to combine expired renewable energy credits under tax code Section 48 (H.R. 1090), the nuclear credit extension that passed the House in June, with an extension of a carbon sequestration tax credit, the aide said. The sequestration measure, which is spearheaded by Sens. Heidi Heitkamp (D-N.D.) and Sheldon Whitehouse (D-R.I.), hasn't been introduced yet this year but is expected to closely resemble legislation (S. 3179) from last Congress.

But if those don't pass, momentum could shift to a technology-neutral approach.

Republicans, however, still need to come up with a bill. The disagreement between the right and the left stems from how they view the idea, a Democratic aide said. Democrats see a technology-neutral

approach as a climate issue "at its core," the aide said. For Republicans, this is about spurring energy innovation, a GOP aide said.

"Conservatives generally are for agnostic government policies that don't choose winners or losers but that instead empower consumers and encourage research and development," Rep. Carlos Curbelo (R-Fla.) said.

One idea that has been considered is to provide incentive to new technologies with a credit until they reach a certain level of power generation, a GOP aide said. That would allow the oil and gas sector to receive the credit for technologies that are more efficient than current systems. Aides of both parties said, however, that the approach could be open to litigation because it's hard to define what processes are "innovative."

A compromise between Democratic and Republican approaches, however, would be a delicate balancing act, and so far no real headway appears to have been made, Timothy Fox, an alternative power analyst at ClearView Energy Partners LLC, told Bloomberg BNA.

"The fact that this minimizes the tax code could generate some support for this, but tax reform is very difficult," he said. "If a bill with this regulatory construct could be drafted in a way that more services could qualify in terms of lowering the baseline, then the prospects that it advances are greater."

For example, plants that burn cleaner coal could benefit from a lower baseline, he said.

Competing Factions

Power plants that emit 35 percent less carbon than the national average would be able to qualify for the minimum credit under Wyden's plan. Those that emit zero carbon would access the full credit.

The bill, therefore, could benefit the "fossil fuel guys" who crack down on carbon emissions, Wyden told Bloomberg BNA.

But Republicans still often lock horns over the basic merits of subsidizing energy, tax and energy specialists said. "It's a spectrum type of thing. You're going to have conservatives who don't want to incentivize energy production and some that want to incentivize fossil energy and some that want to incentivize renewable energy," Curtis Beaulieu, an energy lobbyist at Bracewell LLP, said. "I couldn't tell you how to amend this proposal to get the maximum Republican support."

Rep. David Schweikert (R-Ariz.), a member of the House Freedom Caucus, said the credits are likely to face resistance from some conservative members.

"If you have none, you are treating everyone the same," he said. "Wouldn't the ultimate policy-neutral perspective be really low rates accomplishing the same thing rather than a subsidy for energy?"

Christopher Guith, senior vice president of the U.S. Chamber of Commerce's Institute for 21st Century Energy, echoed that call, pointing to what he said were potential perils of the Wyden proposal or a related version.

"If you look at some of the struggles that are happening in competitive power markets right now that are pushing coal and nuclear out of the market, there's a growing consensus that the piecemeal

approach to subsidizing renewables has had unintended consequences," he told Bloomberg BNA. "There's a growing realization that federal subsidies have caused more problems than solutions."

Since the White House's "energy week," which wrapped up June 30, President Donald Trump continues to tout the value of baseload power, which refers to fossil fuels and nuclear. Environmentalists and like-minded lawmakers, however, urge an immediate transition to carbon-free energy production in order to minimize emissions that cause climate change.

Compromise Search

Despite the uncertainty, Reed told Bloomberg BNA he is working with a group of Senate Democrats and Republicans to find a way to move a technology-neutral bill, especially since the House passed the nuclear tax credit bill. "My hope is that as that vehicle goes forward that our technology-neutral-type provisions are recognized in the same caliber as that legislation," Reed said.

Attaching technology-neutral provisions to the nuclear bill could be difficult, especially if the nuclear legislation is fast-tracked through the Senate in a unanimous-consent process as some Republicans are hoping.

Wyden indicated he would wait to see how a Republican bill looks, before committing to compromising on his bill, but added "we are looking for opportunities to advance this."

And Sen. Debbie Stabenow (D-Mich.), Wyden's deputy on the committee, said the measure could be a Democratic position in tax reform negotiations. "We're just now hearing that we may actually have an open process on tax reform in the committee, which would be a welcome change," she told Bloomberg BNA.

The proposal, in fact, could ultimately serve as an olive branch if Republicans need a few Democratic votes to pass comprehensive tax reform. "I'm not saying the inclusion of this proposal would lead those Democrats to support tax reform, but it could entice them. This might move the needle a bit," Beaulieu said.

China Poised to Blow Past Solar Goals Amid Push to Clear Skies

Posted July 06, 2017, 9:18 A.M. ET

By Bloomberg News

China is poised to blow past its solar targets several years ahead of schedule as the government presses ahead with efforts to fight pollution, solidifying the nation's role as the world's biggest solar market.

Based on a review of projects already announced or under construction, China could install more than 30 gigawatts of new solar capacity this year, Yvonne Liu, a Beijing-based analyst at Bloomberg New Energy Finance, said in a phone interview. That would push China past its stated goals for 2020.

In 2016, China set out a plan to have at least 105 gigawatts of solar installations in four years. The nation, the world's biggest investor in clean energy, had almost 85 gigawatts as of the end of March after adding 7.21 gigawatts during the first quarter, according to data from China's National Energy Administration.

London-based BNEF's most-optimistic forecasts for China this year see solar installations close to their peak, aided in large part by growth in the commercial solar market. China's overall solar capacity has surged 13-fold since the end of 2012.

China installed a record 34.54 gigawatts of solar last year, according to the NEA. The growth of the market has benefited top panel manufacturers led by JinkoSolar Holding Co. and Trina Solar Ltd.

Policy Environment

The nation could add about 20 gigawatts in the first half after a rush of project development ahead of tariff cuts, said Peng Peng, secretary-general of the China Photovoltaic Power Investment & Financing Alliance. She raised her forecast for the year to at least 28 gigawatts from a previous estimate of 25 gigawatts.

The government's goal is "a bottom line," BNEF's Liu said, adding that China could install at least another 25 gigawatts of solar capacity in 2018 if the policy environment remains stable.

Leading to 2020, China is aiming to cut production costs and improve the efficiency of solar-generated power, Xing Yiteng, vice consultant in the new energy division at the NEA, said in February, adding that expansion is secondary.

France Seeks Carbon Price More Than 19 Times Market Level

Posted July 06, 2017, 10:42 A.M. ET

By Helene Fouquet, Mathew Carr and Mark Deen

French Environment Minister Nicolas Hulot said he wants to increase the government's target price for carbon emissions to more than 100 euros ($114) a ton by 2030 to meet the nation's climate-change goals.

"The objective is to accelerate the implementation of the Paris climate accord," Hulot said July 6 at a news conference in which he set out a wide-ranging environmental strategy. A Hulot adviser said an earlier report in Le Figaro newspaper that said the 2030 target would be 140 euros a ton was wrong, and that a precise figure would be given in September.

At 100 euros, a French permit to release a ton of the greenhouse gas still would be more than 19 times the current level of European Union carbon allowances.

Companies from Engie to Electricite de France SA have lobbied for a minimum price of at least 30 euros a ton, arguing it would boost the use of cleaner natural gas-fired power stations and carbon-free nuclear generation.

European Union carbon allowances dropped about 22 percent so far this year after the bloc has spent most of the past decade seeking to deal with an accumulated glut in its market that's the equivalent of a full year of supply. Nations, the region's parliament and the European Commission are seeking to finalize plans this year to establish a reserve in 2019 to mop up the program's glut.

The EU may have to consider pursuing a carbon-floor price or a tax in the next decade if the deal on the reserve fails to adequately revive EU allowances, a German government official said in March.

South African Farmers Wary of Fracking as Licensing Looms

Posted July 06, 2017, 8:57 A.M. ET

By Paul Burkhardt

Farmers in South Africa say they need more assurances that shale-gas drilling is safe for their industry as exploration licenses for companies including Royal Dutch Shell Plc are expected in months.

After emerging from the worst drought on record, farmers still aren't clear about where explorers will get the water they need to inject chemicals as part of a drilling technique known as fracking, Johannes Moller, the president of growers' body Agri SA, said July 5 at a press conference. There's also uncertainty about how land will be rehabilitated after drilling and how land owners will be compensated, he said.

The development of gas in the semi-desert Karoo region, which is estimated by regulators to hold as much as 201 trillion cubic feet of the resource, has been slowed by legislative delays. Momentum has increased following the introduction of a program to diversify South Africa's fuel mix by using natural gas, and Mineral Resources Minister Mosebenzi Zwane has said he favors the exploitation of shale resources.

"We can't support the government's view on progressing shale gas" until there are answers, Moller said. South Africa's Academy of Science in November also recommended further research before moving ahead with exploration.

Representatives of Shell, the Department of Minerals and the Department of the Environment didn't immediately return emails seeking comment.

The minister will decide on five applications in the third quarter, according to Petroleum Agency South Africa. If permits are issued, Agri SA will appeal immediately, said Janse Rabie, the group's head of natural resources.

One of the least-populous areas of the country, the Karoo produces most of South Africa's wool and accounts for the bulk of the country's mohair output, as well as sheep and ostrich meat.

Senate Confirms William Wehrum to Lead EPA Air Office

WASHINGTON (November 9, 2017) – Today, U.S. Environmental Protection Agency (EPA) Administrator Scott Pruitt praised the U.S. Senate vote to confirm William (Bill) Wehrum to serve as the Assistant Administrator for EPA's Office of Air and Radiation.

"I want to thank Leader McConnell and Chairman Barrasso for their continued partnership and outstanding leadership with getting Bill confirmed to such an important role at the agency. Bill Wehrum has a long history of public service, including over 30 years working in the environmental field. I look forward to him joining EPA to help us implement our positive environmental agenda and administer programs that ensure that Americans have access to clean air," **said EPA Administrator Scott Pruitt.**

On October 25, 2017, the U.S. Senate Committee on Environment and Public Works, led by U.S. Senator John Barrasso (R-WY) advanced William Wehrum's nomination out of committee.

Leading the News

Asbestos
EPA Sets Out Parameters for Studying Asbestos Risk
The EPA took an early step June 22 to lay out how it plans to evaluate the risk of asbestos, publishing an initial document on how it will review information on the substance.

Chemicals
EPA Details New Oversight of Chemicals in Three Final Rules
The Environmental Protection Agency released June 22 final rules establishing its first-ever, comprehensive regulatory strategy to evaluate—and regulate, if needed—chemicals in commerce.

Risk Assessment
EPA Examining Worker Exposures to Solvents, Liver Damage
The EPA will review whether five commonly used solvents may damage liver or kidney function or cause other harms in exposed workers, the general public or people living near sites where the chemicals are made or disposed, according to risk scoping documents the agency released June 22.

Risk Assessment
EPA to Refine Initial Analysis of Pigment, Other Chemicals
Lenox Corp., Tiffany & Co., 3M, BASF Corp. and Procter & Gamble Corp. are among the companies that eventually could be affected by the risk analysis plans that the EPA released June 22 for four chemicals.

News

Air Pollution

Cement Plants to Get Extension for Alternate Emissions Tests

Cement manufacturers should be authorized to continue using alternative methods to comply with federal hydrochloric acid emissions limits due to a shortage of materials used to calibrate required monitoring systems, according to the EPA.

Air Pollution

EU Panel Backs U.N. Ozone, Air Pollution Agreements

The European Parliament's environment committee June 22 waved through draft European Union decisions to ratify international agreements on ozone-depleting substances and transboundary air pollution.

Asbestos

Foster Wheeler Appeal Upends Asbestos Case Transfer

A federal district court in Maryland denied Foster Wheeler LLC its right to a federal forum when it transferred a worker's asbestos exposure case to state court, the Fourth Circuit ruled June 22 (Sawyer v. Foster Wheeler LLC, 4th Cir., No. 16-1530, 6/22/17).

Driving the Day

Good Monday morning. IVANKA SPEAKS -- INTERVIEW WITH AINSLEY EARHARDT ON FOX NEWS -- *Asked about her father's tweets*: "I try to stay out of politics. I -- his political instincts are phenomenal. He did something that no one could have imagined he'd be able to accomplish. There were very few who thought, early on. I feel blessed just being part of the ride from day one and before. But he did something pretty remarkable. But I don't profess to be a political savant."

-- ABOUT WHETHER SHE DISAGREES WITH HER FATHER: "So naturally, there are areas where there is disagreement. We're two different human beings. I think it's normal to not have 100 percent aligned viewpoints on every issue. I don't think anyone operates like that with a parent, or within the context of an administration, and I think that all different viewpoints being at the table is a positive thing. And I think one of the things that, in this country we don't have enough of, is dialogue."

-- ONE QUICK NOTE: Ivanka is a senior adviser to the president. If she is trying to "stay out of politics" it will be hard for her to be very successful in Washington.

IT'S FINALLY HERE ... Republicans have been talking about repealing Obamacare for six years, and this week they are finally poised to take up their legislation. One problem: it's unclear if they have anywhere near the support they need to get the bill through. Expect a lot of arm twisting and drama over the next several days. President Donald Trump will play a support role. Senate Majority Leader Mitch McConnell's allies have sent signals that he is going to put the bill up for a vote even if he doesn't expect it to pass. But Sen. John Cornyn of Texas, the No. 2 Senate Republican, told reporters in Colorado Springs that Aug. 1 is the real final deadline.

IF IT LOOKS LIKE THIS BILL WILL PASS, there's a chance the House will stick around to try to take action. **SENIOR REPUBLICANS** we talk to tell us they'd want to try to take advantage of the political momentum. But there's still serious doubt this bill can pass the House.

WHERE THINGS STAND -- "Senate Republicans skeptical Obamacare repeal can pass this week: Senate GOP leaders face problems from seemingly every corner of the conference," by Elana Schor and Seung Min Kim: "Senate Republicans are casting doubt on their leaders' plans to vote this week on repealing Obamacare, with lawmakers from all wings of the party so far withholding support from the massive reshaping of the health care law that they campaigned on for seven years. Majority Leader Mitch McConnell of Kentucky faces problems from seemingly every corner of his conference, and -- from wary moderates to conservatives and even leadership allies -- few Republicans were willing Sunday to predict the Senate repeal bill could pass this week, before lawmakers leave Washington for a weeklong July 4 recess. ...

"Senate Majority Whip John Cornyn, speaking to reporters at the Koch Brothers' donor conference in Colorado Springs, said he was unsure if Republicans would be able to round up the votes. He said the party needed to move quickly, and things were on schedule for a vote this week. 'We don't have the luxury of waiting around. It's not going to get easier,' Cornyn said, identifying Aug. 1 as a 'drop-dead line.'" http://politi.co/2sHC9uG

-- BIG COVERAGE LOSSES: "CBO score sure to add to McConnell's headaches," by Adam Cancryn and Dan Diamond: "The CBO is poised to tell Senate Republicans this week that their health plan will leave millions more uninsured than Obamacare -- with the losses estimated from 15 million to 22 million over a decade, according to a half dozen budget analysts polled by POLITICO. ... The CBO score of the Senate bill [is] expected as early as Monday." http://politi.co/2tbNggh

-- NYT A1, "Senate Leaders Try to Appease Members as Support for Health Bill Slips," by Robert Pear and Tom Kaplan: "Senate leaders, trying to muster support, are looking for ways to address a conspicuous omission: The bill requires insurers to accept anyone who applies, but repeals the mandate for people to have coverage and does not replace it with anything. ... Republicans said they might revise their bill to establish a six-month waiting period for people who go without insurance and then want to sign up, in the belief that this would encourage consumers to maintain continuous coverage. ... The Senate's answer also has potential problems. For someone with cancer, a six-month waiting period could be a death sentence." http://nyti.ms/2tbvs4X

-- WITH FRIENDS LIKE THESE ... SEN. RON JOHNSON (R-WIS.) on the **NYT OP-ED PAGE: "Where the Senate Health Care Bill Fails":** "Speaking at a rally for his wife's presidential campaign last year, Bill Clinton called Obamacare 'the craziest thing in the world.' As he put it, 'The people who are out there busting it, sometimes 60 hours a week, wind up with their premiums doubled and their coverage cut in half.' Mr. Clinton

was right, and it's why Republicans have been pushing to repair the damage done by Obamacare for so long. Our priority should be to bring relief, and better, less expensive care, to millions of working men and women.

"Unfortunately, the Senate Republican alternative, unveiled last week, doesn't appear to come close to addressing their plight. Like Obamacare, it relies too heavily on government spending, and ignores the role that the private sector can and should play. ... Republican leaders have told us the plan unveiled last week is a draft, open to discussion and improvement. I look forward to working with Senate leadership and the president to improve the bill so it addresses the plight of the forgotten men and women by returning freedom and choice to health care." http://nyti.ms/2s7Ux1c

-- JOHNSON seems to be voicing pretty fundamental concerns with the GOP bill. His issues don't appear to be easily solvable with a tweak or two. That is a problem for Senate Republicans.

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study found that pharmacy benefit managers (PBMs) reduced spending in Medicare Part D by 58 percent in 2014, driving down costs for the government, taxpayers, and beneficiaries. The study forecasts that PBMs will save $1,800 per Medicare beneficiary, per year over the next ten years. Learn more at affordableprescriptiondrugs.org ******

TRUTH TALK -- "Koch-backed group calls health fight in Congress 'humbling'," by Kevin Robillard in Colorado Springs: "The head of the Koch brothers-backed Americans for Prosperity admitted to donors on Sunday that the group was caught 'flat-footed' by the fight in Congress to replace Obamacare, as the group seeks to influence Republican proposals it says do not go far enough to repeal the 2010 law. 'We fully expected a repeal vote,' Americans for Prosperity President Tim Phillips told hundreds of donors at the Koch network's annual seminar at the Broadmoor Resort. 'We were caught flat-footed when it didn't happen.' He added: 'This has been humbling for us.'" http://politi.co/2tbAnCQ

AIR WARS -- "Pro-Trump group's health care offensive warns GOP senators to get in line," by Alex Isenstadt: "A new campaign by top White House allies targeting the GOP's most vulnerable senator over health care sends a loud message to those resistant to the Trump agenda: We're coming after you. America First Policies, a White House-backed outside group led by the president's top campaign advisers, has launched a $1 million attack against Sen. Dean Heller (R-Nev.), who on Friday announced that he opposed the Senate's recently unveiled Obamacare repeal plan. ...

"The offensive is aimed at both punishing Heller and at swaying his vote, and it is a stunning act of political retaliation against a member of the president's own party - one who faces a perilous path to re-election in 2018. Senior Republicans, many of whom are deeply worried about Heller's political standing and increasingly nervous about the midterms, were shocked and spent the weekend measuring the possible fallout."

http://politi.co/2tbTJbj

FOGGY BOTTOM WATCH -- NYT A1, " Where Trump Zigs, Tillerson Zags, Putting Him at Odds With White House," by David E. Sanger, Gardiner Harris and Mark Landler: "Mr. Tillerson [is] in exactly the place a secretary of state does not want to be: in public disagreement with the president who appointed him. Mr. Tillerson tried to position himself as an intermediary [for the Qatar crisis] and sought for all sides to put their demands on the table. ... Some in the White House say that the discord in the Qatar dispute is part of a broader struggle over who is in charge of Middle East policy -- Mr. Tillerson or Jared Kushner, the president's son-in-law and a senior adviser - and that the secretary of state has a tin ear about the political realities of the Trump administration.

"Others say it is merely symptomatic of a dysfunctional State Department that, under Mr. Tillerson's uncertain leadership, does not yet have in place the senior political appointees who make the wheels of diplomacy turn. ... In fact, Mr. Tillerson's determination to rationalize the State Department structure, which many applaud, and his refusal to appoint under secretaries and assistant secretaries until he has it all figured out have created policy gridlock. Three foreign ambassadors - one from Asia and two from Europe - said they had taken to contacting the National Security Council because the State Department does not return their calls or does not offer substantive answers when it does. ... Through it all, Mr. Tillerson, a Texas native and an engineer by training, has remained publicly stoic, proceeding at his own pace, though colleagues from his Exxon days say they have seen little evidence he is finding much joy in the job." http://nyti.ms/2sS1a4N

END OF AN ERA -- "Russian Ambassador Sergey Kislyak Is Going Home To Russia," by BuzzFeed's John Hudson: "Ending one the most turbulent tenures of a Washington-based ambassador in recent memory, the Kremlin has decided to recall its ambassador to the United States Sergey Kislyak, three individuals familiar with the decision tell BuzzFeed News. ... The U.S.-Russia Business Council ... is hosting a going away party for the ambassador on July 11 at the St. Regis Hotel. ... In Kislyak's place, the Kremlin is expected to send Russian deputy foreign minister, Anatoly Antonov, according to Russian media reports." http://bzfd.it/2tLI1m2 ... ***RSVP to the party*** http://bit.ly/2s7vDyM

-- Gregg Carlstrom (@glcarlstrom): "On July 12, no one in DC will recall having gone to this party".

COMING ATTRACTIONS -- "Trump eager for big meeting with Putin; some advisers wary," by AP's Vivian Salama: "President Donald Trump is eager to meet Russian President Vladimir Putin with full diplomatic bells and whistles when the two are in Germany for a multinational summit next month. But the idea is exposing deep divisions within the administration on the best way to approach Moscow in the midst of an ongoing investigation into Russian meddling in the U.S. elections.

"Many administration officials believe the U.S. needs to maintain its distance from Russia at such a sensitive time - and interact only with great caution. But Trump and some others within his administration have been pressing for a full bilateral meeting. He's calling for media access and all the typical protocol associated with such sessions, even as officials within the State Department and National Security Council urge more restraint, according to a current and a former administration official." http://apne.ws/2sHLe6K

-- **"Europe has been working to expose Russian meddling for years,"** by WaPo's Dana Priest and Michael Birnbaum in Riga, Latvia: "Across the continent, counterintelligence officials, legislators, researchers and journalists have devoted years - in some cases, decades - to the development of ways to counter Russian disinformation, hacking and trolling. ... Four dozen officials and researchers interviewed recently sounded uniformly more confident about the results of their efforts to counter Russian influence than officials grappling with it in the United States, which one European cyber-official described as 'like watching 'House of Cards.'" http://wapo.st/2s7KWYg

-- "Trump's Deflections and Denials on Russia Frustrate Even His Allies," by NYT's Maggie Haberman: http://nyti.ms/2t9oqNV

SUSAN GLASSER'S "THE GLOBAL POLITICO" -- NEW EPISODE -- "Why Rep. Adam Kinzinger Is Raising 'Holy Hell' Over Russia: The up-and-coming member of the House Foreign Affairs Committee is prepared to wage a GOP rebellion": "Kinzinger ... [has] emerged as a rare voice inside the GOP willing to publicly critique the president of his own party on foreign policy. A particularly ardent Russia hawk in a party that was until recently filled with them, Kinzinger has taken to tweeting with the hashtag '#russiaisnotourally' in what seems to be a direct challenge to the Twitter-loving president." http://politi.co/2scRik0 ... ***Full transcript*** http://politi.co/2sSi6br ... ***Subscribe*** http://apple.co/2kJ9q1U

NOTHING TO SEE HERE -- "No, Justice Anthony M. Kennedy Is Not Retiring Tomorrow," by Above the Law's David Lat: "[B]ased on reports I've received from former AMK clerks who attended his law clerk reunion dinner [Saturday] night, it is highly unlikely that Justice Kennedy will announce his retirement" Monday. http://bit.ly/2sHz25l

-- FROM ELIANA JOHNSON: "White House counsel Don McGahn told the president recently that he anticipated Kennedy would step down, leading Trump to expect a retirement announcement, a senior White House aide said." http://politi.co/2u65a0W

-- IMPORTANT TO KNOW TODAY -- AP'S MARK SHERMAN: "Before taking their long summer break, the Supreme Court justices are poised to act on the Trump administration's travel ban and a separation of church and state dispute involving a Missouri church playground." http://apne.ws/2s826oh

THE PRESIDENT'S DAY -- TRUMP is lunching with Mike Pence and Nikki Haley. In the afternoon, Trump welcomes Indian Prime Minister Narendra Modi to the White House. They'll meet, give a public statement and will have dinner.

THE JUICE ...

-- THE OBAMAS are at the Four Seasons in Bali. http://dailym.ai/2u6xwIh

-- STEVE KERRIGAN and **RICK PALACIO** are launching a new PAC called "Stronger States" to help build the Democratic bench and support local candidates ahead of the 2018 midterms. http://bit.ly/2scS4gR

-- HOUSE MINORITY LEADER NANCY PELOSI will join Charlie Rose, Gayle King and Margaret Brennan on "CBS This Morning" at 8:30 a.m.

Playbook Reads

PHOTO DU JOUR: Members of Resist, a foundation that supports people's movements for justice and liberation, protest President Donald Trump and other politicians as they march during the New York City Pride Parade on June 25. | Michael Noble Jr./AP Photo

FUN READ - JEFFREY TOOBIN in The New Yorker, "The National Enquirer's Fervor for Trump: The tabloid is defined by its predatory spirit. Why has it embraced the President with such sycophantic zeal?": "As [an editorial] meeting wound down, the discussion turned to the following week's issue. Someone suggested a story about a video from Donald and Melania Trump's first overseas trip. The video, which had just gone viral, showed the couple walking down a red carpet on the airport tarmac in Israel. When Donald reached for Melania's hand, she slapped it away with a sharp flick of her wrist. 'I didn't see that,' [David] Pecker [chief executive of American Media, Inc. which owns the Enquirer] said, on the speakerphone. The half-dozen or so men in the room exchanged looks.

"One then noted that the footage of Melania's slap had received a good deal of attention. 'I didn't see that,' Pecker repeated, and the subject was dropped. It was a telling moment. Even if the leader of a celebrity-news empire had missed the viral video from the President's trip, Pecker's decision to ignore the awkward moment for the First Family was not surprising. ... Pecker and Trump have been friends for decades ... and Pecker acknowledges that his tabloids' coverage of Trump has a personal dimension. ...

"Pecker is ... considering expanding his business: he may bid to take over the financially strapped magazines of Time, Inc. ... Based on his stewardship of his own publications, Pecker would almost certainly direct those magazines, and the journalists who work for them, to advance the interests of the President and to damage those of his

opponents --- which makes the story of the Enquirer and its chief executive a little more important and a little less funny ... [T]he idea of Pecker as the leader of Time, Inc., like that of Trump as the President of the United States, has gone from preposterous to more than possible." http://bit.ly/2s82C5N

JARED INC. -- "Kushner firm's $285 million Deutsche Bank loan came just before Election Day," by WaPo's Michael Kranish: "One month before Election Day, Jared Kushner's real estate company finalized a $285 million loan as part of a refinancing package for its property near Times Square in Manhattan. The loan came at a critical moment. Kushner was playing a key role in the presidential campaign of his father-in-law, Donald Trump. The lender, Deutsche Bank, was negotiating to settle a federal mortgage fraud case and charges from New York state regulators that it aided a possible Russian money-laundering scheme. The cases were settled in December and January.

"Now, Kushner's association with Deutsche Bank is among a number of financial matters that could come under focus as his business activities are reviewed by special counsel Robert S. Mueller III, who is examining Kushner as part of a broader investigation into possible Russian influence in the election. The October deal illustrates the extent to which Kushner was balancing roles as a top adviser to Trump and a real estate company executive." http://wapo.st/2sHGj5P

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD)**: A new study projects pharmacy benefit managers (PBMs) will save Medicare Part D $896 billion over ten years. PBMs drive savings for taxpayers and seniors by negotiating discounts from drug manufacturers; by encouraging the use of lower cost, clinically equivalent drugs; and by providing clinical programs that improve health outcomes. MAYOR OF THE WORLD -- "Bloomberg's Next Anti-Washington Move: $200 Million Program for Mayors," by NYT's Alex Burns: "Michael R. Bloomberg will throw his financial might into helping beleaguered American mayors, creating a $200 million philanthropic program aimed at backing inventive policies at the city level and giving mayors a stronger hand in national politics. Mr. Bloomberg intends to announce the initiative on Monday in a speech to the United States Conference of Mayors in Miami Beach, where he will castigate federal officials and state governments around the country for undermining cities. He plans to describe the program, called the American Cities Initiative, as a method of shoring up the global influence of the United States despite turmoil in Washington." http://nyti.ms/2sS1iBl ... ***Release*** http://politi.co/2sSc4Yc ... ***The new program*** http://bloombg.org/2s7vKtQ

HAPPENING TODAY -- New Orleans Mayor Mitch Landrieu will be elected president of the U.S. Conference of Mayors today in Miami Beach. He'll deliver a speech on national leadership starting at 12:45 p.m. ***Livestream*** http://bit.ly/2sSbJVD

FIRST IN PLAYBOOK -- Alexis Prieur L'Heureux and **Hannah Fried,** two lawyers and

longtime Democratic campaign staffers, are starting a 501(c)4 called Access Democracy, focused on election administration problems, such as out-of-date registration lists and long lines. http://bit.ly/2sI9SUL

MEDIAWATCH -- "CNN Is Imposing Strict New Rules On Its Russia Coverage," by BuzzFeed's Jon Passantino: "CNN is imposing strict new publishing restrictions for online articles involving Russia after the network deleted a story and then issued a retraction late Friday, according to an internal email obtained by BuzzFeed News. The email went out at 11:21 a.m. on Saturday from Rich Barbieri, the CNNMoney executive editor, saying 'No one should publish any content involving Russia without coming to me and Jason [Farkas],' a CNN vice president. 'This applied to social, video, editorial, and MoneyStream. No exceptions ... I will lay out a workflow Monday.'" http://bzfd.it/2sHsuEb

-- ANDREA MITCHELL, NBC News chief foreign affairs correspondent, yesterday was awarded the Joseph M. Quinn Award for Lifetime Achievement by the Los Angeles Press Club, the club's highest honor. Pool report: "Introduced by NBC News' Katy Tur, Andrea shared that 'rarely have we been as needed as we are today' as journalists and that 'none of us can do this alone,' addressing some of the less-covered stories of today like the Sunni/Shiite divide in the Persian Gulf. Andrea is now covering her seventh (!) presidential administration and has no plans on slowing down, telling the audience, "I know this is a lifetime achievement award, but this one isn't over!'" ***Pics*** http://bit.ly/2scVGzJ ... http://bit.ly/2rSsjU0

--"Victoria Alekhine, Joshua Harlan": "Victoria Alekhine and Joshua David Harlan were married [on Thursday] at the Lotos Club, a private literary club in New York. Rabbi Joshua M. Davidson officiated. The couple met in New York in 2013 at an event hosted by the Council on Foreign Relations. The bride is the deputy director for fellowship affairs for the organization and the groom is a member. Ms. Alekhine, 32, graduated summa cum laude from George Washington University, where she also earned a master's degree in public administration. ... Mr. Harlan, 46, is the founder and managing partner of Harlan Capital Partners, a New York investment firm. He graduated summa cum laude from Harvard, received a master's degree in philosophy from Oxford University in England and earned a law degree from Yale." ***With pic*** http://nyti.ms/2s58BIJ

WELCOME TO THE WORLD -- Tim Brown, comms director for Rep. Joe Courtney (D-Conn.) and **Tracey Roberts,** congressional liaison for NLRB, email friends and family, welcomed Abigail Roberts Brown on Sunday: "Abbey is making it clear from the start that she will be doing things her own way, arriving exactly 1 week before her due date! No more risk of a July Fourth baby, instead she will have a June birthday just like her mom. She checked in at 11:52 a.m. at 7 pounds, 6.5 ounces, and 19 inches tall. Mother and daughter are resting comfortably." ***Pic*** http://bit.ly/2tcMP67

-- Mike Carter-Conneen, a reporter at ABC7 (WJLA-TV), and **Torey Carter-Conneen**, the COO of the American Immigration Lawyers Association, have announced the adoption of their newborn daughter Drew Marie Michelle Carter-Conneen. "Drew was born on Monday, May 29th (Memorial Day). At birth, she was 8 lbs, 6 oz, with a head full of hair. Her dads are over the moon." ***Pics*** http://bit.ly/2u6yZyc ... http://bit.ly/2s7G0md

BIRTHDAY OF THE DAY: WaPo White House bureau chief **Juliet Eilperin.** How she's celebrating: "The good thing about being a D.C. native is I get to celebrate my birthday with my extended family, including my parents, and one of my nieces from Brooklyn

almost always comes to town this time of year. So we'll gather at my dad's house -- though a day early, since I may be on deadline writing about health care on June 26." Read her Playbook Plus Q&A: http://politi.co/2tc1I8h

BIRTHDAYS: Charles S. Robb is 78 ... Elizabeth Wilner, managing editor for policy at Airbnb and a Kantar Media alum ... Politico's Scott Bland ... WSJ's Louise Radnofsky ... Dave Brown, director at Brunswick Group ... Mark Kadesh (h/t Jon Haber) ... Patrick O'Connor ... Chris Weideman, former Treasury chief of staff, now head of litigation at Apollo Global Management (we jumped the gun yesterday on Patrick and Chris) ... O'Malley alum Adam Goers, founder and principal at Demo Strategies ... Stephen Rattner, Treasury and Crist alum ... Jesse Greener ... GOP pollster Jon McHenry ... Mark Ritacco ... Betsy Burton Goldin ... former Hawaii Gov. Neil Abercrombie is 79 ... Mickey Leibner, attorney at Mayer Brown in DC (h/t Josh Alcorn) ... Ross Feinstein, senior manager of corporate comms. at American Airlines (h/t Stephen Johnson) ... Joe Durheim ... Lucy Silver ... Ed Buckley ...

... NYT's Daniel Victor ... Philip Lajaunie ... Judy Havemann, director of public affairs/comms at the National Endowment of the Humanities ... Bill Lyne ... Alex Hayden DiLalla, senior digital campaigner at Global Citizen ... Graeme Zielinski ... Julie Norton, managing director at SKDKnickerbocker and president of Fight Back PAC (h/t Kelley McCormick) ... Alan Solow, former chairman of the Conference of Presidents of Major American Jewish Organizations, is 63 (h/t Jewish Insider) ... Elisabeth Cholnoky ... Kathleen Falk, the pride of all of Wisconsin ... Joannie Braden ... Denny Gass (h/ts Teresa Vilmain) ... Jan Burmeister ... Preeya Noronha Pinto ... Derek Jeter is 43 ... actor-musician Jason Schwartzman is 37 ... Aubrey Plaza is 33 ... actress-singer Ariana Grande is 24 (h/ts AP)

****** **A message from the Coalition for Affordable Prescription Drugs (CAPD):** A new study estimates that Medicare Part D costs would be 58 percent higher without pharmacy benefit managers' (PBMs') clinical tools and price negotiations with drug manufacturers and pharmacies. The study shows PBMs significantly lower premiums and out-of-pocket costs for Medicare beneficiaries. In fact, PBMs are projected to save Medicare Part D $896 billion over the next decade. Thanks to PBMs, Medicare Part D continues to drive savings and value for taxpayers and beneficiaries, ensuring that more than 39 million American seniors can access the prescription drugs they need. Summaries

AIR
Arizona SIP/San Manuel Area SO2 NAAQS Maintenance Plan
AIR

Proposed rule of the EPA would approve a revision to the Arizona SIP concerning the second 10-year maintenance plan for the San Manuel area in Arizona for the 1971 sulfur dioxide (SO2) NAAQS. The plan demonstrates the area's continued maintenance of the NAAQS, in part, by showing that future emissions of SO2 will not exceed the level of the attainment inventory. The plan includes emissions inventories representing current emissions for 2014 for area sources, projected emissions for two interim years during the second maintenance period, and projected emissions for the tenth year of the second maintenance period. Comments are due Nov. 6, 2017. Contact: Ashley Graham; EPA Region 9, Air Planning Office; 415-972-3877; graham.ashleyr@epa.gov. Citations: 40 CFR 52

82 FR 46444 (10/05/2017)

Regulatory Update

AIR
Illinois SIP/Lemont and Pekin SO2 NAAQS Nonattainment Areas
AIR

Proposed rule of the EPA would approve revisions to the Illinois SIP regarding the nonattainment plans for the 2010 one-hour sulfur dioxide NAAQS for the Lemont and Pekin nonattainment areas. The revisions include the attainment demonstration and address requirements for emissions inventories, reasonably available control measures and reasonably available control technology, reasonable further progress toward attainment, and contingency measures. The revisions also address limits to the sulfur content of distillate and residual fuel oil combusted at stationary sources. Comments are due Nov. 6, 2017. Contact: John Summerhays; EPA Region 5, Air Programs Branch; 312-886-6067, summerhays.john@epa.gov. Citations: 40 CFR 52

82 FR 46434 (10/05/2017)

Regulatory Update

AIR
Nebraska SIP/Operating Permits Program
AIR

Direct final rule of the EPA approves portions of revisions to the Nebraska SIP, the operating permits program, and the Section 112(l) program. The revisions incorporate by reference the list of organic compounds that are exempt from the definition of volatile organic compound and updates notification requirements for the operating permits program. The revisions also extend the process of off-permit changes to Class I operating permits. The agency takes no action on proposed revisions of the definition of "solid waste" because they do not conform with federal standards. The rule is effective Dec. 4, 2017, unless adverse comments are received by Nov. 6, 2017. Contact: Greg Crable; EPA Region 7, Air Planning and Development Branch; 913-551-7391; crable.gregory@epa.gov. Citations: 40 CFR 52.1420; 70, Appendix A

AIR
Nebraska SIP/Operating Permits Program
AIR

Proposed rule of the EPA would approve portions of revisions to the Nebraska SIP, the operating permits program, and the Section 112(l) program. The revisions incorporate by reference the list of organic compounds that are exempt from the definition of volatile organic compound and update notification requirements for the operating permits program. The revisions also extend the process of off-permit changes to Class I operating permits. The agency is not proposing to take action on revisions of the definition of "solid waste" because they do not conform with federal standards. A concurrent direct final rule adopts the revisions, effective Dec. 4, 2017. Comments are due Nov. 6, 2017. Contact: Greg Crable; EPA Region 7, Air Planning and Development Branch; 913-551-7391; crable.gregory@epa.gov. Citations: 40 CFR 52.1420; 70, Appendix A

Regulatory Update

AIR
Texas SIP/Dallas-Fort Worth
AIR

Proposed rule of the EPA would approve revisions to the Texas SIP concerning reasonably available control technology (RACT) requirements under the 2008 eight-hour ozone NAAQS for the Dallas-Fort Worth moderate nonattainment area. The revisions address volatile organic compounds emission limits and control requirements at major sources in newly designated Wise County. The revisions also concern testing, monitoring, and recordkeeping requirements; exemptions; compliance schedules; and definitions. In addition, the rule would approve negative declarations for certain source categories subject to RACT in the nonattainment area. Comments are due Nov. 6, 2017. Contact: Robert Todd; EPA Region 6; 214-665-2156; todd.robert@epa.gov. Citations: 40 CFR 52

Regulatory Update

AIR
Utah SIP/Davis and Salt Lake Counties Major Source Ozone Offset Requirements
AIR

Final rule of the EPA approves revisions to the Utah SIP concerning ozone offset requirements for major sources in Davis and Salt Lake counties. The revisions update definitions and applicability and address offset provisions of the nonattainment area new source review permitting program after the area is redesignated to attainment for ozone. The revisions also establish more stringent offset requirements for nitrogen oxides that may be triggered as a contingency measure under the ozone maintenance plan. The rule is effective Nov. 6, 2017. Contact: Kevin Leone; EPA Region 8, Air Program; 303-312-6227; leone.kevin@epa.gov. Citations: 40 CFR 52.2320

Voluntary Criteria for Radon Credentialing Organizations

AIR

Notice of the EPA announces the extension of the comment period for an Aug. 23, 2017, notice (82 FR 39993) regarding the establishment of voluntary criteria specifying a standard of competence for organizations that credential radon service providers under the Indoor Radon Abatement Act. The EPA intends to establish an ongoing and open evaluation process of the National Radon Proficiency Program, the National Radon Safety Board, and state-run certification programs. The EPA also intends to require the organizations to meet the specified standards of the International Organization of Standardization and the International Electrotechnical Commission, and to incorporate device requirements. The EPA seeks comments regarding three separate scenarios, including the agency's development of a basic framework for credentialing organizations, the agency's support for the development of the initial certification scheme, and the agency's support for the development and maintenance of a certification scheme. Comments now are due Nov. 23, 2017. Contact: Katrin Kral; EPA, Indoor Environments Division; 202-343-9454; kral.katrin@epa.gov

OCCUPATIONAL SAFETY AND HEALTH
Examinations of Working Places in Metal and Nonmetal Mines
OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Mine Safety and Health Administration delays until June 2, 2018, the effective date of a Jan. 23, 2017, final rule (82 FR 7680) that updated standards for the examination of working places in metal and nonmetal mines. Working place examination standards that were in effect as of Oct. 1, 2017, are reinstated until June 2, 2018. The delayed rule requires operators to promptly notify miners of any conditions found that may adversely affect their safety or health, and requires operators to promptly take corrective action. The rule also requires the examination record to include the name of the examiner, examination date, location of areas examined, a description of adverse conditions found, and the date of corrective action. In addition, the rule requires operators to make the examination record available to authorized representatives of the secretary of Labor and miners' representatives and to provide a copy upon request. MSHA previously delayed the effective date to assure that mine operators and miners affected by the rule have the required training and compliance assistance (82 FR 15173; 03/27/2017) and to allow additional time for the agency to provide stakeholders training and compliance assistance (82 FR 23139; 05/22/2017). The current action allows additional time for MSHA to provide stakeholders training and compliance assistance and provides more time to train inspectors. A Sept. 12, 2017, proposed rule (82 FR 42757) would make limited changes to the delayed rule concerning working place examinations. The rule is effective Oct. 5, 2017. Subject: Court orders quick responses on EPA methane rule dispute

By Alex Guillén

07/10/2017 11:11 AM EDT

The D.C. Circuit Court of Appeals today set speedy deadlines for responses to EPA's request to delay implementing its methane rule for future oil and gas wells, indicating a decision on the matter could come as soon as Wednesday.

On Friday, EPA asked the court to delay its July 3 order for EPA to resume enforcing the Obama-era methane rule, arguing that the agency was not given proper time to consider seeking a re-hearing.

Today, the three-judge panel ordered environmental groups to file their response by noon on Tuesday, with EPA's reply to that due by 10 a.m. Wednesday.

WHAT'S NEXT: The condensed timeline indicates the court will move on EPA's request quickly, possibly as early as Wednesday. EPA is separately working to establish a two-year delay, but that effort likely will not be in place until September.

Driving the Day

Good Wednesday morning. WARNING FROM SENATE REPUBLICANS TO PRESIDENT TRUMP: It will be tough, if not impossible, to confirm another attorney general if you fire Jeff Sessions. Six GOP senators have already taken Sessions' side. Trump has neither the time nor political capital to oust Sessions and pick someone else.

FOR YOUR SITUATIONAL AWARENESS: The House approved a sanctions bill 419-3 yesterday afternoon that would, among other things, limit Trump's ability to roll back penalties against Russia, Iran and North Korea. The Senate is expected to quickly pass the bill. The White House has sent mixed signals about whether Trump will sign this bill. If he doesn't, Congress would be able to override his veto.

-- FT: "The new sanctions have become the subject of intense scrutiny both in Washington and overseas, where European allies have raised the threat of retaliation because the measures could effect a pipeline project to transport Russian gas into Germany. ...

"Brussels has stepped up its diplomatic offensive against the sanctions, warning several oil and gas projects involving Shell, Eni and BP are at risk. On Tuesday, officials said the EU was 'activating all diplomatic channels' in an effort to persuade US lawmakers to dilute the bill's impact on European companies and the continent's energy security. EU officials are concerned the sanctions could damage multibillion-euro pipeline and infrastructure projects straddling Russian territory and beyond in areas between the Baltic and Black seas." http://on.ft.com/2uYk798

OVERNIGHT -- NYT: TOM KAPLAN and **ROBERT PEAR: "Senate Votes Down**

Broad Obamacare Repeal": "[R]epublican leaders suffered a setback when their most comprehensive plan to replace President Barack Obama's health law fell far short of the votes it needed.

"The Tuesday night tally needed to reach 60 votes to overcome a parliamentary objection. Instead, it fell 43-57. The fact that the comprehensive replacement plan came up well short of even 50 votes was an ominous sign for Republican leaders still seeking a formula to pass final health care legislation this week. ...

"The Senate is now moving ahead with debate, amendments and ultimately a final vote in the coming days on legislation that would have a profound effect on the American health care system - roughly one-sixth of the United States' economy. But it is entirely possible that by week's end, the senators will have passed nothing." http://nyti.ms/2uwBzRk

-- THE BET , although far from certain, is that Senate Republicans will pass a so-called "skinny repeal" bill -- legislation that would end the employer and individual mandate, and medical-device tax. This would be a vehicle to allow the House and Senate to negotiate on a final repeal and replace bill. The "skinny repeal," though, is not a comprehensive plan and includes no replacement, so it's a tough vote. **AND ANOTHER QUESTION** a lot of people are asking: what can get through the very divided -- and increasingly conservative -- House Republican Conference? This is not a gang known to favor incrementalism -- and that's what would emerge from a negotiation with the Senate. ***Paul Demko on what's next in the health care debate*** http://politi.co/2uXmyIV

THE POLITICO TICK TOCK -- BURGESS EVERETT, SEUNG MIN KIM and **JEN HABERKORN: "How the GOP brought Obamacare repeal back from the dead':** "As Mitch McConnell strode to the Senate floor on Tuesday, with no votes to spare to keep the GOP's Obamacare repeal campaign alive, he knew where everyone in his conference stood. Everyone, that is, except for Ron Johnson....

"When he finally emerged, Johnson headed to McConnell's desk on the Senate floor. The two engaged in a tense, 10-minute face-to-face talk. McConnell's face turned increasingly red, and the GOP leader threw up his hands multiple times. ... Ten minutes after McConnell and Johnson began chatting, McCain entered the chamber and provided the 49th vote. Only Johnson remained. Left with the option of being the Republican who killed Obamacare repeal or the one who saved it, the Wisconsin senator quickly flipped a thumbs-up into the air to vote yes....

"On a Delta flight from Salt Lake City to Washington on Monday afternoon, Lee sat in the middle seat, furiously texting about his latest thinking in the health care debate, according to an eyewitness who sat next to Lee and described the messages to POLITICO.

"In one text, Lee told a recipient that he might still vote to proceed to the repeal

debate, but that it was 'still too early to do so in good conscience because we're not being told anything.' 'This leadership line of pass something, anything, is dangerous and potent,' Lee typed out in another message, written in a large enough font that fellow passengers could easily read his words, according to the eyewitness. In another text, Lee wrote: 'This bill is nothing more than bailing out insurance companies with a few minor reforms thrown in for good measure.'" http://politi.co/2tJ5il8

MCCONNELL'S REDEMPTION via **JOHN BRESNAHAN: "McConnell gets a win in Obamacare repeal opening round":** http://politi.co/2uXedVA

****** **A message from BP: We employ more than 14,000 people in the U.S. and support another 130,000 jobs all across the country.** *See how this impacts your community.* ******

MCCAIN'S MAVERICK MOMENT -- WAPO's PAUL KANE: "'We're getting nothing done': McCain, in emotional return, laments what the Senate has become": "Sen. John McCain was greeted by applause from both sides of the aisle Tuesday as he walked onto the Senate floor, delivering Republicans a crucial vote to begin debate on an unknown plan to overhaul the health-care industry. Then the Arizona Republican, done with the niceties, delivered a 15-minute excoriation of the modern Senate. A Senate riven by partisan infighting and almost no effort to work across the aisle. A Senate that has abandoned the principle that legislative committees had ownership of the process. ...

"'All we've managed to do is make more popular a policy that wasn't very popular when we started trying to get rid of it,' McCain said, noting rising support for the 2010 Affordable Care Act. 'I voted for the motion to proceed to allow debate to continue and amendments to be offered. I will not vote for this bill as it is today. It's a shell of a bill right now.' ...

"'We're not getting much done apart,' McCain told his colleagues. 'I don't think any of us feels very proud of our incapacity. Merely preventing your political opponents from doing what they want isn't the most inspiring work. There's greater satisfaction in respecting our differences but not letting them prevent agreements.'" http://wapo.st/2uYa3wP

-- DANA BASH: "Reporter's Notebook: Inside the Senate chamber - an hour-long emotional swirl" http://cnn.it/2h1IL32

-- BOSTON GLOBE: "While the Senate debates health care, Mitt Romney is . . . waterskiing?" http://bit.ly/2tIzBi9

MEANWHILE ... BACK ON THE TRAIL -- "At Ohio rally, Trump keeps making campaign promises," by Annie Karni in Youngstown, Ohio: "President Donald Trump returned to this longtime Democratic stronghold on Tuesday night, sounding almost unchanged from the candidate who campaigned here last year, as he confidently

doubled down on promises he has yet to keep.

"In the Covelli Centre arena filled with still-believing fans, Trump promised a trillion dollar infrastructure bill, which so far is stalled in a long pipeline of legislation that must come before it. He vowed he was still going to build that wall, which currently has no source of funding. He said manufacturing jobs would come roaring back to Mahoning County, advising the Ohio crowd, 'don't sell your house. We're going to get those values up.' Ohio's unemployment rate increased to 5 percent in June, from 4.9 percent the previous month. And even as he is actively splitting his own party and his own movement by publicly denigrating his Attorney General, Jeff Sessions, Trump made a rousing call that 'America must be united.'

"But what was ostensibly the biggest good news of Trump's day -- the Senate vote to move ahead on repealing Obamacare -- appeared in his speech only as an afterthought. It didn't get more than a passing mention until the very end of Trump's hour-long laundry list of a speech, during which he appeared more animated when he spoke about cracking down on undocumented immigration, sanctuary cities, and 'radical Islamic terrorism' than when he touched on the legislative victory that puts him one step closer to fulfilling a campaign promise." http://politi.co/2uVQXrB

-- WHAT TRUMP SAYS - Per Annie Karni: "With the exception of the late, great Abraham Lincoln, I can be more presidential than any president that's ever held this office," he said. "It's much easier, by the way, to act presidential than what we're doing here tonight, believe me."

****** **A message from BP: From coast to coast, we spent $16 billion with local businesses last year.** *Take 30 seconds to see how we're supporting jobs across the U.S.* ******

POOL REPORT DU JOUR, per yesterday's pooler David Jackson: "Spotted disembarking from Air Force One: Corey Lewandowski and David Bossie. Asked what he was doing on the trip, Bossie said: 'I heard there was a rally here.'"

-- "Trump Says Apple CEO Has Promised to Build Three Manufacturing Plants in U.S.," by WSJ's Tripp Mickle and Peter Nicholas: "Mr. Trump, in a 45-minute interview with The Wall Street Journal, said [Tim] Cook promised him Apple would build 'three big plants, beautiful plants.' Mr. Trump didn't elaborate on where those plants would be located or when they would be built. 'I spoke to [Mr. Cook], he's promised me three big plants -- big, big, big,' Mr. Trump said as part of a discussion about business-tax reform and business investment. 'I said you know, Tim, unless you start building your plants in this country, I won't consider my administration an economic success. He called me, and he said they are going forward.'" http://on.wsj.com/2tJ7U8C

-- OTHER HIGHLIGHTS FROM TRUMP'S WSJ INTERVIEW : "The truth is the people I care most about are the middle-income people in this country who have gotten screwed. And if there's upward revision it's going to be on high-income people. You know, I was

with Bob Kraft the other night. He came to have dinner with me. He's a friend of mine. And as he left, he said, Donald, don't worry about the rich people. Tax the rich people. You got to take care of the people in the country. It was a very interesting statement. I feel the same way."

-- WHAT JON ALLEN AND AMIE PARNES ARE READING: TRUMP: "Well, I didn't - I wouldn't have wanted to. But I see the way they go after us on a witch hunt, you know? The Russian - the Russian story's all an excuse for the Democrats losing. In fact, if you read the book, 'Shattered,' they have a whole chapter where they sat the day after the election and they said: Yeah, Russia. It was Russia. And, you know, Trump was involved. OK, the one thing interesting, you never heard me even associated with anybody. But, no, that's a total witch hunt, the whole Russia story. It's a hoax. It's a hoax. We had no collusion with Russia. We never dealt with Russia." ***Edited transcript*** http://on.wsj.com/2v7bGcg

SCARAMUCCI TALKS SHOP -- Anthony Scaramucci told reporters late Tuesday night that he is trying to fight White House leaks and that "they don't care about [the] Washington establishment and as New Yorkers they are going to do things their own way," according to pooler David Jackson of USA Today. "'There are rumors that I'm firing more people,' but 'I'm not firing any more people' at least for now.' Scaramucci said, according to the pool. 'If the leaks continue then I've got to let everybody go.'" He also said that he will likely restructure the communications department. "Asked if he really thought leaks were from the [communications] office he said 'some of them are', but they are the people he can deal with. Said he can't get into the problem of other leakers yet."

BATTLE ROYALE -- "Trump and Sessions locked in silent battle," by Josh Dawsey: "Donald Trump is playing an elaborate game of chicken with Jeff Sessions. And they are not on speaking terms. Sessions has sent to word to the White House that he has no plans to resign and wants to stay as attorney general even amid daily humiliation from the boss, according to two people familiar with his thinking. But he hasn't told Trump that himself. Trump, meanwhile, has complained to anyone who will listen about Sessions recusing himself from the Russia and has weighed firing him. And he has told his advisers he has no desire to speak to Sessions, an early campaign supporter.

"'I'm very disappointed in Jeff Sessions,' Trump said in the Rose Garden Tuesday, sending a message to his top law enforcement official from a public microphone. Trump's public criticisms of his attorney general have led to an unusual spectacle where the two men aren't talking - but sending messages through their aides and waiting for a resolution to the fate of the country's top law enforcement official, according to interviews with six White House aides and advisers, as well as Sessions allies. The zone of confusion has led to conservatives, liberals, West Wing aides and others wishing for a resolution and end of a tired storyline without having any idea when that resolution will come." http://politi.co/2uY0cqB

-- SESSIONS TAKES A STAND: "The standoff between Trump and Sessions escalates," by WaPo's Devlin Barrett, Philip Rucker and Sari Horwitz: "In a recent conversation, Sessions's chief of staff, Jody Hunt, told White House Chief of Staff Reince Priebus that the attorney general had no intention of stepping down. Hunt, according to people familiar with the conversation, made it clear to Priebus that Sessions 'plans to move forward with his agenda in the department and he has no plans for resigning,' according to one person familiar with the exchange. Priebus, for his part, did not say Trump planned to fire Sessions if he did not leave ... Trump's reluctance to act on his anger and fire Sessions may be based in part on the lack of an immediate plan for a successor at the Justice Department. While Trump has discussed potential candidates to replace Sessions, senior White House officials have not settled on anyone, and may not anytime soon." http://wapo.st/2vZCBDa

NYT'S ALEX BURNS in **PHOENIX -- "Senator Jeff Flake, Facing Twin Threats, Is Said to Take On G.O.P. Rift in New Book":** "Senator Jeff Flake, Republican of Arizona, faces political challenges from both sides in seeking re-election next year ... Yet Mr. Flake, seemingly undaunted, has secretly planned an unconventional campaign kickoff that risks intensifying both threats: Working privately, and largely without the knowledge of political advisers, he has written a book that amounts to an ideological manifesto for his own version of conservatism, according to three people briefed on the manuscript who discussed it on the condition of anonymity. ... In his writing, Mr. Flake draws a bright-line distinction between his outlook on government and a competing vision, associated with Mr. Trump, that Mr. Flake describes as nationalist and populist in nature, the people said. Mr. Flake links himself closely with Barry Goldwater." http://nyti.ms/2uWEWIE

WHAT TRUMP IS READING -- "Poll: Half of Trump voters say Trump won popular vote," by Steve Shepard: "Roughly half of voters who said they voted for Donald Trump last November, 49 percent, believe Trump won the popular vote, according to a new POLITICO/Morning Consult poll. That's compared to 40 percent who say Democrat Hillary Clinton won. Overall, a majority of voters, 59 percent, believe Clinton won more votes than Trump, but 28 percent believe Trump won more votes." http://politi.co/2h2oLgJ

-- "Poll: Voters say Mueller ouster would be inappropriate," by Steve Shepard: "By a more than two-to-one margin, voters say it would be inappropriate for President Donald Trump to fire special counsel Robert Mueller over his probe into Russian interference in the 2016 presidential election, according to a new POLITICO/Morning Consult poll. Nearly half of voters, 48 percent, say it would be wrong to remove Mueller, compared to only 22 percent who say it would be appropriate for the Trump administration to dismiss Mueller. There is a huge gap in partisan perceptions: Democrats say overwhelmingly that firing Mueller would be inappropriate, 67 percent to 11 percent. Independents also tilt heavily against firing Mueller, 47 percent to 19 percent. But Republicans say, 37 percent to 29 percent, that it would be appropriate." http://politi.co/2h2ILQh

THE JUICE ...

-- **FIRST IN PLAYBOOK:** GOP political consultant and strategist **JEFF LARSON** is joining America Rising Corporation as its new chairman. Larson was a senior adviser to the 2017 Presidential Inaugural Committee and CEO of the 2016 Republican National Convention. Larson will focus on business development and the marketing of the organization's platforms and products. Byron Koay, the president of America Rising Corporation, and CEO Joe Pounder will still oversee day-to-day operations. Matt Rhoades, the former chairman of AR, has been named to AR's board of directors.

-- WHAT THE WHITE HOUSE WANTS YOU TO READ: Tuesday was local media day at the White House. Local TV stations and the Salem Radio Network broadcast from the North Lawn of the White House. Reince Priebus, Mick Mulvaney, Tom Price, Linda McMahon, Ben Carson, Elaine Chao, Sarah Huckabee Sanders and Kellyanne Conway all participated.

TRUMP'S WEDNESDAY -- He's speaking to the American Legion Boys Nation and the American Legion Auxiliary Girls Nation at 3 p.m., and has a "jobs announcement" at 5 p.m. His schedule is completely empty between 10:30 a.m. and 3 p.m.

SIREN -- "Woman pleads guilty in scheme to pay off Brady challenger," by Josh Gerstein: "A Pennsylvania pastor pleaded guilty to a federal felony Tuesday for participating in a scheme that led a challenger to Rep. Robert Brady (D-Pa.) to bow out of a 2012 primary contest. Appearing in U.S. District Court in Philadelphia, Rev. Carolyn Cavaness pleaded guilty to a single charge of making a false statement in a federal proceeding, court records show. Cavaness was a campaign staffer for Jimmie Moore, a Philadelphia judge who entered the Democratic primary against Brady. Moore dropped out in February 2012, according to press accounts. No charges have been announced against Moore or Brady. However, one court filing made public Tuesday indicates prosecutors believe Brady attempted to influence the testimony of at least one witness in the investigation." http://politi.co/2tBZxYh

THE WAR -- "Trump Finds Reason for the U.S. to Remain in Afghanistan: Minerals," by NYT's Mark Landler and James Risen: "President Trump, searching for a reason to keep the United States in Afghanistan after 16 years of war, has latched on to a prospect that tantalized previous administrations: Afghanistan's vast mineral wealth, which his advisers and Afghan officials have told him could be profitably extracted by

Western companies. Mr. Trump has discussed the country's mineral deposits with President Ashraf Ghani, who promoted mining as an economic opportunity in one of their first conversations. Mr. Trump, who is deeply skeptical about sending more American troops to Afghanistan, has suggested that this could be one justification for the United States to stay engaged in the country. To explore the possibilities, the White House is considering sending an envoy to Afghanistan to meet with mining officials." http://nyti.ms/2tYdBe8

BIG NEWS -- "Wasserman Schultz aide arrested trying to leave the country," by Heather Caygle and John Bresnahan: "Imran Awan, a House staffer at the center of a criminal investigation potentially impacting dozens of Democratic lawmakers, has been arrested on bank fraud and is prevented from leaving the country while the charges are pending.

"A senior House Democratic aide confirmed Awan was still employed by Rep. Debbie Wasserman Schultz (D-Fla.) as of Tuesday morning. But David Damron, a spokesman for Wasserman Schultz, later said that Awan was fired on Tuesday. Awan pleaded not guilty on Tuesday to one count of bank fraud during his arraignment in the U.S. District Court for the District of Columbia. Awan is accused of attempting to defraud the Congressional Federal Credit Union by obtaining a $165,000 home equity loan for a rental property, which is against the credit union's policies since it is not the owner's primary residence." http://politi.co/2uwiXB7

TRUMP'S CABINET -- "State Department says Secretary Tillerson is 'taking a little time off' amid tensions in the White House," by Business Insider's Alex Lockie: "When asked about the discrepancies between Tillerson's public schedule and his reported movements, and why the department hadn't updated the press on his whereabouts, [Heather] Nauert said Tillerson 'does have the ability to go away for a few days on his own.' 'Just taking a little time off,' Nauert said of Tillerson's unannounced absence. 'He's got a lot of work. He just came back from that mega-trip overseas, as you all well know - many of you were over there with the G-20.' Asked why she didn't just say Tillerson was on vacation, Nauert said she didn't know the standard protocol for listing private days. ... Nahal Toosi, a foreign-affairs correspondent at Politico, later tweeted that Tillerson had 'GTT -- Gone to Texas,' adding that he was 'fine and he's working 20 hour days, but just not in DC.'" http://read.bi/2uAmuwo

OOPS! -- "U.S. energy secretary duped into fake interview with Russian comedians," by Reuters' Timothy Gardner: "U.S. Energy Secretary Rick Perry optimistically discussed expanding American coal exports to Ukraine and other energy matters during a lengthy phone call this month with a Russian prankster who Perry thought was Ukraine's prime minister. Perry actually was talking with comedians known in Russia for targeting celebrities and politicians with audacious stunts, Energy Department spokeswoman Shaylyn Hynes said in a written statement. Pranksters Vladimir Krasnov and Alexei Stolyarov are sometimes called the 'Jerky Boys of Russia,' after an American duo who put out recordings of their prank phone calls in the 1990s. ... During the 22-minute call on July 19, Perry, whose department oversees the U.S.

nuclear weapons program, discussed a range of topics in a business-like tone, including sanctions against Russia and helping Ukraine develop oil and gas." http://reut.rs/2tBLjXp

THE RESISTANCE -- "McAuliffe, Pelosi weekend travel project promotes governor races as 'future of the party'," by USA Today's Heidi Przybyla: "Virginia Gov. Terry McAuliffe and Rep. Nancy Pelosi have been quietly courting major party donors during a series of weekend trips that illustrate how the Democratic Party's road to rebuilding begins with changing the habits of labor unions and traditional donors. The duo has traveled to San Francisco, Los Angeles, Boston and New York to try to convince traditional donor groups and grassroots organizations to channel more funding to local and state elections - with a particular focus on the next generation of governors who will oversee redistricting around the 2020 Census - as well as legal battles and ballot initiatives to challenge gerrymandered congressional districts.

"It's the start of a routine they plan to keep in the lead up to the 2018 election. 'I don't care who the president of the United States is, it doesn't matter in the sense that, if we don't have governors to stop these horrible maps, they're going to pass a lot of this stuff at the state level,' said McAuliffe, a Democrat who finishes his term in January. 'Politically, this is what I'm going to do. I'm obsessed,' McAuliffe said during an interview with USA TODAY at a Washington hotel." https://usat.ly/2h2iyl7

POLITICO MAGAZINE -- "Trump the Disloyalist: Why is anyone surprised by the president's treatment of Jeff Sessions?" by John J. Pitney Jr.: "Trump's life has been a long trail of betrayals. His mentor was attorney Roy Cohn, who had been Senator Joseph McCarthy's right-hand man. ... Trump benefited greatly from the relationship, but when Cohn contracted AIDS in the 1980s, Trump turned his back on him, transferring his business to other attorneys. When the funeral came, Trump didn't speak. 'Donald pisses ice water,' Cohn reportedly said before his death. Trump's ex-wives would probably say the same thing if they were not bound by non-disclosure agreements. He was especially disloyal to his first wife, Ivana, the mother of Donald, Jr., Ivanka and Eric. During their breakup, he told a writer for Vanity Fair: 'When a man leaves a woman, especially when it was perceived that he has left for a piece of ass -- a good one! -- there are 50 percent of the population who will love the woman who was left.'" http://politi.co/2h2pPRE

DEEP DIVE -- MICHAEL LEWIS in September's Vanity Fair, "Why the Scariest Nuclear Threat May Be Coming From Inside the White House": "On the morning after the election, November 9, 2016, the people who ran the U.S. Department of Energy turned up in their offices and waited. They had cleared 30 desks and freed up 30 parking spaces. They didn't know exactly how many people they'd host that day, but whoever won the election would surely be sending a small army into the Department of Energy, and every other federal agency. ...By afternoon the silence was deafening. 'Day 1, we're ready to go,' says a former senior White House official. 'Day 2 it was "Maybe they'll call us?" ... On his visits to the White House soon after the election, Trump's son-in-law, Jared Kushner, expressed surprise that so much of its staff seemed to be

leaving. 'It was like he thought it was a corporate acquisition or something,' says an Obama White House staffer. 'He thought everyone just stayed.' ...

"Meanwhile, inside the D.O.E. building, people ... from the Trump administration appear willy-nilly, unannounced, and unintroduced to the career people. ... 'Yes, you can notice the difference,' says one young career civil servant, in response to the obvious question. 'There's a lack of professionalism. They're not very polite. Maybe they've never worked in an office or government setting. It's not hostility so much as a real sense of concern with sharing information with career employees. Because of that lack of communication, nothing is being done. All policy questions remain unanswered.'" http://bit.ly/2vZFEvm

MEDIAWATCH -- "Fox News host 'targeted' in ambush at Brooklyn bar," by N.Y. Post's Lia Eustachewich and Daniel Prendergast: "A Fox News host was ambushed while attending her pal's campaign event in Brooklyn Monday night - doused head to toe with a bottle of water. The assault against Kat Timpf, a libertarian co-host on 'Fox News Specialists,' occurred at Union Pool in Williamsburg, where her friend and Brooklyn Borough president hopeful Ben Kissel was hosting the event, which coincided with his birthday. A still shaken Timpf told The Post Tuesday that she was definitely targeted for the attack." http://nyp.st/2v77Z6w

--N.Y. TIMES DEPARTURE LOUNGE -- per Hadas Gold's Morning Media: "A slew of Times stalwarts have taken buyouts. Among them: Bruce Headlam, an editor in the opinion section (Headlam was also featured in the documentary film 'Page One' when he was media editor), Charles Duhigg, who's been in charge of live events, former Jerusalem bureau chief Ian Fisher and defense reporter Chris Drew. -- Headlam told me after he leaves he'll be working on a new project with Malcolm Gladwell, a company that will be 'doing digital journalism in a lot of different forms,' 'an empty vessel for interesting things' including some writing, visual and audio journalism. There's no name just yet."

-- LUIZA SAVAGE promoted at Politico - Carrie Budoff Brown emails the staff: "We're thrilled to announce a new expanded role for Luiza Savage, who will become the Editorial Director of Cross-Platform Content, working across the newsroom and with our business partners to drive and develop written, video and live-event projects that are high impact and newsworthy. Luiza is an ideas machine, and she's already played a unique role in conceptualizing projects that produce strong journalism while generating significant revenue."

Chemicals
EPA 'Safer Choice' Label Program, Criteria Under Fire
Does a detergent that Procter & Gamble Co. makes merit a 'safer' label designation? The issue has re-ignited a debate among trade association executives over the type of analysis needed to justify such labels.

News

Biotechnology
Syngenta Faces 7,000 Kansas Farmers in Dispute Over Modified Corn
Farmers have to deal with threats to their crops from nature all the time. Thousands of Kansans argue, however, that Syngenta AG posed an even bigger threat by failing to prevent its genetically modified corn seed from contaminating U.S. crops, which led to a devastating rejection of imports by Chinese officials.

Brownfields
E-Commerce Boosts Demand for Brownfields Redevelopment
The e-commerce industry's appetite for warehouse space near major cities is boosting demand for brownfields as well as environmental insurance.

Chemicals
Toxic Chemical in Food Packaging Fight Takes Road Less Traveled
Environmentalists are employing a seldom-used legal maneuver to fight a recent decision that would allow the continued use of a toxic chemical in food packaging.

Climate Change

Hunt for Trump's Climate Views Like 'Chasing Rabbit,' Perry Says

People shouldn't focus on whether U.S. President Donald Trump believes climate change is real, according to one of his own Cabinet members.

Climate Policy

U.K. Doesn't Think Paris Climate Deal Needs to Be Renegotiated

Prime Minister Theresa May's government doesn't think the Paris climate deal needs to be renegotiated, her spokeswoman said, pitching Britain behind the position held by France, Germany and Italy.

Cost Recovery

U.S. Subject to Superfund Suit Over Waste On Navajo Land

Kinder Morgan subsidiary El Paso Natural Gas can pursue Superfund cleanup costs from the federal government for uranium mining waste on land held in trust for the Navajo Nation, the District of Arizona ruled (El Paso Nat. Gas Co. v. United States, 2017 BL 186291, D. Ariz., No. 14-CV-08165, 6/2/17).

Disclosure

Most Companies Report as Usual on Conflict Minerals

Corporate disclosures on sourcing of minerals that have been linked to conflict and human rights abuses in Africa are largely unchanged this year despite the Securities and Exchange Commission's relaxed regulatory stance.

Energy

China Is Said to Halt New Electric-Car Production Permits

China plans to halt issuing permits to produce electric vehicles pending a review of the policy because of concern additional approvals may lead to a glut in the world's biggest auto market, according to people familiar with the matter.

Hazardous Waste

Retail Industry Seeks EPA Answers on Hazardous Waste

The retail industry is still waiting for the EPA to address a fundamental question: When does a product become waste?

International Climate

Trump Exit Spurs State, Corporate Vows to Back Climate Pact

U.S. cities, states and companies vowed June 5 to try to shore up support for climate action in the aftermath of President Donald Trump's June 1 vow to exit the Paris climate pact.

Nanotechnology

No New Data Needed for Nanomaterials Rule, EPA Official Says

Companies making and processing nanoengineered chemicals do not have to generate new information to comply with the agency's data collection rule that is effective in August, an EPA manager said.

Subject: POLITICO's Morning Energy, presented by Chevron: Pruitt's next step on power plants — Energy retribution for Murkowski's healthcare vote? — Largest U.S. wind farm announced

By Anthony Adragna | 07/27/2017 10:00 AM EDT

With help from Alex Guillén, Esther Whieldon, Eric Wolff and Annie Snider

ESCAPE PLAN FOR COAL PLANTS? EPA Administrator Scott Pruitt is ready to let coal-fired power plants off the hook for their contribution to climate change, based on a novel legal argument that the Clean Air Act bars him from further regulating carbon dioxide emissions from existing power plants because a separate Obama-era regulation on toxic mercury emissions already applies to them, Pro's Alex Guillén reports , citing multiple sources with knowledge of his plan. That approach echoes a novel interpretation of the statute Pruitt leaned into as Oklahoma attorney general, but it would avoid an all-out brawl over the established science on climate change.

The argument, known throughout Washington's legal circles as the "112 exclusion," says EPA cannot regulate carbon emissions from power plants under section 111(d) of the Clean Air Act because section 112 already goes after hazardous air pollutants from those sources. A federal appeals court never ruled on the matter before pausing the case in the wake of President Donald Trump's election, but several judges on the D.C. Circuit appeared skeptical of it during oral arguments last year. Environmental groups, meanwhile, are ready to fight the planned repeal of the Clean Power Plan, including the 112 exclusion argument, and Pruitt's broader claim that the Clean Air Act does not give EPA the proper tools to fight climate change.

Pruitt's approach won't be enough for some: Conservatives want Pruitt's EPA to go further still by overturning the agency's 2009 endangerment finding that classified carbon dioxide as a pollutant. That approach has divided coal companies, with one industry source saying entities are split over whether Pruitt should repeal the endangerment finding or pursue more lenient rules that would not force plants to shut down. "The more they look at it, the more they're going to realize they need to re-open and revise the endangerment finding," said Myron Ebell, director of the Center for Energy and Environment at the Competitive Enterprise Institute and the Trump administration's EPA transition team leader. Pruitt is not expected to repeal the endangerment finding in the near term, though he has announced plans for a "red team/blue team" debate of the consensus on climate change.

WELL FOLKS, IT'S THURSDAY! I'm your host Anthony Adragna, and former Rep. Kerry Bentivolio (a former reindeer rancher) won a general election while losing a special one on the same day back in 2014. For today: Who holds the record for shortest tenure as House Speaker? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy , and @POLITICOPro.

NOT TOO SUBTLE: One day after Senate Energy Chairman Lisa Murkowski voted against beginning debate on Obamacare repeal, Interior Secretary Ryan Zinke called both Alaska

senators to warn their energy priorities were suddenly at stake, the Alaska Dispatch News reports. "I'm not going to go into the details, but I fear that the strong economic growth, pro-energy, pro-mining, pro-jobs and personnel from Alaska who are part of those policies are going to stop," Sen. Dan Sullivan said. "The message was pretty clear." Among the priorities now at risk, according to the paper: the nominations of Alaskans to Interior Department posts, a long-sought one-lane gravel road from the isolated southwestern Alaska village of King Cove, and expanded drilling opportunities throughout the state.

MOVING THAT MINI-BUS! Lawmakers moved their way through dozens of amendments on the Energy and Water-filed mini-bus package H.R. 3219 (115) late Wednesday night. Expect lawmakers to finish two remaining votes on Energy and Water amendments today ahead of a final vote on the mini-spending package on Friday. Among the measures of interest to ME readers:

- Lawmakers approved by voice vote Rep. Paul Gosar's amendment barring the development of any rule or guidance document related to the social cost of carbon.

- A bid by Democrats to strip a rider insulating the Trump administration's withdrawal of the Waters of the U.S. regulation from legal challenges failed by voice vote.

- Rep. Scott Perry's amendment adding $15 million to the Office of Energy Efficiency and Renewable Energy by taking away from DOE's administration fees and Rep. David McKinley's amendment restoring fossil energy funding to fiscal 2017 levels passed by voice vote. - A bid to add $921 million to EERE by pulling from the nuclear weapons program failed by voice vote, as did several smaller efforts.

- Ohio Republican Steve Stivers' push to block any funding for Cape Wind, the offshore wind project in Massachusetts' Nantucket Sound that has been stalled for years, passed by voice vote.

- Efforts by Nevada Democrats to remove language barring the closure of Yucca Mountain flopped by voice vote.

- Seventh time's the charm? Rep. Michael Burgess' perennial light bulb rider blocking enforcement of DOE efficiency standards passed by voice vote again.

Before they adjourned Wednesday night, lawmakers set up a vote on Rep. Marsha Blackburn's push for a 1 percent across-the-board discretionary cut and two Michigan Republicans withdrew an amendment barring the Corps from slow-walking a controversial study related to keeping Asian carp from reaching the Great Lakes.

LIKELY TRUMP WATER PICK HAS AG GROUP, RED STATE CRED: The likely nominee to run EPA's water office is David Ross, director of the Environmental Protection Unit at Wisconsin's Department of Justice, according to multiple sources close to the decision. Before heading to Wisconsin last year, Ross was in the Wyoming Attorney General's office, where he worked on the 13-state lawsuit challenging that Obama administration's Waters of the U.S. rule that won an early injunction from a North Dakota District Court judge in 2015.

Ross also spent more than a decade in private practice, largely in Crowell & Moring's environment and energy group, where he worked on a number of hot-button water lawsuits. He was part of the team that represented the American Farm Bureau Federation in its challenge to the landmark Chesapeake Bay cleanup plan - a suit that Pruitt joined as an intervenor while serving as Oklahoma's attorney general, although he now says he supports the effort - and represented agricultural groups and fertilizer companies in litigation brought by environmental groups in a bid to force stricter pollution limits in the sprawling Mississippi River basin.

** **A message from Chevron**: Advanced technology is helping us find safer ways to deliver energy. We're piloting a program that uses drones to monitor tanks and pipelines. Watch the video: http://bit.ly/2vFEzbX **

FROM 'MONEYBALL' TO ... DOE? Financial writer Michael Lewis, known for books like "Moneyball" and "Flashboys," explores the convoluted past, present and future of the Energy Department in a lengthy piece for Vanity Fair. Much like we've explained the agency's many important - and thankless - tasks, Lewis tells the story of what DOE does, that no one seems to get it, and how fraught with risk it all is. And he hits the highlights: the loan program, nuclear security, physical and cyber threats to the electric grid, and (paging Sen. Maria Cantwell) an extended section on the Hanford nuclear cleanup. He interviewed Arun Majumdar to talk about DOE's ARPA-E program, which he launched and is under threat from Trump.

MASSIVE WIND FARM GOING UP: American Electric Power announced Wednesday it would invest $4.5 billion into a massive 2,000-megawatt wind farm that will provide power to customers in Arkansas, Louisiana, Oklahoma and Texas once completed. It would be the largest wind farm in the country, and AEP says customers will save $7 billion over 25 years once the wind farm is online. The effort includes a 350-mile dedicated, extra-high voltage power line designed to serve up to 1.1 million customers, according to developer Invenergy.

TRUMP TRANSITION OFFICIAL THINKS WHITE HOUSE SHOULD DO CLIMATE ASSESSMENT: Former Trump Transition official David Schnare argued in an op-ed for Inside EPA that the White house Office of Science and Technology Policy, and not EPA, should conduct a re-evaluation of climate science. Schnare, who decried the "alarmist" views he said dominated the Obama administration's approach, calls Pruitt's proposal for a red team/blue team debate "silliness" and "not how science works." He argues that under the 1990 Global Research Act, only OSTP, and not EPA, has the authority to conduct such a review. "EPA can play, but it isn't in charge and doesn't have the authority," he writes. Schnare was an attorney with EPA for 30 years, though he is now general counsel for the anti-climate action Energy and Environment Legal Institute.

EU TAMPED DOWN SANCTIONS BILL: The legislation still faces some obstacles before it reaches Trump's desk, but European officials actually managed to blunt the initial scope of the proposed Russian sanctions through last-minute tweaks last weekend, POLITICO Europe's Anca Gurzu and Lili Bayer report. Officials are especially worried provisions in the measure could deliver an economic blow to EU companies involved in Russian energy export pipelines or that partner with Russian companies on energy projects. "We do a lot under the radar because we

wanted to avoid the appearance that we are split with the U.S. on the sanctions," a Commission official said.

NOT SO FAST, REX: Critics are not down with Secretary of State Rex Tillerson's plan to slash dozens of positions known collectively as special envoys, POLITICO's Nahal Toosi reports. The administration has already indicated it plans to eliminate a special envoy for climate change. But today the Senate Foreign Relations Committee will consider legislation that will give lawmakers a greater say over how special envoy jobs are filled.

MAIL CALL! WE'RE WITH YOU ON OFFSHORE DRILLING PLAN: A group of 36 Senate Republicans, led by Lisa Murkowski, sent a letter to Zinke Wednesday voicing support for his agency's new Outer Continental Shelf Five-Year Oil and Gas Leasing Program for 2019-2024. "We encourage you to carefully review those areas that were not included in the 2017-2022 Five-Year Program to ensure that opportunities are not missed," they wrote. BOEM is currently accepting comment on a new five-year drilling plan through Aug. 17 that would replace the plan developed under the Obama administration.

PERRY'S BAD TUESDAY GETS WORSE: Top House Energy and Commerce Democrat Frank Pallone asked GAO Wednesday in a letter to probe whether Energy Secretary Rick Perry misused taxpayer funds in writing an op-ed criticizing the Affordable Care Act and if the agency improperly promoted that piece through social media channels. "I have significant concerns as to why DOE is using official agency resources to weigh in on the health care debate, and am troubled that recent DOE actions may represent a broader effort by the Administration to inappropriately use agency resources on matters well beyond an agency's jurisdiction," Pallone wrote, asking for an opinion on whether Perry's actions violated Antideficiency Act, the Anti-Lobbying Act, and the Consolidated Appropriations Act of 2017.

TASTE OF WHAT'S TO COME IN SEPTEMBER: House Energy and Commerce lawmakers today vote on Drinking Water System Improvement Act H.R. 3387 (115). The measure cleared subcommittee on July 13 after the addition of amendments requiring states to spend a minimum share of federal dollars on disadvantaged communities, boosting the popular Drinking Water State Revolving Fund's authorization to $8 billion over five years and encouraging removal of lead service lines. Be on the lookout for a manager's amendments with further tweaks when the session begins at 10 a.m. in Rayburn 2123.

ICYMI: The Senate Energy and Natural Resources shelved a vote originally planned for today at 9:30 a.m. on half a dozen Interior and DOE nominees "until a date and time to be determined," Pro's Esther Whieldon reports. A committee aide chalked it up as a casualty to the chamber's vote-a-rama on healthcare repeal.

PRUITT MET CANADA'S HARPER: The EPA confirmed late Wednesday that Pruitt met with former Canadian Prime Minister Stephen Harper back in March. "The purpose of the meeting was to extend a courtesy visit to the former Prime Minister of Canada and thank him for past bilateral cooperation on environment," a spokeswoman said. "It was not intended, nor was it, a policy meeting." The Huffington Post first reported the meeting, which it said was arranged by a top Comcast lobbyist.

MONUMENT REVIEW ROLLS ON: Zinke continues his visits to national monuments today as his swing takes him to New Mexico. He'll have a closed-press helicopter tour of the Organ Mountains Desert Peaks National Monument in the morning, followed by a meetings with local elected officials, ranchers, academics, border security experts, and others (also off-limits to the press).

It hasn't been announced yet but a rural Nevada county commissioner told the Las Vegas Review-Journal Zinke will be in the area next Monday to hear input on the Gold Butte and Basin and Range National Monuments in the state. Nye County Commission Chairman Dan Schinhofen told the paper Zinke would hear from him about former President Barack Obama's designation of the Basin and Range. "We don't object to national monuments, but to take 700,000 acres to protect private property that represents less than one percent of that land seems excessive," he said. "We think it can be pared down."

Speaking of monuments, the Commerce Department announced it would give the public an additional 15 days to comment on the status of 11 marine national monuments and sanctuaries through August 14, Pro's Esther Whieldon reports. A spokesperson declined additional comment on why the public comment period was extended.

REPORT: APPLIANCE EFFICIENCY COULD SAVE BIG BUCKS: The Appliance Standards Awareness Project and the American Council for an Energy-Efficient Economy released a report Wednesday recommending 21 appliance standards states could adopt on a variety of products, from computers to portable air conditioners. The groups say those standards would save $113 billion through 2035 assuming they go into effect by 2020.

MORE STATES JOIN GREEN CONTRACT TREND: Two states, Minnesota and Nebraska, this year joined the ranks of about a half dozen states that have allowed their utilities to offer direct-sale, long-term supply contracts for renewable generation, according to a report out today by the Advanced Energy Economy. Under these so-called green tariffs, big companies like Facebook and Google since 2012 have signed deals for more than 8 gigawatts of renewables.

CHANGING THE FACE OF THE GREEN MOVEMENT: Environmental advocates and lawmakers gather today at 10 a.m. in Cannon 421 for a discussion on the need for diversity in the mainstream environmental movement. Reps. Donald McEachin and Pramila Jayapal, along with representatives from Green 2.0, the Hip Hop Caucus, Defenders of Wildlife, LCV and GreenLatinos, participate.

MOVERS, SHAKERS:

Gwendolyn Keyes Fleming, chief of staff at EPA under Gina McCarthy from 2013 to 2015, has joined the law firm Van Ness Feldman in its environmental practice. She'll focus on environmental litigation and national security issues. Before becoming chief of staff, Fleming was EPA's regional administrator for the Southeast, and before that she was an elected district attorney in Georgia's DeKalb County. After leaving EPA, Fleming spent nearly two years as the top legal adviser for Immigration and Customs Enforcement. In recent months DeKalb County

had employed Fleming as a consultant to advise it on relations and negotiations with EPA and state regulators.

Cynthia Giles, EPA's top enforcement official during the Obama administration, has joined the University of Chicago's Energy & Environment Lab as executive fellow and director of strategic initiatives. The organization aims to work with governments to design and test environmental policies that can be scaled up.

Mike Godwin has joined the Niskanen Center as a senior fellow; He was most recently the director of innovation policy at the R Street Institute (h/t Playbook).

Energy and Climate Report

July 11, 2017 - Number 132

News

Climate Policy
Colorado Vows Carbon Cuts in Support of Paris Climate Deal
Colorado vowed to slash statewide greenhouse gas emissions by a quarter from 2005 levels by 2025 as Gov. John Hickenlooper (D) announced plans to join a multi-state alliance to meet the goals of the international Paris climate change agreement.

Climate Regulation
EU Panel Backs 'Stop-the-Clock' Emissions Exemption for Airlines
Long-haul flights that arrive in or leave European Union airports would continue to be exempted from a requirement to participate in the bloc's greenhouse gas emissions trading system, under a legislative proposal backed by the European Parliament's environment committee July 11.

Emissions Trading
California Reaches Deal to Extend Climate Trading Program
Large California industries would be shielded from local greenhouse gas regulations, but would need to curb emissions of other harmful air pollutants under bills to reauthorize the state's carbon trading program.

Emissions Trading
EU May Be Required to Keep Carbon Sink Emissions At, Below Zero
European Union countries would be required to keep combined greenhouse gas emissions from carbon sinks, such as forests, at or below zero from 2021 to 2030, under a plan approved July 11 by the European Parliament's environment committee.

Energy
Tesla's Australian Battery Fix Comes at 'Big Price,' Analyst Says
Billionaire Elon Musk's plan to install a giant battery to help fix a power crisis in South Australia will come at a "big price" with installation costing 60 percent more than alternative open cycle gas plants, according to Wood Mackenzie Ltd.

Energy
Trump Taps Business Executives for Energy Undersecretary Jobs
President Donald Trump announced his intent July 11 to nominate executives at J.P. Morgan and Berkshire Hathaway Energy for two Energy Department undersecretary posts.

Fuel Efficiency
Carmaker Fines for Fuel Economy Shortfalls Under Review by U.S.

The Trump administration is considering easing steeper fines proposed by Obama-era regulators for automakers that don't meet tougher fuel economy standards, a move that would give a break largely to luxury brands like Jaguar, BMW and Porsche that have paid the highest penalties in the past.

Motor Vehicles

China Likely to Extend Tax Break on Electric Cars, Auto Group Says

China is likely to extend a purchase-tax exemption on electric cars to promote the vehicles, whose sales have outpaced broader industrywide deliveries, according to the state-backed auto association.

Motor Vehicles

London's Iconic Black Cabs Go Electric; Bound for Amsterdam

Hundreds of London's black cabs will start appearing on the roads of Amsterdam next year, powered by batteries instead of diesel fuel, marking the first international sale for Geely Automobile Holdings Ltd.'s new electric taxi.

Subject: GOP tells Pruitt he will get bigger budget than requested

By Alex Guillén

06/15/2017 02:42 PM EDT

Republican lawmakers made it clear today that EPA is not going to get the budget it asked for — it's going to get a whole lot more.

Multiple GOP members of the Appropriations committee overseeing EPA said they will not come close to enacting the administration's proposed 31 percent cut.

"I can assure you you're going to be the first EPA administrator that's come before this committee in eight years that actually gets more money than they asked for," Rep. Tom Cole (R-Okla.) told EPA Administrator Scott Pruitt. "That doesn't mean you'll get as much as you've had, but you'll do better than you asked for."

Rep. Mark Amodei (R-Nev.) noted that Congress has already cut EPA's budget by more than $2 billion since 2010. "No one's standing on the rooftops begging for dirty air and dirty water," he said in calling for no more than moderate spending reductions.

Other Republicans on the panel made sure to defend specific programs they favor.

House Appropriations Chairman Rodney Frelinghuysen (R-N.J) told Pruitt that his state is home to more than 100 of the nation's 1,300 Superfund sites. "I think it's good to move with precaution before you take too many dramatic steps," he warned about EPA's 31 percent cut to that program.

Subcommittee chairman Ken Calvert (R-Calif.) criticized steep cuts to a popular diesel engine refit program and lamented the complete deletion of targeted air shed grants.

And Rep. Dave Joyce (R-Ohio) criticized the budget for killing the $300 million Great Lakes Restoration Initiative.

WHAT'S NEXT: Appropriators will write EPA's spending bill for next year, expected to be released later this summer.

Subject: EPA delays chemical facility safety rule until 2019

By Alex Guillén

06/12/2017 12:26 PM EDT

EPA is giving refineries, chemical plants, fertilizer makers and other facilities until 2019 to comply with an Obama-era rule meant to prevent explosions and other disasters at those sites and protect nearby communities.

The Risk Management Program rule was finalized in January and had been set to go into effect in March as part of the federal government's response to the West, Texas, fertilizer plant explosion that killed 15 people in 2013.

"We are seeking additional time to review the program, so that we can fully evaluate the public comments raised by multiple petitioners and consider other issues that may benefit from additional public input," Administrator Scott Pruitt said in a statement. In a Federal Register notice to be published later, Pruitt gave regulated facilities until Feb. 19, 2019 to comply with the rule, although any changes to its requirements likely will push that back even further.

In a separate response to comments, EPA dismissed complaints that the delay poses environmental, safety or national security risks.

"EPA's legal mandate ... is not to ratchet up regulatory requirements to prevent all conceivable accidental releases regardless of the burden of implementation and regardless of how such regulations fit in overall chemical safety," the agency said, adding that the law requires the agency to be "reasonable."

Sen. Jim Inhofe (R-Okla.) pushed unsuccessfully to kill the RMP rule via a Congressional Review Act resolution earlier this year after arguing it would reveal too much sensitive information to terrorists. His resolution never received a vote.

WHAT'S NEXT: EPA will continue its review of objections to the rule raised by industry groups and companies.

G-20 Seeks to Contain Trump by Avoiding Climate Mention

Posted July 06, 2017, 9:51 A.M. ET

By Peter Martin and Jessica Shankleman

German Chancellor Angela Merkel is seeking to unite the Group of 20 nations on key environmental goals by steering clear of references to climate change wherever possible, according to a draft being circulated ahead of a summit of world leaders.

A section of the current draft seen by Bloomberg notes the decision of the U.S. to withdraw from the landmark Paris Agreement, while promising collaboration on other less controversial areas such as innovation, sustainable growth, and competitiveness.

Climate change has become one of the biggest issues at stake during the G-20 summit, after President Donald Trump last month decided to pull the U.S. out of the 2015 Paris deal that promised to keep global warming "well below" 2 degrees Celsius. Trump has questioned the scientific consensus of climate change, even once suggesting it was a hoax created by China.

"This is about trying to contain Trump and not provoke him," said Nick Mabey, who used to advise the U.K. government on climate issues and now runs E3G, a policy-research group. "This language would show that he's isolated on climate change but leave him with a bit of dignity."

Investor Concern

As the world's second largest emitter, the U.S.'s involvement in the Paris deal is seen as crucial to global efforts to tackle climate change. Investors are concerned that a U.S. exit could have a domino effect around the world, yet no other country has said they will follow Trump in leaving the accord.

While previous G-20 leaders' summits promised strong action on climate change, the communique currently being considered doesn't appear to mention the phrase, instead noting the opportunities for job creation "of increased investment into sustainable and clean energy technologies and infrastructure." It also promotes energy security, a key issue for Trump. The statement is not final

and can still change.

As president of the G-20 this year, Germany is seeking to avoid leaving the U.S. as a footnote on the issue of climate change. Merkel wants to avoid a repeat of Group of Seven talks in Italy in May that confirmed a crack between six member states and the U.S. after environment ministers were unable to find common ground on climate measures.

Steffen Seibert, Merkel's chief spokesman, declined to comment on the G-20 draft's substance. "Nothing is decided for now," he said by email. "There are many options."

While the main communique won't affirm the group's commitment to tackling climate change, the section of the draft said the remaining 19 parties will endorse a separate climate and energy action plan, which will act as an annex.

The other heads of state and government from G-20 countries, as well as the European Union's leaders, will affirm their belief that the 2030 Agenda for Sustainable Development and the Paris Agreement are irreversible.

Teflon's Old Cancer Ties Stoke New Fears on U.S. Rivers

Posted July 06, 2017, 9:16 A.M. ET

By Tiffany Kary and Jack Kaskey

On a cool spring morning last year, Jason Galloway lugged his father's kayak up to the edge of the Ohio River and slid it into the calm water. This wasn't a pleasure trip. Galloway, by his own admission, isn't very skilled with an oar in his hands and, to make matters worse, can't swim.

He had come to gather water samples at spots in the river downstream from the Chemours Co. plant in Parkersburg, W.V. And what he says he found is adding to growing concerns over a new generation of chemicals—designed to be safer than the old ones—that Chemours and others make for products like Teflon cookware, waterproof fabrics and grease resistant food packaging.

Last month, a study detected one of the new chemicals, known as GenX, downstream from a different Chemours plant—some 400 miles away in Fayetteville, N.C. That news sent the company's stock and bonds tumbling as protests erupted over the safety of the local drinking water.

It's the latest chapter in a two-decade litigation and public relations ordeal that has buffeted DuPont Co., and now its spun-off unit Chemours. DuPont was accused for years of polluting the Ohio River separating Ohio and West Virginia with the widely-used Teflon chemical known as PFOA. In February, the two companies appeared to put the issue behind them when they agreed to a $670 million settlement to cover 3,500 personal-injury suits stemming from the old compound in drinking water around its Parkersburg plant.

Now, the Environmental Protection Agency is investigating the new chemical while some Wall Street analysts are discussing the potential for a fresh round of lawsuits against Chemours.

"History seems to be repeating itself," said Jeffrey Dugas, a spokesman for advocacy group Keep Your Promises DuPont. "We don't know if this chemical will have adverse health effects, but it has already contaminated drinking water."

Health Screening

Chemours said that it believes GenX levels around the Fayetteville plant are "well below the health screening level" announced by North Carolina regulators last month, adding that emissions "have not impacted the safety of drinking water."

In response to the controversy, Chemours said it started capturing the wastewater containing GenX and is working with regulators and local officials to determine the next steps.

The EPA said in a statement last month that its probe would review GenX toxicity data and update its risk assessment. There is no requirement that drinking water be tested for GenX and most similar chemicals, nor any federal limits on exposure.

DuPont had been using the old chemical, PFOA, also called C8, since at least the 1950s.

'Probable Links'

After residents near Parkersburg started raising health concerns and filing lawsuits in 2001, DuPont agreed to an independent science panel, which studied 80,000 residents for seven years, and found "probable links" between PFOA and six diseases including testicular cancer and ulcerative colitis. After losing a handful of individual suits, DuPont and Chemours reached this year's settlement on the PFOA suits.

The EPA encouraged companies beginning in 2006 to phase out PFOA and related chemicals, and DuPont agreed to do so. The industry replaced them with GenX and other new-generation agents known as perfluorinated compounds, or PFAS. The new class is eliminated faster from the body, making them safer, Chemours says.

At a conference in Boston in June about the chemicals, several scientists agreed that they cycle out of humans more quickly, but expressed concerns, citing their persistence in the environment including plant life, as well as a dearth of studies.

"Every perfluorinated compound that's been studied causes problems," said Linda Birnbaum, who directs an environmental health unit of the National Institutes of Health.

More Research

Much more research is needed to determine whether levels of the chemical found in North Carolina or near Parkersburg are safe, according to Jamie C. DeWitt, an associate professor at East Carolina University and author one of the few peer-reviewed studies of GenX.

"GenX isn't as potent, but we are seeing some concerns," she said.

Galloway, who has a degree in chemical engineering and is now a student at Ohio State University in molecular genetics, went on his vigilante sampling trip after reading about the new chemicals. He said he took the samples into the EPA for testing, and is working with the agency on a study for peer review.

"When I saw the plant was still operating, I tried to look up information on emissions and couldn't find anything, so I decided to get involved," Galloway said in a phone interview.

Public Outcry

The EPA didn't return requests for comment on Galloway's samples, and Chemours said it can't respond until the agency is done evaluating them.

Meanwhile, in North Carolina, local officials are grappling with their next step after the public outcry, initially sparked by a peer-reviewed study in November that found GenX is in the Cape Fear River and that current filtration systems have little ability to remove it.

"We need assurance that the water is safe," said Woody White, chairman of the New Hanover County commissioners, which covers affected communities around Wilmington, N.C., downstream from Chemours' Fayetteville plant. "We worry, and we want more data as soon as possible."

In Fayetteville, Chemours is required to capture GenX when used to make Teflon but not when discharged as a byproduct of a separate process.

Tom Claps, a litigation analyst with Susquehanna International Group, said in a research note that while lawsuits are likely, it may take a long time, citing the 16 years it took from the first lawsuit against DuPont over PFOA in Parkersburg to the recent settlement.

Chemours also inherited 17 factories globally that make fluoroproducts like Teflon. Its plant in Dordrecht, the Netherlands, recently came under scrutiny from Dutch officials concerned about GenX in the local drinking water. Its factories in Changshu, China, and Shimizu, Japan, also use GenX.

Southern's Clean Coal Tryout Officially Dead Upon State Order

Posted July 06, 2017, 12:48 P.M. ET

By Mark Chediak

A seven-year, $7.5 billion effort to build a first-of-its-kind "clean coal" power plant in Mississippi is officially over.

Mississippi regulators ordered utility owner Southern Co. on July 6 to come up with a deal that'll have the Kemper plant—once hailed by the Obama administration as the future of coal—running as a natural gas-fired generator instead. The Mississippi Public Service Commission directed Southern to come up with a settlement within 90 days that has the plant burning gas and protects customers from the ballooning costs of the project.

The state's ruling only stands to seal the fate of the Kemper plant. Southern already said last week that it was pulling the plug on the coal part of the complex, and the July 6 vote only memorializes the state utility commission's call last month for the company to give up on "unproven" technologies at

the plant.

The death of the clean-coal project represents a major setback for the very technologies that the Trump administration has promoted it as a way to help save mining jobs. It also marks the end of a high-profile project that was plagued by construction slowdowns, equipment failures and sliding natural gas prices. The plant's already years behind schedule and more than $4 billion over budget.

Southern warned investors that it may take a $3.4 billion second-quarter charge if the company isn't authorized to recover the costs of the project from customers.

Kemper was supposed to turn coal into gas to produce electricity—all while removing carbon dioxide emissions linked to global warming. At least that was idea as the U.S. government poured $382 million of grants into the project and then-Energy Secretary Steven Chu stressed its "national importance." Now, the project's only claim to fame is becoming quite possibly the most expensive gas plant ever built.

When the Kemper project was first conceived, America's gas resources were thought to be becoming scarcer. Southern pitched the plant as a valuable hedge against volatile commodity prices. The shale boom has since unleashed so much gas that it's glutted markets and sent prices plummeting to the lowest level since the 1990s.

Viable With Gas

By February, Southern was estimating that running the Kemper plant on natural gas was more economically viable than running it off coal under two of three gas price scenarios analyzed.

The company has 45 days to propose a settlement to the commission, with another 45 days afforded for public comment and discussion, Public Service Commission Chairman Brandon Presley said before the panel voted on an order Thursday. Any deal must fit the terms laid out by the commission last month, he said. A printed copy of the order wasn't immediately available.

—With assistance from Jim Polson.

Interior's Zinke Wants Oil and Gas Permitting Streamlined

Posted July 06, 2017, 02:14 P.M. ET

By Alan Kovski

Oil and gas companies could get more leasing opportunities and faster permitting for work on federal onshore lands under an order announced June 6 by Interior Secretary Ryan Zinke.

Zinke told reporters he was issuing a secretarial order to simplify and streamline the leasing and permitting process and stabilize it in terms of honoring lease commitments, all without skirting the obligations of the National Environmental Policy Act.

Drilling permit processing averaged 257 days last year. Zinke said he was aiming to meet the statutory mandate for issuing drilling permits in 30 days, although he acknowledged the government might not get there.

G-20 Energy Efficiency, Greenhouse Gases Both Rise, Report Says

Posted July 06, 2017, 7:49 A.M. ET

By Eric J. Lyman

The world's industrial powers are becoming more energy efficient, but greenhouse gas emissions continue to rise in those countries because of growing economies, according to an assessment of the Group of 20 nations by a climate advocacy group.

Overall, the G-20 nations saw greenhouse gas emissions increase by 34 percent between 1990 and 2014, while their economies grew 117 percent during that period, illustrating increased efficiency, the report said.

But the G-20 countries—which account for three-fourths of the world's greenhouse gas emissions—are not taking action strong enough to limit global warming to 2 degrees Celsius (3.6 degrees Fahrenheit) compared to pre-industrial levels, the central goal of the 2015 Paris Agreement, said the report, released ahead of the July 7-8 meeting of G-20 leaders in Hamburg, Germany.

Of the G-20 members, "Australia, Canada, Saudi Arabia and the United States stand out with by far the highest per capita energy-related CO2 emissions," said the report from the umbrella group Climate Transparency, which wants G-20 countries to take more ambitious steps to fight climate change.

'Underlying Message'

The report is not a response to President Donald Trump's decision to pull the U.S. out of the Paris Agreement, said Niklas Hohne, a report co-author.

"The decision of the U.S. to withdraw creates some uncertainty, and it means the other 19 members of the G-20 will have more work to do," Hohne told Bloomberg BNA. "But it doesn't change the underlying message that the world is moving in the right direction, but doing so too slowly."

Hohne noted that at a 2009 G-20 summit in Pittsburgh, leaders committed to "phase out over the medium term inefficient fossil fuel subsidies that encourage wasteful consumption."

"As our latest report shows, there is still a lot of work to do in this area, but this is an ongoing discussion that started at the G-20," Hohne said. "The G-20 can play a key role in sending a message to the world about what is important."

The G-20 is comprised of the European Union and 19 countries: Argentina, Australia, Brazil, Britain, Canada, China, France, Germany, India, Indonesia, Italy, Japan, Mexico, Russia, Saudi Arabia, South Africa, South Korea, Turkey and the U.S.

The report's authors came from 10 of the countries in the G-20, though none were from the U.S.

Tesla Seen Pulling Away from GM for Clear U.S. Electric Car Lead

Posted July 06, 2017, 8:43 A.M. ET

By Claire Ballentine

More than a dozen automakers are jostling to lead the U.S. electric-car race, but Bloomberg New Energy Finance sees a clear winner separating from the pack: Tesla Inc.

The automaker led by Chief Executive Officer Elon Musk will emerge as "the stand-out" in total cumulative deliveries through 2021, reaching nearly 709,000 vehicles, according to BNEF's Long-Term Electric Vehicle Outlook released July 7. Tesla is projected to pull away from current leader General Motors Co., which may slip behind Volkswagen AG's aggregate sales of plug-in hybrid and fully electric autos in four years' time.

The report reinforces the optimism among some analysts that Tesla will be able to distance itself from established automakers and dominate many of the world's biggest markets for battery-powered vehicles. Investors have bid the company's shares up 53 percent this year in anticipation of Musk debuting the Model 3 sedan, a more affordable car he's counting on to crack the mass market.

"If they can stick to the Model 3 timeline, they're going to be at the front edge of this for a while," BNEF analyst Colin McKerracher said of Tesla in a phone interview.

While BNEF expects Tesla, VW and GM will lead the EV charge in 2021, the research group owned by Bloomberg LP predicts at least three other automakers will have also surpassed the 200,000 cumulative sales mark in the U.S. by that year. After crossing that threshold, buyers are no longer eligible for the full federal $7,500 tax credit toward purchases of vehicles from those manufacturers.

Hitting the 200,000 unit milestone would portend more sustainable demand for electric vehicles. Though BNEF does expect some impact from the federal tax credit phase-out, industry sales could be even higher because the analysts' short-term forecasts are based only on electrified models disclosed to date.

Product introduction schedules for 2020 and 2021 are still taking shape. BNEF made its forecasts before Volvo Car Group announced plans July 5 to offer only hybrid or full-electric motors on every new model launched starting in 2019.

The prediction BNEF settled on that Volkswagen could climb to the No. 2 spot by 2021 was the "the most contentious" of the research group's projections, McKerracher said. The German automaker doesn't yet have the same presence in the U.S. market as other electric-focused automakers, though the opportunity is there for the company to rank among the leaders based on all the vehicle launches it's announced.

Hybrid Outlook

The expected rise in pure electric vehicle demand in the U.S. will come at the expense of some hybrid vehicle demand, BNEF said. This could pose a challenge for the likes of Toyota Motor Corp., known for gasoline-electric cars like the Prius. The company sold about 1.4 million traditional and plug-in hybrid vehicles last year and has delivered more than 10 million cumulatively since the first Prius debuted in 1997.

Battery electric cars have already surpassed plug-in electric hybrids in the U.S., with about 85,000 and 73,000 sold last year respectively, BNEF data show. The trend also holds globally, with 412,000 battery electric vehicles sold last year to 283,000 plug-in hybrids.BNEF expects Toyota's Prius

Prime plug-in hybrid to be the exception and hold the title of best-selling electrified vehicle in the U.S. this year. Tesla will get off to too late of a start with its Model 3 to catch up, with Musk planning to hold a handover party for its first 30 sedan customers on July 28. The company is aiming to ramp-up production to a rate of 20,000 cars per month in December.

"In the long term, we see battery electric vehicles winning because of the battery cost curve," McKerracher said.

Simplifying Energy Tax Code System Proving Not So Simple

Posted July 06, 2017, 7:00 A.M. ET

By Laura Davison and Brian Dabbs

Proposals to simplify energy tax credits are garnering interest from Senate Democrats and House Republicans as congressional leaders contemplate comprehensive tax reform. Lawmakers are looking at tax reform or a bill to extend nuclear production tax credits as possible vehicles to help them untangle the current energy tax system, lawmakers and industry officials told Bloomberg BNA.

One idea involves moving to a "technology-neutral" tax credit. The subsidy would apply to all forms of renewable energy, such as wind, solar, and geothermal, to prevent Congress from having to create credits for new technologies as the industry innovates. Supporters laud the proposal for simplifying a complex energy tax quilt.

"It will prevent the need to shoehorn new technologies into statutory definitions, some of which have been written decades ago," said David K. Burton, a partner at Mayer Brown LLP who leads the firm's renewable energy group.

The effort comes as lawmakers are aiming to overhaul the tax code by year-end—an ambition that faces big hurdles, since Republicans have failed so far to agree on a framework. House Ways and Means Committee Chairman Kevin Brady (R-Texas) said he expects energy tax credits to be included in the legislation. Some lawmakers also hope technology-neutral provisions could be attached an extension of the nuclear production tax credit—a bill (S. 666) lawmakers from South Carolina and Georgia are looking to push through Congress quickly.

Sen. Ron Wyden (D-Ore.), ranking member of the Finance Committee, has been pushing the idea of streamlining the energy sections of the tax code with a technology-neutral credit for several years. His bill, Clean Energy for America Act (S. 1068), would let taxpayers choose between a production or an investment tax credit, scaled according to the amount of carbon emissions. It has 21 co-sponsors in the Senate, none of whom are Republicans.

Renewable energy groups, including the Solar Energy Industries Association and the American Council on Renewable Energy, have expressed support for the Wyden bill.

The tension between Democrats and Republicans on technology neutrality hinges on which energy sources will qualify for the credit. Wyden's bill allows zero-emission technologies, such as wind and solar, to qualify for the maximum credits, either 2.3 cents per kilowatt hour for the production credit or an investment tax credit of up to 30 percent. Rep. Tom Reed (R-N.Y.) has been exploring ways to create a Republican-friendly alternative that doesn't base eligibility on carbon.

"In a perfect world, you would start with a technology-neutral credit," rather than the patchwork of incentives that exists now, a GOP aide said.

Energy Priorities

For now, the strongest push in the Senate is to combine expired renewable energy credits under tax code Section 48 (H.R. 1090), the nuclear credit extension that passed the House in June, with an extension of a carbon sequestration tax credit, the aide said. The sequestration measure, which is spearheaded by Sens. Heidi Heitkamp (D-N.D.) and Sheldon Whitehouse (D-R.I.), hasn't been introduced yet this year but is expected to closely resemble legislation (S. 3179) from last Congress.

But if those don't pass, momentum could shift to a technology-neutral approach.

Republicans, however, still need to come up with a bill. The disagreement between the right and the left stems from how they view the idea, a Democratic aide said. Democrats see a technology-neutral approach as a climate issue "at its core," the aide said. For Republicans, this is about spurring energy innovation, a GOP aide said.

"Conservatives generally are for agnostic government policies that don't choose winners or losers but that instead empower consumers and encourage research and development," Rep. Carlos Curbelo (R-Fla.) said.

One idea that has been considered is to provide incentive to new technologies with a credit until they reach a certain level of power generation, a GOP aide said. That would allow the oil and gas sector to receive the credit for technologies that are more efficient than current systems. Aides of both parties said, however, that the approach could be open to litigation because it's hard to define what processes are "innovative."

A compromise between Democratic and Republican approaches, however, would be a delicate balancing act, and so far no real headway appears to have been made, Timothy Fox, an alternative power analyst at ClearView Energy Partners LLC, told Bloomberg BNA.

"The fact that this minimizes the tax code could generate some support for this, but tax reform is very difficult," he said. "If a bill with this regulatory construct could be drafted in a way that more services could qualify in terms of lowering the baseline, then the prospects that it advances are greater."

For example, plants that burn cleaner coal could benefit from a lower baseline, he said.

Competing Factions

Power plants that emit 35 percent less carbon than the national average would be able to qualify for the minimum credit under Wyden's plan. Those that emit zero carbon would access the full credit.

The bill, therefore, could benefit the "fossil fuel guys" who crack down on carbon emissions, Wyden told Bloomberg BNA.

But Republicans still often lock horns over the basic merits of subsidizing energy, tax and energy specialists said. "It's a spectrum type of thing. You're going to have conservatives who don't want to incentivize energy production and some that want to incentivize fossil energy and some that want to

incentivize renewable energy," Curtis Beaulieu, an energy lobbyist at Bracewell LLP, said. "I couldn't tell you how to amend this proposal to get the maximum Republican support."

Rep. David Schweikert (R-Ariz.), a member of the House Freedom Caucus, said the credits are likely to face resistance from some conservative members.

"If you have none, you are treating everyone the same," he said. "Wouldn't the ultimate policy-neutral perspective be really low rates accomplishing the same thing rather than a subsidy for energy?"

Christopher Guith, senior vice president of the U.S. Chamber of Commerce's Institute for 21st Century Energy, echoed that call, pointing to what he said were potential perils of the Wyden proposal or a related version.

"If you look at some of the struggles that are happening in competitive power markets right now that are pushing coal and nuclear out of the market, there's a growing consensus that the piecemeal approach to subsidizing renewables has had unintended consequences," he told Bloomberg BNA. "There's a growing realization that federal subsidies have caused more problems than solutions."

Since the White House's "energy week," which wrapped up June 30, President Donald Trump continues to tout the value of baseload power, which refers to fossil fuels and nuclear. Environmentalists and like-minded lawmakers, however, urge an immediate transition to carbon-free energy production in order to minimize emissions that cause climate change.

Compromise Search

Despite the uncertainty, Reed told Bloomberg BNA he is working with a group of Senate Democrats and Republicans to find a way to move a technology-neutral bill, especially since the House passed the nuclear tax credit bill. "My hope is that as that vehicle goes forward that our technology-neutral-type provisions are recognized in the same caliber as that legislation," Reed said.

Attaching technology-neutral provisions to the nuclear bill could be difficult, especially if the nuclear legislation is fast-tracked through the Senate in a unanimous-consent process as some Republicans are hoping.

Wyden indicated he would wait to see how a Republican bill looks, before committing to compromising on his bill, but added "we are looking for opportunities to advance this."

And Sen. Debbie Stabenow (D-Mich.), Wyden's deputy on the committee, said the measure could be a Democratic position in tax reform negotiations. "We're just now hearing that we may actually have an open process on tax reform in the committee, which would be a welcome change," she told Bloomberg BNA.

The proposal, in fact, could ultimately serve as an olive branch if Republicans need a few Democratic votes to pass comprehensive tax reform. "I'm not saying the inclusion of this proposal would lead those Democrats to support tax reform, but it could entice them. This might move the needle a bit," Beaulieu said.

France Seeks Carbon Price More Than 19 Times Market Level

Posted July 06, 2017, 10:42 A.M. ET

By Helene Fouquet, Mathew Carr and Mark Deen

French Environment Minister Nicolas Hulot said he wants to increase the government's target price for carbon emissions to more than 100 euros ($114) a ton by 2030 to meet the nation's climate-change goals.

"The objective is to accelerate the implementation of the Paris climate accord," Hulot said July 6 at a news conference in which he set out a wide-ranging environmental strategy. A Hulot adviser said an earlier report in Le Figaro newspaper that said the 2030 target would be 140 euros a ton was wrong, and that a precise figure would be given in September.

At 100 euros, a French permit to release a ton of the greenhouse gas still would be more than 19 times the current level of European Union carbon allowances.

Companies from Engie to Electricite de France SA have lobbied for a minimum price of at least 30 euros a ton, arguing it would boost the use of cleaner natural gas-fired power stations and carbon-free nuclear generation.

European Union carbon allowances dropped about 22 percent so far this year after the bloc has spent most of the past decade seeking to deal with an accumulated glut in its market that's the equivalent of a full year of supply. Nations, the region's parliament and the European Commission are seeking to finalize plans this year to establish a reserve in 2019 to mop up the program's glut.

The EU may have to consider pursuing a carbon-floor price or a tax in the next decade if the deal on the reserve fails to adequately revive EU allowances, a German government official said in March.

China Poised to Blow Past Solar Goals Amid Push to Clear Skies

Posted July 06, 2017, 9:18 A.M. ET

By Bloomberg News

China is poised to blow past its solar targets several years ahead of schedule as the government presses ahead with efforts to fight pollution, solidifying the nation's role as the world's biggest solar market.

Based on a review of projects already announced or under construction, China could install more than 30 gigawatts of new solar capacity this year, Yvonne Liu, a Beijing-based analyst at Bloomberg New Energy Finance, said in a phone interview. That would push China past its stated goals for 2020.

In 2016, China set out a plan to have at least 105 gigawatts of solar installations in four years. The nation, the world's biggest investor in clean energy, had almost 85 gigawatts as of the end of March after adding 7.21 gigawatts during the first quarter, according to data from China's National Energy Administration.

London-based BNEF's most-optimistic forecasts for China this year see solar installations close to their peak, aided in large part by growth in the commercial solar market. China's overall solar

capacity has surged 13-fold since the end of 2012.

China installed a record 34.54 gigawatts of solar last year, according to the NEA. The growth of the market has benefited top panel manufacturers led by JinkoSolar Holding Co. and Trina Solar Ltd.

Policy Environment

The nation could add about 20 gigawatts in the first half after a rush of project development ahead of tariff cuts, said Peng Peng, secretary-general of the China Photovoltaic Power Investment & Financing Alliance. She raised her forecast for the year to at least 28 gigawatts from a previous estimate of 25 gigawatts.

The government's goal is "a bottom line," BNEF's Liu said, adding that China could install at least another 25 gigawatts of solar capacity in 2018 if the policy environment remains stable.

Leading to 2020, China is aiming to cut production costs and improve the efficiency of solar-generated power, Xing Yiteng, vice consultant in the new energy division at the NEA, said in February, adding that expansion is secondary.

South African Farmers Wary of Fracking as Licensing Looms

Posted July 06, 2017, 8:57 A.M. ET

By Paul Burkhardt

Farmers in South Africa say they need more assurances that shale-gas drilling is safe for their industry as exploration licenses for companies including Royal Dutch Shell Plc are expected in months.

After emerging from the worst drought on record, farmers still aren't clear about where explorers will get the water they need to inject chemicals as part of a drilling technique known as fracking, Johannes Moller, the president of growers' body Agri SA, said July 5 at a press conference. There's also uncertainty about how land will be rehabilitated after drilling and how land owners will be compensated, he said.

The development of gas in the semi-desert Karoo region, which is estimated by regulators to hold as much as 201 trillion cubic feet of the resource, has been slowed by legislative delays. Momentum has increased following the introduction of a program to diversify South Africa's fuel mix by using natural gas, and Mineral Resources Minister Mosebenzi Zwane has said he favors the exploitation of shale resources.

"We can't support the government's view on progressing shale gas" until there are answers, Moller said. South Africa's Academy of Science in November also recommended further research before moving ahead with exploration.

Representatives of Shell, the Department of Minerals and the Department of the Environment didn't immediately return emails seeking comment.

The minister will decide on five applications in the third quarter, according to Petroleum Agency

South Africa. If permits are issued, Agri SA will appeal immediately, said Janse Rabie, the group's head of natural resources.

One of the least-populous areas of the country, the Karoo produces most of South Africa's wool and accounts for the bulk of the country's mohair output, as well as sheep and ostrich meat.

Peru Steps Up Rainforest Protection as Police Raid Illegal Mines

Posted July 06, 2017, 9:20 A.M. ET

By John Quigley

Peru moved to halt the destruction of the world's largest rainforest by dispatching almost a 1,000 police to raid illegal mining camps on the edge of a major nature reserve in Peru's Amazon jungle.

Police raided 83 camps surrounding the Tambopata reserve in the Madre de Dios region of south east Peru, the Interior Ministry said in a statement July 5. They also destroyed millions of dollars' worth of equipment used to extract gold from river banks and beneath once virgin forest.

Illegal gold miners have encroached upon the reserve, which is home to jaguars and capuchin monkeys, even as Peru has stepped up controls in recent years. The Madre de Dios region accounts for about a fifth of the country's gold output and the activity has turned swathes of rainforest into wasteland and polluted rivers with mercury.

"Illegal mines have operated here for many years and the results, as you can see, are Dantesque," Deputy Interior Minister Ruben Vargas said. "This is an activity that's equally or even more lucrative than drug trafficking."

A preliminary investigation suggests the local authorities may have awarded mining rights in protected areas, and the ministry said it's considering taking legal action against Luis Otsuka, the regional governor.

Police arrested six people on charges related to illegal mining out of a total 225 questioned, in the biggest operation against mines since President Pedro Pablo Kuczynski took office almost a year ago. Three people were detained for suspected sex trafficking while eight women and minors were being kept in the camps against their will, the ministry said.

CEI Renews Call For Trump To Attack California Vehicle GHG Rule Power

The Competitive Enterprise Institute (CEI) is citing an early effort to develop bipartisan endorsement of negotiations over vehicle greenhouse gas and fuel economy rules as a new justification for the Trump administration to pursue attacks on California's vehicle GHG authority -- illustrating the challenges to forging any bipartisan consensus on the issue.

Subject: EPA proposes repealing 'glider kit' part of truck rule

By Alex Guillén

11/09/2017 12:48 PM EDT

EPA today proposed repealing part of the Obama-era Phase 2 emissions rule for heavy-duty trucks that classified "glider kits" as new vehicles or engines that are subject to more stringent requirements.

Glider kits are new truck chassis with rebuilt engines and can cost significantly less than a new truck with a new engine. The proposal argues that EPA does not have the authority to regulate glider kits under the Clean Air Act.

In a statement, EPA Administrator Scott Pruitt said the Obama administration unlawfully tried to expand the Clean Air Act's reach. "Gliders not only provide a more affordable option for smaller owners and operators, but also serve as a key economic driver to numerous rural communities," he said.

Pruitt announced plans to revisit that part of the rule in August following a May meeting with and a July petition from Fitzgerald Truck Sales, the biggest U.S. manufacturer of glider kits.

WHAT'S NEXT: EPA will take public comment through Jan. 5 and hold a hearing on Dec. 4 at EPA headquarters in Washington.

Understanding the Senate health care bill

Joseph Antos and James C. Capretta | Health Affairs

Senate Republican leaders released a discussion draft of their version of health care legislation, the Better Care Reconciliation Act. The Senate Republican plan is best understood as a GOP amendment to the existing Affordable Care Act (ACA). Indeed, one could imagine that, back in 2009, if the Republicans had attempted to modify rather than defeat the ACA, this is the kind of amendment they would have offered.

Austerity rules the 2018 defense budget

Mackenzie Eaglen | AEI

It is no secret that President Donald Trump's first defense budget falls short of his own rhetoric. The president's defense budget would repair, not rebuild, the military. Worse, it lacks the investments necessary to allow a robust rebuilding effort to begin a year from now. The request represents a more muscular status quo at best.

Reuters

What does a Trump supporter look like?

Karlyn Bowman | Forbes

In 2016, the Democracy Fund, a foundation based in Washington, DC, gathered a group of nearly two dozen academics and polling practitioners with diverse political points of view to take a deeper look at important currents in the 2016 election. The results of that work show that, far from being monolithic, there are five distinct types of Trump voters.

PESTICIDES
Pesticide Control
Alaska PESTICIDES

Final rule of the Department of Environmental Conservation amends regulations under 18 AAC 90.205 through .990 (nonconsecutive) and adopts regulations under 18 AAC 90.635 regarding pesticide product registration and certified applicator standards. The rule clarifies product registration period and renewal requirements, activities that require applicator certification, and exemptions from certification requirements. The rule also adds and modifies categories of use for applicators, adds requirements for new categories of use, and clarifies applicator certification renewal processes and recordkeeping items. In addition, the rule clarifies requirements for the storage of restricted-use pesticides, establishes standards for tenant notification of pesticide applications, deletes the discount for online pesticide product registration, and adds and revises definitions. Finally, the rule provides protective measures for automatic misting systems, clarifies when insurance coverage is required, and removes oral examinations as a certification procedure. The rule is effective Oct. 27, 2017. Contact: Rebecca Colvin; DEC, Division of Environmental Health; 907-269-7802; rebecca.colvin@alaska.gov

SOLID WASTE
Solid Waste Management
Alaska SOLID WASTE

Final rule of the Department of Environmental Conservation amends regulations under 18 AAC 60.005 through .990 (nonconsecutive); adopts regulations under 18 AAC 60.009 and .432; and repeals and readopts regulations under 18 AAC 60.007, .008, and .700 regarding solid waste management requirements for oil and gas exploration and production waste, coal ash, medical waste, and biosolids. The rule excludes drilling and medical waste treatment facilities and facilities that treat sewage solids or septage to create biosolids from the exemption for small

treatment facilities. The rule also revises the standards for the beneficial use of solid waste as structural fill material or as an ingredient in manufactured products, updates small treatment facility permitting and biosolid requirements, allows for the approval of short-term solid waste treatment facilities via plan approval rather than through permit, and updates standards concerning drilling waste disposal facilities. In addition, the rule updates fees and establishes standards concerning the closure of inactive reserve pits and drilling waste disposal facilities. The rule is effective Oct. 27, 2017. AIR

Permits, CEQA Review/Risk Assessments
California Regions AIR

Proposed rule of the Eastern Kern Air Pollution Control District amends regulations under Regulation II and Rule 208.2 to revise air toxic risk management guidelines for purposes of permitting and California Environmental Quality Act review. The rule establishes a permitting risk threshold of less than 20 in one million cancer risk or a noncancer acute and chronic health index of less than or equal to one. The rule also provides that for CEQA purposes, projects that do not exceed this threshold will be considered to have an insignificant air quality impact. A workshop is scheduled for Nov. 2, 2017, in Mojave. Comments are due Dec. 4, 2017. Contact: Wunna Aung; Eastern Kern APCD; 661-862-5250; aungw@kerncounty.com

Commercial Oil Field Waste Disposal Facilities/Financial Assurance

Wyoming WATER

Proposed rule of the Department of Environmental Quality, Water Quality Division, amends regulations under Chapter 14 to remove an exemption from financial assurance requirements for grandfathered commercial oil field waste disposal facilities. The rule also requires such facilities to provide financial assurance for closure and post-closure activities and for corrective action within 90 days after the proposal is finalized. In addition, the rule clarifies that the provisions apply to all facilities that manage more than 10 tons of dried wastewater treatment sludges. Finally, the rule clarifies agent registration requirements, removes redundant provisions regarding bond and financial assurance release, and clarifies that the provisions do not apply to publicly owned facilities or facilities that receive nondomestic sludges. A hearing is scheduled for Dec. 5, 2017, in Cheyenne. Comments are due Nov. 17, 2017. Contact: Rich Cripe; DEQ; 307-777-7075; rich.cripe@wyo.gov

Subject: POLITICO's Morning Score: Ossoff raised $15M in two months, Handel $4M for Georgia special — Trump drives Virginia Democrats to the left — NRCC's Stivers talks through the House map

By Daniel Strauss | 06/09/2017 10:00 AM EDT

With Kevin Robillard

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

YUUUUGE BET - "Democrats bet on Trump in Virginia governor's race," by Campaign Pro's Kevin Robillard: "The Democratic primary to be Virginia's next governor has been an open race to the left, with Lt. Gov. Ralph Northam and former Rep. Tom Perriello scrambling to prove their progressivism ahead of Tuesday's primary vote and the November election. Behind it all is the one supporting character common to both campaigns: President Donald Trump... The president's 5-point loss in Virginia cemented Democrats' determination that the former red state has turned blue, and Northam and Perriello have responded with unapologetically liberal campaigns on abortion, guns, free college tuition, criminal justice reform and other issues - with a heavy dose of Trump-bashing thrown in. 'Let's prove that Donald Trump's values are not Virginia values,' Perriello says in one of his closing television ads. Northam has arguably gone further, using his TV campaign to call Trump a 'narcissistic maniac' - though Perriello answered Thursday with an ad of his own calling Trump 'authoritarian.'" **Read more.**

- MORE VIRGINIA: Friends of the Earth Action donated $25,000 to Perriello's campaign.

CASH FLOW - "Ossoff raised $15M in last two months," by Campaign Pro's Elena Schneider: "Democrat Jon Ossoff raised $15 million in the last two months leading up to Georgia's special House election, bringing his overall fundraising total to $23 million, a massive sum for a House candidate. Ossoff's campaign touted that the average contribution to his campaign was $20.49. Spending in the race has topped $40 million, shattering the record for the most expensive House race in history...Republican Karen Handel's team has not yet released her fundraising numbers. In the pre-primary report in April, Handel raised just under $500,000. Handel, who's run for several statewide offices, has struggled in the past with fundraising." **Read more.** Ossoff spent $16.3 million and had just over $1 million left on hand after May 31.

- "Handel raised $4M leading up to Georgia special election," by Campaign Pro's Elena Schneider: "Republican Karen Handel raised over $4 million for her campaign in Georgia's special House election in the last two months, according to her FEC report. Handel spent $2.8 million and had $1.4 million left over at the end of May." **Full story.**

- GEORGIA POLL - Ossoff 50, Handel 47 from WSB-TV/Landmark Communication: The poll is in line with the group's previous surveys, which have been showing Ossoff on top but well

within the margin of error. Read more here.

- FIRST IN SCORE - CLF runs new ad in GA-06: Ten days out, the Congressional Leadership Fund released another TV and digital ad that hammers Democrat Jon Ossoff for being a Nancy Pelosi "liberal" who "would make things worse" in Washington by "voting for higher taxes, more spending and job-crushing regulations," the ad's narrator says. "As Georgia's only woman in Congress, Karen Handel will fight hard for working families - supporting a Balanced Budget Amendment, fighting waste and putting Georgia taxpayers and Georgia jobs first." The ad is part of CLF's $7 million expenditure in the Georgia special election**. Watch the ad here.**

MORE CAMPAIGN FINANCE - Congressional Leadership Fund's pre-special election FEC report showed that the GOP House super PAC raised over $2.9 million in May, including $1 million from Western Refining's Paul Foster and $1 million transferred from American Action Network, CLF's sister nonprofit, which does not disclose its donors. Georgia GOP megadonor Bernard Marcus gave $250,000.

- On the House Democratic side, House Majority PAC raised $1.86 million - but in five full months, from Jan. 1 through May 31. Real estate magnate George Marcus gave $500,000, financier Donald Sussman gave $250,000, NextGen Climate Action gave $200,000, and political funds of the UAW and IBEW unions gave $100,000 apiece.

CLOSE CALLS - "NRCC chair: Georgia special election 'going to be a tight race,'" by Campaign Pro's Scott Bland: "Steve Stivers (R-Ohio), the chairman of the NRCC, said Thursday that he expects the special House election in Georgia to go down to the wire - but believes Republicans will hold the seat in the end. 'It's going to be a tight race all the way to the end,' Stivers said in an interview for C-SPAN's 'Newsmakers.' 'Karen Handel is a great candidate. When you look at what happened in April, we had 13 Republican candidates and they combined to get just over a majority of the vote. ... I feel very comfortable and confident that we are working it as a team with the NRCC.'"

- STIVERS IDs A 2018 BELLWETHER - "'I think of our seats, if you want to look at kind of a bellwether, it'd probably be Ryan Costello" in **Pennsylvania's 6th District** in the Philadelphia suburbs, Stivers said. 'He's a great young member, a rising star, but he's got a strong challenger and I would pay attention to that race.' ... And he sees Florida's 7th District, represented by freshman Democrat Stephanie Murphy, as a major target the GOP can flip to protect the House ... **'If we win in Florida, I believe that the Democrats are not taking back the majority. If they win in Pennsylvania against Ryan Costello, they've got a shot to take the majority,'** Stivers said." **Read more.**

Days until the 2017 election: 150.

Days until the 2018 election: 514.

OFF MESSAGE PODCAST BONUS EPISODE: On the eve of LGBTQ Pride marches around the country, president of the Human Rights Campaign Chad Griffin and *Indecent* playwright Paula Vogel join Isaac Dovere for a special bonus episode of Off Message. The two activists share their anxieties about the future of the LGBTQ community under the Trump administration. "Do I feel right now that we're at a volatile moment? Absolutely," Vogel tells Dovere. "Do I feel we're going to lose these rights? I think it's a real possibility." Listen and subscribe: iTunes | Panoply | Stitcher

NERDCAST PODCAST: James Comey made his first public appearance as the former director of the FBI Thursday. POLITICO's Scott Bland, Charlie Mahtesian, Ken Vogel and Eliana Johnson break down what he said and what it means for the Russia investigation. Plus, the latest on New Jersey and Virginia's gubernatorial races and what they say about the future of the Democratic Party - and what's new in Georgia's intense special House election. Listen and subscribe: iTunes | Panoply | Stitcher

MEANWHILE, IN SOUTH CAROLINA - Norman had $97,000 on hand in pre-special FEC report: Republican Ralph Norman is still the heavy favorite in the race to replace OMB Director Mick Mulvaney, but he won't get there by outspending Democrat Archie Parnell. A pre-election campaign finance report shows him with just $97,500 on hand as of the end of May. Norman is personally wealthy, so he could change that situation quickly. Norman spent just under $555,000 and raised $411,000 during the last campaign finance period, according to an FEC filing.

KOBACH GETS IN - "Kobach announces campaign for Kansas governor" by Campaign Pro's Daniel Strauss: "Kansas Secretary of State Kris Kobach launched his campaign for governor today. Kobach is one of the most high-profile secretaries of state in the country, an ally of President Donald Trump and a strident opponent of voter fraud and illegal immigration. Trump picked Kobach to serve as vice chairman of his commission on voter fraud and voter suppression." **Read more.**

- Former Missouri Secretary of State Jason Kander's Let America Vote group responded: "Let America Vote will make sure that Secretary Kobach answers for every time he stands in the way of eligible voters and the ballot box."

DEBATE RECAP - "Georgia House candidates debate in Comey's shadow," by Campaign Pro's Elena Schneider: "Ossoff and Handel debated Thursday morning for the second time in three days - this time in a meeting sponsored by an Atlanta public radio station that was also streamed online - mostly sparring over health care, taxes and foreign policy. But with the debate beginning just an hour before Comey appeared on Capitol Hill, both candidates were pressed on Comey's advance testimony, which was released on Wednesday. Both candidates deflected and

said the investigations should continue." **Full story.**

BOLTON BACKING - John Bolton's PAC is donating a net total of $100,000 to ten House Republicans' reelection campaigns. They are: Reps. Martha McSally (AZ-02), Mike Coffman (CO-06), Ron DeSantis (FL-06), Brian Mast (FL-26), Lee Zeldin (NY-01), Carlos Curbelo (FL-26), Elise Stefanik (NY-21), John Katko (NY-24), Will Hurd (TX-23), and Rep. Mike Gallagher (WI-08).

STAFFING UP - Rep. Raúl Labrador announced his gubernatorial campaign team on Thursday. The team is run by China Veldhouse Gum, the former executive director of the Republican Party and Labrador's 2010 and 2012 campaign manager. Axiom Strategies' Jeff Roe and Ethan Zorfas will serve as principal advisers on strategy, direct mail, and digital engagement. Public Opinion Strategies' Glen Bolger and Robert Blizzard are also on the team alongside Jim Innocenzi, who will run political advertising and messaging for the campaign.

HOUSE BATTLEGROUND WATCH - "A secret recording shows U.S. Rep. McSally has some concerns about reelection," by Tucson Weekly's Jim Nintzel: "Team McSally has been poo-pooing recent polls ... But last week, in a private talk to the Arizona Bankers Association, McSally conceded that in the current political environment, she has some real challenges in next year's election. McSally complained that President Donald Trump and his tweets were creating troubling 'distractions' and 'it's basically being taken out on me. Any Republican member of Congress, you are going down with the ship.' ... 'There's just an element out there that's just, like, so against the president. Like they just can't see straight. And all of a sudden on January 20, I'm like his twin sister to them. And I'm, like, responsible for everything he does, and tweets and says. And they want me to be spending my time as a pundit. "I disagree with that. I agree with this." I have a job in the legislature!'" **Full story.**

REDISTRICTING UPDATE - "State lawmakers [in North Carolina] are disregarding Gov. Roy Cooper's call Wednesday for an extra session to redraw the legislative districts struck down by the U.S. Supreme Court," WRAL's Laura Leslie reported. **Full story.**

CODA - QUOTE OF THE DAY: "I can guarantee you there will be no Harbaughs winning in Columbus in November." - NRCC Chairman Steve Stivers (R-Ohio), criticizing OH-07 Democrat Ken Harbaugh and University of Michigan football coach Jim Harbaugh all at once Thursday, in an interview for C-SPAN's "Newsmakers," which will air Sunday.

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

House Energy Spending Chair Cuts Research Program He Likes

Posted June 28, 2017, 01:17 P.M. ET

By Rebecca Kern

Rep. Mike Simpson (R-Idaho) said that while he likes the Energy Department's ARPA-E program, which provides early stage investment in innovative energy technologies, his Energy and Water Subcommittee's fiscal 2018 appropriations bill would cut it "because of limited resources."

The House Appropriations Committee's Energy and Water Subcommittee approved by voice vote June 28 the $37.56 billion appropriations bill funding the Energy Department, Army Corps of Engineers, and other related agencies. The funding would be $209 million below the fiscal 2017 enacted level and $3.65 billion above the President Donald Trump's budget request. No amendments were offered during the markup.

The Advanced Research Projects Agency-Energy was proposed to be eliminated in Trump fiscal 2018 budget, which requested just $20 million to wind down remaining projects, compared to $291 million in the fiscal 2017 annualized continuing resolution.

While the House version would cut ARPA-E funding, the program has strong backing in the Senate. Sen. Lamar Alexander (R-Tenn.), chairman of the Senate Appropriations Committee's Energy and Water Subcommittee, told Energy Secretary Rick Perry during the Energy Department budget hearing June 21 that he wanted his assurance that Perry would continue to fund the program.

Simpson acknowledged the funding bill will be altered. "We'll go into conference and it will change. This is the first step in a process, but it will change along the way," he told reporters after the markup.

ARPA-E was created during President George W. Bush's administration. Since 2009, ARPA-E has funded over 400 potentially transformational energy technology projects.

House Compromise Struck on Interim Nuclear Storage Measure

Posted June 28, 2017, 11:56 A.M. ET

By Brian Dabbs

A bipartisan measure to authorize private interim storage of nuclear waste will move to the House floor following the Energy and Commerce Committee's approval June 28.

Lawmakers struck a compromise on an amendment to provide "adequate" funding for related transportation services, while ensuring a "base authorization for at least $150 million for the first private interim storage agreement," Rep. John Shimkus (R-Ill.) said at the markup.

"This gives those private storage initiatives financial surety," he said, noting that interim storage must have local support.

The legislation also reboots Energy Department research on a permanent repository at Nevada's Yucca Mountain site, which had been under study as the permanent U.S. burial site before the Obama administration mothballed it. Most Nevada lawmakers staunchly oppose using Yucca Mountain as a waste repository.

Another amendment aims to placate concerns over Nevada's water rights.

The underlying legislation (H.R. 3053) authorizes the Energy Department to strike contracts with private facilities on interim storage of spent fuel from commercial nuclear power plants, which is currently stored on-site at those plants.

But Rep. Ben Ray Lujan (D-N.M.) opposed the bill over concerns the interim storage facilities will become de facto permanent repositories. The Nuclear Regulatory Commission has received two applications from private companies to accept the spent fuel.

Pipeline Pinch Adds to Oil-Sands Woes as Keystone Wait Drags

Posted June 28, 2017, 03:33 P.M. ET

By Kevin Orland and Frederic Tomesco

Call it the pipeline pinch, or maybe the Keystone quagmire.

While plans by Canadian companies from Suncor Energy Inc. to Canadian Natural Resources Ltd. to boost oil output are racing to fruition, the construction of three pipelines needed to move that product to market, including the infamous Keystone XL, is lagging years behind.

The result: Producers have little choice but to move those extra barrels by train, with costs two to three times higher than pipeline shipping. It's an unwelcome added expense after oil plunged about 20 percent from this year's peak. Futures prices have settled in below $45 a barrel, after many predicted it would rise to $60.

"We're not going to see significant new pipeline capacity until late 2019 or 2020," said Nick Schultz, vice president for pipelines and regulatory matters at the Canadian Association of Petroleum Producers. In the meantime, the extra expense for shipping "impacts royalties and other things that impact the public."

During Barack Obama's administration, oil-sands producers feared a future when they would have to rely heavily on costly railway shipments if he didn't approve Keystone XL. That may start this year.

Pipelines in Western Canada, which holds the world's third-largest oil reserves, can carry about 3.3 million barrels of crude a day, according to CAPP. Meanwhile, the area is expected to produce 3.92 million barrels a day this year and 4.2 million next year as a number of large oil-sands projects come online.

The looming bottleneck adds a new urgency to the industry's calls for more capacity and may lend credence to its argument that the lack of lines hurts the nation's economy.

More Expensive

Canadian oil producers have long lamented the dearth of pipelines carrying their supplies to the nation's east and west coasts, saying that the situation leaves them able to export only to the U.S. and forces them to accept whatever price American refiners will pay. Environmentalists in Canada and the U.S. have opposed new or expanded pipelines, arguing that burning the crude locked up in the oil sands would contribute to catastrophic global warming.

The industry saw glimmers of hope last year, when government regulators approved expansions of Kinder Morgan Inc.'s Trans Mountain pipeline linking Alberta's oil sands with export facilities on British Columbia's Pacific Coast as well as Enbridge Inc.'s Line 3 running from Hardisty, Alberta, to the U.S. border in Manitoba.

The pipeline situation got another boost when U.S. President Donald Trump approved TransCanada Corp.'s Keystone XL, which spans from the oil sands to the U.S. Gulf Coast. Kinder Morgan this month entered into credit agreements totaling C$5.5 billion ($4.2 billion) to help fund the development of Trans Mountain.

More Hurdles

Yet Keystone still needs to win approvals from regulators in Nebraska, and the Line 3 project has faced delays that pushed its in-service date back to 2019. The fate of Trans Mountain also has been called into question after opponents of the project won power in British Columbia last month.

Meanwhile, there are a handful of massive new oil projects that will start production this year and next. Suncor's Fort Hills oil-sands project is expected to begin production in the fourth quarter and ramp up to about 90 percent of its capacity of 194,000 barrels a day within 12 months. Canadian Natural plans to complete another phase of expansion at its Horizon mine this year that will add 80,000 barrels a day.

While Suncor has pipeline space reserved for output from Fort Hills, the company believes market access is important to Canada's oil producers and its economy, said Sneh Seetal, a spokeswoman. Canadian Natural isn't concerned with transportation of Horizon's production because the operation produces light oil, which has fewer shipping constraints, said spokeswoman Julie Woo.

"Though transportation of crude oil by pipeline is our current and primary method of shipment, we evaluate and monitor on an ongoing basis where crude by rail has been, and will continue to be, an option," Woo said.

Offshore Project

More oil will be produced outside of Western Canada as well. The Hebron project off the coast of Newfoundland and Labrador also is expected to come online this year. Operated by Exxon Mobil

Corp. with investments by Chevron Corp., Suncor, Statoil ASA and Nalcor Energy Corp., Hebron is expected to have crude oil production capacity of 150,000 barrels a day at its peak.

All that extra Canadian crude promises to be a boon for railroad companies who were stung by declines in that business when crude prices crashed in 2014. In fact, some already are seeing a pickup in their oil business. Canadian Pacific Railway Ltd. Chief Executive Officer Keith Creel said on a conference call last month that the company had moved 17,000 carloads of oil so far this year, nearly meeting its forecast for 20,000 carloads for all of 2017.

Two-Year Window

Canadian National Railway Co. foresees a two-year window of opportunity before Trans Mountain starts up and crude-by-rail shipments are affected, Chief Commercial Officer Jean-Jacques Ruest told an investor presentation June 14.

If crude-by-rail demand "comes in, you want to ride it very hard, and if at some point the opportunity disappears, then you ride something else," Ruest said.

Crude and condensate accounted for about C$370 million of revenue at Canadian National Railway last year. That's less than half the C$750 million that the company generated from the same line of business in 2014. The company's overall revenue was C$12 billion last year.

Railways may benefit from a pickup in their oil businesses for the next year or two, said David Tyerman, an analyst at Cormark Securities.

"They view it as a short-term boost," he said. "They're happy to haul the stuff, but they're not going to spend a lot of money on infrastructure because they don't know if this is going to be around long."

But the oil industry's trade group sees a need for more pipelines beyond those that already are expected to enter service. Canada will need an additional 1.3 million barrels a day of pipeline capacity by 2030 to meet the nation's growing production, CAPP said in a report earlier this month.

"The urgent need for new pipelines to increase our competitiveness continues to be one of the biggest challenges facing our industry," CAPP CEO Tim McMillan said.

Discoveries Boost Hopes for Alaska Oil Output

Posted June 28, 2017, 9:15 A.M. ET

By Alan Kovski

Oil discoveries on the North Slope of Alaska during the past few years have increased hopes for the economy of the region and the state.

The developments also could quiet worries about keeping viable the North Slope's oil lifeline—the Trans-Alaska Pipeline. If its volumes sink too low, it becomes uneconomical to operate.

Oil production on the North Slope increased during the past 12 months as new wells more than made up for declines at older wells, said Ed King, a special assistant to the commissioner of the

Alaska Department of Natural Resources.

The increases came from ConocoPhillips Co. operations primarily, and an Exxon Mobil Corp. project to a lesser extent. At the same time, BP Plc has slowed the decline at the super-giant Prudhoe Bay Oil Field.

"I don't anticipate that it'll be another increase in 2018," King said, referring to Alaska's fiscal 2018, which will start July 1. There are no notable new supplies set to come online during the next 12 months that would allow another increase, he told Bloomberg BNA.

After 2018, the picture becomes more complicated because of the difficulties in forecasting the output of new discoveries.

Sharply Differing Outlooks

The spring 2017 forecast from the Alaska Department of Revenue projected a decade of decline in North Slope output, without benefit of enough information to include significant volumes from recent discoveries.

Interior Secretary Ryan Zinke visited Alaska in late May. He signed an order to accelerate development of the National Petroleum Reserve-Alaska and to make a new estimate of potential oil reserves in part of the Arctic National Wildlife Refuge.

The Wilderness Society issued a report June 19 arguing that expected developments in North Slope oil fields should keep the Trans-Alaska Pipeline viable for many years to come.

"The pipeline will continue operating for decades, with no need to drill in controversial, ecologically important and federally protected Arctic regions, i.e., the Arctic National Wildlife Refuge, off-limits portions of the National Petroleum Reserve-Alaska, and the Arctic Ocean," the report said.

Pipeline Volumes Rise

The Trans-Alaska Pipeline carried more than 2.1 million barrels a day at its peak in 1988, but now is operating at a quarter of that amount.

Alyeska Pipeline Service Co., operator of the line for a consortium of oil companies, has not determined the lower limit at which the line would become uneconomical, said Michelle Egan, an Alyeska spokeswoman.

Flow through the pipeline rose in 2016 to 517,000 barrels a day, the first annual increase since 2002, according to Alyeska. Year-to-date flows in 2017 have averaged 557,000 barrels a day, Egan said June 26.

The increases in North Slope production that fed the pipeline occurred primarily because of more production from the Alpine and Kuparuk fields, both operated by ConocoPhillips, and the startup of Exxon Mobil's Point Thomson field.

Good management at the Prudhoe Bay field managed to temporarily arrest the long decline of output there, according to DNR's King.

"It'll be interesting to see if they can extend that," he said of the Prudhoe Bay work. "They did a

really great job last year."

Two Especially Big Fields

But big hopes for future production come from new fields.

Foremost is Nanushuk, which Armstrong Energy LLC is developing in partnership with Spanish oil giant Repsol S.A. The companies estimate that 1.2 billion barrels of light oil can be recovered, their calculation boosted this year by additional exploration wells.

Nanushuk's location is not too far from existing infrastructure and enough wells have been drilled to boost confidence in estimates.

Less certain is the discovery of Caelus Energy LLC's Smith Bay Project, because only two wells have been drilled. In October 2016, the company said it estimated that there could be several billion barrels of oil in the field in state waters off the northern coast of Alaska. How much of the oil is recoverable remains to be determined.

California Weighs Making Electric Cars Cheaper Right Off the Lot

Posted June 28, 2017, 12:07 P.M. ET

By Dana Hull and Ryan Beene

The federal tax credit for electric car purchases has an end in sight, but California doesn't want demand for the zero-emissions vehicles to meet the same fate.

The state, long a champion of electric cars, is considering a bill to provide rebates to electric vehicle buyers at the time of purchase, reducing the sale price right as customers drive off the lot. The bill, which does not specify the size of rebates but proposes giving more cash to low-income buyers, looks to set aside as much as $3 billion for the incentives.

If passed, the program could help bridge the "valley of death" looming on the horizon for electric vehicle demand as federal rebates begin to wind down, said Max Baumhefner, an attorney with the Natural Resources Defense Council's clean vehicles program.

"The conditions are right for a tipping point to occur but with uncertainty about the state's purchase rebates and the prospect of federal tax incentives expiring, it could tip in the wrong way."

The plan—dubbed the California Electric Vehicle Initiative—could be a key step in encouraging the purchase of battery-powered vehicles by bringing the price after credits more in line with similar gasoline-fueled models. Gov. Jerry Brown (D) set a goal of 1.5 million zero-emission cars on state roads by 2025, and the state already offers clean vehicle rebates for the purchase of models including the Chevy Bolt, Nissan Leaf and Tesla Model S and X, but customers have to apply for those credits after the purchase is complete, a possible deterrent.

Plan Details

The bill would eliminate the need for buyers to file tax rebates with the state, according to a draft statement on the bill seen by Bloomberg News. The income-based rebates would also help assuage concerns that tax dollars are helping wealthy buyers afford luxury cars such as the Tesla Model S,

which can sell for more than $100,000.

The legislation, which passed a vote on the assembly floor earlier this month, faces votes in two state Senate committees next week, the draft statement said.

The bill is modeled on the state's highly successful California Solar Initiative, which resulted in an uptick in rooftop solar installations on homes and commercial buildings across the state. Like that program, the electric vehicle proposal suggests the rebates decline over time as market penetration rises. Electric vehicles are forecast to become comparable price-wise with combustion-engine vehicles around 2026 in the U.S., according to Bloomberg New Energy Finance.

The bill comes as the federal tax rebate begins to run its course. Purchasers of only the first 200,000 electric cars sold by each manufacturer in the U.S. are eligible for the $7,500 federal tax credit before it starts to phase out, meaning the largest electric vehicle makers including General Motors Co., Nissan Motor Co. and Tesla Inc. will lose eligibility first, just as their more affordable, longer-range electrics are hitting the market.

Tesla is slated to begin in July production of its Model 3 sedan, which is expected to start at $35,000 before incentives or options. Tesla produced roughly 84,000 electric vehicles in 2016 and plans to make half a million in 2018, then 1 million in 2020.

As the nation's coal-fired power plants close, transportation is likely to eclipse electricity production as the nation's largest source of greenhouse gas emissions. That is already true in California, where transportation accounts for nearly 40 percent of the state's emissions.

Connecticut's Renewable Efforts Get Court Approval

Posted June 28, 2017, 12:13 P.M. ET

By Adrianne Appel

A Connecticut effort to contract for renewable energy does not violate federal law, a federal judge ruled Wednesday.

The state and proponents of renewable energy hailed the decision as a broad win for states that seek to grow their renewables market by requesting proposals for renewable energy projects.

Allco Renewable Energy Limited, a solar developer and investment firm based in New York City, filed a suit in August 2016, claiming Connecticut violated the federal Commerce Clause by giving preference to energy developers based in the Northeast (Allco Finance Ltd. v. Klee, 2d Cir., No. 16-2946, 6/28/17).

China Is About to Bury Elon Musk in Batteries

Posted June 28, 2017, 9:04 A.M. ET

By Joe Ryan

As Elon Musk races to finish building the world's biggest battery factory in the Nevada desert, China

is poised to leave him in the dust.

Chinese companies have plans for additional factories with the capacity to pump out more than 120 gigawatt-hours a year by 2021, according to a report published this week by Bloomberg Intelligence. That's enough to supply batteries for around 1.5 million Tesla Model S vehicles or 13.7 million Toyota Prius Plug-in Hybrids per year, according to Bloomberg New Energy Finance.

By comparison, when completed in 2018, Tesla Inc.'s Gigafactory will crank out up to 35 gigawatt-hours of battery cells annually.

Lithium-ion batteries have long been used in smartphones, laptops, and other personal electronics, but demand is forecast to explode in the next five years as electric vehicles proliferate and power companies install giant storage systems to smooth the ebb and flow of wind and solar.

Telsa produced nearly 84,000 vehicles in 2016 and has said it plans to make 500,000 in 2018.

While Tesla may be building the biggest and splashiest factory, the Chinese government has launched a sweeping effort to increase the country's dominant market share.

Roughly 55 percent of global lithium-ion battery production is already based in China, compared with 10 percent in the U.S. By 2021, China's share is forecast to grow to 65 percent, according to Bloomberg New Energy Finance.

In all, global battery-making capacity is forecast to more than double by 2021 to 273 gigawatt-hours, up from about 103 gigawatt-hours today. That's a huge opportunity, and China doesn't want to miss it.

"The Gigafactory announced three years ago sparked a global battery arms race," said Simon Moores, a managing director at Benchmark Mineral Intelligence. "China is making a big push."

But don't count Tesla out. The company, based in Palo Alto, Calif., plans to announce locations for up to four new factories by the end of 2017. (It's exploring at least one site in Shanghai.) And there are few, if any, individual Chinese battery companies that can match the scale of Tesla's production toe to toe.

Yet while China lacks a dominant battery behemoth, it makes up for it with a constellation of smaller players, including Amperex Technology Ltd., Tianjin Lishen Battery Joint-Stock Co. and dozens of others.

Earlier this year, the Chinese government announced plans to consolidate battery manufacturers to help the industry mature. The initiative goes hand in hand with China's plans to flood highways with five million electric vehicles by 2020.

China's ambition to become the global leader in clean cars stems in part from pressure to clear pollution from smog-choked streets in Baoding, Xingtai, Shijiazhuang, and other cities. There's a second reason: creating a domestic market for Chinese battery manufacturers, said Logan Goldie-Scot, a Bloomberg New Energy Finance analyst.

"The Chinese government wants to encourage the creation of a domestic market to create a large enough base and gain a foothold," Goldie-Scot said. "From there, they can expand and sell globally."

China State Grid Chairman Says Clean Energy Will Create Jobs

Posted June 28, 2017, 8:37 A.M. ET

By Bloomberg News

Thousands of renewable energy plants will create jobs as the world switches to clean power from coal, according to the chairman of the State Grid Corp. of China.

New roles will emerge during construction and for operators and maintenance personnel, Shu Yinbiao said at press briefing June 27 at the World Economic Forum's Annual Meeting of the New Champions in Dalian, China.

"We will have more opportunities for jobs," Shu said. "The transformation of energy will not impact employment, it will create opportunities."

The remarks followed the International Renewable Energy Agency's forecast that green energy jobs will continue to grow in developing nations, especially Asia. The clean-energy business employed 9.8 million people last year, up 1.1 percent from 2015, led by an expansion in solar photovoltaics, according to the Irena's annual report.

Green jobs may reach 24 million worldwide in 2030 as more countries work to combat climate change, Irena said.

China, the world's biggest emitter, plans to invest 2.5 trillion yuan ($360 billion) in renewable energy through 2020 to reduce greenhouse gases that cause global warming. The investment will help create 13 million jobs, Li Yangzhe, former deputy head of National Energy Administration said in January.

Green Energy Investing Meets Crowd Funding in African Venture

Posted June 28, 2017, 9:32 A.M. ET

By Mathew Carr

Gullspang Invest led a group of investors providing 6 million euros ($6.8 million) to Trine Finance Ltd., a company that spurs off-grid solar power in emerging markets including Africa by tapping crowd funding in the U.K. and other advanced economies.

Trine offers crowd investors a return of about 5 percent, with money used to finance solar lamps and solar home systems from Zambia to Uganda, the Gothenburg, Sweden-based company said on its website. The electricity can be cheaper and safer than existing systems typically fueled by kerosene, which emit toxic fumes.

"When you can go in with everything from 25 euros and up, it's opening up finance to people who might not have had that opportunity before," said Lena Apler, founder of Collector AB and a member of Trine's advisory board, by email. "Sustainable solutions are not only turning out to be necessary, but also out competing traditional alternatives."

Trine Chief Executive Officer Sam Manaberi wants to channel 100 million euros of crowd-investment into solar energy projects over two years, up from more than 1 million euros distributed the past three years. Risks for the crowd investors, who spend a minimum 25 euros, range from fluctuating currencies to developing-country solar suppliers who might struggle to make payments.

Payments for the solar energy equipment can be made via mobile phones on a weekly or monthly basis, saving the need for large upfront costs and boosting its appeal. A Trine project listed for Kenya expects to save each participant 1,000 Kenyan shillings ($9.65) a month, about 10 percent of average income, the company said.

Energy and Climate Report

To: Jackson, Ryan[jackson.ryan@epa.gov]
From: Morning Energy
Sent: Mon 7/10/2017 2:10:09 PM
Subject: POLITICO's Morning Energy: Methane rule delay gets public spotlight today at EPA — U.S. lone climate holdout at G-20 — Tillerson gets oil industry award

By Anthony Adragna | 07/10/2017 10:00 AM EDT

With help from Annie Snider

FEEDBACK WELCOME! EPA Administrator Scott Pruitt's proposal to delay key methane leak detection and repair requirements for new oil and gas wells for two years is the subject of hours of public comment today. A list of speakers scheduled to show up at agency headquarters shows a bevvy of appearances on behalf of green groups with the Sierra Club and Moms Clean Air Force especially well-represented. "Most of the land where our children live, learn, and play is leased to the natural gas industry," Patrice Tomcik, a mother of two from Butler County, Pa., plans to say at the hearing. "The prospect of future operations unleashing harmful air pollution in proximity to children - among the most vulnerable to the impacts of air pollution - is a totally unacceptable risk for any family." ME is also curious to hear from the creatively-named Patriots From The Oil & Gas Shales.

Look for oil and gas representatives to tout their successes at reducing methane emissions even as production has surged over the past decade, while voicing strong support for Pruitt's two-year pause as the agency reconsiders the regulation. "We're doing our part and these trends are indicative of what our industry, when given the freedom to innovate, can achieve to improve the environment while protecting our nation's energy security," Howard Feldman, the American Petroleum Institute's senior director for regulatory and scientific affairs, says in his prepared remarks. "And progress will continue." Companies would, of course, not have to comply with the rule's requirements if Pruitt moves forward with the two-year pause on implementation.

The public hearing comes after a federal court rebuked Pruitt for trying to immediately pause the rule without taking public comment. As Pro's Ben Lefebvre reports, EPA on Friday asked the D.C. Circuit Court of Appeals to delay its decision from earlier in the week requiring the agency immediately resume enforcing the methane rule. The filing argues that immediate mandate deprived the EPA sufficient time to consider a rehearing.

LAST CALL FOR MONUMENT COMMENTS! Today's the last day to weigh in on the Trump administration's review of nearly two dozen monuments designated since 1996 under the Antiquities Act. As ME went to bed, more than 1.2 million comments have already poured in for Interior Secretary Ryan Zinke to mull over. It'll be a tight turnaround: He's due to deliver his final recommendations to Trump on Aug. 24. Comments on a separate, but related, review of national marine monuments are still being accepted until July 26 by NOAA.

WELCOME TO MONDAY! I'm your host Anthony Adragna, and we're unveiling a new, cleaner version of our ME selves here. What do ya think? Bracewell's Frank Maisano was first on Friday to name the four state capitals with city in their names (Salt Lake City, Carson City, Jefferson City and Oklahoma City). For today: What was the first college to go co-ed in the

U.S.? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ONE IS THE LONELIEST NUMBER: It was 19 versus an increasingly isolated U.S. at the end of the G-20 summit in Germany Saturday as world leaders took "note" in the final declaration of Trump's decision to leave the Paris climate agreement but declared the 2015 landmark accord to be "irreversible" and vowed to continue "moving swiftly towards its full implementation." As POLITICO's Andrew Restuccia reports , last-minute negotiations arose after several countries, including France, objected to U.S. insistence on mentioning fossil fuels in the final document, though the final version maintained the reference while pairing it with a call to use renewable energy. As POLITICO Europe's Matthew Karnitschnig reports, German Chancellor Angela Merkel acknowledged Europe's frustration with the U.S. withdrawal ran deep. "Everyone was against the United States of America," on climate policy, Merkel said at her closing press conference. "The dissent wasn't plastered over, but made clear."

Look no further than French President Emmanuel Macron for visible signs of the frustration with the Trump administration's climate posture. He announced plans to hold a climate summit this December on the two-year anniversary of the Paris accord and tweeted Saturday his country and China were united on climate action, provocatively adding in English the hashtag #MakeOurPlanetGreatAgain. British Prime Minister Theresa May added during a press conference Saturday she was "dismayed" by the U.S. decision and personally urged Trump to rejoin the agreement, while pronouncing her own country's commitment to climate action "as strong as ever." (Also worth watching: Turkish President Recep Tayyip Erdo??an warned the U.S. withdrawal made his country less likely to ratify the climate deal, Reuters reports.)

Trump officials tried to downplay differences with Trump chief economic adviser Gary Cohn telling reporters on the flight back that the declaration "came together pretty reasonably" given the various perspectives present. "We do go out of our way to say in there that that doesn't mean that we don't support environment, and we're still working for the environment," he said. "It was not a situation where there was contentious discussion going on."

GETTING REAL ON RUSSIA NUCLEAR THREAT: With government officials confirming to The Washington Post over the weekend that Russian hackers got into the business systems of U.S. nuclear power and other energy companies, the calls for Congress and the White House to bolster cyber defenses for the energy sector and the electric grid are bound to get louder still. Sens. Maria Cantwell and Angus King sounded the alarm Friday, based on earlier reports that pegged Russia as the top suspect. As POLITICO's Eric Geller, Darius Dixon and Martin Matishak report, a hard connection to Russia to the hacks would mark the latest evidence of Moscow's wide-ranging digital aggression and highlight the broad threats the Kremlin-backed digital army pose to the U.S.

Utility industry officials argued the power grid is ready for such threats and said their most sensitive systems are selectively disconnected from the internet. "This is not viewed as an escalation," said Marty Coyne, a spokesman for the North American Electric Reliability Corp. "Power utilities are routinely targeted by these types of actors." But past Obama cyber officials warn the threat is only likely to intensify. "It is probably the single greatest national security

threat to the United States right now," one former official said. **Eric's tweetstorm here is worth your time.** And former Energy Secretary Ernest Moniz offers his own here.

Speaking of Russia, House Republicans are mulling whether to change a Senate-passed sanctions bill to give U.S. energy companies a greater chance to stay in oil and gas projects involving Russian companies, Pro's Ben Lefebvre reports. Energy interests have warned the the bill could force them out of projects around the world where Rosneft, Lukoil or other Russian oil companies may have as little as a 5 percent stake.

TAKING STOCK OF ZINKE'S SAGE GROUSE TEAM: Among the four Interior political appointees tasked with potentially revamping the sage grouse land-use management plans put in place in 2015 is Kathleen Benedetto, a former House staffer who worked to increase access for minerals production on federal lands and pressed to give local communities more control over endangered species, Pro's Esther Whieldon reports. Other political appointees on the team include: Casey Hammond, also a former House Natural Resources Committee staffer, who was on the Trump administration's landing team at BLM; Timothy Williams of the Interior Department's Office of External Affairs and Vincent DeVito, a political ally of Zinke's who is now counselor to the secretary for energy policy. Zinke has asked for recommendations on the plans by Aug. 6, including how to encourage energy development on public lands.

CALIFORNIA DROUGHT LEGISLATION, ROUND 2: The historic drought in California is officially over, but the state's water woes aren't - and neither is House Republicans' bid to push some of their more controversial ideas, including many that got dropped from last year's compromise legislation. Rep. David Valadao's H.R. 23 is slated to come to the floor this week with a hearing Tuesday evening before the House Rules Committee. The measure would grease the skids for permitting new dams across the West, attempt to rebalance water rights within the Golden State and block the federal permits from touching on issues related to water rights.

LET THERE BE MARKUPS! House appropriators are marking up their $37.56 billion fiscal 2018 energy and water spending bill Wednesday at 10:30 a.m. ME readers likely remember the package zeroes out the late-stage research Advanced Research Projects Agency-Energy and prevents DOE from issuing new loan-guarantees, while also cutting spending on energy efficiency and renewables almost in half. Look to see if efforts to restore funding for those programs, some of which enjoy significant bipartisan support, are successful. Later that afternoon, an Appropriations subpanel takes up the as-yet unreleased Interior spending bill.

THIRD TIME'S THE CHARM? After two previous attempts were shelved, the Senate Environment and Public Works Committee on Wednesday at 9:45 a.m. intends to vote on the nominations of Annie Caputo and David Wright to the NRC as well as the selection to Susan Bodine to be EPA's top enforcement official. Lawmakers also intend to vote on legislation reauthorizing popular Brownfields and diesel engine retrofitting programs. Details here.

PETROLEUM GROUP GIVES TILLERSON AWARD: Secretary of State Rex Tillerson dropped by Istanbul Sunday where he accepted the World Petroleum Council's Dewhurst Award for what the group described as "outstanding contribution to the oil and gas industry" through his decade-long run running Exxon Mobil Corp. "I have to share [the award] with the men and

women of ExxonMobil, because I'm here because of what they did, not because of what I did," Tillerson said. "I miss you as colleagues, I miss you as partners, I miss you as competitors. I miss the healthy debates, the collaboration, the breakthroughs that were achieved that I witnessed during that 41 and a half years that have continued to deliver energy on a massive scale and a reliable way."

The award was announced before Trump picked Tillerson for his current position, though it is still raising eyebrows: "Secretary Tillerson's warped notion that it's appropriate to attend and accept an award at an oil industry conference proves yet again that he has no idea how to be the United States' chief diplomat," Greenpeace's Naomi Ages said in a statement. Tillerson is just the 10th person - past recipients have included heads of Shell and Chevron - to receive the "distinguished lifetime achievement award," according to the World Petroleum Council.

ME FIRST - GROUPS RALLY AGAINST SENATE ENERGY BILL: More than 350 groups, including Food & Water Watch, League of Women Voters, Our Revolution and the Center for Biological Diversity, are sending a letter to Senate leadership urging them to oppose the Senate's energy bill (S. 1460). The bill largely resembles legislation that virtually all Democrats backed last year despite objections from environmentalists over issues like liquefied natural gas exports. "No energy legislation is better than bad energy legislation that serves to increase our dependence on dirty fossil fuel production instead of building on successful policies to expand clean energy sources," they write. "We find it astounding that any energy bill could contain a 'Renewables' subtitle but not include provisions on solar and wind energy."

HERE'S... A NEW ONE: Two senior House Science Republicans - Chairman Lamar Smith and Rep. Randy Weber - released a letter Friday in which they asked Treasury Secretary Steven Mnuchin to investigate whether Russia has been funneling money to U.S. environmental groups in an effort to influence the domestic market. The lawmakers argue Russian interests may be trying to stymie domestic fracking as a way to bolster their energy sector. "If the above allegations are true, Russian entities have funneled money through shell corporations to U.S. environmental activist organizations to influence U.S. energy policy," they wrote.

WEIRD FOURSOME! Vice President Mike Pence, Zinke, Sen. Roy Blunt and Medicaid chief Seema Verma walk into a park. On horseback. On Friday. Here's the pic.

- Gov. Doug Ducey asks EPA for power to regulate Arizona streams. Arizona Daily Star.

- Rooftop Solar Dims Under Pressure From Utility Lobbyists. The New York Times.

- Tillerson launches personal diplomacy in Persian Gulf dispute. The Washington Post.

- Greenpeace activists charged with scaling Trump Tower with banner. Chicago Sun-Times.

- Gross Dam on its way to becoming the tallest dam in the state. Denver Post.

THAT'S ALL FOR ME!

The IMF missed the Great Recession — and here they go again

Desmond Lachman | AEIdeas

The International Monetary Fund's track record in economic forecasting leaves a lot to be desired. It failed to anticipate the Asian economic crisis in 1998, the global Great Recession of 2008–09, and the European sovereign debt crisis of 2010. There's now every prospect that before 2018 is out, its latest economic outlook will be seen once again to have been wildly optimistic and blind to the real risks confronting the world's economic recovery.

Reuters

Al Jazeera: Symbol of press freedom or engine of extremism?

Michael Rubin | AEIdeas

As the crisis between Qatar and moderate Arab states approaches its second month, one of the key complaints of the anti-Qatar coalition centers on Al Jazeera, the Qatar-based channel that was once the most-watched Arabic station. Al Jazeera and its supporters argue that the station's hard-hitting reporting is simply an exercise of press freedom in a region that's sorely lacking it. Its detractors, however, say it fans the flames of terrorism.

Driving the Day

Good Thursday morning. PLAYBOOK EXCLUSIVE: **NADEAM ELSHAMI** , House Minority Leader Nancy Pelosi's chief of staff, is leaving Capitol Hill to join SIGNAL Group as executive vice president. The veteran communicator is expected to be involved in the firm's communications and lobbying operation. Elshami, who worked his way up the ranks from the Senate mailroom, spent 25 years on Capitol Hill, including more than 10 years for Pelosi. He also worked as senior communications adviser and spokesman to Sen. Dick Durbin, communications director for Rep. Jan Schakowsky of Illinois and deputy press secretary for former Sen. Barbara Boxer of California.

"Nadeam's deep insight and effectiveness has been a vital part of our Caucus' unity throughout his time as Chief of Staff, especially during critical battles to protect the Affordable Care Act, Wall Street Reform and other landmark progress for working families," Pelosi said in a statement.

DANNY WEISS , former long-time chief of staff to former Rep. George Miller (D-Calif.), is returning to Capitol Hill to serve as Pelosi's new chief of staff. Weiss currently works as vice president for federal policy and director of the Washington regional office for Common Sense Media. The transition will take place the week of Sept. 18.

FIRST IN PLAYBOOK -- **PAUL RYAN** and **JOHN BOEHNER TO FUNDRAISE TOGETHER IN GREEN BAY --** Speaker Paul Ryan and former Speaker John Boehner are holding a joint fundraiser at the Green Bay Packers vs. Cincinnati Bengals game Sept. 24 in Green Bay. If you want to attend the tailgate and the game it will set you back $10,000 -- just the tailgate will cost $1,000. ***PDF of the invite*** http://bit.ly/2eIHda6

THE AFTERMATH OF THE TRUMP-SCHUMER-PELOSI ALLIANCE ...

-- "GOP livid after Trump cuts deal with Democrats: Congressional Republicans say the move will only embolden Chuck Schumer and Nancy Pelosi in future talks," by Burgess Everett, Rachael Bade and John Bresnahan: "In the aftermath, Republicans seethed privately and distanced themselves publicly from the deal. They were left to hope that Trump's collaboration with Senate Minority Leader Chuck Schumer and House Minority Leader Nancy Pelosi was a temporary dalliance, and not the new MO for the president. ... 'A three-month debt ceiling? Why not do a daily debt ceiling?' cracked Rep. Mike Simpson (R-Idaho). 'He's the best deal-maker ever. Don't you know? I mean, he's got a book out!' ... White House officials apologized to congressional leaders after the meeting, according to a GOP source on Capitol Hill. But the damage was done." http://politi.co/2vOhaJO

-- "Trump's flirtation with Democrats makes Republicans nervous about 2018: GOP worries about whether Trump will be a reliable force for the midterms," by Josh Dawsey and Burgess Everett: "Trump's aides have teamed up with the [NRSC] to target vulnerable Democrats and plan presidential travel to help the GOP maintain its congressional majorities during the elections that are 14 months away. White House officials, particularly political director Bill Stepien and legislative affairs head Marc Short, have had regular conversations with aides at the NRSC ... Internally, Trump officials have discussed the president taking trips to 10 states to push tax reform and attack Democrats in states where Trump enjoys wide support. Before he left the White House, former chief strategist Steve Bannon had also plotted with other White House officials about 'tough votes' for Democrats - and how to make them happen, a Bannon ally said." http://politi.co/2wL3aO6

FOR THE RECORD ... None of the president's usual allies -- in or out of the White House -- is defending this deal to us. Marc Short said on Air Force One that the president was trying "clear the decks" for tax reform. We mentioned that comment to a member of the House Ways and Means Committee -- the panel charged with a tax-code rewrite -- who said that was a "real head scratcher." How does setting up a bunch of deadlines at the end of the year help with getting tax reform done ... by the end of the year?

WSJ EDITORIAL BOARD: "The Pelosi-Schumer-Trump Congress: The Republican gang that can't even shoot at each other straight." http://on.wsj.com/2xRv3Ez

COMING ATTRACTIONS -- MARC SHORT is meeting with members of the House Freedom Caucus today.

-- WAPO'S BOB COSTA: "Freedom Caucus leaders vent to Paul Ryan after talks with Steve Bannon": "Ryan heard out three members of the influential conservative group: Reps. Mark Meadows (R-N.C.), Jim Jordan (R-Ohio), and Scott Perry (R-Pa.), the people said. Meadows is the chairman of the Freedom Caucus, which counts about three dozen members, and he has been a friend and ally of Bannon for years." http://wapo.st/2wJepsd

-- TOP TWEETS: @EWErickson: "When [Boehner] cut a deal with Obama on the debt ceiling, conservatives tossed him. Trump cut one with Pelosi and it's Paul Ryan's fault? WTF?" ... **Josh Barro (@jbarro):** "Trump may have hit on an insight: If Republican voters will like him no matter what, he can become popular by doing whatever Democrats want." ... **@PatrickSvitek:** "Cruz on Trump, circa 2016: 'He'll go and cut a deal with Chuck Schumer ... and Nancy Pelosi.'"

TRUMP is dining with Speaker Paul Ryan tonight, just a day after the president tossed Ryan, Senate Majority Leader Mitch McConnell, Treasury Secretary Steven Mnuchin, House and Senate Republicans under the bus.

BULLETIN at 6:22 a.m.: "NEW YORK (AP) - Amazon opens search for second headquarters, to spend more than $5 billion and add as many as 50,000 jobs."

BEHIND THE SCENES -- THE CONFUSION IN THE DEBT-CEILING DEAL ...

-- WHEN DONALD TRUMP and Hill leaders left the White House Wednesday, they thought they had a deal, whether they liked it or not: a three-month extension of government funding, a three-month hike of the debt ceiling and a pile of Harvey aid. **BUT THERE'S A LOT OF CONFUSION AND A QUIET TIFF THAT'S ERUPTED ON THE HILL**. Typically, the Treasury secretary can use what we call "extraordinary measures" to extend the debt limit beyond its projected deadline. The government can, for example, temporarily stop investing in the Civil Service Retirement Disability Fund. This is a standard tactic aimed at buying more time for Congress to get its act together.

Some Democrats are telling us they thought the Dec. 15 deadline was firm -- and no extraordinary measures could be used. They want a hard deadline in the middle of December, not a debt limit in January or February. While Republicans -- and, quietly, some Democrats -- say Treasury Secretary Steven Mnuchin should be allowed to manage the debt by pushing the deadline off using those measures. Many Republicans and Democrats say it would be irresponsible for Congress to handcuff the administration. **WILL THIS BLOW UP THE DEAL?** Eh, we don't think so. But it needs to be resolved. Every indication we've gotten is that Mnuchin will be allowed to use these measures.

HOW TO THINK ABOUT THE TRUMP-SCHUMER-PELOSI DEAL -- Capitol Hill was a bit of a mess yesterday after this deal was cut at the White House. But both sides agree that Republicans got nothing out of this deal. Trump accepted Democrats' first offer, and now the party deep in the minority has the opportunity to use the must-pass bills in December to pressure Trump and Republicans to do pretty much whatever they want.

TRUMP is hosting the entire Cabinet at Camp David this weekend -- scoop from CNN's Kaitlan Collins: "CNN has learned that the President will host the members of his Cabinet at the secluded government-owned retreat in Maryland starting Friday. They are expected to discuss a wide range of issues, spanning from the administration's

legislative strategy for tax reform to the growing nuclear crisis in North Korea.

"A source familiar said because of logistics and limited lodging space, half of the Cabinet will travel to the 125-acre retreat on Friday and stay overnight. The rest of the Cabinet will travel there on Saturday, when a full Cabinet meeting will take place. The first half of the Cabinet will then return back to Washington Saturday while the second half stays the night and returns Sunday." http://cnn.it/2xRDsb5

WE HEAR that Steve Bannon sat down with Charlie Rose for three hours yesterday for the Sunday "60 Minutes" piece. Two sources involved in the interview told us Bannon vociferously defended the Trump administration and the president. **PORTIONS OF THE INTERVIEW** will air this morning on "CBS This Morning."

****** **A message from Hewlett Packard Enterprise** : How are Hewlett Packard Enterprise's supercomputers helping create the future in science, medicine and national security? Learn more: hpe.com/supercomputing ******

THE LATEST ON HURRICANE IRMA -- AP's Danica Coto and Anika Kentish in San Juan: "Hurricane Irma has killed at least eight people and injured 23 in French Caribbean island territories as the dangerous Category 5 storm roared over the Caribbean, France's interior minister said Thursday. Speaking on French radio France Info, French Interior Minister Gerard Collomb said the death toll in Saint-Martin and Saint-Barthelemy could be higher because rescue teams have yet to finish their inspection of the islands. ...

"Irma blacked out much of Puerto Rico, raking the U.S. territory with heavy wind and rain while staying just out to sea, and it headed early Thursday toward the Dominican Republic and Haiti. To the east, authorities struggled to get aid to small Caribbean islands devastated by the storm's record 185 mph (298 kph) winds earlier Wednesday, while people in Florida rushed to get ready for a possible direct hit on the Miami area. ... Nearly every building on Barbuda was damaged when the hurricane's core crossed almost directly over the island early Wednesday and about 60 percent of its roughly 1,400 residents were left homeless, Antigua and Barbuda Prime Minister Gaston Browne told The Associated Press." http://bit.ly/2wKtgkg

--AP/SAN JUAN: "French President Emmanuel Macron will go to the islands hit by Hurricane Irma as soon as weather conditions permit, after authorities announced at least eight people died on Saint-Martin. Macron's office said Thursday that the president will travel to France's Caribbean territories 'as soon as possible' once immediate rescue operations are complete. The president of the territorial council, Daniel Gibbs, said on Radio Caraibes International that Saint-Martin is '95 percent destroyed.'" http://bit.ly/2gNcGfP

ALL IN THE FAMILY -- "Trump says Ivanka asked to tag along on tax reform trip - 'Daddy, can I go with you?'" by Nolan McCaskill: http://politi.co/2f5bVuI

SORRY GARY -- "President Trump Unlikely to Nominate Gary Cohn to Become Fed Chairman," by WSJ's Mike Bender, Harriet Torry and Nick Timiraos: "President Donald Trump is unlikely to nominate Gary Cohn, his top economic adviser, as the next Federal Reserve chairman, according to people familiar with the president's thinking, adding to the uncertainty over the U.S. central bank's leadership and policies next year. Mr. Trump told The Wall Street Journal in July that he was considering Mr. Cohn as a potential successor to Fed Chairwoman Janet Yellen, whose term as central bank chief expires in early February. ...

"The shift in Mr. Cohn's prospects for the top Fed job arises largely from his criticism of Mr. Trump's response to the violence in Charlottesville, Va. ... Mr. Trump has told people that he is impressed with Ms. Yellen, leaving them with the sense he might ask her to serve another term. ... Mr. Cohn may have doomed his chances for the top Fed job with comments he made to the Financial Times last month ... One White House official said the president visibly bristles at the mention of his economic adviser." http://on.wsj.com/2gMD09C

MATT NUSSBAUM -- "Trump's favorite dodge: 'We'll see': Whether asked about war with North Korea or canning his aides, the president has often deployed this verbal tic": "Again and again on Wednesday - 11 times in total, before 1 p.m. - President Donald Trump deployed some form of his favorite dodge: 'We'll see.' ... Whether he's facing an uncomfortable question, trying to keep some mystery around his future plans, or simply filling up verbal space, Trump has frequently thrown out the phrase 'we'll see' when facing a barrage of questions from reporters. He's used the verbal tic on topics big and not-as-big - from whether the U.S. will go to war with a nuclear North Korea, to whether Steve Bannon would be ousted from the West Wing." http://politi.co/2eNJR25

FOR YOUR RADAR -- "Behind North Korea's Nuclear Advance: Scientists Who Bring Technology Home," by WSJ's Jeremy Page and Alastair Gale in Harbin, China: "When North Korea tested what it said was a domestically produced hydrogen bomb on Sunday-a week after launching its 18th ballistic missile of the year-it was a reminder of a conundrum at the heart of the country's nuclear program. How has it advanced so rapidly despite concerted international efforts to keep weapons-related technology out of its hands?

"The answer may lie in expertise brought home by North Korean scientists who studied abroad, especially in China, sometimes in apparent violation of 2016 United Nations sanctions that ban teaching North Koreans certain subjects. Hundreds of North Korean scientists have studied outside the country in recent years, according to a Wall Street Journal review of official figures, academic papers and data from universities, many in areas the U.N. says could help Pyongyang's weapons programs." http://on.wsj.com/2vOeV9b

THE LATEST ON RUSSIA -- "Russian firm tied to pro-Kremlin propaganda advertised on Facebook during election," by WaPo's Carol D. Leonnig, Tom Hamburger and Rosalind S. Helderman: "Representatives of Facebook told

congressional investigators Wednesday that the social network has discovered that it sold ads during the U.S. presidential campaign to a shadowy Russian company seeking to target voters, according to several people familiar with the company's findings.

"Facebook officials reported that they traced the ad sales, totaling $100,000, to a Russian 'troll farm' with a history of pushing pro-Kremlin propaganda, these people said. A small portion of the ads, which began in the summer of 2015, directly named Republican nominee Donald Trump and Democrat Hillary Clinton, the people said, although they declined to say which candidate the ads favored. Most of the ads, according to a blog post published late Wednesday by Facebook's chief security officer, Alex Stamos, 'appeared to focus on amplifying divisive social and political messages across the ideological spectrum - touching on topics from LGBT matters to race issues to immigration to gun rights.'" http://wapo.st/2f65ojr

THE JUICE ...

-- FIRST IN PLAYBOOK: THE REPUBLICAN MAIN STREET PARTNERSHIP, the outside group which has supported the "governing wing" of the GOP, is expanding its footprint, starting a group inside the Capitol. The group voted Wednesday to start the Republican Main Street Caucus, a group that aims to be one of the large caucuses inside the House of Representatives alongside the RSC, Freedom Caucus and Tuesday Group. Rep. Pat Tiberi (R-Ohio) will chair the group until the end of 2018.

The group will be focused on economic and national security issues. The partnership, as it exists on the outside, has 75 members, but lawmakers need to sign up to be a member of the caucus. **WHY SHOULD YOU CARE?** The Republican Main Street Partnership has dough to spend to elect its members. Having a bloc inside the Capitol could help them stand out.

-- DEPT. OF DON'T BELIEVE THE HYPE!: -- The NRCC today is releasing a digital ad campaign titled **"The House at Work."** "There are so many things that we have actually done in the House that people just don't know about," Paul Ryan says in the video. The NRCC is spending five figures on the buy. ***1-min. video*** http://bit.ly/2f5LGob

Playbook Reads

PHOTO DU JOUR: Senate Minority Leader Chuck Schumer speaks to President Donald Trump in the Oval Office prior to his departure from the White House on Sept. 6. | Alex Wong/Getty Images

THANKS, VLAD! -- Reuters/Vladivostok, Russia: "Vladimir Putin took a jab at Rex Tillerson on Thursday, joking that the U.S. Secretary of State had 'fallen in with the wrong company' since he had awarded him a Russian state honor for his contribution to Russian-U.S. relations. ... Addressing a U.S. citizen at a plenary session of an economic forum in the far eastern city of Vladivostok, Putin said: 'We awarded your compatriot Mr. Tillerson the Order of Friendship, but he seems to have fallen in with the wrong company and to be steering in the other direction.' 'I hope that the wind of cooperation, friendship and reciprocity will eventually put him on the right path,' Putin added, drawing cheers from the crowd." http://reut.rs/2xd0wnn

SCOOP -- "Buried in backlog, Feds give top-secret clearances to murderers, rapists," by McClatchy's Tim Johnson: "Under a crushing backlog in the issuing or renewing of security clearances, federal authorities have given interim clearances to people they later discovered were murderers and pedophiles, a senior government official said Wednesday. 'This is very, very dangerous,' said Daniel E. Payne, head of the Defense Security Service, a federal office that oversees the granting of temporary clearances. ... 'I've got murderers who have access to classified information. I have rapists. I have pedophiles. I have people involved in child porn,' Payne said. 'This is the risk we are taking.'" http://bit.ly/2j5jk1O

-- "Hundreds of EPA Workers Leave in Recent Days," by WSJ's Timothy Puko: "Nearly 400 workers have left the Environmental Protection Agency in recent days, the agency said Tuesday, a wave of departures that soon could take the agency's staffing to its lowest point in almost 30 years. ... 'We're giving long-serving, hardworking employees the opportunity to retire early,' EPA Administrator Scott Pruitt said." http://on.wsj.com/2gNuM1b

TRUMP WORLD -- "Michael Cohen Would Take a Bullet for Donald Trump: In

advance of his congressional testimony, Trump's personal lawyer wants the world to know that his loyalty to the president is deep and unwavering, and then some. 'I'd never walk away,' he says," by Vanity Fair's Emily Jane Fox: "'The part that's most disappointing is that I haven't spoken to the president in several weeks. I haven't spoken to Melania or any of the kids,' Michael Cohen, Donald Trump's longtime lawyer and confidante, lamented to me last week. It was a Friday morning and Cohen was biting into eggs over easy and dry seven-grain toast at a coffee shop in Water Mill, the hamlet of Southampton, which was sandwiched between a Tracy Anderson studio and a farmers' market, and near his vacation home.

"It was the unofficial last weekend of summer, and while the diners around us discussed their upcoming boat trips or blueprints for new houses, Cohen was facing a more pressing, and public, summons. As one of several figures under scrutiny in an F.B.I. and congressional investigation into purported links between the Trump campaign and Russia, Cohen was preparing to testify before the House Intelligence Committee." http://bit.ly/2gIQMXt

VANITY FAIR - "How Will History Judge the Trump Presidency?": "Donald Trump may be a radical break from the past, but history will have its say. Six scholars of the presidency -- A. Scott Berg, Robert Dallek, Jon Meacham, Edmund Morris, Stacy Schiff, and Garry Wills -- put the current occupant of the Oval Office into perspective." http://bit.ly/2eN640c

****** **A message from Hewlett Packard Enterprise**: A nation's strength is increasingly measured by its technical prowess. 2020 WATCH -- "Pro-Israel group slams Booker in new ad," by Gabe Debenedetti: "The first attack ad of the 2020 election cycle has landed. The conservative Committee for Israel nonprofit group is launching a television broadside against Democratic New Jersey Sen. Cory Booker on Wednesday, assailing him for voting against a measure that would scale back funding to the Palestinian Authority." http://politi.co/2wIUoBQ ... ***The ad*** http://bit.ly/2xd6btL

ROLLING STONE on **SEN. KIRSTEN GILLIBRAND (D-N.Y.) -- "How Kirsten Gillibrand Is Outsmarting Donald Trump":** http://rol.st/2xODwbu

HAPPENING TODAY - BETSY DEVOS is delivering a "major policy address" on Title IX enforcement today at GMU's Arlington campus. CBS News correspondent Jan Crawford will sit down with her right after the speech for an interview for "CBS Evening News" and Friday on "CBS This Morning."

HILLARY CLINTON on Anthony Weiner via The Daily Beast's Gideon Resnick: "When Clinton describes Comey's last-minute announcement in October about the discovery of what appeared to be additional emails in the final days of the campaign, she writes about him with even more malice. 'Was this a bad joke?' she writes. 'It had to be. The FBI wasn't the Federal Bureau of IFs or Innuendos. Its job was to find out the facts. What the hell was Comey doing?' Upon learning more about the news, and its link to disgraced former congressman Anthony Weiner, his wife and close Clinton adviser Huma Abedin burst into tears, Clinton writes. 'When we heard this, Huma looked stricken,' she writes. 'Anthony had already caused so much heartache. And now this.' "This man is going to be the death of me," [Abedin] said, bursting into tears.'" http://thebea.st/2wJzWAV

-- "Democrats dread Hillary's book tour," by Isaac Dovere and Gabe Debenedetti: "President Donald Trump may be the only person in politics truly excited about Hillary Clinton's book tour. Democratic operatives can't stand the thought of her picking the scabs of 2016, again - the Bernie Sanders divide, the Jim Comey complaints, the casting blame on Barack Obama for not speaking out more on Russia. Alums of her Brooklyn headquarters who were miserable even when they thought she was winning tend to greet the topic with, 'Oh, God,' 'I can't handle it,' and 'the final torture.'" http://politi.co/2gMSk68

SPEAKING OF HILLARY -- PHILIPPE REINES, who is writing a book about his time working as a consigliere for Clinton and his views of the Trump presidency, in POLITICO Magazine, **"What I Learned From Playing Donald Trump:** My three months of immersive debate prep taught me being Trump means never having to face the consequences of your actions": "[T]he one thing that stood out more than anything, and hasn't been adequately explored even now, is that Trump has never paid the price for his actions. I couldn't find even one instance. He didn't pay taxes. Nothing. He didn't pay creditors. Nothing. He didn't pay contractors. Nothing. I'd even argue he came out for the better. He skipped out on his debts, but kept the planes, the helicopters, the penthouses and properties. If you go bankrupt once and there are no consequences, why not do it three more times? Same with his personal life. He betrayed and publicly embarrassed his first wife-the mother of his eldest three children-in spectacular fashion. No matter-he simply got a second wife (with whom he betrayed his first)." http://politi.co/2vNZP3y

JACK SHAFER in POLITICO Magazine, **"This Pro-Hillary Website Looks Like North Korean Agitprop:** Peter Daou, the prickly pro-Clinton operative, has launched a propaganda rag so shameless it would make Kim Jong Un blush: "As Daou's Verrit manifesto puts it, the site hopes to become the trusted source for the 65.8 million voters who cast their ballots last November for Clinton and who seek verified 'facts' they can use to argue politics. ... The headline to one early Verrit borrows from the literary methods of Kim Jong Un's North Korea to assert, 'Hillary Democrats Are the Heart and Conscience of America.' Does anybody outside of the Daou re-education camp really think this way?" http://politi.co/2el1a0O

NEW NATION COVER STORY - "The Department of Justice Is Overseeing the Resegregation of American Schools: A major investigation reveals that white parents are leading a secession movement with dire consequences for black children," by Emmanuel Felton: http://bit.ly/2gJ9vCj ... ***The cover*** http://politi.co/2wKSGhN

MEDIAWATCH -- MICHAEL CALDERONE returns to POLITICO - Carrie Budoff Brown emails the staff: "We're excited to announce that Michael Calderone, one of the best known and most respected media writers in the business, is joining POLITICO - rejoining, we should note - to be senior media writer and author of our Morning Media column. Michael has covered all of the top media stories of the last decade, first for The New York Observer, then POLITICO and since 2011 at The Huffington Post. ... Michael will ensure that Morning Media remains a source of fresh scoops and analysis for the most sophisticated media consumers; he will also help us build out the brand with more live events and video."

-- MAGGIE HABERMAN in NYMag, "How I Do It": "On convincing people to talk to her: 'I don't know how I do it. I'm annoying, and I won't stop contacting them. I was a bartender for four years, and that was the best training that I had for learning how to approach people.'" http://bit.ly/2gNfHwK

-- KRISTEN WELKER is featured on the cover of Philadelphia Weekly, her hometown weekly alternative paper. ***The cover*** http://bit.ly/2gHyxRZ ... ***Q&A:*** http://bit.ly/2f4QslV

--JONATHAN LEMIRE, AP White House reporter, has joined NBC News and MSNBC as a political analyst (h/t Morning Media).

-- JAY SURES, who represents many top political TV journalists, has been named co-president of United Talent Agency.

Playbookers

SPOTTED: Megyn Kelly last night at Off the Record ... Montana Sen. Jon Tester (D) in a baseball cap with his son Sean walking down H Street NE yesterday evening.

SPOTTED at Rich Taylor's ESA farewell party last night at Baby Wale: Dan Hewitt, Christian Genetski, Jonathan Lamy, David Green, Ed Desmond, Ingrid Sanden, Michael Meehan, Mark Wallace

WHITE HOUSE ARRIVAL LOUNGE -- Daniel Bucheli has accepted the national press secretary position at the Office of National Drug Control Policy in the Executive Office of the President. He most recently was comms director and deputy chief of staff for Rep. Mike Coffman (R-Colo.).

TRANSITIONS -- Dave Hoppe, the former chief of staff to Speaker Ryan, has joined 38

North Solutions as a senior principal. ... **Phil Perry** has joined Asna Creative Strategy as vice president of client services. Perry previously led digital corporate and public affairs campaigns at Adfero and Burson-Marsteller and advised multiple political campaigns. ... **Reed Galen** has joined the Serve America Movement as chief strategist. ... Societe Generale de Banque au Liban has hired **Daniel Glaser**, former Treasury Assistant Secretary for Terrorism Finance, as senior adviser. ...

... VOX Global has promoted **Carey Tarbell** to general manager, and **Mike Marker** to managing director. ... Kountoupes Denham Carr & Reid (KDCR Partners) has named **Julie Hershey Carr** and **Randi Reid** as its new partners as the firm marks its 10th anniversary this year.

ENGAGED -- Liz Goodwin, reporter for Yahoo News, got engaged over Labor Day weekend to **Labib Fawaz,** a data scientist at Booz Allen. "He proposed on a walk on the beach in Tulum ... We met a few months before I was asked to move from NYC to DC to cover Congress. Lots of Amtrak/megabus miles before he was able to move here in June!" ***Pic*** http://politi.co/2wa8zfP

HAPPY 4th ANNIVERSARY to Bennett and Lindsey Richardson

BIRTHWEEK (was yesterday): Lizzi Ulmer, who does comms for DAGA (hat tip: Ashley Pratte)

BIRTHDAY OF THE DAY: Kate Andersen Brower, author of "First Women: The Grace and Power of America's Modern First Ladies" and "The Residence: Inside the Private World of the White House," a CNN contributor and former Bloomberg WH correspondent. **What she's reading:** "I just finished 'The Glass Castle' by Jeannette Walls and it's a wonderful read. She describes these horrific things that happened to her growing up and she somehow writes about them with a sense of humor. And Harry Truman's memoir, '1945: Year of Decisions.' He's remarkably honest and I think the book shows the loneliness of the presidency." **Read her Playbook Plus Q&A:** http://politi.co/2xQZt9W

BIRTHDAYS: Maralee Schwartz ... Peggy Noonan ... Joe Klein ... WaPo photojournalist Bill O'Leary ... Mark Whitaker ... Jim Mahoney, longtime public-policy exec at Bank of America ... Gayle Tzemach Lemmon ... Chris Padilla, VP of gov't and regulatory affairs for IBM and former under Secretary of Commerce in Bush 43 (h/t Scott Kamins) ... Politico Europe's Zoya Sheftalovich ... Robert Blizzard, partner at Public Opinion Strategies ... Fentress Boyse (h/t sister Natalie) ... photojournalist Katie Orlinsky ... Laura Edwins, social media editor at Bloomberg Business ... Amb. Stuart Holliday, president and CEO of Meridian International Center ... Meredith Raimondi ... BuzzFeed's Zoe Tillman ... iHeartMedia's Bryan Watkins ... Eric Kanter, Seth Moulton's senior policy adviser, who will be celebrating with both FlyWheel and Funfetti (h/t Matt Corridoni) ... Gabby Friedman, who works on gov't relations at The Gap (h/t Alex Catanese) ...

... Rafael Lemaitre, founder and principal strategist at Third Way Strategies and a FEMA alum (h/ts Cameron Hardesty and Katie Green) ... Robin Reck, managing director of the Incite Agency and senior director at Bully Pulpit Interactive (h/t Marshall Cohen) ... Mary Jeka, SVP and general counsel at Tufts ... Ren Zheng, IT wizard (h/ts Jon Haber) ... John Michael Walker ... Rep. Ryan Costello (R-Pa.) ... Nick Ciarlante ... Craig Higgins ... Matthew Grill ... Derrick Dockery ... Johan Propst ... Eric Martin ... Sam Stefanki ... Elizabeth Fox ... Matt McCluskey ... David Grant ... Meg Peterson ... Gregory Petzold ... Janelle Kovacevich ... Michael Coritsidis ... Philip Watson ... Jeff Schrade ... Brandon Rettke ... Rob Engle ... Glenn Carlson ... Sheila Cochran ... Cheryl Parker Rose ... Joan Silver ... Vince Walsh (h/ts Teresa Vilmain)

****** **A message from Hewlett Packard Enterprise**: To super compete, America must super compute. Supercomputing is key to future breakthroughs in medicine, science and manufacturing. As the designer and builder of more supercomputers than any other company in the world, Hewlett Packard Enterprise is helping America increase its competitive edge in not only today's economy, but tomorrow's. Subject: POLITICO's Morning Score: House Democrats tread lightly into 2018 primaries — Ohio Democrats 'wait and see' amid Cordray rumors — Messer jumps into Indiana Senate race

By Elena Schneider | 07/27/2017 10:00 AM EDT

With Kevin Robillard and Zach Montellaro

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

A LIGHT TOUCH - "House Democrats take cautious approach to 2018 primaries," by Campaign Pro's Elena Schneider: "The DCCC has stated its policy on primaries over and over: The committee "reserves the right" to get involved in them. So far, though, House Democratic leaders have adopted a more hands-off approach than in years past as hundreds of candidates across the country flood into potential battleground races. Operatives said that House Democrats' somewhat laissez-faire attitude is explained by the 'embarrassment of riches' when it comes to the volume of candidates interested in running this cycle, said John Lapp, a Democratic media strategist and former DCCC executive director. ...The committee still has favorites in some seats - and may signal more in the future. DCCC Chairman Ben Ray Lujan donated to six challengers in the first half of 2017 via his leadership PAC, in an array of districts with unusual primaries, long-shot contenders or particularly notable candidates. But strategists and other observers say the effort to clear primary fields and anoint nominees has been much less aggressive in the early stages of the 2018 election cycle than in past years." **Full story.**

THE WAITING IS THE HARDEST PART - "Ohio Democrats 'wait and see' amid Cordray rumors," by Campaign Pro's Daniel Strauss: **Full story.**

GETTING IN - Messer jumps into Indiana Senate race: Rep. Luke Messer jumped into Indiana's Senate race on Wednesday, beating fellow Rep. Todd Rokita to the punch for the GOP primary to take on vulnerable Democratic Sen. Joe Donnelly. Messer's short Twitter missive - "We're in!" - didn't include the traditional announcement video or many details, indicating there's probably more to come at Messer's annual family BBQ on August 12. But Messer did reveal his slogan: "I Like Luke."

- The Rokita campaign is working hard to claim the momentum. They released a poll hours after Messer's entrance into the race showing Rokita leading him 28 percent to 20 percent in a head-to-head matchup, and with a similar lead among a larger field. (Messer had released polling last week showing the pair tied.) And that poll comes a day after a memo from Rokita general consultant Tim Edson arguing Messer is overly reliant on PAC money that will dry up not long after he enters a race against an incumbent Senator. And that memo came after news Rokita massively outraised Messer in the second quarter, which came after a series of hits on Messer's wife's high-paid legal work for an Indianapolis suburb and other stories highlighting Messer's

home in McLean, Va.

GETTING IN, PART DEUX - Nicholson starts Wisconsin field: Iraq and Afghanistan veteran and businessman Kevin Nicholson is the first Republican to enter the field to take on Democratic Sen. Tammy Baldwin after trucking heiress Nicole Schneider and Rep. Sean Duffy both opted against running. Nicholson has obvious appeals: He's a veteran with no voting record and graduate degrees from Harvard and Dartmouth. But he has one obvious negative: He was president of the College Democrats of America and spoke at the 2000 Democratic National Convention.

- Nicholson's announcement video, which covers his impressive biography, hints at how he'll handle the College Democrat attacks. "In my younger days, I was a Democrat. I used to do nothing and know everything," he says in the 3-minute long video. "But since then, we've had three kids, fought in two wars and worked in businesses around the world. And after you've been hit in the face with that much reality, you can not help but become a strong conservative." **Watch it here.**

- Will the Club for Growth endorse Nicholson? The group issued a statement "welcoming" him to the race. Nicholson already has a super PAC seeded with $3.5 million from GOP superdonor Richard Uihlein, and the Club could provide additional cash for a primary. "This is the most important development of today," an advisor close to Nicholson said. "Dick Uihlein and the Club for Growth in a primary are a force that alone can match any self-funder dollar for dollar." It's worth noting Uihlein has donated to the Club for Growth in the past. The self-funder would presumably be 2012 GOP primary runner-up Eric Hovde. State Sen. Leah Vukmir is also considering the race, and has already questioned Nicholson's conservatism..

BAWITDABA - Kid Rock launches voter registration nonprofit, says he's still exploring Senate bid: Kid Rock is continuing to look at a Senate bid in his home state of Michigan, he wrote in a post that went up at midnight, and is starting a voter registration nonprofit in the meantime. "The one thing I've seen over and over is that although people are unhappy with the government, too few are even registered to vote or do anything about it," he wrote. "We have over a year left until an actual election, so my first order of business is to get people engaged and registered to vote while continuing to put out my ideas on ways to help working class people in Michigan and America all while still calling out these jackass lawyers who call themselves politicians." But he also notes Democrats "are 'shattin' in their pantaloons' right now" and says he'll hold a press conference sometime in the next six weeks to discuss a potential bid. **Read more.**

Days until the 2017 election: 102.

Days until the 2018 election: 466.

ON THE HILL - "'Skinny' Obamacare repeal still lacks votes to pass," by POLITICO's Burgess Everett, Jennifer Haberkorn and Seung Min Kim: "Even a bare-bones repeal of Obamacare is no sure thing in the Senate. A handful of key Republican senators who had spurned earlier overtures from GOP leadership endorsed the latest plan to gut Obamacare's individual and employer coverage mandates and its medical device tax. But several centrists said they're undecided on the so-called skinny repeal, leaving the GOP in limbo through at least the end of the week." **Full story.**

- "Heller defends health care vote amid Democratic attacks," via POLITICO's Burgess Everett: "Democrats are escalating their attacks on Nevada GOP Sen. Dean Heller for voting to open debate on Obamacare repeal and signaling support for a trimmed-down repeal bill. But Heller, who faces a tough reelection contest next year, says he is at peace with his decisions. ...In an interview on Wednesday, Heller said he is satisfied with how he has handled the grueling health care debate, which includes standing with Gov. Brian Sandoval to lash proposed cuts to Medicaid, getting needled by President Donald Trump in front of other colleagues and then aiding Senate Majority Leader Mitch McConnell in moving forward on the repeal effort." **Full story.**

DAILY WAR EAGLE - Not gonna happen, Mo: An odd turn in the Alabama senate race: Rep. Mo Brooks said he'd withdraw from the race-if everyone else did so too, so that the beleaguered Jeff Sessions could get his old seat back. Brooks, in a statement: "If all Republican candidates collectively agree to simultaneously withdraw from this race, then we clear the way for the Republican Party of Alabama to nominate Jeff Sessions to be the Republican nominee for the December 12, 2017 general election. He can return to the Senate where he has served us so well. President can then appoint whomever he wants as Attorney General." He also called the president's treatment of Sessions a "public waterboarding of one of the great people Alabama has ever produced." **Full story.**

- Brooks goes after Trump in radio interview: In a radio interview this morning, Brooks previewed his pro-Sessions stance and criticized President Donald Trump. He immediately pronounced he was "disappointed and chagrined with what what's happening with Jeff Sessions and President Trump right now." Asked about his pre-election criticisms of Trump, Brooks declares: "It looks like a lot of the reservations I had are turning out to be prophetic." He later says Trump hasn't been helpful during the Obamacare repeal process, and refuses to say he has confidence in the president. **Listen here**.

OOPS - "Watchdogs Say Cuomo Is Skirting Campaign Finance Rules," by The New York Times' Brian Rosenthal: "At the end of a video promoting Gov. Andrew M. Cuomo's immigration policies, a disclaimer noted the advertisement's funding source: an obscure anti-discrimination group called New Yorkers United Together. The fledgling group, which has financed only the one online video, claims it has no ties to any politician. Two of the group's co-founders said in interviews that the governor had nothing to do with the ad, other than agreeing to appear in it alongside several celebrities. But a closer examination shows otherwise. ... To

government watchdogs, the connections are evidence that Mr. Cuomo is again skirting campaign finance rules by using a secretive nonprofit to advance his agenda." **Full story.**

FROM THE COURTROOM - "Lawyers for Brady, rival rebut claims of illegal campaign payoff," by The Philadelphia Inquirer's Jeremy Roebuck, Chris Brennan and Tricia L. Nadolny: "U.S. Rep. Robert Brady's lawyer pushed back Wednesday against federal prosecutors' claims that the congressman secretly paid a political rival $90,000 to drop a bid to unseat him in the 2012 Democratic primary. Scoffing at the depiction of the money as a covert payoff, attorney James Eisenhower said that the funds were intended in part to acquire exclusive rights to valuable polling data from the primary challenger, Municipal Court Judge Jimmie Moore." **Full story.**

PELOSI, PELOSI, PELOSI - "Voter by voter, GOP super PAC tries to separate the party from Trump," by The Washington Post's Dave Weigel: "...The CLF's multimillion-dollar campaign, unfolding this year in 20 targeted districts and expanding next year to 30, is an ambitious bet that the Republican House majority can be spared from midterm backlash over President Trump. If it works, each endangered Republican will be reintroduced to voters as a post-partisan who delivers on their key issues; each Democratic challenger will be framed as a vote for Rep. Nancy Pelosi (D-Calif.) to snatch back the speaker's gavel while empowering an anti-Trump 'resistance' that only wants to wreck the country." **Full story.**

ICYMI - Facebook donates $500,000 to 'secure elections' from meddling, via POLITICO's Nancy Scola: "Facebook is contributing half a million dollars to getting off the ground a new Harvard project aimed at combating digital interference in democratic elections, the tech company said today." **Full story.**

CODA - QUOTE OF THE DAY: "We don't comment on casting." - An ABC spokeswoman, asked to comment on the possibility that "Dancing with the Stars" is trying to recruit former press secretary Sean Spicer, POLITICO reported.

Good Wednesday morning. THE TWEET READ ROUND THE WORLD -- @realDonaldTrump at 12:06 a.m.: "Despite the constant negative press covfefe". The tweet stood alone -- nothing before it, or after it. If you had any doubt that the president of the United States was sitting late at night with his own device in the White House residence, this should probably dispel that. Trump deleted the tweet at some point in the 5 a.m. hour. #covfefe is now a trending hashtag on Twitter and launched an Urban Dictionary entry overnight (http://bit.ly/2qzNP3i). ***See the deleted tweet, which got over 126,000 retweets and 160,000 likes*** http://bit.ly/2sdnZPy

--@realDonaldTrump at 6:09 a.m.: "Who can figure out the true meaning of "covfefe" ??? Enjoy!"

--@jimmykimmel at 2:15 a.m.: "More what makes me saddest is that I know I'll never write anything funnier than #covfefe".

NOW BACK TO REALITY -- AP's VIVIAN SALAMA: "Trump's cellphone diplomacy raises security concerns": "President Donald Trump has been handing out his cellphone number to world leaders and urging them to call him directly, an unusual invitation that breaks diplomatic protocol and is raising concerns about the security and secrecy of the U.S. commander in chief's communications. Trump has urged leaders of Canada and Mexico to reach him on his cellphone, according to former and current U.S. officials with direct knowledge of the practice. Of the two, only Canadian Prime Minister Justin Trudeau has taken advantage of the offer so far, the officials said. ...

"Presidents generally place calls on one of several secure phone lines, including those in the White House Situation Room, the Oval Office or the presidential limousine. Even if Trump uses his government-issued cellphone, his calls are vulnerable to eavesdropping, particularly from foreign governments, national security experts say. 'If you are speaking on an open line, then it's an open line, meaning those who have the ability to monitor those conversations are doing so,' said Derek Chollet, a former Pentagon adviser and National Security Council official now at the German Marshall Fund of the United States." http://apne.ws/2qAheGe

BUZZ -- The White House is scouting office space for the much-speculated about new White House "war room" in the Eisenhower Executive Office Building next to the White House. (There isn't much open office space in the West Wing these days.) The war room would manage fallout from the scandals engulfing the Trump administration. Corey Lewandowski -- one of the potential hires for the war room -- has been spotted in and around the White House in recent days.

FIRST IN PLAYBOOK: MITT ROMNEY'S annual retreat -- the E2 Summit -- will be June 8-10 at the Stein Eriksen Lodge in Park City. On the docket this year: Sens. John McCain (R-Ariz.) and Lindsey Graham (R-S.C.), Speaker Paul Ryan (R-Wis.), former Canadian Prime Minister Stephen Harper, former CIA Director Mike Morell and Microsoft Chairman John Thompson. **GET YOUR MONEY'S WORTH!:** There will be "enthusiast sessions" like trap shooting with Paul Ryan, pilates with Ann Romney and early-morning hikes with Mitt Romney.

HOT VIDEO -- @AlexanderEmmons: "Watch as Stuart Jones, a high-level acting official in the State Dept, is asked why they criticize Iranian elections but never Saudi Arabia:" http://bit.ly/2qz8VP0 ... ***Jones is retiring soon after a career as a foreign service officer.***

INSIDE THE WEST WING -- "As Trump Weighs Shake-Up, He Faces Recruiting Challenge," by NYT's Peter Baker and Maggie Haberman: "[T]alks with two former advisers, Corey Lewandowski and David N. Bossie, about joining the White House staff [have grown] more complicated. Mr. Bossie ... signaled that he does not plan to join the staff, citing family concerns, one person close to the discussions said Tuesday. ... Whether Mr. Trump will actually reorganize his White House team remained uncertain.

"He has often talked about expelling people from his orbit, only to decide not to, as he did with Stephen K. Bannon, his chief strategist, a few weeks ago. Seemingly reinvigorated, Mr. Bannon is now among those leading the effort to convince the president that he needs to overhaul his operation to focus more intensely on the nationalist policy goals that animated his candidacy. ... The president has joked repeatedly with [Reince] Priebus, whose mother is of Greek descent, that he would send him to Athens as ambassador to Greece. Speculation grew last week when a list of ambassadors was compiled at Mr. Priebus's request, and the Athens position was left blank, officials said." http://nyti.ms/2sl95Gi

POLITICO STARS ANDREW RESTUCCIA and **JOSH DAWSEY: "Russia probe scares off potential appointees":** "Four people who work closely with prospective nominees told POLITICO that some potential hires are having second thoughts about trying to land executive branch appointments as federal and congressional investigations threaten to pose a serious distraction to Trump's agenda. ... According to the nonpartisan Partnership for Public Service, the White House has announced nominees for just 117 of the 559 most important Senate-confirmed positions." http://politi.co/2rDE8Rd

-- WHO REPLACES MIKE DUBKE?: Communications director to President Donald Trump is a nearly impossible job. Setting a message for a man who could undermine it with a tweet is not a terribly appealing job to the top communicators in D.C., many of them tell us. Who should get the job? Drop us a line, we'll be publishing a round of ideas in the coming Playbooks.

DEADLINE WATCH -- PRESIDENT TRUMP must decide by tomorrow whether he will move the U.S. embassy from Tel Aviv to Jerusalem. He can sign a six-month waiver to keep the embassy in Tel Aviv while he continues to seek Middle East peace. He can also extend the waiver while signaling his intent to move it eventually. That's what we hear he'll do.

DEPT. OF TIME TICKING -- "Trump's window for scoring early legislative victories is shrinking," by WaPo's Damian Paletta and Mike Debonis: "President Trump faces an increasingly narrow path to win major legislative victories before the looming August recess, with only two months left to revive his health-care or tax initiatives before Congress departs for a long break. White House officials said Tuesday that Trump has become increasingly incensed that legislation is bogging down in the Senate, something they blame on Democrats. ...

"White House officials plan to push Senate Republicans in June to vote on a repeal of the Affordable Care Act, and they want to spend the rest of the summer whipping up support for major tax cuts. They are also planning to push lawmakers soon to consider an infrastructure package, although that effort has also moved more slowly because his staff hasn't put together a final plan." http://wapo.st/2slrpip

-- BACK IN REALITY ... -- Can the Senate cobble together a health-care plan in June? Sure anything can happen. Is it likely? No. They have hardly started putting together their own version of a health-care overhaul, and last week, Senate Majority Leader Mitch McConnell said, "I don't know how we get to 50 (votes) at the moment. But that's the goal." That means they are nowhere close, at the moment. Keep in mind the next time you hear the White House predict something: they've been saying for months that they are on the brink of releasing an infrastructure package. After the August recess it only gets tougher. Congress will have to fund government, lift the debt ceiling and then it's campaign season.

****** **A message from Morgan Stanley:** Morgan Stanley's innovative financing is helping Unilever advance a commitment to sustainable growth. Capital creates change. Read the full story at morganstanley.com/unilever. CRC 1313323 10/15 ******

FOR YOUR RADAR -- "Bombing in diplomatic area of Kabul kills 80, wounds scores," by AP's Rahim Faiez and Amir Shah in Kabul: "A massive explosion rocked a highly secure diplomatic area of Kabul on Wednesday morning, killing 80 people and wounding as many as 350, an attack that left a scene of mayhem and destruction and sent a huge plume of smoke over the Afghan capital. The target of the attack -- which officials said was a suicide car bombing -- was not immediately known, but Ismail Kawasi, spokesman of the public health ministry, said most of the casualties were civilians, including women and children. It was one of the worst attacks Kabul has seen since the drawdown of foreign forces at the end of 2014.

"Associated Press images from the scene showed the German Embassy and several other embassies located in the area heavily damaged in the explosion. It wasn't known if any foreign diplomats were among the casualties but Germany and Pakistan said some of their embassy employees and staff were hurt in the explosion." http://apne.ws/2qzy9Nf

JARED'S MOOD from **ANNIE KARNI,** the master of Jared intrigue **-- "Kushner tries to pretend everything's normal":** "There has been no rallying the troops in the White House, and no open acknowledgement from President Donald Trump's son-in-law, Jared Kushner, that he has transformed from behind-the-scenes West Wing powerbroker to its lead distracting story. Kushner led three meetings in the West Wing on Tuesday -- and never once acknowledged the stories about him that dominated cable news since last week, when it was reported that during the campaign he discussed setting up a secret communications backchannel to Moscow." http://politi.co/2qyFBbB

MATT NUSSBAUM, TARA PALMERI and **JOSH DAWSEY -- "Spicer's 'middle finger' to the press":** "On the recent trip abroad, he repeatedly showed the strain of the job. At one point, he got drinks with a group of other staffers and reporters in Jerusalem, where he was adamant that the conversation steer clear of work. 'The most we've seen of Sean [Spicer] was at a rooftop bar in Jerusalem,' said one U.S. journalist on the trip. 'But he refused to take work-related questions and said if you asked him a work-related question, then you had to take a shot.' The comment was made in jest, according to people present, and no shots were taken." http://politi.co/2rTM14V

INSIDE STATE -- "Tillerson's Enigmatic Chief of Staff Wields Power, Not Spotlight," by Bloomberg's Nick Wadhams: "One unfamiliar name stood out among the coterie of family and aides President Donald Trump brought into his meeting with Pope Francis at the Vatican last week: Margaret Peterlin. The presence of Peterlin -- Secretary of State Rex Tillerson's chief of staff -- underscored the former congressional staffer and Mars Inc. lawyer's growing clout in the administration. Not even Press Secretary Sean Spicer, a practicing Catholic who interacts with Trump almost daily,

made it to the Papal audience, which included Tillerson as well as Melania and Ivanka Trump.

"Peterlin, a Navy veteran who as a congressional aide helped draft the Patriot Act after the Sept. 11 attacks, gained Tillerson's trust by navigating him through his Senate confirmation hearings in January. With most top State Department jobs unfilled, Peterlin has more power than any chief of staff in recent memory, bringing in key associates to fill critical openings." https://bloom.bg/2qzcVzh

-- FASCINATING DETAIL: "She's become famous within the State Department for the Post-it notes she leaves on staff members' computer monitors asking them to chase tasks. Other times she prints out emails and attaches Post-its to them, with instructions on how to proceed."

THE FAMILY -- "Arrested, missing China activists spark criticism of Trump," by AP's Erika Kinetz in Shanghai: "The arrest and disappearance of three labor activists investigating a Chinese company that produces Ivanka Trump-branded shoes in China prompted a call for her brand to cease working with the supplier and raised questions about whether the first family's commercial interests would muddy U.S. leadership on human rights. The men were working with a U.S. nonprofit to publish a report next month alleging low pay, excessive overtime and possible misuse of student labor, according to China Labor Watch executive director Li Qiang, who lost contact with the investigators over the weekend. China Labor Watch has been exposing poor working conditions at suppliers to some of the world's best-known companies for nearly two decades, but Li said his work has never before attracted this level of scrutiny from China's state security apparatus." http://apne.ws/2rj1GI2

NEW POLITICO/MORNING CONSULT POLL -- "Poll: Support for Trump impeachment rises," by Steven Shepard: "An increasing percentage of voters want Congress to impeach President Donald Trump - even if they don't think Trump has committed the 'high crimes and misdemeanors' the Constitution requires. Forty-three percent of voters want Congress to begin impeachment proceedings, according to a new POLITICO/Morning Consult poll, up from 38 percent last week. ...

"But that's still less than the 45 percent who don't want Congress to impeach Trump, down a tick from 46 percent the week before. Only three American presidents in history have faced legitimate impeachment threats. Much of the support for impeaching Trump comes from political considerations, the poll shows - not a belief that Trump is actually guilty of impeachable offenses, like treason, bribery or obstructing justice." http://politi.co/2rEa34b

MEDIAWATCH -- "Scott Pelley out as CBS Evening News anchor," by Hadas Gold: "Scott Pelley is out as 'CBS Evening News' anchor, POLITICO has confirmed. Pelley will stay with the network as a full-time correspondent for '60 Minutes,' according to people familiar with the decision. The New York Post first reported the news on Tuesday evening. A formal announcement is expected on Wednesday. Those familiar with the

situation said the removal has been in the works for a while. Guest anchors will fill the evening news chair until a replacement is chosen. Pelley has been out on '60 Minutes' assignment for the past few days, but he's expected to return to the anchor seat to say farewell to viewers." http://politi.co/2rDwZR2

-- SEND US YOUR IDEAS for who should take over the anchor chair at CBS. We'll publish some names in Playbook.

TRUMP'S WEDNESDAY -- THE PRESIDENT is meeting with Secretary of State Rex Tillerson and later will host Vietnamese Prime Minister Nguyen Xuan Phuc to the White House.

THE JUICE ...

-- FIRST IN PLAYBOOK -- OZY Fest, happening July 22 at Central Park's Rumsey Playfield in NYC, is adding a number of political speakers to its lineup: Sen. Kirsten Gillibrand (D-N.Y.), Jill Biden, Mark Cuban and Marcus Samuelsson.

-- HAPPENING TODAY -- Recode co-founders Kara Swisher and Walt Mossberg will interview Hillary Clinton at Recode's annual Code Conference in Rancho Palos Verdes, California. Clinton is expected discuss Russia's efforts to influence 2016, the state of play in politics and tech's gender gap. The interview will be broadcast live on CNBC and livestream on Facebook and Periscope at 3:15 p.m. eastern.

INTRODUCING LONDON PLAYBOOK: Jack Blanchard -- currently the Daily Mirror's political editor -- is joining POLITICO Europe to launch a London Playbook starting Sept. 4. Blanchard will bring our flagship product to London and all those interested in what makes Europe's global city tick, as the U.K. seeks out a new role in Europe and the world. Blanchard has worked at the Boston Standard and Yorkshire Post, and he is also a Sky News contributor. ***Read POLITICO Europe Executive editor Matt Kaminski memo*** http://politi.co/2qF16lZ ... ***To sign up early*** http://politi.co/2qyWQJA

-- POLITICO EUROPE has also launched a U.K. Election Tracker. ***Available for iPhones*** http://politi.co/2sl4gN1

Playbook Reads

TRUMP'S PARIS OPTIONS -- "Trump's climate conundrum nears a verdict," by Andrew Restuccia: "Donald Trump's advisers have sent wildly different messages to U.S. allies about the president's willingness to remain in the Paris climate agreement - adding to the confusion as he appears set to render a verdict this week. ... For all the mystery, though, Trump has only a few main options for dealing with the non-binding climate deal, one of former President Barack Obama's proudest diplomatic

achievements. He can stick with the deal, while unwinding most of Obama's climate policies and pledges for reducing greenhouse gas pollution. He can use the threat of leaving to push other countries for concessions that benefit U.S. fossil fuels. He can even try to renegotiate the agreement - highly implausible, given that nearly 200 governments took part in crafting it. Or he can do nothing." http://politi.co/2qyQOZt

FLYNN WATCH -- "Flynn to provide some documents in response to Senate subpoenas," by Darren Samuelsohn and Austin Wright: "Michael Flynn has now agreed to provide some documents to the Senate Intelligence Committee as part of its investigation into Russia's meddling in the presidential election. The decision by President Donald Trump's former national security adviser comes after initially refusing last week to comply with an initial subpoena.

"Flynn informed the committee in a letter Tuesday he will provide some documents related to his two businesses, along with some personal materials, according to a source close to Flynn who spoke on the condition of anonymity. Flynn is expected to begin providing documents on a rolling basis by June 6, the source said." http://politi.co/2rDQpoX

-- "Mike Flynn's Pro-Turkey Work: An Unfinished Documentary to Boost Country's Image," by WSJ's Dion Nissenbaum: "Last fall, as retired Lt. Gen. Mike Flynn traveled the country stumping for Donald Trump, his business partner holed up in a small Washington hotel room with the former head of Turkish military intelligence to work on a special project. 'General, hi. I'm Bijan Kian, welcome to Washington, D.C.,' Mr. Kian, the head of Mr. Flynn's consulting firm, greeted the Turkish dignitary. 'Gen. Flynn, my partner, sends his regards to you.' The hotel room meeting was filmed as part of a documentary the Flynn Intel Group was producing for a Turkish businessman, who paid $530,000 to the lobbying shop to polish the country's image after a botched military coup. That contract has landed Mr. Flynn in legal jeopardy. The unfinished, never-distributed film, details of which haven't been previously reported, appears to represent the core of the Flynn Intel Group's work for Turkish interests." http://on.wsj.com/2qyIRno

****** **A message from Morgan Stanley:** Capital creates a fresh perspective. Can business contribute to a sustainable future? Absolutely. Morgan Stanley helped Unilever point the way forward raising £250 million ($415 million) with a first-of-its-kind green bond offering. The capital went toward projects that promote Unilever's vision of reducing waste, water use and greenhouse gases by 30% in existing factories compared with 2008 levels. In new factories funded by this green bond, Unilever is committed to cutting in half CO2 emissions, water use and waste. Now Unilever can have less impact on the planet.[1] Capital creates change. morganstanley.com/unilever

DISCLAIMER:
[1]Above statements based on Unilever's project selection criteria, communicated in the company's press release dated March 19, 2014. Exchange rate used to calculate "$415 million" was as published by Bloomberg on March 19, 2014, of 1.6644. For further details and information about Unilever's green bond issuance, please see Unilever's

press release dated March 19, 2014. CRC 1297328 10/15 ******

DEEP DIVE - BETHANY MCLEAN in Vanity Fair's Summer issue, "How Wells Fargo's Cutthroat Corporate Culture Allegedly Drove Bankers to Fraud": "Most Americans have assumed their bank accounts are sacrosanct. But with the major scandal unfolding at Wells Fargo, angry former employees illuminate the alarming pressure that allegedly led local bankers to defraud perhaps more than a million customers." http://bit.ly/2sdaaAJ

WHAT WALL STREET IS READING - "Steven Cohen's Hedge-Fund Comeback Shoots for a Record Target: $20 Billion," by WSJ's Rob Copeland: "Mr. Cohen's goal is to amass $20 billion once he gets back in the business as early as next year, he and his representatives have said in conversations with bankers, colleagues and potential investors. That would likely include his family fortune of $11 billion. The new target would blow past the $16 billion managed at peak by Mr. Cohen's SAC Capital Advisors LP, one of the most profitable hedge-fund firms in the U.S. before it pleaded guilty to criminal insider trading charges in 2013." http://on.wsj.com/2ragquC

MEDIAWATCH -- "Megyn Kelly: I don't love politics," by Hadas Gold: "Megyn Kelly has a confession: She doesn't love politics. 'I was not born to be a political news anchor,' she said, in a POLITICO interview. The newly minted NBC anchor was known for her fast-paced, hard-hitting nightly show on Fox News and moderating prowess on the debate stage, tangling with then-candidate Donald Trump. But now that she's set to launch a Sunday news magazine show and a daily morning show on NBC, Kelly said she's happy to be leaving the political frying pan. 'No, I'm not going to miss the crazy news cycle. The audience enjoyed the show and I'm grateful for it,' Kelly said. 'But it wasn't who I was and it isn't who I am. ... While I will cover politics ... I don't want to do only that. It's not enough for me personally.'" http://politi.co/2rTrYn4

PHIL RUCKER: STAR OF THE ONION -- "'Washington Post' Reporter Frustrated Every Space In Parking Garage Taken Up By Anonymous Source" - The Onion: http://bit.ly/2rnaOhb

Playbookers

SPOTTED -- Sen. Patty Murray (D-Wash.) in coach on a Seattle-appropriate purple rain jacket, on a delayed Alaska 2 from Seattle to DCA Tuesday ... House Transportation Chairman Bill Shuster in jeans and short sleeves at Joe's Stone Crab's bar Tuesday ... Arkansas Lt. Gov Tim Griffin and Rep. Barbara Comstock (R-Va.) at Landini Brothers Restaurant last night in Old Town Alexandria. Griffin and Comstock go way back to when they were counsels on the House Government Reform Committee with investigator Dave Bossie. Comstock and Griffin later led the research effort in 2000 on Al Gore with senior researcher Matt Rhoades. Griffin was a member of Congress from 2010 until 2014.

WEEKEND WEDDING -- Emily Howell, former POLITICO assistant editor, on Saturday married **Lyndon DeSalvo,** a recent graduate from University of Pennsylvania's city planning masters program. The ceremony was at Mad River Barn in the beautiful Green Mountains in Waitsfield, Vermont. The couple met more than a decade ago while attending Carleton College in Northfield, Minnesota. They have since traveled the globe together. After a honeymoon in Mexico, the newlyweds are moving to Cambridge this summer where the bride will be pursuing a MPH at Harvard. Among the attendees were bridesmaid Vivyan Tran (former Politico and current WSJ, who sat behind Bernie Sanders on her flight back to Newark from Burlington) and Tim Lueders-Dumont (policy director for Vermont State Treasurer). ***Pics*** http://bit.ly/2rDt3j2 ... http://bit.ly/2rDYjyt

WELCOME TO THE WORLD -- Ashley Verville, communications director for Rep. Ed Perlmutter (D-Colo.) and **Shane Verville** , performance coach at U.S. Bank, welcomed Olivia Lynn Verville last Wednesday. ***Pic*** http://politi.co/2rjeiz7

-- Molly Murphy, partner at ALG Polling, and **Sean Dryden,** senior analyst at PerryUndem Research and Communication, welcomed a baby boy, Charlie Cooper Dryden, over the Memorial Day weekend. Charlie came in at 7 lbs 8 oz. Since his parents are pollsters, "the kid is going to have a knack for math and was statistically within the margin of error in all categories."

ENGAGED - ROMNEY ALUMNI -- Micah Spangler, deputy director of legislative affairs at the United Nations Foundation, proposed to **Jill Nguyen**, senior client strategy manager at Phone2Action, over the Memorial Day weekend. "Micah popped the question on the steps of Mexico City's historic Metropolitan Cathedral. The two first met in early 2016 but didn't start dating until this year, when, after preparing to collaborate on an advocacy event at UN Headquarters, Jill (a vocal Hillary supporter) texted Micah (a former Romney 2012 staffer), 'I can't believe you're a Republican.'" ***Pic*** http://politi.co/2qyMYjf

TRANSITIONS -- Julie McClain Downey started last week as national director of campaign communications at EMILY's List. She most recently served as the New Hampshire communications director for the Hillary Clinton campaign. ... **John Martin** started on Tuesday as principal associate commissioner for legislation at the FDA. Martin, the pride of Grapevine, Texas, most recently served as legislative director for Sen. Tom Cotton (R-Ark.). ... **Tom Rogan** has been named a commentary writer at the Washington Examiner. Leading the News

Budget

House Seeks EPA Budget Cut, But Not As Much As Trump Wants

House appropriators proposed a modest cut for environmental and public lands agencies in their spending bill for fiscal year 2018, reducing funding to $31.4 billion from the $32.37 billion for current spending levels. That funding level is $4.3 billion above what was included in President Donald Trump's budget request.

Climate Policy

Colorado Vows Carbon Cuts in Support of Paris Climate Deal

Colorado vowed to slash statewide greenhouse gas emissions by a quarter from 2005 levels by 2025 as Gov. John Hickenlooper (D) announced plans to join a multi-state alliance to meet the goals of the international Paris climate change agreement.

News

Biotechnology

Dow Soybean Draws Objection From EU Environment Panel

The European Parliament environment committee July 11 signaled to EU regulators that they shouldn't authorize use of a Dow AgroSciences genetically modified soybean.

Budget

House Appropriators Reject Call to Shutter Chemical Safety Board

The U.S. Chemical Safety Board, targeted for elimination in the White House's budget request earlier this year, would continue operating under a funding proposal released July 11 by a House subcommittee.

Chemical Security

EPA, Industry Back Chemical Security Rule Delay

EPA Administrator Scott Pruitt acted appropriately when he moved to delay new chemical plant security rules, agency attorneys and industry groups said in court filings July 10.

Climate Change

Banks Heed Carney's Call to Tackle Risks of Climate Change

Eleven major banks including Barclays Plc, Citigroup Inc. and UBS AG said they'll seek ways to address the financial risks of global warming, after Bank of England Governor Mark Carney urged investors to act on the threat.

Climate Regulation

EU Panel Backs 'Stop-the-Clock' Emissions Exemption for Airlines

Long-haul flights that arrive in or leave European Union airports would continue to be exempted from a requirement to participate in the bloc's greenhouse gas emissions trading system, under a legislative proposal backed by the European Parliament's environment committee July 11.

Emissions Trading

California Reaches Deal to Extend Climate Trading Program

Large California industries would be shielded from local greenhouse gas regulations, but would need to curb emissions of other harmful air pollutants under bills to reauthorize the state's carbon trading program.

Emissions Trading

EU May Be Required to Keep Carbon Sink Emissions At, Below Zero

European Union countries would be required to keep combined greenhouse gas emissions from carbon sinks, such as forests, at or below zero from 2021 to 2030, under a plan approved July 11 by the European Parliament's environment committee.

Energy

Tesla's Australian Battery Fix Comes at 'Big Price,' Analyst Says

Billionaire Elon Musk's plan to install a giant battery to help fix a power crisis in South Australia will come at a "big price" with installation costing 60 percent more than alternative open cycle gas plants, according to Wood Mackenzie Ltd.

Energy

Trump Taps Business Executives for Energy Undersecretary Jobs

President Donald Trump announced his intent July 11 to nominate executives at J.P. Morgan and Berkshire Hathaway Energy for two Energy Department undersecretary posts.

Enforcement

U.S. Wants Man Convicted in Illegal Dump Case to Pay $3.7M

An upstate New York man convicted in 2013 of allowing his property to be used as an illegal dump for hazardous construction debris should be ordered to pay $3.7 million to reimburse the EPA for cleaning up the site, the Justice Department said.

Fuel Efficiency

Carmaker Fines for Fuel Economy Shortfalls Under Review by U.S.

The Trump administration is considering easing steeper fines proposed by Obama-era regulators for automakers that don't meet tougher fuel economy standards, a move that would give a break largely to luxury brands like Jaguar, BMW and Porsche that have paid the highest penalties in the past.

Maritime Affairs

Ships Get More Time to Combat Invasive Marine Organisms

The world's 40,000 merchant shipowners and operators have been granted two extra years—until 2024—to prepare for new rules on how to treat ballast water to prevent invasions of aquatic species, the International Maritime Organization said July 11.

Mining

Alaska Gold Mine Project Inches Forward

The Trump administration took the next step July 11 toward allowing a massive gold, copper, and molybdenum mine to be built in Alaska.

Motor Vehicles

China Likely to Extend Tax Break on Electric Cars, Auto Group Says

China is likely to extend a purchase-tax exemption on electric cars to promote the vehicles, whose sales have outpaced broader industrywide deliveries, according to the state-backed auto association.

Motor Vehicles

London's Iconic Black Cabs Go Electric; Bound for Amsterdam

Hundreds of London's black cabs will start appearing on the roads of Amsterdam next year, powered by batteries instead of diesel fuel, marking the first international sale for Geely Automobile Holdings Ltd.'s new electric taxi.

PCBs

Monsanto's PCB Superfund Countersuit Tossed Again

Monsanto Co. can't pursue Superfund cost recovery counterclaims against Spokane, Wash., over PCB river contamination, the Eastern District of Washington ruled July 10 (City of Spokane v. Monsanto Co., 2017 BL 236833, E.D. Wash., No. 15-cv-00201, 7/10/17).

Pesticides

Environmentalists Urge EPA to Test All Pesticide Ingredients

The EPA must assess environmental and health effects for all pesticide ingredients, not just the active ingredients that kill pests, the Center for Food Safety argued in a July 10 petition to the agency.

Risk Assessment

EPA Chemical Risk Reviews Demand New Rigor Under Amended Law

EPA scientists are grappling with meticulous new methods imposed by the nation's primary chemicals law for reviewing risks, a senior agency official said.

Practitioner Insights: EPA's New Chemical Delays Causing Ripple Effect

By Robert F. Helminiak: Experts agree the Frank R. Lautenberg Chemical Safety for the 21st Century Act (LCSA), the Toxic Substances Control Act (TSCA) reform bill enacted last June, is an improvement over the old TSCA of 1976. It clearly strengthened it. However, the new law has created a major disruption to supply chains due to the backlog of pre-manufacture

notices (PMNs), and innovation is starting to suffer. Society of Chemical Manufacturers and Affiliates (SOCMA) member companies are ...

Subject: Pruitt defends watershed work despite proposed cuts

By Annie Snider

06/15/2017 02:35 PM EDT

EPA Administrator Scott Pruitt sought to reassure skeptical lawmakers that the Trump administration's proposal to defund popular watershed cleanup programs would not interfere with their goals.

He did not offer any specifics on how that would happen.

Facing critical questions from both Democrats and Republicans on a House Appropriations subcommittee, Pruitt acknowledged that Congress was unlikely to go along with the proposal to zero-out programs targeting regions like the Great Lakes, which received $300 million this year, and Chesapeake Bay, which got $73 million.

Pruitt told Rep. Marcy Kaptur (D-Ohio) he could not recall whether he asked OMB Director Mick Mulvaney or other White House staff to eliminate the watershed programs. "In our discussions with OMB [we] talked about the importance of the Great Lakes Initiative," he said.

EPA will continue to facilitate states' efforts around such cleanups, he said.

"Honestly, money's important, but I think this leadership role is important as well, and that's going to continue," Pruitt told Rep. Dave Joyce (R-Ohio). Joyce was careful to call the funding blueprint the "Mulvaney budget" rather than attributing it to Trump.

As an example, Pruitt pointed to EPA's role bringing the six Chesapeake Bay states together around a landmark cleanup plan. As Oklahoma's attorney general, Pruitt joined a lawsuit challenging that plan, but he has recently said that he now sees the effort as a model for how states and the federal government can work together. However environmental groups say the administration's proposal to eliminate funding for the program would devastate that effort.

WHAT'S NEXT: The Appropriations subcommittee is expected to write EPA's fiscal 2018 spending bill later this summer.

Driving the Day

BUZZ-- **THERE IS ALREADY DISCUSSION** about Congress allocating emergency money to help rebuild Houston -- America's fourth-largest city -- after this massive storm. Remember: these legislative fights are not easy. As HuffPo's Matt Fuller **(@MEPFuller)** pointed out last night on Twitter, it's not always easy to pass these kinds of bills. We have to imagine the level of devastation in Houston, combined with the state's large delegation in Congress, will make this a bit easier.

Good Monday morning. WELCOME TO THE LAST WEEK of relative quiet in Washington. Congress is back next week and also has to deal with:

The National Flood Insurance Program expires at the end of September. ... **The FAA** needs its authority renewed by the end of September. ... **SCHIP,** a state-based children's health-care program, must be renewed by the end of September. ... **AND,** the government runs out of money Sept. 30 and the debt ceiling needs to be lifted by Sept. 29.

THERE ARE ROUGHLY 50 LEGISLATIVE DAYS left in 2017.

HOUSTON CHRONICLE FRONT PAGE - "SWAMPED BY HARVEY" http://bit.ly/2wVjq1k ... **NYT:** "Deadly Storm Transforms Houston Streets Into Raging Rivers" http://nyti.ms/2xqfMu1 ... **WAPO:** "Catastrophic flooding in Houston" ... **USA TODAY:** "CATASTROPHE: Inundated Houston faces an 'unprecedented' 50 inches of rain" ... **WSJ:** "Rain, Floods Deluge Texas".

DEVASTATION IN TEXAS -- HOUSTON CHRONICLE: "No end in sight to historic floods caused by Harvey," by Mike Tolson: "The normally matter-of-fact National

Weather Service joined in the excited reaction to a deluge that began just after dark Saturday night and promised never to end: 'All impacts are unknown and beyond anything experienced,' it said in a Sunday tweet. One of its meteorologists, Patrick Blood, hardly knew what to call it. 'It's catastrophic, unprecedented, epic -- whatever adjective you want to use,' he said.

"Houston Mayor Sylvester Turner said late Sunday that police and fire officials received nearly 6,000 calls and had rescued more than 1,000 people. Many of the high-water rescues involved people trapped on their roofs or in their attics in southeast Houston. 'It breaks your heart,' Houston Police Chief Art Acevedo said via livestream on Twitter, as he stood in waist-high water in north Houston. 'But it's Texas, we'll get through it.' ...

"Gov. Greg Abbott said 3,000 National Guard members will join the Texas Guard in areas ravaged by Harvey. The federal government declared Harris County a disaster area Sunday morning. President Trump said he would come to Texas to inspect damage on Tuesday if possible. On Sunday, the president praised the government response in a tweet, writing: 'Wow - Now experts are calling #Harvey a once in 500 year flood! We have an all-out effort going, and going well!'" http://bit.ly/2vC44Ky

-- Brian L Kahn (@blkahn): "Coast Guard flyover reveals stunning scope of Harvey flooding. Everything is underwater" http://bit.ly/2vBLum3

-- IT WILL BE INTERESTING TO WATCH how Trump surveys this storm. Both Houston airports, Hobby and George H.W. Bush Intercontinental, are closed. The city is completely paralyzed.

-- "Why Wasn't Houston Evacuated Before The 'Unprecedented' Storm?" by BuzzFeed's Nidhi Prakash: "Houston Mayor Sylvester Turner defended the decision, telling reporters at a press conference Sunday that officials did not expect the city to be directly in the line of the storm, and that there was not time to evacuate residents safely. 'In this particular case, the hurricane, we were not in the direct line,' Turner said. 'It is true we anticipated a lot of rain, a lot of rain. But the best place for people to be is in their homes.' 'You cannot in the city of Houston put 2.3 million people on the road. That is dangerous,' he continued.

"'When you combine Houston and Harris County, you literally cannot put 6.5 million people on the road. If you think the situation right now is bad, you give an order to evacuate, you are creating a nightmare. Especially when it's not planned.' To illustrate this, Turner pointed to the city's disastrous evacuation efforts during Hurricane Rita in 2005, when some 2.5 million residents tried to leave Houston before the storm, creating monumental traffic jams and leaving 100 people dead.'" http://bzfd.it/2wCcSF4

-- "FEMA director says Harvey is probably the worst disaster in Texas history," by WaPo's Joel Achenbach and Lisa Rein: "The disaster Hurricane Harvey - now a tropical storm - has created is immense in scale, encompassing thousands of square miles of

Southeast Texas. It has brought epic flooding that will affect millions of people. Rivers are still rising, the rain still falling. 'This will be a devastating disaster, probably the worst disaster the state's seen,' William 'Brock' Long, administrator of the Federal Emergency Management Agency, told The Washington Post on Sunday. 'The recovery to this event is going to last many years to be able to help Texas and the people impacted by this event achieve a new normal.'" http://wapo.st/2xFfizz

-- CLICKER - "Hurricane Harvey in Photographs: Powerful photos from the storm battering the Gulf Coast." ***28 pix on one page*** http://nyti.ms/2vvER5o

THE IMPACT, by AP's Marcy Gordon: "With the heavy precipitation expected to last for days, it's still unclear how bad the damage will be, but there is already evidence of widespread losses. Key oil and gas facilities along the Texas Gulf Coast have temporarily shut down, and flooding in the Houston and Beaumont areas could seriously pinch gasoline supplies. Companies operating in the Gulf of Mexico have evacuated drilling platforms and rigs, crimping the flow of oil and gas. Experts believe gasoline prices could increase as much as 25 cents a gallon." http://bit.ly/2wC2sVJ

HELPING HOUSTON -- DONATE TO THE RED CROSS http://rdcrss.org/2xqrjcC

MEXICO TO TRUMP: WE'RE NOT PAYING FOR THE WALL -- CNN: "In response [to a Trump Sunday tweet], the country's foreign ministry released a statement saying Mexico would not pay for a wall or other physical barrier at the border 'under any circumstances.' 'This determination is not part of a Mexican negotiating strategy, but a principle of national sovereignty and dignity,' the statement said." http://cnn.it/2xq6VIA

TRUMP'S MONDAY -- THE PRESIDENT will lunch with VP Mike Pence and Secretary of State Rex Tillerson. At 2 p.m., he's meeting with Education Secretary Betsy DeVos. At 3:15 p.m., Finnish President Sauli Niinisto gets to the White House. At 4:20 p.m., the two leaders hold a joint press conference.

****** **A message from the American Bankers Association:** It's no secret that banks help create jobs and economic growth by lending to America's employers. But America's banks themselves employ thousands of women and men. Can you guess how many? Is it 200,000, 1 million or 2 million? Find out:
http://www.aba.com/aba/americasbanks/index.html#jobs ******

SIREN -- "Trump's business sought deal on a Trump Tower in Moscow while he ran for president," by WaPo's Carol Leonnig, Tom Hamburger and Ros Helderman: "While Donald Trump was running for president in late 2015 and early 2016, his company was pursuing a plan to develop a massive Trump Tower in Moscow, according to several people familiar with the proposal and new records reviewed by Trump Organization lawyers. As part of the discussions, a Russian-born real estate developer urged Trump to come to Moscow to tout the proposal and suggested that he could get President Vladimir Putin to say 'great things' about Trump, according to several people who have been briefed on his correspondence.

"The developer, Felix Sater, predicted in a November 2015 email that he and Trump Organization leaders would soon be celebrating - both one of the biggest residential projects in real estate history and Donald Trump's election as president, according to two of the people with knowledge of the exchange. Sater wrote to Trump Organization Executive Vice President Michael Cohen 'something to the effect of, 'Can you believe two guys from Brooklyn are going to elect a president?" said one person briefed on the email exchange. Sater emigrated from what was then the Soviet Union when he was 6 and grew up in Brooklyn.

"Trump never went to Moscow as Sater proposed. And although investors and Trump's company signed a letter of intent, they lacked the land and permits to proceed and the project was abandoned at the end of January 2016, just before the presidential primaries began, several people familiar with the proposal said.

"Nevertheless, the details of the deal, which have not previously been disclosed, provide evidence that Trump's business was actively pursuing significant commercial interests in Russia at the same time he was campaigning to be president - and in a position to determine U.S.-Russia relations. The new details from the emails, which are scheduled to be turned over to congressional investigators soon, also point to the likelihood of additional contacts between Russia-connected individuals and Trump associates during his presidential bid." http://wapo.st/2wKZJdj

SUSAN GLASSER: "For All His Fire And Fury, Trump Hasn't Changed Much: Six months in, the president who shocked the world is a lot more conventional than his words suggest" http://politi.co/2xFQw2j

TRUMP'S WHITE HOUSE -- "Trump's prized perk: Oval Office photo ops," by Josh Dawsey: "Donald Trump has grown frustrated with many parts of being president. But the former showbiz star is still in love with one perk: The Oval Office photo op. Despite the weight of multiple Russia investigations, open war with GOP leaders and a stalled congressional agenda, Trump has spent considerable time grinning behind the Resolute Desk, where he summons visitors from PGA star John Daly to former campaign aides to pastors, truck drivers, tech CEOs, teachers and even journalists to pose in front of the gold curtains.

"He tells aides, from senior White House advisers to his private bodyguard, Keith Schiller, to snap the photos on cell phones, or he shouts for Shealah Craighead, the official White House photographer, to come in. The often impatient president will sometimes pose for several minutes per sitting, taking variations of a photo with a single group. He even stands with people to inspect the photos. 'Check the lighting,' one senior White House official said, describing his comments. 'Are your eyes closed? Do you want another? He knows these are special moments for people.'

"The photos illustrate how master-marketer Trump sees the job, White House officials say - and are one part of the presidency that don't seem to grate on him, even though

other presidents have barely tolerated the click-and-grin sessions." http://politi.co/2wBV6Sa

2018 WATCH -- "Team Trump turns to Rove playbook to juice 2018 turnout," by Alex Isenstadt: "Donald Trump's White House may take a page from the Karl Rove playbook. The administration has been in talks to put conservative initiatives on the ballot in 2018 midterm battleground states in hopes of energizing base voters dispirited by the performance of Republican-controlled Washington. The strategy is similar to the one Rove used in 2004. The George W. Bush political guru helped engineer a slate of anti-gay marriage amendments that year to boost GOP turnout in swing states such as Ohio, an approach that many are convinced helped pave the way for Bush's reelection. (Rove has denied accounts that he orchestrated the 11-state effort.)

"White House aides are less interested in a ballot initiative campaign focused on social issues, fearful that it would only serve to further stoke an already-motivated liberal base. Instead, according to three people familiar with the deliberations, they're considering initiatives involving tax reform and other economic issues seen as more likely to invigorate conservatives. Tax reform also goes to the heart of Trump's agenda, and he's expected to spend much of the fall pursuing it." http://politi.co/2whIIUl

FIRST IN PLAYBOOK - HMM -- AMERICAN ACTION NETWORK, the big-time conservative outside group, is launching a five-figure TV and digital ad thanking Rep. Tim Ryan (D-Ohio) for supporting tax reform. It's AAN's first ad to applaud a Democrat. ***The ad*** http://bit.ly/2xq4fuQ

SHADE, THROWN -- "Gorka Says McMaster Has 'Obama Lens' on Threat of Radical Islam," by Jerusalem Post's Michael Wilner: "In an interview with The Jerusalem Post, Gorka said he had not once heard H.R. McMaster speak critically of the state in his six months since taking office. 'I'm not here to feed stories of palace intrigue - I hate that, and I'm still loyal to the president and his agenda,' Gorka said. But 'I have never heard Gen. McMaster say things that are anti-Israeli. I've never heard that.' Gorka did, however, offer harsh criticism of McMaster's stance toward Islamists, speaking of the violent extremism as a problem inherent to Islam itself. McMaster 'sees the threat of Islam through an Obama administration lens, meaning that religion has nothing to do with the war we are in,' Gorka said. 'He believes -- and he told me in his office -- that all of these people are just criminals. That is simply wrong.'" http://bit.ly/2wBRorR

SARAH ELLISON in October's Vanity Fair, "Exiles on Pennsylvania Avenue: How Jared and Ivanka Were Repelled by Washington's Elite: "When I asked a longtime associate how Jared and Ivanka felt about their time in Washington, the first word uttered was 'sacrificial.' ... Ivanka is more practiced in the spotlight than Kushner, though she can be cold to staffers, particularly those who are not in favor with the president, according to a former West Wing aide. 'She tries to charm you at first, and then there'll be the cutting remark in front of her father,' the former adviser added. Kushner, though he tries to be casual and jokes with other staffers, can have even more of an edge.

"Once, when [Reince] Priebus asked Kushner what his team of [Reed] Cordish and [Chris] Liddell had been up to, Kushner retorted, according to someone who heard the exchange, 'Reince, we aren't getting paid. What the f*** do you care?' ... When they lived in New York, Kushner used to remind Ivanka that 'we're in the zoo, but let's try hard not to be part of the animals.' He often would add, 'You want to be watching.' The friend noted that Kushner has traded up into a higher-powered circle: 'He is rolling with the prince of Saudi Arabia and not the real-estate guys anymore.'" http://bit.ly/2xFJHxl

WSJ: "Uber Selects Expedia CEO Dara Khosrowshahi to Lead Company," by Greg Bensinger: "Uber Technologies Inc.'s board has voted to appoint Expedia Inc. Chief Executive Dara Khosrowshahi as its new CEO, capping a tumultuous nine-week search after Travis Kalanick resigned in late June, according to people familiar with the matter. Uber's board was deciding on Sunday between Mr. Khosrowshahi and Meg Whitman, chief executive of Hewlett Packard Enterprise Co., ultimately electing the lesser-known executive who has been at the helm of Expedia since 2005. Representatives for Uber didn't return requests for comment and an Expedia spokeswoman declined to comment." http://on.wsj.com/2wBVnEB

FUN STORY -- "Former Eagles All-Pro Jon Runyan explains why he's an Uber driver - and what happens when fans recognize him," by PhillyVoice's Matt Mullin: "Runyan, the one who spent nine of his 14 seasons in the NFL with the Eagles - has actually been driving for Uber for almost nine months now. And before you ask, he isn't broke. ... [H]e made more than $40 million in his NFL career and has continued to work throughout his post-football life - in addition to his work on radio on and TV, Runyan was a two-term U.S. Representative former New Jersey's 3rd congressional district (2011-2015) and is about to enter his second season as the NFL's Vice President of Policy and Rules Administration. So, no, Runyan isn't driving for Uber because he needs the money. The truth is, he just gets bored sometimes." http://bit.ly/2vBQg2F

REMINDER -- Power Briefing, our afternoon edition, is taking a break this week.

Playbook Reads

PHOTO DU JOUR: An unidentified man helps Carlos Torres, in tube, get to dry ground after Torres drove his tractor-trailer into a freeway flooded by Tropical Storm Harvey on Sunday near downtown Houston, Texas. | Charlie Riedel/AP Photo

MORE ZINKE DRAMA -- "Sale of Interior secretary's motor home raises $25K question," by AP's Bobby Caina Calva in Helena, Montana: "U.S. Interior Secretary Ryan Zinke's dormant congressional campaign committee recently sold a 2004 motor home at a steep discount to an old friend in the Montana Legislature. But a seemingly ordinary transaction between friends, when seen through the optics of stringent

campaign finance laws, can raise a bevy of questions - especially when those friends are politically high-powered and well-connected. ...

"The buyer, state Sen. Ed Buttrey, said the 37-foot (11-meter) recreational vehicle had engine problems and other damage, which would undercut its value. But he still felt he got a 'nice deal.' Buttrey maintains there was nothing improper about the transaction. Yet he acknowledged it might prompt questions, especially because he says he's in the final vetting stages for a key post in Zinke's Interior Department." http://bit.ly/2xpG3Zo

AT THE PENTAGON -- "Trump Forges Ahead on Costly Nuclear Overhaul," by NYT's David Sanger and William Broad: "During his speech last week about Afghanistan, President Trump slipped in a line that had little to do with fighting the Taliban: 'Vast amounts' are being spent on 'our nuclear arsenal and missile defense,' he said, as the administration builds up the military. The president is doing exactly that. Last week, the Air Force announced major new contracts for an overhaul of the American nuclear force: $1.8 billion for initial development of a highly stealthy nuclear cruise missile, and nearly $700 million to begin replacing the 40-year-old Minuteman missiles in silos across the United States.

"While both programs were developed during the Obama years, the Trump administration has seized on them, with only passing nods to the debate about whether either is necessary or wise. They are the first steps in a broader remaking of the nuclear arsenal - and the bombers, submarines and missiles that deliver the weapons - that the government estimated during Mr. Obama's tenure would ultimately cost $1 trillion or more." http://nyti.ms/2xq6b6q

****** **A message from the American Bankers Association:** America's banks play a critical role in generating economic growth while delivering safety and convenience for customers. The two million women and men who work for America's banks safeguard $12.9 trillion in deposits and originate $2.4 trillion in home loans. They provide $331 billion in loans to small businesses and $175 billion in loans to farmers and ranchers. Banks' fraud protection measures stop at least $11 billion in attempted fraud each year. And thousands of banker volunteers deliver financial literacy lessons annually to millions of young Americans to help them become financially successful adults. SPEAKING OF TAX REFORM ... -- **"How Stephen M. Ross' gift to the University of Michigan ended up in tax court,"** by Detroit Free Press' Matthew Dolan and David Jesse: "On his way to becoming the University of Michigan's largest donor, Stephen M. Ross and a group of business partners donated a collective gift to his alma mater. In return, the partnership claimed a giant charitable tax deduction: $33 million. The [IRS] didn't buy it. IRS lawyers flagged Ross and his partners as engaging in a 'tax avoidance scheme lacking in economic substance ... to the benefit of Mr. Ross and his associates at Related Companies.' It would take nearly a decade of legal wrangling before U.S. Tax Judge James S. Halpern sided with the IRS last month and disallowed the entire $33-million write-off that the judge valued at a more paltry $3.4 million. The judge also

imposed maximum civil penalties for a 'gross valuation misstatement' that could now cost Ross and his partners millions more." http://on.freep.com/2vkrZ5X

THE WAVE OF PROTESTS -- "Masked anarchists violently rout right-wing demonstrators in Berkeley," by SF Chronicle's Lizzie Johnson, Erin Allday, Michael Cabanatuan and Nanette Asimov: "An army of anarchists in black clothing and masks routed a small group of right-wing demonstrators who had gathered in a Berkeley park Sunday to rail against the city's famed progressive politics, driving them out - sometimes violently - while overwhelming a huge contingent of police officers.

"Hundreds of officers tried to maintain calm in and around Martin Luther King Jr. Civic Center Park before the 1 p.m. 'No to Marxism in Berkeley' rally, putting up barricades, searching bags and confiscating sticks, masks, pepper spray and even water bottles. ... But once again, counterdemonstrators frustrated efforts by police, who numbered about 400. As the crowd swelled to several times that size, officers stepped aside and allowed hundreds of people angered by the presence of the right-wing rally to climb over the barriers into the park." http://bit.ly/2waStWA

Engineers Question Millions FEMA Spent on Generators for Puerto Rico

By *Jonathan Levin* and *Naureen S. Malik*

The Federal Emergency Management Agency spent $35.1 million on renting two emergency generators to help power blacked-out San Juan, Puerto Rico. But a group of engineers says existing infrastructure could have been used more effectively at a fraction of the cost.

Three LNG Export Terminal Authorizations Upheld in D.C. Circuit

By *Rebecca Kern*

Energy Department authorizations of liquefied natural gas export terminals in Louisiana, Maryland, and Texas were upheld today by a federal appeals court, which denied lawsuits from the Sierra Club that claimed the government didn't do enough to assess indirect environmental impacts of the projects.

Today's News

Limestone Company Not Liable as Superfund Arranger

By *Peter Hayes*

A Virginia limestone company isn't liable as a Superfund arranger for disposal of hazardous waste absent proof it hired another party for the disposal, the Western District of Virginia said.

Retailers Get More Time to Meet EPA Wood Glue

Emissions Rule

By *Pat Rizzuto*

Retailers, including Mitchell Gold + Bob Williams furniture stores, will have more time to meet formaldehyde emission limits for wood products after the EPA extended the compliance deadline and revised some requirements in last December's rule.

Shippers Question $14 Billion Cost of Greening California Ports

By *Carolyn Whetzel*

AP Moller-Maersk, Evergreen Shipping Agency, and other terminal operators, along with dozens of trucking companies, would shoulder most of the $14 billion cost of a plan to address air pollution at the city-owned ports of Los Angeles and Long Beach.

Vietnam Seen as Frontier for Solar, But Not at Expense of Coal

By *Lien Hoang*

Solar water heaters and rooftop panels are nothing new in Vietnam, but only recently has there been a glimmer of light suggesting the government will bring solar power into the national electric grid.

Biggest Aluminum Maker Outside China Aims for Low Carbon Brand

By *Jack Farchy*

United Co. Rusal, the biggest aluminum maker outside China, plans to sell a quarter of its output under a "low carbon" brand in the next three to four years to tap into demand for metal produced with less pollution and to mark itself off from rivals relying on power generated from coal.

U.K. Nuclear Industry Sees No Brexit Win from Euratom Pullout

By Alex Morales

There is no upside to Britain withdrawing from the European Union's treaty dealing with such issues as radioactive materials transport to nuclear reactor parts. That was the unanimous verdict of four industry insiders quizzed by a cross-party panel of lawmakers Nov. 1.

Gas Retailers Seek Bounty in Blue-Sky Push in Indian Capital

By *Debjit Chakraborty* and *Rajesh Kumar Singh*

A ban on dirty fuels in areas surrounding one of the world's most polluted cities is set to spur sales at India's natural-gas retailers.

Japan-Based Toda to Sell Millions in Green Bonds for Wind Farm

By *Chisaki Watanabe*

Toda Corp., a Japanese construction company, plans to sell 10 billion yen ($88

million) of green bonds to build a floating wind farm.

Emphasis on Coal Moves Japan in the Wrong Direction, Report Says

By Chisaki Watanabe

Japan's support for coal power is pushing against global trends and ignores the nation's advantages in clean-energy technology, according to a *report* released Nov. 1.

Tuesday Night Wrapup

Critics Say EPA Panel's New Scientists to Skew Public Confidence

By *Sylvia Carignan*

EPA Administrator Scott Pruitt's new scientific advisers could erode public confidence in industry and agency environmental efforts, former EPA advisers say, while industry representatives support Pruitt's vision.

Pennsylvania High Court to Weigh Duty to Warn on Asbestos

By *Leslie A. Pappas*

An appeals court in Pennsylvania is asking the state Supreme Court if manufacturers have a duty to warn about asbestos-related hazards of component parts made by third parties.

WATER
APDES Permit/Domestic Wastewater Treatment Works
Alaska WATER

Notice of the Department of Environmental Conservation announces the proposed issuance of an Alaska Pollutant Discharge Elimination System (APDES) general permit to small publicly and privately owned treatment works providing secondary treatment of domestic wastewater up to 1 million gallons per day to fresh or marine surface water. The permit establishes effluent limits for ammonia, five-day biochemical oxygen demand, dissolved oxygen, enterococci bacteria, fecal coliform bacteria, pH, total residual chlorine, and total suspended solids. The permit also allows applicants to request modified effluent limits and facility specific mixing zones for dissolved oxygen, fecal coliform bacteria, pH, or total residual chlorine. Comments and hearing requests are due July 18, 2017. Contact: Marie Klingman; DEC, Division of Water; 907-451-2101; marie.klingman@alaska.gov

GENERAL ENVIRONMENT AND SAFETY
Mobile Automotive Repair Advertising
California GENERAL ENVIRONMENT AND SAFETY

Notice announces the disapproval by the Office of Administrative Law of a proposed rule of the Bureau of Automotive Repair that would have amended regulations under 16 CCR 3371.1 and adopted regulations under 16 CCR 3351.7.1, 3351.7.2, and 3351.7.3 to establish registration, advertising, and other standards for automotive repair dealers that engage in the business of

mobile automotive repair and that do not operate a currently registered place of business where the diagnosis or repair of motor vehicles is performed. The OAL disapproved the rule because it did not meet Administrative Procedure Act procedural requirements. The action is dated June 6, 2017. Contact: Brian Clark; Bureau of Automotive Repair; 916-403-8560; brian.clark@dca.ca.gov

OCCUPATIONAL SAFETY AND HEALTH
Construction Safety Orders/Scaffolds
California OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Department of Industrial Relations, Occupational Safety and Health Standards Board, amends regulations under 8 CCR 1637 regarding construction safety orders related to the use of scaffolds. The rule requires rest platforms when hook-on and attachable ladders are used on supported scaffolds that are more than 35 feet high. The rule also establishes a maximum height of 24 inches for the bottom rung of ladders from the scaffold supporting level to prevent employee slips and falls while transitioning between the support level and the ladder. The rule is effective June 5, 2017. Contact: Marley Hart; DIR, Cal-OSHA Standards Board; 916-274-5721; mhart@dir.ca.gov

OCCUPATIONAL SAFETY AND HEALTH
General Industry Safety Orders/Emergency Action Plans
California OCCUPATIONAL SAFETY AND HEALTH

Final rule of the Department of Industrial Relations, Occupational Safety and Health Standards Board, amends regulations under 8 CCR 3220 regarding emergency evacuation plans. The rule incorporates federal standards under 29 CFR 1910.38 to require emergency evacuation procedures to identify escape procedures and exit route assignments specific to the type of evacuation. The rule also specifies that provisions cover employees performing rescue and/or medical duties. The rule is effective June 5, 2017. Regulatory Update

OCCUPATIONAL SAFETY AND HEALTH
Workers' Compensation/Attorney Disclosure Form
California OCCUPATIONAL SAFETY AND HEALTH

Notice announces the decision of the Division of Workers' Compensation to deny a request for reconsideration of a previously denied petition submitted by an individual requesting an emergency rulemaking to properly adopt DWC Form 3, the written attorney disclosure form to be provided to an injured worker at the time of their initial consultation, under 8 CCR 10134. The petitioner claims that the agency did follow procedural requirements in the adoption by

incorporation by reference of the form. The petition is denied because the agency finds that the regulation was exempt from Administrative Procedures Act formal rulemaking provisions at the time of adoption and because the agency held hearings prior to the initial adoption and amendment of the regulation. Motor Carrier Safety/Hazardous Materials Transportation
Montana HAZARDOUS MATERIALS TRANSPORTATION

Final rule of the Department of Transportation amends regulations under ARM 18.8.1502, .1503, and .1505 regarding motor carrier services safety requirements. The rule updates the incorporation by reference of federal motor carriers safety standards under 49 CFR 373 through 399, as of Feb. 17, 2017, and requires certain commercial vehicles to be equipped with electronic logging devices to record hours-of-service of drivers. The rule also updates the incorporation by reference of federal standards under 49 CFR 107, 171, 172, 173, 177, 178, and 180, as of Feb. 17, 2017, regarding transportation of hazardous materials. In addition, the rule updates the incorporation by reference of the Commercial Vehicle Safety Alliance North American Standard Out-of-Service Criteria as of April 1, 2017. The rule is effective June 24, 2017. Contact: Dennis Hult; DOT, Motor Carrier Services Division; 406-444-9237; dhult@mt.gov

Subject: Morning Energy, presented by Exelon: Put your hands in the air for Energy Week! — Pruitt's got a posse — The trade dispute that could ruin solar

By Eric Wolff | 06/26/2017 05:41 AM EDT

With help from Esther Whieldon, Andrew Restuccia, and Ben Lefebvre

WELCOME TO ENERGY WEEK! WHATEVER THAT MEANS! President Donald Trump aims to make this week Energy Week. You may recall theme weeks from such prior weeks as Tech Week, Workforce Development Week, and Infrastructure Week. The fact that these weeks seem not to have drawn much attention has more to do with the steady drumbeat of news on the Senate health care bill and the ever-widening, ever-deepening Russia scandal, as POLITICO's Andrew Restuccia and Josh Dawsey report in a story going live this morning.

Of course, part of the problem is Trump himself, who can't seem to stay focused. The White House tried to fill his schedule with wonky policy events to create a counter-narrative, but they haven't succeeded in keeping the president on topic. Asked about other theme weeks that may be coming in the future, a senior Trump aide told Andrew and Josh, "Whatever he tweets."

Here's the Energy Week itinerary:

Today Trump will discuss energy with Indian Prime Minister Narendra Modi. India is the third largest coal consumer, and it's appetite is growing, so Trump could take the opportunity to press the case for the U.S. coal industry to get into the market there. But then, Modi has said he is still committed to the Paris climate accord, and his ambitious plans to develop solar power there could alter the course in the power-starved country.

On Wednesday Trump will host Wisconsin Gov. Scott Walker, Maine Governor Paul LePage, and Nebraska Gov. Pete Ricketts along with other local and tribal leaders for a discussion regarding local and state energy.

On Thursday Trump, will give a speech on "Energy Dominance" after meeting with EPA Administrator Scott Pruitt, Interior Secretary Ryan Zinke, and Energy Secretary Rick Perry, who will host the American Energy Dominance Panel at DOE with labor and industry groups.

Not happening: A long-hoped for visit by Trump to an LNG export terminal in Louisiana this week has been scratched. The reasons? Sources tell ME that last week's Tropical Storm Cindy (complete with floating squads of fire ants), the need to be in D.C. to twist arms for the Senate health care bill, and the lack of advance planning made organizing the trip too difficult.

JUST ANOTHER MANIC MONDAY! I'm your fill-in host Eric Wolff, and I want you to know that every week is Energy Week at ME, as we provide you with the latest news with a spring in our step and a song in our hearts. It's been fun pitching in for a couple of days of ME glory, but Ben Lefebvre will take over tomorrow, so while you can send me your comments at

ewolff@politico.com, you should send your ME tips to blefebvre@politico.com. Anthony will be back Wednesday, along with trivia answers, so you can find him at aadragna@politico.com, or follow us on Twitter @ericwolff, @aadragna, @bjlefebvre, @Morning_Energy, and @POLITICOPro.

PRUITT'S POSSE: EPA's Pruitt is relying on a skeleton crew of loyalists with little experience in environmental regulations, augmented by former industry lobbyists, as he pursues an ambitious agenda of seeking to undo the agency's Obama-era rules, your morning host reports. Trump's molasses-slow pace in announcing nominations has left Pruitt running an agency out of the Office of the Administrator, with senior advisers keeping tabs on key policy making offices from the Office of Policy. In filling these jobs he has drawn from his time as Oklahoma Attorney General, bringing in former campaign staff, the former head of both the Republican Attorneys General Association and the Rule of Law Defense Fund, and a gaggle of Sen. Jim Inhofe's ex-aides. Both supporters and opponents question whether the team he's assembled is up to the task.

A tight inner circle: Pruitt hasn't made his life easier by his unwillingness — which he has transmitted to his hand-picked subordinates — to trust career staff. "If you are Pruitt, you have a handful of folks around you that you trust and have confidence in," said Stephen Brown, top lobbyist for oil refiner Tesoro. "You head an agency of 15,000, many of whom can be described as 'the resistance.' What would anyone do except hunker down and deal only with those you trust?"

Golden padlock: Investigative Reports and Editors, a journalists' association, gave Pruitt its "golden padlock" award on Friday for requiring a two-year lawsuit to get him to turnover key emails form his time as Oklahoma Attorney general.

GTM: TRADE DISPUTE COULD CRUSH U.S. SOLAR INDUSTRY: A report out today by GTM Research finds that if Trump implements the solar import trade tariffs solar panel makers Suniva and SolarWorld Americas are seeking, it could wipe out nearly two-thirds of the solar projects set to be built in the U.S. cumulatively from 2018 through 2022. Between 36.1 gigawatts and 47.5 gigawatts might fall to the wayside if Trump sets tariffs and minimum prices for imported solar panels and cells, the report says. It "could send shockwaves through the U.S. solar industry," GTM said in the report.

The largest solar plants, which are in the utility-scale sector, will be hit the hardest because the majority are moving forward under power purchase agreements that may need to be canceled or renegotiated, the report said. Developers are scrambling to pre-order cheap imported modules in case Trump enacts the changes next year. But Cory Honeyman of GTM tells ME that only about 1.3 gigawatts-worth of projects are on track to get modules in time. The U.S. International Trade Commission is slated to rule on the trade complaint by Sept. 22 and send its findings to Trump in mid-November.

ZINKE GOIN' TO THE COUNTRY (PEACH EATING UNCERTAIN): Interior's Zinke will head to the resort town of Lake Tahoe, Nev. to make an announcement on the Trump administration's "commitment to rural communities." Zinke will be addressing the Rule of Law Defense Fund (which, of course, ME mentioned above in connection to Pruitt).

Then on Tuesday Zinke heads to Whitefish, Mont. (the most delicious town to spread on a bagel) to address the Western Governors Association. For Zinke, the event is a chance to head back to the town where he grew up and starred on the high school football team (Go Bulldogs!).

** **A message from Exelon:** Innovation always begins with the spirit of discovery—the search for new ideas and answers to our biggest questions. As America's largest clean energy provider, what happens when 34,000 Exelon engineers, analysts, and innovators put their heads together to tackle the energy industry's biggest challenges? Find out here: http://bit.ly/2szvZN4 **

CITY MAYORS CLIMATE POWERS, ACTIVATE! Former New York Mayor Michael Bloomberg will today announce a $200 million philanthropic effort to help cities fight climate change and to increase their voices at the national level, the New York Times reports. Bloomberg is set to make the announcement as part of a speech at the U.S. Conference of Mayors' annual meeting in Miami Beach, Fla. As part of the effort, cities will be able to apply for six- and seven-figure grants to support policy experimentation.

Form of: Climate resolutions! The mayors will also vote today on resolutions to establish a 100 percent renewables by 2035 target, accelerating the electrification of transportation, and "Supporting a Cities-Driven Plan to Reverse Climate Change." Climate warriors look toward cities and states to carry on the carbon reduction work as the federal government under President Trump pulls the federal government out of the carbon reduction business.

Shape of: G20 demands! The mayors of 46 "megacities", have put out a statement asking the G20 leaders to aggressively push for carbon reductions when they meet in Bonn, Germany in July. "You have the privilege of leadership at a unique moment in history to help realize the potential of the Paris Agreement," the statement says. "The cities of the world and their citizens have a shared vision for a just and sustainable future... Together with business leaders we have already decided on a climate-safe future of opportunity, optimism and innovation -- there is no alternative."

APPROPRIATION JUNCTION, WHAT'S YOUR FUNCTION? Congressional appropriators a cramming in hearings and markups like it's the week before finals, which seems about right for late June (Hey, your host is from New York. The school year **lasts** forever). EPA Administrator Scott Pruitt will meet with Sen. Lisa Murkowski and her band of Interior-Environment appropriators on Tuesday, and the heads of the Bureau of Reclamation and the U.S. Army Corps of Engineers will spend their Wednesday morning with Sen. Lamar Alexander and his subcommittee. Even NASA's budget is getting a hearing on Thursday.

On the House side, the Energy and Water Development appropriation will get a subcommittee markup on the House side on Wednesday.

MARK 'EM UP, DANNO! The House Natural Resources Committee will have a markup today on a slew of mostly minor bills, but there are a couple of noteworthy votes. The committee will take up Rep. Hal Rogers RECLAIM Act that would pump $200 million a year for five years into coal-mine clean up (a program that the Trump budget disappeared), and a bill from Rep. Don

Young to advance the construction of King Cove road, the project long-sought by the Alaska delegation that was stymied by the Obama administration.

QATAR LOVES EXXON: Qatari Emir Sheikh Tamim bin Hamad al-Thani and Exxon Mobil CEO Darren Woods met over the weekend to talk 'continued cooperation' amid increasing tensions in the region, Reuters reports . Exxon has been instrumental in opening up Qatar's natural gas fields, and the tiny country is now the top LNG supplier in the world. Secretary of State Rex Tillerson, Woods' predecessor at Exxon, issued a statement Sunday saying that Qatar has begun a review of the demands from its neighbors Saudi Arabia, the United Arab Emirates, Bahrain and Egypt, which cut ties with Qatar, accusing the country of supporting extremism. "While some of the elements will be very difficult for Qatar to meet, there are significant areas which provide a basis for ongoing dialogue leading to resolution," Tillerson said.

CAP'S LIST: The Center for American Progress is out today with a website listing the fossil fuel affiliations of political appointees working in the Trump administration. "Across the administration, political staff have close ties to the Koch brothers, Exxon, and coal trade associations, among others -- and many of the people tasked with regulating the industry were getting their paycheck from it just months ago," Erin Auel, a research associate for CAP, said in a statement.

NUCLEAR WASTE MERGER DECAYS TO STABLE FORM: Valhi, the parent company of Waste Control Specialists, will not appeal a federal court decision to block a merger with Energy Solutions, a low-level nuclear waste management company. The Nuclear Regulatory Commission on Thursday suspended an application by WCS to build a high-level nuclear waste facility in Texas.

DRY LAKE: BAD FOR FISHING, GOOD FOR SOLAR: BLM hopes to sell solar leases in Dry Lake Nevada, the first leases under a new rule, Pro's Esther Whieldon reports. the agency is conducting environmental reviews in advance of the sale in the hopes of streamlining permitting and construction.

MOVERS, SHAKERS: Jamie Simler, director of FERC's Office of Energy Market Regulation, has retired. Anna Cochrane, deputy director of the office, has been promoted to director. Jette Gebhart has been named acting deputy director.

Stephen Kittredge will be leaving the Electric Power Supply Association to run government affairs for Owens Corning.

HAPPENING THIS WEEK

Monday

All Day — FERC conference on software and market efficiency, 888 First St. NE

10 a.m. — NRDC Experts to Discuss New Report About Baseload & Electricity Grid Reliability, NRDC offices, 1152 15th Street, NW #300, RSVP eheyd@nrdc.org or to get call-in info

5:30 p.m. — Senate votes on confirmation of Kristine Svinicki to be a member of the Nuclear Regulatory Commission

Tuesday

All Day — FERC conference on software and market efficiency, 888 First St. NE

9 a.m. — Environmental Law Institute conference on chemical safety, feat. Rep. John Shimkus (R-Ill.), Milken Institute School of Public Health, George Washington University, 950 New Hampshire Ave., NW

9:30 a.m. — FY2018 budget request for the Environmental Protection Agency, feat. EPA Administrator Scott Pruitt, Senate Appropriations Committee, Interior, Environment, and Related Agencies Subcommittee, Dirksen 124

10 a.m. — Full committee markup, incl. the RECLAIM Act and a bill to advance King Cove Road, House Natural Resources Committee, Longworth 1324

2:45 p.m. — Developing and Deploying Advanced Clean Energy Technologies, Senate Environment and Public Works Committee, Subcommittee on Clean Air and Nuclear Safety, Dirksen 406

Wednesday

All Day — FERC conference on software and market efficiency, 888 First St. NE

10 a.m. — Oversight Hearing "Examining Policy Impacts of Excessive Litigation Against the Department of the Interior", House Natural Resources Committee, Subcomittee on Oversight and investigations, Longworth 1324

11 a.m. — Markup of FY 2018 Energy and Water Appropriations Bill, House Appropriations Committee, Energy and Water Development and Related Agencies Subcommittee, Rayburn 2362-B

2:30 p.m. — FY2018 budget request for the U.S. Army Corps of Engineers and the U.S. Department of the Interior, Bureau of Reclamation, feat. Lt. Gen. Todd T. Semonite Commanding General and Chief of Engineers, U.S. Army Corps of Engineers, Douglas Lamont, Senior Official Performing the Duties of the Assistant Secretary of the Army (Civil Works), Alan Mikkelsen Acting Commissioner Bureau of Reclamation, Senate Appropriations Committee, Energy and Water Development Subcommittee, Dirksen 138

Thursday

10 a.m. — FY2018 budget request for NASA, feat. Robert M. Lightfoot Jr., Acting Administrator for NASA, Senate Appropriations Committee, Commerce, Justice, Science, and Related Agencies Subcommittee, Dirksen 192

10 a.m. — Oversight Hearing on "Examining Access to Oil and Gas Development on Federal Lands", House Natural Resources Committee, Subcommittee on Energy and Mineral Resources, Longworth 1324

Friday

No energy events.

THAT'S ALL FOR ME!

** **A message from Exelon:** Innovation always begins with the spirit of discovery—the search for new ideas and answers to our biggest questions. As Washington, D.C.'s energy provider and America's largest source of clean energy, we're committed to continual investment in innovation. Every day, Exelon's engineers, analysts, and innovators are revolutionizing the way energy is generated, sold, and delivered across the United States and around the world. So, what happens when 34,000 Exelon employees come together at our annual Innovation Expo in Washington, D.C. this week to tackle the energy industry's biggest challenges? Stories from POLITICO Pro

BLM eyes Nevada Dry Lake Valley for first solar leases under new rule Back

By Esther Whieldon | 06/23/2017 05:33 PM EDT

The Interior Department's Bureau of Land Management is eyeing Nevada's Dry Lake Valley for its first solar lease sale under BLM's new competitive leasing rule, according to a BLM official.

The Dry Lake area "really fits within what we're looking for as far as low conflict and is really suitable for a competitive lease process," John Kalish, chief of BLM's office of renewable energy and rights of way, told POLITICO today. In 2014, BLM successfully auctioned off six parcels in the area known as the Dry Lake solar energy zone, which sits near transmission lines that make it attractive to developers who have expressed interest in new developments in the area, Kalish said.

Under the competitive leasing rule BLM issued in November, the agency runs environmental reviews to identify areas where solar projects are unlikely to cause major environmental problems before it auctions off the land for development. Front-loading the process with those reviews is aimed at reducing the time it takes to site new projects.

Kalish said BLM could issue a lease sale notice for the Dry Lake area by early to mid-2018. The agency is also considering new leases under the process in California and Arizona.

BLM wants to "make sure we know fully what all of the potential impacts would be before we make those lands available," Kalish said.

WHAT'S NEXT: Before it can hold a lease auction, BLM will need to amend its land-use plan for the area and identify the specific parcels it wants to offer up in 2018, Kalish said.

Summaries

AIR
Commercial Package Air Conditioning and Heating Equipment Test Procedures
AIR

Notice of the Energy Department requests information to inform regarding potential revisions to the test procedures for commercial package air conditioning and heating equipment. The agency seeks comments on the testing of products with newly available features, including evaporatively cooled commercial unitary air conditioners (ECUACs), water-cooled commercial unitary air conditioners (WCUACs), and air-cooled commercial unitary air conditioners with a rated cooling capacity greater than or equal to 65,000 British thermal units per hour (Btu/h) and less than 760,000 Btu/h. The agency also seeks comments on the testing of ECUACs and WCUACs with a rated cooling capacity less than 65,000 Btu/h, all classes of variable refrigerant flow multisplit air conditioners and heat pumps, and all classes of computer room air conditioners. In addition, the agency seeks comments on a potential new test procedure for dedicated outdoor air systems. Comments are due Aug. 24, 2017. Contact: Catherine Rivest; DOE, Office of Energy Efficiency and Renewable Energy; 202-586-7335; ApplianceStandardsQuestions@ee.doe.gov. Citations: 10 CFR 429, 431

Regulatory Update

AIR

Indiana/Clean Air Act Consent Decree Modification

AIR

Notice of the Justice Department announces a proposed third modification to a 2012 consent decree in United States v. Essroc Cement Co. (Civil Action No. 2:11-cv-01650-DSC), lodged on July 19, 2017, with the U.S. District Court for the Western District of Pennsylvania. The original consent decree (77 FR 517; 01/05/2012) addressed alleged violations under the Clean Air Act against six Essroc cement facilities in three states and in Puerto Rico. The proposed modification, which affects Essroc's facility in Logansport, Ind., revises nitrogen oxides (NOx) emissions control requirements to no longer require installation of the selective noncatalytic reduction NOx control technology at Kiln 2 and to instead require installation of water injection technology at both kilns. The proposed modification also reduces the allowable NOx emissions rate at both kilns and specifies that the company is now known as Lehigh Hanson ECC. Comments are due Aug. 24, 2017. Contact: DOJ, Environment and Natural Resources Division; 202-514-2701

82 FR 34553 (07/25/2017)

Regulatory Update

ENDANGERED SPECIES

Washington State/Marine Mammals Incidental Take

ENDANGERED SPECIES

Notice of the National Marine Fisheries Service announces the receipt of a request for authorization to take 11 species of marine mammals incidental to pile driving activities for pier restoration located on Elliot Bay in Seattle. The proposed project will make limited modifications to Pier 63 and demolish and reconstruct Pier 62 between September 2017 and February 2018. The authorization allows take in the form of Level A and Level B harassment. A separate incidental take authorization application will be prepared for an expected second season of work at the site. Comments are due Aug. 24, 2017. Contact: Stephanie Egger; NMFS, Office of Protected Resources; 301-427-8401; ITP.egger@noaa.gov

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
M4E(R2) Common Technical Document Guidance
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of a final guidance for industry on preparing efficacy components of an application file for registration of human pharmaceuticals in the common technical document format. The guidance, M4E(R2): The Common Technical Document–Efficacy, revises the 2001 M4E guidance to standardize the presentation of benefit-risk information in regulatory submissions of pharmaceutical products. The guidance was prepared under the auspices of the International Council for Harmonisation, which addresses the harmonization of technical requirements for the registration of pharmaceutical products for human use among regulators worldwide. Comments may be submitted at any time. Contact: Pujita Vaidya; FDA,

Center for Drug Evaluation and Research; 301-796-0684

82 FR 34538 (07/25/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Nevada/Paiute Pipeline 2018 Expansion Project
GENERAL ENVIRONMENT AND SAFETY

Notice of FERC announces the receipt of an application for the 2018 Expansion Project, proposed by Paiute Pipeline Co. of Las Vegas. The project involves the installation of 4.61 miles of pipeline and the replacement of 3.85 miles of pipeline in Douglas and Lyon counties and Carson City, Nev. The project will provide incremental firm transportation services of 5,635 dekatherms per day on Paiute's system. The agency will complete an environmental assessment or issue a notice of schedule of environmental review by Oct. 17, 2017. Comments are due Aug. 9, 2017. GENERAL ENVIRONMENT AND SAFETY
Nutrition Labeling for Restaurants/Retail Establishments
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a correction to a July 3, 2017, extension (82 FR 30730) of the comment period for a May 4, 2017, interim final rule (82 FR 20825) that delays the compliance date for a 2014 final rule that established requirements for nutrition labeling of standard menu items in restaurants and retail food establishments (79 FR 71155; 12/01/2014). The correction revises the RIN number, which was published incorrectly. The correct RIN number is 0910-ZA48. The correction is effective July 25, 2017. Contact: Lisa Granger; FDA, Office of Policy; 301-796-9115. Citations: 21 CFR 11.1, 101.9, 101.10, 101.11

82 FR 34401 (07/25/2017)

Regulatory Update

GENERAL ENVIRONMENT AND SAFETY
Permitted Daily Exposures/Residual Solvents
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces the availability of recommendations for the permitted daily exposures (PDEs) for the residual solvents triethylamine and methylisobutylketone in pharmaceuticals. The guidance provides for a new PDE for trimethylamine, a revised PDE to 45 milligrams per day for the solvent methylisobutylketone, and placement of methylisobutylketone into class 2. The revision is based on reconsideration of the severity of effects identified in rat studies and the human relevance of effects identified in mouse carcinogenicity study. The recommendations were developed under the methods for establishing exposure limits in the guidance for industry, Q3C Impurities: Residual Solvents, and under the auspices of the International Council for Harmonisation. GENERAL ENVIRONMENT AND SAFETY
Presidential Advisory Council on Infrastructure Executive Order
GENERAL ENVIRONMENT AND SAFETY

Notice of the Executive Office of the President announces the issuance of Executive Order 13805 concerning the establishment of the Presidential Advisory Council on Infrastructure. The order provides that it will be the policy of the executive branch to advance infrastructure projects that create high-quality jobs for American workers, enhance productivity, improve quality of life, protect the environment, and strengthen economic growth. The order also provides that the council, established under the Commerce Department, will consist of not more than 15 members, including two co-chairs. Members will be drawn from the public and will have subject-matter expertise in real estate, finance, construction, communications and technology, transportation and logistics, labor, environmental policy, regional and economic development, and other appropriate sectors. The council will make recommendations concerning infrastructure priorities, acceleration of the preconstruction and approval processes, development of financing options to generate new investment over the next 10 years, and additional methods to increase public-private partnerships. The council also will make recommendations concerning best practices to improve procurement methods, grant procedures, and delivery systems and the promotion of advanced manufacturing and technological innovation. In addition, the council will submit a report to the president summarizing its findings and recommendations. The council will terminate on Dec. 31, 2018, unless extended by the president, or within 60 days of submitting the report, whichever occurs first. The order is dated July 19, 2017.

GENERAL ENVIRONMENT AND SAFETY
Voluntary Medical Device Manufacturing and Product Quality Program Workshop
GENERAL ENVIRONMENT AND SAFETY

Notice of the FDA announces a workshop concerning the Voluntary Medical Device Manufacturing and Product Quality Pilot Program. The workshop will announce the proposed framework and preliminary outline of the program that recognizes an independent assessment of manufacturing and product quality. The agenda includes discussions concerning the independent assessment, details of participation, rules of engagement, monitoring and performance expectations, and potential modifications of FDA oversight actions in response to demonstrated manufacturing quality performance. The workshop is scheduled for Oct. 10, 2017, in Silver Spring, Md., and via webcast. Comments are due Oct. 18, 2017. OIL AND GAS INDUSTRY
Hydraulic Fracturing on Federal and Indian Lands
OIL AND GAS INDUSTRY

Proposed rule of the Bureau of Land Management would rescind a March 26, 2015, final rule (80 FR 16128) regarding hydraulic fracturing on federal and Indian lands. The 2015 rule addressed well construction requirements and management of fluids that flow back to the surface as a result of hydraulic fracturing operations and required public disclosure of the chemicals used in hydraulic fracturing fluid. The current proposed rule would return affected CFR sections to the language that existed immediately before the effective date of the 2015 final rule. The action is being taken under Executive Order 13783 (82 FR 16093, 03/31/2017), which required the secretary of the Interior Department to review and revise or rescind certain rules that potentially burden the development and use of domestically produced energy resources. Comments on the proposed rule and the supporting environmental assessment are due Sept. 25, 2017. Contact: Steven Wells; BLM, Fluid Minerals Division; 202-912-7143. Bad diplomatic agreements may win prizes, but they do not bring peace. Often, they hasten conflict.

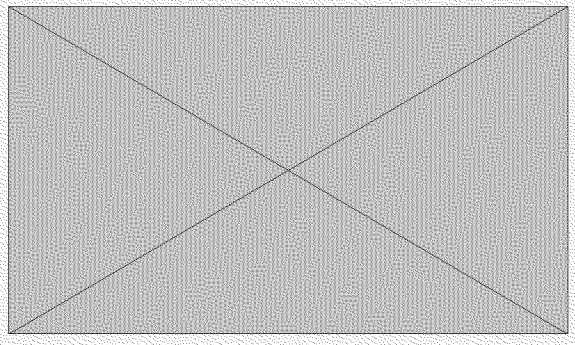
AEI's daily publication of independent research, insightful analysis, and scholarly debate



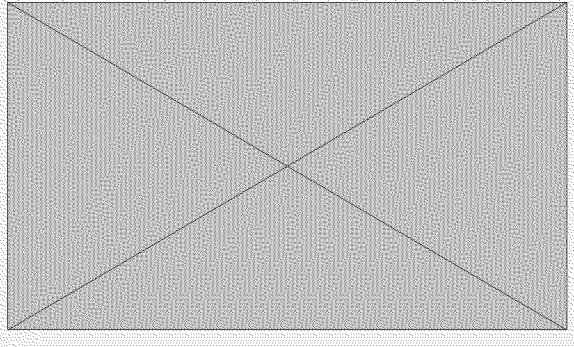
Reuters

Should President Trump recertify the Iran deal?

Michael Rubin | Washington Examiner

Bad diplomatic agreements may win prizes, but they do not bring peace. Often, they hasten conflict. When it comes to hard diplomacy with rogue regimes, there are never any shortcuts. Should President Trump walk away from the Iran deal? Probably not. But he should make its 90-day continuance contingent on implementation of all parts of the deal, including rapid

inspection of Iranian military bases where nuclear weapons work might continue.

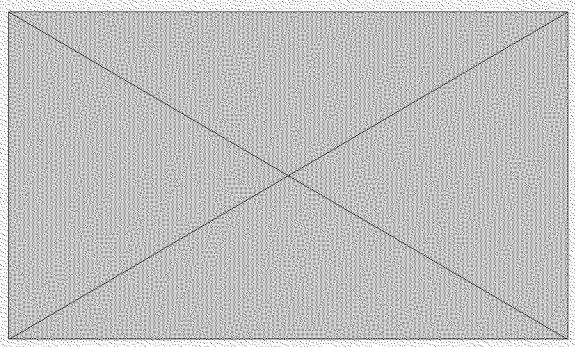


Reuters

Hey, Democrats: It's OK to get behind tax cuts

James Pethokoukis | The Week

Just because President Trump supports an idea doesn't mean it's terrible. This is a problem for Democrats. It wasn't so long ago that they also wanted to cut corporate tax rates: In 2015, President Obama proposed axing tax breaks and loopholes to pay for slashing the corporate rate to 28 percent from 35 percent. Of course, it's hard to blame Democrats for developing a knee-jerk revulsion given how badly Republicans are distorting the issues.



Reuters

The Republican base is beyond President Trump's control

Jonah Goldberg | National Review Online

Judge Roy Moore's victory last week in a runoff against Sen. Luther Strange (R-AL) may signal that the base is not President Trump's army to command. The president endorsed Strange, and it didn't help. There's remarkably little substance to this populist fever: Strange was more conservative than Moore but less bombastic. Republican politicians can't ignore the anger, but stoking it is pointless. Eventually, politicians have to govern.

Testimony: The American interest in Iraq today

Kenneth Pollack | Testimony before the House Armed Services Committee

Every year since 2003, knowledgeable Americans have been warning that the current year is absolutely crucial in Iraq. They have been right every time, and 2018 will be no exception. But as always at seminal moments like this, it's important to remind ourselves of what our interests are in

Iraq. After 2003, an endless parade of American mistakes produced a dangerous set of internal threats to US interests.

Subject: Today on Climate Beat

November 27, 2017

Today on Climate Beat . . .

. . . we visited Montreal, where a State Department official recently said the federal government supports the "goals and approach" of a global deal reached last year to limit the production and use of refrigerants that act as potent greenhouse gases, offering a rare example of a climate policy the Trump administration endorses.

In litigation news, a federal district court judge is allowing environmental groups' lawsuit challenging the Trump administration's approval of the cross-border permit for the Keystone XL tar sands pipeline to proceed, rejecting multiple motions by the administration and the developer to dismiss the National Environmental Policy Act case.

And in biofuel updates, we reported that EPA issued its final denial of refiners' petitions to shift the renewable fuel standard's "point of obligation," with oil sector groups expected to sue over the decision as they push for shifting what they see as an unfair compliance burden away from refiners to fuel blenders.

Subject: POLITICO's Morning Energy: Pruitt's approach to EPA panned by former chiefs — Zinke nears decision on Bears Ears — Carper floats separating consideration of NRC picks

By Anthony Adragna | 06/09/2017 10:00 AM EDT

With help from Eric Wolff, Sara Stefanini and Alex Guillén

WANT THAT OLD THING BACK? EPA Administrator Scott Pruitt has pressed the idea of taking the agency "back to basics," returning to its roots of cleaning up toxic waste sites under the Superfund program and providing safe drinking water, while rejecting the Obama administration's initiatives on issues like climate change. But as Pro's Alex Guillén reports, previous EPA administrators from both parties say the agency's mission is far broader than the cramped version Pruitt's promoting. "I don't think it has to be an either-or, nor should it be," said Christine Todd Whitman, George W. Bush's first EPA administrator. "Superfund is not the only issue for human health. Water pollution is a huge issue and very important and you need to work on it, but it's not the only issue. Air is an issue too. Even if you don't want to believe in climate change, you've got to believe that carbon and mercury are not good for you."

It's not just old administrators though. Thomas Jorling, who co-authored the Clean Air Act in 1970 and the Clean Water Act in 1972 as a Senate Republican staffer, said that Pruitt's philosophy of "EPA originalism" is wrong. Continuing to stick to a limited set of cherry-picked priorities Pruitt has chosen to champion is "just disingenuous," he added. "It's all basically a smokescreen to their real intention, which is kind of a moral and ethical corruption, to ... restore the dependence of the United States energy system on fossil fuels." The agency did not make Pruitt available for an interview.

ME EXTRA - HISTORY LESSON: Lee Thomas, Reagan's second-term EPA administrator, said Pruitt's budget-slashing, anti-regulatory agenda has certain parallels to one of his predecessors: Anne Gorsuch Burford, Reagan's first EPA chief and the mother of Supreme Court Justice Neil Gorsuch. Burford, who died in 2004, had no previous relationship with agency staff, reduced EPA's budget by 22 percent and once boasted about cutting a book of water regulations from six inches thick to just half an inch. She ultimately resigned in 1983 after being cited for contempt of Congress in a management scandal regarding Superfund, at that time a new program. More than a dozen other agency officials quit in the surrounding months amid a turbulent atmosphere at the agency.

Thomas, at that time deputy director at the Federal Emergency Management Agency, came on as a top official to help right EPA, and two years later returned as administrator after Bill Ruckelshaus had stabilized the agency. "I've seen it go bad. And I've seen what it takes to go back on track," Thomas said. "The public does not want EPA to go through that kind of crisis."

G-7'S (TOTALLY AWKWARD) ENVIRONMENT MEETING: G-7 environment ministers meet in Bologna on Sunday and Monday, just 10 days after Trump announced he was ditching the Paris climate agreement (unless the rest of the world agrees to better terms, of course). Pruitt

will be there as the American representative. The biggest battle to watch for: Will the other six ministers and Pruitt come to any agreement on a communiqué that supports efforts to tackle climate change? (ME bets no.) Disagreements over climate already scuppered a joint statement at the G-7 energy ministers meeting, and Trump refused to back commitments made at the leaders summit last month.

Benvenuti! Pruitt tweeted a picture Thursday from Italy after "mtg w/ U.S. companies doing business in Europe." The agency told ME representatives from Whirlpool, DuPont, Chemours, First Solar and 3M attended, as well as a few Italian companies, but declined to provide any further details on Pruitt's schedule while in Europe.

TGIF MY FRIENDS! I'm your host Anthony Adragna, and Hunton & Williams' Joe Stanko was first to identify Sen. Lamar Alexander as the former Cabinet member (Education Secretary under President George H.W. Bush) now in the Senate. Your end-of-the-week fun: The spouse of which U.S. senator co-owns the legendary Strand Bookstore? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

ROUND, ROUND, GET AROUND: He's apparently still in discussions with the White House ahead of a final recommendation about whether to rescind or tweak the designation of the Bears Ears National Monument in Utah, but Interior Secretary Ryan Zinke is planning to keep chugging on his national tour. Zinke plans to visit Connecticut, New Hampshire, Maine, and Massachusetts during a four-day swing kicking off June 13. That trip will include a tour of the hotly contested Katahdin Woods and Waters National Monument in Maine, another of the more than two dozen monument designations under the Antiquities Act currently under review by the Trump administration.

TRUMP HAILS NEW COAL MINE'S OPENING: Trump hailed the opening Thursday of Corsa Coal Corp. in Pennsylvania, a new mine digging coal used to make steel, as proof deregulation is helping bring jobs to the industry, ABC News reports. "We have withdrawn the United States from the horrendous Paris climate accord, something that would have put our country back decades and decades, we would have never allowed ourselves to be great again," the president said in a video message. About 200 miners, business leaders, and politicians celebrated its opening under a tent amid mining headgear labeled "Make Coal Great Again."

RIDIN' SOLO? Sen. Tom Carper, the top EPW Democrat, has asked Republicans to split off the reappointment of Kristine Svinicki to the NRC from other two Republican nominees in order to fast track the process, Pro's Darius Dixon reports. "One of the things I've suggested to Chairman [John] Barrasso is to find a way to pair those two maybe with one Democrat, and there's a Democrat on the NRC whose term expires ... next year," Carper said. Svinicki, who has been an NRC commissioner for nine years, would have to step down, even temporarily, if the Senate fails to confirm her for another five-year term by June 30.

FOR YOUR WEEKEND RADAR: Activists will gather Saturday at city halls and statehouses across the country to protest Trump's decision to pull out of the Paris climate accord. "Our communities cannot and will not allow these reckless policies and decisions to wreck our

future," organizers, who include 350.org, the Sierra Club, The Climate Reality Project and many more, said in a statement.

Now here's a far away hearing: Senate Energy and Natural Resources plans to hold a field hearing at 10 a.m. local time Saturday in Cordova, Alaska - accessible only by boat or plane (book you tickets for Mudhole Smith Airport). Representatives from Sandia National Laboratory, Alaska Center for Energy and Power, Alaska Village Electric Cooperative and Alaskan Brewing Company will be examining microgrids and hybrid energy systems. Both Lisa Murkowski and Maria Cantwell, the top Republican and Democrat on the committee, are slated to participate.

WHITEHOUSE: CCS CREDITS BILL READY TO FOR REPRISE: A bill to expand tax credits for carbon capture projects should be ready for introduction soon, Sen. Sheldon Whitehouse told ME. "It's close enough that we're having conversations about when and final steps," he said. The bill, which will be co-sponsored with Sen. Heidi Heitkamp , would attempt to revive is one a trio of "orphaned" tax credits, along with credits for geothermal and for advanced nuclear plants - that were left out of the 2015 omnibus bill that extended solar and wind tax incentives.

Warns 'raiding party' has hit EPA: Republican "heads would be exploding" if a Democratic administration simply ignored requests for information as Pruitt's EPA has done to Democrats, Whitehouse told ME. "Basically, the fossil fuel industry has sent a raiding party into EPA and taken it over," the Rhode Island Democrat said. "I think he feels a kind of immunity from any kind of accountability because the fossil fuel industry so owns the Republican Party and so owns him."

JUDGE, IRKED BY DOJ, LETS KIDS CLIMATE CASE GO TO TRIAL: A federal judge on Thursday slammed the Justice Department for trying to force her hand on a legal matter in the lawsuit brought by children seeking to compel sweeping federal action on greenhouse gas emissions. The Trump administration had asked Judge Ann Aiken of the U.S. District Court in Oregon to let them appeal her decision not to dismiss the lawsuit before moving into the discovery phase. In a short order, Aiken criticized DOJ for threatening to go to the 9th Circuit anyway by today if she hadn't already ruled on the request, noting that the suit is already on an expedited schedule. She said the government's arguments were too weak to secure even faster consideration, and panned DOJ because it asked for a rapid decision after waiting four months to make its initial request. Aiken also gave the green light to move closer to the trial phase. The Trump administration could still try to get the 9th Circuit involved, but the appellate court is unlikely to intervene in an ongoing case.

BIPARTISAN BILL PASSES SENATE: Senators passed Wildlife Innovation and Longevity Driver Act (S. 826) by voice vote Thursday. The legislation, co-sponsored by Chairman John Barrasso and Carper, would reauthorize funding for the Partners for Fish and Wildlife Program in which the Interior partnerships with private landowners in fighting invasive species and offer rewards for innovative technologies to stop invasive species. The bill cleared committee in April.

TROLL SO HARD: French President Emmanuel Macron poked Trump again Thursday by

launching a website urging anyone concerned with climate change to move to France, POLITICO Europe's Nicholas Vinocur reports. The website - www.MakeOurPlanetGreatAgain.fr - plays on Trump's campaign slogan and invites researchers, entrepreneurs and NGO workers from around the world to state their interest in climate change and their specialist field, then apply for positions and immigration documents to come to France.

ANOTHER BOLD PROMISE: Did everyone remember it's the White House's Infrastructure Week? Well, Vice President Mike Pence certainly did, and told a working luncheon Thursday that Trump intended to speed up the approval of new projects. "We'll revolutionize federal permitting and review with the goal of reducing wait times from 10 years to two years," he said.

ENERGY PRIORITIES OUTLINED FOR NAFTA: A bipartisan group of eight senators has outlined specific "principles" that the Trump administration should consider when it renegotiates NAFTA, Pro Trade's Adam Behsudi reports. "NAFTA has played a key role in all North American energy markets including electricity, renewable, oil, and natural gas, as each market is highly integrated with and remains dependent on vital energy infrastructure and trade crossings that border the United States, Canada, and Mexico," they wrote in a letter organized by Sen. John Cornyn.

EPA UNION DEMANDS GUVS FIGHT FOR GREAT LAKES: The union representing some 1,000 EPA employees has asked to meet with six Midwest governors - Mark Dayton of Minnesota, Eric Holcomb of Indiana, John Kasich of Ohio, Bruce Rauner of Illinois, Rick Snyder of Michigan and Scott Walker of Wisconsin - to strongly oppose proposed budget cuts to the agency that they warn would severely impact the Great Lakes. "Aside from the long term health and safety of the public in the Great Lakes region, the economic threats to the region must be recognized," Michael Mikulka, president of Local 704 of the American Federation of Government Employees, said in a statement.

THEY'RE FIRED UP: Green groups are burning up over the Forest Service's proposal this week to expand two coal leases inside Colorado national forests. Local and national green groups are bristling at the plan to bulldoze wilderness for several new miles of roads and build new drilling pads for methane vents in an area home to black bears, elk and lynx. "Giving away our western public lands to the coal industry isn't energy independence, it's a scheme to make executives and shareholders rich at our expense," said Shannon Hughes of WildEarth Guardians. A 45-day public comment period ends July 24; if approved, the next step is a second approval from the Bureau of Land Management.

SOMETHING SYMBOLIC HERE: California Gov. Jerry Brown and Energy Secretary (and former Texas governor) Rick Perry shaking hands while going opposite directions on an escalator during a trip to China. Pic.

REPORT: EPA DIDN'T UPDATE POLICIES AS REQUIRED: The GAO released a report Thursday finding EPA failed to update the agency's policy statement for the Science Advisory Board as required under a congressional spending bill, Pro's Alex Guillén reports. "EPA did not update its policies or requirements for the SAB as directed by the explanatory statement," it said.

REPORT: CLEAN ENERGY'S DIRTY SECRET: America Rising Squared is out with a new white paper arguing there are "great human and environmental costs" behind the production of clean energy technologies like solar panels, wind turbines, electric vehicles and EV batteries. "The inconvenient truth is that these 'clean' sources of energy are produced under the worst of labor and environmental rights violations," it says.

DEMOCRATIC REPORT: ENERGY EFFICIENCY EFFICIENTLY CREATES JOBS: Democrats on the Joint Economic Committee, a congressional economic advisory committee formed in 1946, are out with a report today arguing for the job-creating capacity of energy efficiency measures. The report notes that EE jobs bounced up to 2.2 million in 2016, 7 percent increase from the previous year. The report calls on Congress to fully fund the Energy Star program, scheduled to be eliminated under Trump's budget, and in additional research.

AD WATCH: 15 PERCENT ETHANOL ALERT: Growth energy is launching a seven-figure TV and digital ad buy in D.C. and other markets to promote Sen. Deb Fischer's bill to allow year-round sale of 15 percent ethanol fuel. The bill is set to get a hearing at EPW next week.

MOVER, SHAKER! Former House Speaker John Boehner has joined Arizona Mining Inc.'s board of directors (h/t POLITICO Influence).

June 2, 2017

Today on Climate Beat . . .

. . . we took a trip to Asia, reporting that Energy Secretary Rick Perry's visit to Japan and China for a series of international meetings on clean energy means that he is likely to receive an earful from foreign leaders about President Donald Trump's recent decision to leave the Paris Agreement.

Speaking of Paris, our daily news roundup gathered the best coverage – including our own – of Trump's decision on the landmark global deal. We also highlighted some of this week's must-read stories, which naturally had a heavy dose of Paris news.

Back in China, California Gov. Jerry Brown (D) is visiting the world's top greenhouse gas emitter next week to begin preliminary talks to connect the state's cap-and-trade program with China's GHG trading programs.

And over at EPA, a retired scientist with more than a quarter-century of service at the agency has sent Administrator Scott Pruitt a scathing letter outlining his continuing concerns about its direction under his leadership, including a lack of effort to address climate change.

Subject: Playbook Power Briefing, presented by Chevron: Handicappers signal a Dem 'wave' for the House -- MURKOWSKI indicates Alexander-Murray needs vote before tax reform -- CORKER turns on TILLERSON

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Chevron

By JAKE SHERMAN (sherman@politico.com; @JakeSherman), ANNA PALMER (anna@politico.com; @apalmerdc), DANIEL LIPPMAN (daniel@politico.com; @dlippman) and ZACH MONTELLARO (zmontellaro@politico.com; @ZachMontellaro)

Good FRIDAY afternoon. TAKE THIS IN, FOR A SECOND: DAVE WASSERMAN (@redistrict) is the gold standard when it comes to handicapping House races. He has changed the ratings in seven different seats. But, most notably: Reps. **PETER ROSKAM (R-ILL.), RODNEY FRELINGHUYSEN (R-N.J.)** and **REP. JOHN CULBERSON (R-TEXAS)** have all moved from lean Republican to toss up.

FRELINGHUYSEN is a 23-year veteran of Congress and the chairman of the House Appropriations Committee. **CULBERSON** is a 16-year veteran who chairs an Appropriations subcommittee. **ROSKAM** has been in D.C. since 2008, and is the chairman of the Ways and Means tax subcommittee. Yes, it's early. But if these members of the House are in danger, that's a troubling sign for the GOP in 2018. ***Dave Wasserman's analysis*** http://bit.ly/2yRiPM0

-- AMY WALTER, also at The Cook Political Report, has this headline: **"A Wave Is a Comin'"** http://bit.ly/2hHzpLe

THE TAX BATTLE -- "Murkowski Tax Vote Contingent on Stabilizing Individual Health Insurance Market," by Roll Call's Joe Williams: "Sen. Lisa Murkowski suggested on Thursday that her vote on the current version of the tax overhaul is contingent on passing a separate bill to stabilize the individual health insurance market. ...

"'I think that there is a path and I think the path is a reasonable path,' the Alaska Republican said of her support for [Alexander-Murray]. 'If the Congress is going to move forward with repeal of the individual mandate, we absolutely must have the Alexander-Murray piece that is passed into law.'" http://bit.ly/2jDJZU8

-- READ BETWEEN THE LINES: Alexander-Murray will get a vote in the first part of December and will end up in a big spending package of some sort.

POLITICO KILLING IT IN FLORIDA -- "MIAMI (AP) - Florida Democratic Party

chairman resigns after women complained about his sexually inappropriate comments, demeanor." ***The original story, by Matt Dixon and Marc Caputo*** http://politi.co/2mBRJGX

ON THE RUSSIA INVESTIGATION -- SCOOP -- "Goldstone Ready to Come to U.S. and Talk to Mueller," by NBC News' Robert Windrem: "The British publicist who helped set up the fateful meeting between Donald Trump Jr. and a group of Russians at Trump Tower in June 2016 is ready to meet with Special Prosecutor Robert Mueller's office, according to several people familiar with the matter. Rob Goldstone has been living in Bangkok, Thailand, but has been communicating with Mueller's office through his lawyer, said a source close to Goldstone. ...

"[S]ources close to Goldstone and familiar with the investigation say they expect he will travel to the United States at some point 'in the near future,' as one put it. Goldstone helped set up - and attended - the June 9, 2016, meeting at Trump Tower at which Russian lawyer Natalia Veselnitskaya says she presented information to Donald Trump Jr. and other key Trump aides." http://nbcnews.to/2hHIaoA

-- "Trump to Pay His Own Legal Bills, Set Up Fund to Cover Staff," by Bloomberg's Shannon Pettypiece: "President Donald Trump has started paying his own legal bills related to the Russia probe, rather than charging them to his campaign or the [RNC], and is finalizing a plan to use personal funds to help current and former White House staff with their legal costs.

"The Office of Government Ethics and a tax firm are working on a mechanism for Trump to contribute to staffers' legal bills that would meet regulatory and ethical standards, White House lawyer Ty Cobb said in an interview. The White House is hoping the issue will be resolved shortly, said Cobb, who declined to elaborate further on the details of the plan. ...

"Trump is only considering using his personal funds to pay for the legal bills of current and former White House aides, not people who served exclusively during the campaign. That would rule out some of the highest profile figures in the investigations, including former campaign manager Paul Manafort and his deputy, Richard Gates, both of whom were indicted on charges of money laundering last month. George Papadopoulos, a campaign foreign policy adviser who pleaded guilty to making false statements to the government, also wouldn't be eligible." https://bloom.bg/2hHMO5S

TRUMP INC. -- "A Panama tower carries Trump's name and ties to organized crime," by NBC News' Aggelos Petropoulos and Richard Engel in Panama City: "An NBC News investigation into the Trump Ocean Club, in conjunction with Reuters, shows that the project was riddled with brokers, customers and investors who have been linked to drug trafficking and international crime. [Former financial crimes prosecutor Mauricio] Ceballos, who investigated the project, went as far as to call the skyscraper 'a vehicle for money laundering.' The investigation revealed no indication that the Trump Organization or members of the Trump family engaged in any illegal activity, or knew of

the criminal backgrounds of some of the project's associates. But Ventura said that the Trumps never asked any questions about the buyers or where the money was coming from." http://nbcnews.to/2hFCBH1

****** **A message from Chevron:** When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat- buckwheat. Watch the video: http://politi.co/2ArIBXv ******

DISASTER RELIEF UPDATE -- "White House seeks $44 billion in third disaster request," by John Bresnahan, Jen Scholtes and Sarah Ferris: "The White House sent its third disaster request to Congress on Friday, asking for $44 billion to aid recovery from this summer's deadly trio of hurricanes. If the funding package is approved, Congress will have kicked in nearly $100 billion in extra money this year to help storm-ravaged communities in places like Texas, Puerto Rico, the U.S. Virgin Islands and Florida.

"Speaker Paul Ryan (R-Wis.) welcomed the administration's move, adding in a statement, 'The House will review the request and work with the administration and members from affected states to help the victims get the resources they need to recover and rebuild.' Other lawmakers, however, voiced strong complaints that the package fell short of expectations." http://politi.co/2hHK9sT

AT 1600 PENNSYLVANIA -- "Lawyers call White House sexual harassment policy 'useless'," by Matt Nussbaum: "As Congress and the private sector move to improve reporting procedures and increase transparency amid multiplying revelations of widespread harassment, the White House remains uniquely opaque -- and reliant on guidance lawyers say falls short of common standards for shielding employees from abuse. Employees joining the White House are provided with new-hire documents that contain two pages defining sexual harassment and discrimination and giving directions for reporting such incidents.

"The document, which was obtained by POLITICO, lists three 'strategies for addressing discrimination': "Talk to the individual about any behavior, actions or decisions that appear discriminatory; Discuss the situation or incident with an appropriate supervisor; Seek EEO [Equal Employment Opportunity] counseling.' The paperwork was not substantially updated or changed from what was used by the Obama administration when President Donald Trump took office, according to a White House source. Five lawyers who reviewed the document for POLITICO raised concerns." http://politi.co/2jxG2jD

CLINTONWORLD V. GILLIBRAND -- @PhilippeReines: "Ken Starr spent $70 million on a consensual blowjob. Senate voted to keep POTUS WJC. But not enough for you @SenGillibrand? Over 20 yrs you took the Clintons' endorsements, money, and seat. Hypocrite. Interesting strategy for 2020 primaries. Best of luck."

JESSE JACKSON SR. announced he has been diagnosed with Parkinson's disease.

His letter http://bit.ly/2hHMhkw

EIGHT FORMER FEMALE STAFFERS TO SEN. AL FRANKEN SPEAK OUT: "Many of us spent years working for Senator Franken in Minnesota and Washington. In our time working for the Senator, he treated us with the utmost respect. He valued our work and our opinions and was a champion for women both in the legislation he supported and in promoting women to leadership roles in our offices," the eight staffers said in a statement. ***The staffers: Katherine Blauvelt, Alexandra Fetissoff, Jessi Held, Lisbeth Kaufman, Natalie Volin Lehr, Karen Saxe, Charlotte Slaiman and Bethany Snyder.***

2020 WATCH -- "McAuliffe to raise money for cash-strapped DNC," by Gabe Debenedetti: "Terry McAuliffe is set to host the [DNC's] major year-end fundraising reception, according to an invitation obtained by POLITICO -- making the outgoing Virginia governor and former DNC chairman one of the only potential 2020 contenders to raise much-needed funds for the party as it struggles for cash.

TERRYWORLD'S THINKING: "'It's easy to take shots at the DNC, but what we need is more of the people who want to be considered leaders in the party to step and actually do something to make the DNC stronger,' said one Democrat close to McAuliffe. 'Send some emails, host some fundraisers, do what you can to make sure Democrats have the resources to compete everywhere.'" http://politi.co/2jxD8eB

THE REX BEAT -- "Corker-Tillerson alliance frays: The GOP Senate Foreign Relations Committee chairman and longtime defender joins a chorus of criticism over the Secretary of State's plans to restructure his department," by Nahal Toosi: "Sen. Bob Corker, having already turned on the president, has a new target for his frustration: Secretary of State Rex Tillerson.The Tennessee Republican and Senate Foreign Relations Committee chairman has voiced concerns about Tillerson's management of the State Department and his still-fuzzy plans to restructure it. ... Until recently, Corker has been a steadfast ally of Tillerson ...

"Corker is far from the only one expressing concern about Tillerson's plans. Last week, a bipartisan group of Senate staffers met with Tillerson aides to get an update on Tillerson's plan to reshape his department. The State staffers shared a presentation, a copy of which was obtained by POLITICO, that infuriated the Senate aides with its lack of substance." http://politi.co/2hz58u0 ... ***The presentation*** http://politi.co/2jBSazZ

2018 WATCH -- "Indiana candidate's D.C.-area home complicates Senate campaign," by AP's Brian Slodysko: "A campaign stop for Rep. Luke Messer in his bid for Senate involves traveling from his family's home in suburban Washington back to Indiana, where aides say he typically stays overnight with his mom. Although living outside the state is hardly a first for members of Indiana's congressional delegation, past elections signal Messer's address could complicate his plans to win the Republican primary and ultimately unseat Democratic Sen. Joe Donnelly next year. ...

"[Messer's] family lives in McLean, Virginia, keeps a vacation house in Dandridge, Tennessee, yet sold their home in Indiana two years after his election to Congress in 2012. They now say a two-bedroom house Messer co-owns with his mom in Greensburg is the family's Indiana residence. One of his chief primary rivals, fellow Rep. Todd Rokita, has already seized on that as a line of attack." http://bit.ly/2hHmzMZ

TOM RIDGE IN CRITICAL CONDITION -- PennLive.com's Travis Kellar: "Former Pennsylvania governor Tom Ridge remains in critical condition after an emergency heart procedure that took place on Thursday. An official with Dell Seton Medical Center at The University of Texas confirmed his condition as of Friday morning. Ridge, 72, was at a Republican Governors Association conference in Austin on Thursday when at about 7 a.m., he asked hotel staff for medical assistance. He was at the conference for Ridge Global, his security and risk management firm." http://bit.ly/2jyzkKh

ON THE WORLD'S STAGE -- "North Korea rules out negotiations on nuclear weapons," by Reuters' Stephanie Nebehay: "North Korea on Friday ruled out negotiations with Washington as long as joint U.S-South Korea military exercises continue, and said that Pyongyang's atomic weapons program would remain as a deterrent against a U.S. nuclear threat. In an interview with Reuters, Han Tae Song, North Korea's ambassador to the United Nations in Geneva, brushed off the new sanctions which the Trump administration has said it is preparing, as well as the possibility of North Korea being added to a U.S. list of states sponsoring terrorism." http://reut.rs/2jwwpl8

-- "Life under Kim Jong Un: Recent North Korean escapees relate how the secretive country has changed under the 'Great Successor'," by WaPo's Anna Fifield: "In six months of interviews in South Korea and Thailand, The Washington Post talked with more than 25 North Koreans from different walks of life who lived in Kim Jong Un's North Korea and managed to escape from it. In barbecue restaurants, cramped apartments and hotel rooms, these refugees provided the fullest account to date of daily life inside North Korea and how it has changed, and how it hasn't, since Kim took over from his father, Kim Jong Il, at the end of 2011. Many are from the northern parts of the country that border China -- the part of North Korea where life is toughest, and where knowledge about the outside world just across the river is most widespread -- and are from the relatively small segment of the population that is prepared to take the risks involved in trying to escape. ...

"But in talking about their personal experiences, including torture and the culture of surveillance, they recounted the hardships of daily life under Kim Jong Un's regime. They paint a picture of a once-communist state that has all but broken down, its state-directed economy at a standstill. Today, North Koreans are making their own way, earning money in an entrepreneurial and often illegal fashion. There are only a few problems in North Korea these days that money can't solve." http://wapo.st/2hHLWOI

MEDIAWATCH -- FT: "New editor of Vanity Fair inherits inbox full of big challenges: Radhika Jones will have to cut editorial budget by 30% as secular trends

bite," by Matthew Garrahan in London and Shannon Bond in New York: "Condé Nast will find some of its savings for Vanity Fair in Ms Jones's remuneration package: she will earn about $500,000 a year, substantially less than Mr Carter, who was paid about $2m a year plus a generous perks package that included use of a private plane, according to one person briefed on the arrangements." http://on.ft.com/2AOol2P

-- "Vox Media's editorial employees are seeking to unionize," by Business Insider's Maxwell Tani http://read.bi/2AXep7G

SPOTTED: Condoleezza Rice this morning in the lobby of the Mandarin Oriental in D.C. She's speaking to Deloitte ... Qatari Foreign Minister and Deputy PM Sheikh Mohammed bin Abdulrahman Al-Thani this morning walking around the same hotel - on his trip to D.C. this week, he met with Sen. Chuck Schumer (D-N.Y.), House Minority Leader Nancy Pelosi (D-Calif.), and Sens. Bob Corker (D-Tenn.) and Ben Cardin (D-Md.).

OUT AND ABOUT -- SPOTTED at the RFK Human Rights award laureate event at the Kennedy Caucus Room in Russell yesterday: Reps. Steny Hoyer (D-Md.) and Joe Kennedy III (D-Mass), Sen. Ed Markey (D-Mass.), Kerry Kennedy, Kathleen Kennedy Townsend, Alfredo Romero (the award winner), Richard Iannuzzi, Maria Hinojosa, Luis Almagro, William Schultz.

SPOTTED at a fundraiser last night for Massachusetts State Sen. Eric Lesser, an Obama WH alum, held in the D.C. office of Blue Engine Message & Media: South Bend, Indiana Mayor Pete Buttigieg, former Amb. to Italy John Phillips, Reggie Love, Erik Smith, Nate Tibbits, Amb. Peter Selfridge (Ret.), Andrew Platt, Bob Duff, Sal DiDomenico, Adam Hinds, Will Brownsberger, Mike Brady, Andrew Bates, Ross Baird, Nate Rawlings, Roger Fisk.

SPOTTED last night at the Niskanen Center's pre-holiday party: Jerry Taylor, Joe Coon, Andrew Mills, Liz Mair, Ian Vasquez, Gene Healy, Rachel Wolbers, Tim Lee, David Mastio, Megan McArdle, Peter Suderman, Bruce Bartlett, Brooke Oberwetter, Dara Lind, Libby Wuller, Gordon Cummings, Adele Morris, Joseph Brazauskas, Chuck Podolak, Hector Arguello, Alex Hergott, Ali McCormick, Andrew Harding

TRANSITIONS -- Cristina Antelo is joining VantageKnight as CEO. She was previously at the Podesta Group. ... **Mike Meece,** currently the chief of staff of former President George W. Bush's office, will join N2 Capital in 2018 as chief operating officer. ... **Andrea Palermo** started today as press secretary for Rep. Jim Banks (R-Ind.). She was previously communications coordinator for Heritage Action. ... **Brian Forest** , chief speechwriter for Senate Majority Leader Mitch McConnell, is joining the National Association of Manufacturers as director of strategic messaging.

WEEKEND WEDDING -- OBAMA ALUMNI - CAROLINE SIMMONS, a Democratic Connecticut state representative, recently married **ART LINARES,** a Republican Connecticut state senator. Simmons, the youngest serving female legislator in the state,

served as a policy analyst at DHS during the Obama administration and then was director of special projects in the counterterrorism coordinator's office; she also worked on the Obama 2008 campaign. The couple met on the Judiciary Committee in the Connecticut General Assembly as well as through the Bi-Partisan Young Legislators Caucus. The wedding was in Old Lyme, and Sen. Richard Blumenthal (D-Conn.) and Rep. Jim Himes (D-Conn.) were among the attendees. ***PICS:*** http://bit.ly/2AVeSaB ... http://politi.co/2AP1Jzb ... http://politi.co/2AP5wfK ... http://politi.co/2zNgMMy ... ***Blumenthal photobombing the couple*** http://politi.co/2ANV1JB

****** **A message from Chevron:** This is a story about DOERS, butterflies, and buckwheat. In '75, the endangered El Segundo Blue butterfly was found near a Chevron refinery. We protected the habitat and planted the only thing they eat-buckwheat. We're still planting and keeping an eye on our littlest neighbor. Watch the video: http://politi.co/2ArlBXv ******

Subject: POLITICO's Morning Transportation, presented by Citizens for On Time Flights: Congress turns to DOT's 2018 budget — G-20 leaders commits to aviation security measures — Graves fails to convince general aviation on ATC proposal

By Tanya Snyder and Lauren Gardner | 07/10/2017 10:00 AM EDT

With help from Brianna Gurciullo

IT BEGINS WITH A THUD: Something other than jostling over the FAA bill will be happening today, MT readers. House appropriators will mark up their fiscal 2018 spending bill for DOT Tuesday night, which means the legislation should be released tonight around 7 p.m. (House spending bills typically come out 24 hours before the subcommittee moves them). THUD is one of a handful of bills left to duke it out over $311 billion remaining for discretionary spending, as our friends (including MT alum Jennifer Scholtes) over at Pro's Budget and Appropriations Brief report . That's compared to the more than $346 billion those bills allocated for fiscal 2017.

What we're watching for: Trucking riders on federal preemption of state requirements for meal and rest breaks (which Senate Commerce tucked into its FAA bill last month), plus anything that broaches long-standing limits on size and weight. On funding, we're keeping an eye on the accounts for Capital Investment Grants (which the Trump administration has proposed phasing out), Amtrak (especially its long-distance routes) and TIGER grants, which remain popular among lawmakers despite the White House's suggestion to nix them.

IT'S MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren is sharing the MT reins with Stephanie, so send your tips, feedback and lyrics to lgardner@politico.com or @Gardner_LM and sbeasley@politico.com or @Steph_Beasley.

"From your red balloon, you were a super high-tech jet fighter. Floating over planet earth, come back down here, I'll show you where it hurts."

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving and sailing?

THE WEEK AHEAD:

Monday - The State Department holds an event to mark the 10th anniversary of the U.S.-European Union Open Skies Agreement.

Tuesday - AUVSI and TRB host the fourth annual Automated Vehicle Symposium in San Francisco. The Senate Homeland Security and Governmental Affairs Committee holds a hearing on the nominations of David Glawe to be Homeland Security undersecretary for intelligence and analysis and David Pekoske to be assistant Homeland Security secretary in the Transportation

Security Administration. The House Appropriations Transportation-HUD Subcommittee marks up the fiscal 2018 spending bill.

Wednesday - ARTBA hosts the annual Public-Private Partnerships in Transportation conference. The Senate Environment and Public Works Committee holds a hearing on the use of TIFIA and innovative financing. The National Press Club hosts a luncheonwith Amtrak CEO Charles W. "Wick" Moorman IV. The Congressional PORTS Caucus co-chairs host a briefing on American coastal ports-of-entry. The House Appropriations Homeland Security subcommittee holds a markup of the fiscal 2018 Homeland Security Appropriations bill.

Thursday - The Senate Finance Committee holds a confirmation hearing on Kevin McAleenan's nomination to be U.S. Customs and Border Protection commissioner. The Senate Appropriations Transportation-HUD Subcommittee holds a hearing on DOT's fiscal 2018 budget. Transportation Secretary Elaine Chao will testify.

Friday - The Federal Aviation Administration holds a Drone Advisory Committee meeting.

GLOBAL HONCHOS TALK AIR SECURITY AT G-20: World leaders gathered at the G-20 summit in Germany pledged Friday to implement "effective and proportionate" aviation security measures to prevent terrorist attacks, reports Cathy Buyck. They promised to work together to review, update, adapt and put in place international security standards based on evolving threats and potential vulnerabilities. A UN Security Council resolution signed last year urged closer collaboration among countries to prevent terrorist attacks and enhance global aviation security.

**** A message from Citizens for On Time Flights:** We should be outraged that a critical piece of our nation's infrastructure is "stuck in the 1950s." But that's where America's air traffic control system is today. ATC reform will bring us into the 21st century. That will mean fewer delays, enhanced safety and reduced emissions. Learn more at OnTimeFlights.Org. **

GRAVES STRUGGLES TO EXPLAIN GA BENEFITS OF FAA BILL: Rep. Sam Graves (R-Mo.) reportedly struggled to answer tough questions at an aviation town hall in his hometown airport Saturday about why the FAA bill's plan to separate the air traffic control system from the FAA is good for general aviation. "I don't have a good answer for you," Graves replied, according to a report by the Aircraft Owners and Pilots Association that will be published (along with video) later today. "There are still a lot of details that have to be worked out in this process. And that's done by bureaucrats, unfortunately." The crowd was said to be smaller than previous events, and though everyone was polite, he was up against a united front of opposition to the plan. Graves, in a statement provided to POLITICO Saturday, acknowledged that "some differences remain" between him and the general aviation executives and experts at the event, but that it's important GA stay involved in the debate and "maintain a seat at the table" throughout the process.

FLORIDA MAN CHARGED AFTER IN-FLIGHT BRAWL: A Tampa, Fla., man was charged Friday with interfering with flight crewmembers after allegedly assaulting a Delta attendant on a plane that had taken off Thursday night for Beijing from Seattle. The U.S. attorney's office in the Western District of Washington identified him as 23-year-old Joseph

Daniel Hudek IV, who could face up to 20 years in prison and a $250,000 fine. Hudek, who was traveling in first class on a "dependent pass," made several trips to the bathroom, then lunged for an exit door and tried to open it. One flight attendant broke a wine bottle over Hudek's head in an attempt to subdue him after he had punched another attendant and a passenger multiple times (they had to go to the hospital for "severe facial injuries" after they landed). "Several additional passengers" helped to eventually restrain Hudek, who had managed to turn the emergency release lever of the door halfway. (Read the complaint here - it's bonkers.)

NOT A DRINK COUPON: In emails to members of its frequent flyer program Thursday, Southwest Airlines implored customers to "help us advocate for national ATC modernization." If you click the link to "let your voice be heard," it directs you to http://www.ontimeflights.org/. (Alaska Airlines also promoted the website in a May blog post about air traffic control.) The program, dubbed "Citizens for On Time Flights," is "facilitated" by Airlines for America, according to spokesperson Chris Billeter. "The traveling and shipping public carries too much of the burden of delays, cancellations and wasted fuel, and Citizens for On Time Flights is dedicated to giving consumers who want more efficient air travel a voice in the debate for a better air traffic control system," Billeter emailed MT.

State by state: The group has what appear to be chapters set up in a handful of states, most of which are notable for being the homes of key authorizing and appropriating lawmakers who either oppose spinning off air traffic control operations from the FAA and into a nonprofit corporation, or at least aren't enthusiastically pushing it. They include Mississippi (Sen. Roger Wicker), South Dakota (Senate Commerce Chairman John Thune), Florida (Sen. Bill Nelson and Rep. Mario Diaz-Balart) and Maine (Sen. Susan Collins). There's also one in Arizona.

SOME LIGHT READING: Amtrak recently finished its five-year plan for the railroad's "service lines" (think Northeast Corridor, state-supported routes and long-distance lines, among others) required under the FAST Act, and passenger rail enthusiasts can check the report out here. It includes detailed breakdowns of where Amtrak gets its financial resources from and how exactly it spends them on operating and capital needs, as well as making debt service payments.

OPEN SKIES TURNS 25: The State Department is hosting an event this evening to celebrate the 25th anniversary of the first U.S. Open Skies agreement, signed with the Netherlands, and the 10th anniversary of the agreement with the European Union. The Partnership for Open & Fair Skies issued a statement saying they hope that "before the next milestone anniversary," the U.S. government will start enforcing the agreements to prevent countries like the United Arab Emirates and Qatar from "breaking the rules by funneling tens of billions of dollars in unfair government subsidies to ... airlines, distorting the international market and harming American workers."

LOBBYING UPDATE: Diana Cooper, senior vice president of policy and strategy for drone maker PrecisionHawk, registered to lobby on FAA reauthorization, bills connected to drones and federal regulations.

ARRIVALS AND DEPARTURES: David Friedman, a top official at NHTSA and the Department of Energy under President Barack Obama, has joined Consumers Union, the policy

arm of Consumer Reports, as the director of cars and product policy and analysis. Matthew Lehner, former spokesman for Obama-era FRA Administrator Sarah Feinberg and a Sen. Mary Landrieu (D-La.) alum, starts a new job today in Chicago at Uptake, a tech company that uses data analytics to help other companies (including some in the transportation realm) spot potential problems. And Houston Mills will move to UPS' global public affairs team to work on federal aviation policy and international aviation standards.

THE AUTOBAHN:

- "If you want your five bucks back, the FAA is refunding drone registrations." Gizmodo.

- Royal Jordanian, Kuwait Airlines lift laptop ban on U.S. flights. The Associated Press.

- "Battle emerging inside Trump administration over who controls immigration and refugees." Washington Post.

- "How to get to New York during Penn Station's summer repairs." The New York Times.

- "1 dead in Amtrak collision with vehicle in Richmond." ABC8 News.

- "Michigan's new Motor City: Ann Arbor as a driverless-car hub." The New York Times.

THE COUNTDOWN: DOT appropriations run out in 83 days. The FAA reauthorization expires in 83 days. Highway and transit policy is up for renewal in 1,179 days.

** **A message from Citizens for On Time Flights:** Innovation is in America's DNA. If this weren't the case, we'd still be watching black-and-white televisions, computers would be the size of refrigerators, and phones would be tethered to walls. Yet when it comes to our nation's air traffic control (ATC) system, we're using WW-II era technology. Today, controllers sequence planes for take-off using paper strips and track them in flight with ground-based radar. This outdated and inefficient system is responsible for nearly half of all flight delays, yet efforts to reform and improve it have stalled. American taxpayers deserve a 21st-century ATC system that delivers enhanced safety, fewer delays and cancellations, reduced emissions and lower costs. Opponents say reforming the system is too complicated. That's a copout. Since when has a challenge kept America from innovating? Congress has the opportunity to fix the ATC system's structure while giving taxpayers the modern system they deserve. Visit OnTimeFlights.Org to learn more. **

Subject: Morning Energy, presented by Chevron: House tees up debate on Energy and Water title — N.Y. nuke subsidy survives first court test — Russian sanctions bill on way to becoming law

By Anthony Adragna | 07/26/2017 05:40 AM EDT

With help from Esther Whieldon and Annie Snider

LET THERE BE MINI-BUS! The House takes up its first spending package today, with nearly four dozen amendments to the Energy and Water title rounding out a list of the first 72 approved by the House Rules Committee. Here are some of the items that caught our eye:

— Democrats will try to strip a rider protecting the Trump administration's withdrawal of the Obama-era Waters of the U.S. rule from legal challenges.

— Another Democratic amendment seeks to restore $921 million to DOE's Energy Efficiency and Renewable Energy account, paid for with cuts to nuclear weapons programs.

— Republican Rep. Paul Gosar's amendment would block work on the social cost of carbon.

— Nevada Democrats are trying to block pro-Yucca Mountain language with an amendment that's sure to fail.

— Ohio Republican Steve Stivers wants to block any funding for Cape Wind, the offshore wind project in Massachusetts' Nantucket Sound that has been stalled for years.

— Florida Republican Ron DeSantis proposed an amendment effectively eliminating the position of director of Civil Works of the Army Corps of Engineers.

— Michigan Republicans Paul Mitchell and Bill Huizenga will get a vote on their amendment aimed at keeping the Corps from slow-walking a controversial study related to keeping Asian carp from reaching the Great Lakes.

— New Jersey Democrat Bonnie Watson Coleman proposed defunding any work in conjunction with President Donald Trump's January executive order aimed at speeding the environmental review of high-priority infrastructure projects, like the Keystone XL pipeline.

— And, of course, the perennial light bulb rider blocking enforcement of DOE efficiency standards returns from Rep. Michael Burgess.

Meanwhile, the League of Conservation Voters urged House lawmakers to reject the mini-spending package, H.R. 3219 (115). The bill "severely cuts federal investment in clean energy, abandoning the research and development that has led to economic growth, job creation, and numerous public health and environmental benefits," the group writes. It also blasts the inclusion of policy riders in the package.

WELCOME TO WEDNESDAY! I'm your host Anthony Adragna, and former Commerce official Randy Mye was first to identify 19th-century Colorado Sen. Henry Teller as the first to win reelection after switching parties. For today: Who won a general election to the House but lost a special election to fill out the remainder of a term on the *same day* back in 2012? Send your tips, energy gossip and comments to aadragna@politico.com, or follow us on Twitter @AnthonyAdragna, @Morning_Energy, and @POLITICOPro.

CUOMO WINS ROUND ONE: A federal judge on Tuesday tossed out a challenge from non-nuclear generators in New York over Gov. Andrew Cuomo's multi-billion dollar nuclear subsidy, POLITICO New York's David Giambusso reports. Judge Valerie Caproni of U.S. District Court for the Southern District of New York said the "zero emission credits" going to four flagging nuclear reactors upstate did not interfere with wholesale energy markets. Instead, she ruled, the program advanced a state policy goal that was within New York's purview and stopped short of treading on FERC's terrain. "Although FERC has substantial authority over interstate wholesale energy sales, the regulation of retail rates for sales of electricity belongs to the States," Caproni wrote in her ruling. "A whole host of measures that States might employ to encourage clean energy development — such as tax incentives or direct subsidies — involve propping up the operation of a generator that might otherwise be unprofitable."

Plaintiffs vow to appeal: Non-nuclear generators argued the subsidy, estimated to cost state utility customers between $2.8 billion and $7.6 billion, interfered with FERC's jurisdiction, and they plan to appeal the ruling, David and Marie J. French report. "The New York Public Service Commission failed ratepayers last year when it instituted a $7.6 billion bailout for uneconomic nuclear plants with almost no public input," New Yorkers for Fair Energy Coalition, one of the plaintiffs in the case, said in a statement. "We will continue to oppose the bailout in the courts and other public forums."

Cuomo praised Caproni's ruling in his own statement: "At a time when the federal government has abdicated its leadership on climate change, New York will continue to do all that we can to ensure that current and future generations have a clean and safe environment in which to live and prosper," the governor said.

9th CIRCUIT PAUSES KIDS CLIMATE SUIT FOR NOW: Three judges on the 9th Circuit Court of Appeals on Tuesday hit the pause button on the kids' climate lawsuit asking for an order forcing the government to take immediate and dramatic action on greenhouse gas emissions. The Trump administration has made an emergency request for the 9th Circuit to stop the proceedings after a federal judge in Oregon said the lawsuit from a group of children and young adults could move to trial. The 9th Circuit's one-page order only says that the pause is temporary and another forthcoming order will address the Trump administration's request more fully. It was issued by Judges Alfred Goodwin, a Richard Nixon appointee, Alex Kozinski (Reagan) and Marsha Berzon (Clinton).

SANCTIONS SAIL THROUGH: House lawmakers voted overwhelmingly Tuesday 419-3 to approve new sanctions on Russia, Iran and North Korea, POLITICO's Elana Schor reports. Arguably the biggest outstanding question is whether Trump will force Congress to override a

veto. "The White House is reviewing the House legislation and awaits a final legislative package for the President's desk," Press Secretary Sarah Huckabee Sanders said Tuesday.

MORE NOMINATIONS SENT OVER: After being nominated last week, the White House sent over to the Senate the nominations of Joseph Balash to be an assistant secretary of Interior and Sam Clovis to be USDA's top scientist on Tuesday. But we're still waiting for the White House to send over the paperwork for Trump's last two nominees for the quorum-less FERC, Democratic Senate staffer Rich Glick and Republican lawyer Kevin McIntyre, whose nominations were announced June 28 and July 13.

** **A message from Chevron**: When an endangered butterfly was found near a Chevron refinery, we protected the habitat and still plant the only thing they eat—buckwheat. Watch the video: http://bit.ly/2vFizh5 **

ANOTHER WEIRD DAY! Energy Secretary Rick Perry's odd Tuesday started when he published an op-ed on Obamacare repeal in an Ohio newspaper (nothing going on in the energy world, Mr. Secretary?), but it took an even more bizarre turn when DOE confirmed Russian pranksters successfully got a 20-minute conversation with him last week, Pro's Darius Dixon reports. The trickery occurred July 19 but got published Tuesday in a story in the Pravda Report, a Russian publication, that linked to the audio. Topics discussed on the call, which Perry thought was with a Ukrainian official on behalf of Prime Minister Volodymyr Groysman, included the 2015 Paris climate agreement, the Nord Stream 2 natural gas pipeline and possibility of a biofuel devised from home-brewed alcohol and manure.

Another day, another rally: Perry and Zinke, along with Trump aide Kellyanne Conway and VA Secretary David Shulkin, traveled with the president to Youngstown, Ohio on Tuesday night for a rally. Picture here.

CARBON TAX PUSHES GOES ON: Two of the Senate's biggest climate hawks — Democrats Sheldon Whitehouse and Brian Schatz — are taking another shot at their carbon tax legislation and will unveil their latest proposal today at the American Enterprise Institute at 3 p.m. Last Congress, the duo proposed legislation they said would curb carbon dioxide emissions by more than 40 percent by 2025 compared to 2005 levels and return revenue collected through the tax to the U.S. public. Details on today's event here.

SUPERFUND RECS ARE OUT: EPA Administrator Scott Pruitt's push to speed the cleanup of Superfund sites got a major boost Tuesday with the release of 42 recommendations from a task force, Pro's Alex Guillén reports. Pruitt also signed a memo with a number of immediate actions, including identifying as many sites as possible for deletion from the National Priorities List and prioritizing sites "where the risk of human exposure is not fully controlled."

WHAT'S IN THAT TAP WATER? Just because your drinking water utility gets a passing grade from federal regulators doesn't mean there aren't dangerous chemicals in your drinking water — that's the message the Environmental Working Group is underscoring with a massive update to its database compiling monitoring records from nearly 50,000 public water systems across the country. EWG found that between 2010-2015, utilities tested for about 500 different

contaminants and found 267 at varying levels in Americans' drinking water, including 93 linked to cancer, 78 associated with brain and nervous system damage and 63 suspected of causing harm to children or fetuses. More than half of the chemicals found are not federally regulated, meaning the federal government has not decided what constitutes an unsafe level of exposure.

BOARDROOM BATTLES ON CLIMATE AT RISK? Business groups, led by the U.S. Chamber, are pushing to make it harder for shareholder activists to push resolutions on issues like climate change onto companies for consideration, Pro Financial Services' Patrick Temple-West reports. The Chamber released seven recommendations Tuesday for SEC consideration that would limit investors' ability to pressure public companies on matters like climate change. Environmental and religious activists hailed a major victory earlier this year when Exxon Mobil investors in May approved a resolution calling for the company to publish annual assessments of the impact of climate change on its business. But the Chamber argued that "no small subset of activists should be able to commandeer longstanding SEC rules for their own parochial purposes."

ALL AROUND THE HILL —

IT'S A MEGA-MARKUP! The House Natural Resources Committee will today vote on 21 bills covering various topics. Among the most interesting: H.R. 825 (115), a bipartisan bill that calls for streamlined permitting for wind, solar, and geothermal energy generation on federal land, and H.R. 2199 (115), which calls for a searchable, online record of federal land ownership and management. A full list of bills being considered is available here.

WILDLIFE BILL SET FOR EPW VOTE: EPW senators consider legislation S. 1514 (115) today that would reauthorize a number of popular conservation programs, including the North American Wetlands Conservation Act and Chesapeake Bay Program, through 2023. While provisions in the package blocking Endangered Species Act protections for gray wolves in Wyoming and the Great Lakes region have drawn some Democratic criticism, it's expected to clear the panel at a business meeting.

PUBLIC LANDS BILLS BEFORE ENR: The Senate Energy and Natural Resources Committee's Subcommittee on Public Lands, Forests and Mining holds a hearing this morning on a slew of public lands bills, including a measure S. 941 (115) from Montana Democrat Jon Tester to make permanent a 20-year mining ban imposed by the Obama administration last year for roughly 30,000 acres of national forest outside Yellowstone National Park, and Barrasso's "Water Rights Protection Act" S. 1230 (115), barring the federal government from requiring that water rights be transferred before an entity can receive a lease, permit or other use agreement.

LAST CALL! Today's the last day for the public to comment to the Commerce Department on 11 National Marine Sanctuaries and Marine National Monuments designated since 2007. The review is separate — but related — to Interior's review of nearly two dozen national monuments designated under the Antiquities Act. Ahead of the deadline, 65 House Democrats sent a letter voicing strong support for the existing designations. Nearly 44,000 comments have already poured in, and you can contribute here . The Center for American Progress has questioned whether Interior will share comments mentioning the marine monument review with Commerce,

though an agency spokeswoman told ME they would.

MAIL CALL! MORE CALL FOR GARRETT WITHDRAWAL: Three senior House Democrats — Steny Hoyer, Gwen Moore and Denny Heck — sent a letter to Trump Tuesday calling on him to withdraw Scott Garrett's nomination to run the Export-Import Bank. They join various business groups imploring the administration to pull the plug on the former New Jersey congressman, one of the biggest critics of the bank. The White House has resisted those calls to date.

CONCERNS RAISED OVER EFFICIENCY PROGRAM: Rep. Ken Calvert, the top EPA and Interior appropriator, raised concerns about the Property Assessed Clean Energy program, which helps private customers implement energy efficiency upgrades on their properties, in a letter obtained by ME. The California Republican asked HUD Secretary Ben Carson and VA Secretary David Shulkin to look into whether the program is being used to "mislead and defraud" citizens into risky loans that might ultimately cause them to default.

TIME TO ACT ON HYDROPOWER: A collection of more than a dozen groups, including the Edison Electric Institute, National Hydropower Association and National Rural Electric Cooperative Association, sent a letter to senior House and Senate energy leaders urging them to push for the passage of bills modernizing the hydropower licensing process. "We believe the hydropower provisions in S. 1460 (115), the Energy and Natural Resources Act of 2017, and H.R. 3043 (115), the Hydropower Policy Modernization Act of 2017, can provide a framework for final legislation to implement this new direction in a way that protects environmental values, public participation, and all existing authorities of federal and state decision???makers in the licensing process," they wrote.

OIA RELEASES STATE OUTDOOR RECREATION SPENDING FIGURES: The Outdoor Industry Association is today releasing data on state-by-state outdoor recreation spending. California boasts $92 billion in annual outdoor recreation consumer spending but most other states bring in more modest amounts. New York sees about $41.8 billion in recreational spending, Colorado sees $28 billion, and Utah and Nevada bring in close to the same levels at $12.3 billion and $12.6 billion, respectively.

CLIMATE SOLUTIONS CAUCUS HITS 50: Reps. Steve Knight (R-Calif.) and Marcy Kaptur (D-Ohio) announced Tuesday they've joined the bipartisan Climate Solutions Caucus, bringing its total membership to 50. "Now 50 members strong, the Climate Solutions Caucus is evidence that there is a growing, diverse, and bipartisan coalition of members of Congress ready to put petty politics aside and find meaningful solutions to the challenges posed by sea level rise and climate change," Carlos Curbelo said in a statement.

POLITICO New York: Federal court dismisses challenge to Cuomo's nuclear subsidy Back

By David Giambusso | 07/25/2017 06:23 PM EDT

A U.S. District Court judge has dismissed a legal challenge brought against the Public Service Commission over Gov. Andrew Cuomo's multi-billion dollar nuclear subsidy.

Non-nuclear generators in New York sued the state in October 2016 over an element of the Clean Energy Standard that could allow as much as $7.6 billion in zero emission credits, or ZECs, to go to four flagging nuclear reactors upstate.

The non-nuclear generators said the state was overstepping its jurisdiction by interfering in the wholesale energy market, which is the jurisdiction of FERC. The ZECs are credits, paid by utility customers, that are tied to the wholesale energy price for nuclear. They are designed to recognize nuclear's non-carbon attributes and advance the state's clean energy goals.

Judge Valerie Caproni of U.S. District Court for the Southern District of New York issued a 47-page opinion today saying the credits did not interfere with wholesale markets, but advanced a state policy goal that was within the purview of state authority.

"Although FERC has substantial authority over interstate wholesale energy sales, the regulation of retail rates for sales of electricity belongs to the States," Caproni wrote in her ruling. "A whole host of measures that States might employ to encourage clean energy development — such as tax incentives or direct subsidies — involve propping up the operation of a generator that might otherwise be unprofitable."

Environmental groups too are opposed to the credits, arguing that nuclear power is not clean energy. They did not join the suit, however.

A copy of Caproni's ruling can be read here.

This article first appeared on POLITICO New York on Tuesday, July 25.

House approves Russia sanctions that handcuff Trump Back

By Elana Schor | 07/25/2017 05:23 PM EDT

The House on Tuesday overwhelmingly approved new sanctions on Russia, Iran, and North Korea, with the GOP-controlled chamber advancing a significant new constraint on President Donald Trump's foreign policy.

The sanctions legislation, which allows lawmakers to block Trump from any attempt to roll back sanctions against Moscow, is expected to pass the Senate in similarly bipartisan fashion before next month's recess.

The White House has yet to say definitively whether Trump would sign the bill, which his administration had criticized for failing to give him necessary "flexibility" to work on warmer relations with Russia. But it appears the votes would be there for Congress to override any veto from Trump.

The House's 419-3 vote on the sanctions bill saw only three dissenters: GOP Reps. Justin Amash of Michigan, John Duncan of Tennessee and Thomas Massie of Kentucky. Even Rep. Dana Rohrabacher (R-Calif.), Russia's staunchest defender on the Hill, revealed hours before the vote that he would support the measure out of support for its penalties against Tehran and Pyongyang.

Lawmakers in both parties hailed the vote and pressed the White House to publicly support the bill, after the administration had tried to secure more Trump-friendly changes after the Senate passed an earlier version on a 98-2 vote.

"Senate Republican leaders should move this bill as soon as possible, so that it can be on the president's desk without delay," Senate Minority Leader Chuck Schumer (D-N.Y.) said in a statement. "Passing the bill on a bipartisan basis will send a strong signal to the White House that the Kremlin needs to be held accountable for meddling in last year's election."

After the House and Senate reached a bipartisan deal to move forward on Saturday, the White House signaled it would back the bill after other alterations were made to ease its impact on industry. But new White House press secretary Sarah Huckabee Sanders said Tuesday that the president had not yet committed to signing the sanctions package into law.

"While the President supports tough sanctions on North Korea, Iran and Russia, the White House is reviewing the House legislation and awaits a final legislative package for the President's desk," Sanders said in a statement.

In addition to giving lawmakers veto power over any relaxation of sanctions on Russia, the bill also converts some existing penalties into law, thus making them more difficult to remove. The legislation's sanctions against Iran are designed to target its supporters of terrorism and its missile development capabilities.

The North Korea sanctions were a late addition to the package, spearheaded by House Majority Leader Kevin McCarthy (R-Calif.), and track with those included in a bill the House passed 419-1 in May. But the top Democrat on the House Foreign Affairs Committee, New York Rep. Eliot Engel, suggested in a floor speech ahead of the vote that the Senate may have lingering issues

with the approach the House took on that bill.

"[I]t seems we may be on the floor before we ironed out all the differences with the other body," Engel said of the Senate. "I hope that's not the case."

Andrew Hanna contributed to this report.

Russian pranksters get lengthy call with Perry Back

By Darius Dixon | 07/25/2017 03:09 PM EDT

Energy Secretary Rick Perry and his staff were tricked into having a 20-minute conversation with Russian pranksters last week, the Energy Department confirmed today.

"Secretary Perry is the latest target of two Russian pranksters," DOE spokesperson Shaylyn Hynes said by email. "These individuals are known for pranking high level officials and celebrities, particularly those who are supportive of an agenda that is not in line with their governments. In this case, the energy security of Ukraine."

The call occurred on July 19 and publicized today in a story in the Pravda Report, a Russian publication, that linked to the audio.

Perry was made to believe he was speaking with a Ukrainian official on behalf of Prime Minister Volodymyr Groysman. Perry discussed the U.S. decision to leave the 2015 Paris climate agreement, the Nord Stream 2 natural gas pipeline and possibility of a biofuel devised from home-brewed alcohol and manure.

The same pranksters have also duped people like Sens. Mitch McConnell and John McCain, as well as rocker Elton John and other celebrities.

Whitehouse, Schatz introduce carbon tax bill: Back

By Andrew Restuccia | 06/10/2015 02:52 PM EDT

Sens. Sheldon Whitehouse and Brian Schatz introduced legislation on Wednesday that would impose an escalating tax on carbon dioxide emissions and funnel part of the revenue generated

from the tax to the public.

The Democrats' legislation, dubbed the American Opportunity Carbon Fee Act, would cut U.S. carbon dioxide emissions by more than 40 percent by 2025 compared to 2005 levels, according to a summary of the legislation.

The senators unveiled their legislation Wednesday afternoon at an event with the conservative American Enterprise Institute, which has long studied a carbon tax as an option for cutting emissions. But the bill will face intense opposition from Republicans in Congress.

Still, the Democrats hope to bridge the gap between liberal, environmentally minded Democrats and right-leaning Republicans by using some of the revenue from the bill to slash the top marginal corporate income tax rate from 35 percent to 29 percent.

The senators' offices say that the $2 trillion it generates in the first decade would be used to cut the corporate income tax rate, provide a payroll tax credit to workers and send an annual $500 benefit to retirees and veterans.

The fee would apply to greenhouse gas emissions from a range of sources and facilities at a rate of $45 per metric ton of carbon dioxide equivalent. That fee would start in 2016 and increase every year "at a rate equal to the change in the consumer price index plus 2 percent," according to a section-by-section summary of the bill.

EPA task force recommends steps to streamline Superfund program Back

By Alex Guillén | 07/25/2017 03:29 PM EDT

An EPA task force today released a list of 42 recommendations for the agency's Superfund program, part of Administrator Scott Pruitt's focus on the long-criticized clean-up initiative.

Pruitt has been critical of what he called indecisiveness on Superfund issues by earlier administrations, although the White House's budget would slash funding from those clean-ups along with most other parts of the agency.

Topline proposals from the task force include creating a "top ten" list of sites to get "weekly attention" from the administrator; finding more third parties to act as investors in sites that could be reused for future projects; several steps to speed up ongoing remediation at Superfund sites; using new technologies to speed up site assessments; streamlining dispute resolution; and requiring "strict adherence to project deadlines."

Pruitt also signed a memo directing EPA leaders to adopt several specific actions immediately.

They include prioritizing sites "where the risk of human exposure is not fully controlled," focusing more on sites with higher potential for new uses, and identifying as many sites as possible for deletion from the National Priorities List.

The task force was chaired by Albert Kelly, the former chairman of Oklahoma-based SpiritBank.

Boardroom battles over climate change to heat up at Trump's SEC Back

By Patrick Temple-West | 07/25/2017 04:10 PM EDT

Business lobbying groups are preparing to clash with socially conscious investors, calling on the SEC to make it harder for shareholder activists to push resolutions on companies.

Activists are concerned that the business lobbyists may finally get their way at President Donald Trump's SEC after years of trying, especially on issues concerning the environment.

On Tuesday, the Chamber of Commerce, the largest U.S. lobbying group, published seven recommendations for the SEC to consider that would limit investors' ability to pressure public companies on issues ranging from executive compensation to climate change.

The Chamber argued that the SEC's shareholder proposal system is "broken" and has been hijacked by activist investors crusading for pet causes that mainstream investors don't care about.

"No small subset of activists should be able to commandeer longstanding SEC rules for their own parochial purposes," the Chamber said.

Shareholder proposals by socially active investors are becoming a powerful tool to pressure companies to make uncomfortable changes. Exxon Mobil investors in May approved a resolution calling for the company to publish annual assessments of the impact of climate change on its business — just as Trump was about to pull the U.S. out of the Paris climate change agreement.

That victory underscored the increasing success of boardroom agitation on environmental issues in recent years, particularly on climate change.

In 2015, the average support for environmental resolutions was 18 percent and no proposals passed, according to a report this month from law firm Sullivan & Cromwell. In 2017, the average support level was 29 percent and three of them passed, all climate change-related proposals at energy companies.

The Chamber on Tuesday recommended that the SEC raise the thresholds that a proposal would need to meet before it could be resubmitted to a company year after year. Among its other

recommendations, the group asked the agency to withdraw a 2015 decision about a shareholder proposal against Whole Foods, an action seen as a setback to companies and hailed by investors as a victory.

While the Chamber has raised concerns that shareholder proposals are often filed by a handful of "gadflies," religious groups also use the program. About 30 such groups supported the Exxon Mobil proposal, including Maryknoll and Jesuit clergy.

Mercy Investment Services, the asset management program for the Sisters of Mercy, is annually one of the most frequent filers of shareholder proposals, mostly focused on environmental and social issues. Socially conscious mutual funds and pension funds from Democratic-leaning states are also frequent filers, including the California State Teachers' Retirement System, which has about $208.7 billion in assets under management.

"As long-term investors, we believe very strongly that companies that take environmental and social concerns seriously improve long-term performance," said Josh Zinner, CEO of the Interfaith Center on Corporate Responsibility, whose members oversee about $400 billion. "This is fundamentally about the long-term value of businesses."

"It is a clear sign of the effectiveness of the shareholder resolution process that the Business Roundtable and the Chamber are fighting so hard to curtail it," he said, speaking before the Chamber report was published.

The Business Roundtable, a lobbying group of top business executives currently chaired by JPMorgan CEO Jamie Dimon, wrote a letter earlier this year to the White House calling for tightening the eligibility for shareholder proposals and for more exclusion of proposals to prevent repeat submissions.

Stock exchanges are also targeting shareholder proposals. In May, Nasdaq called for raising the minimum ownership amount and holding period for investors making shareholder proposals as well as changing SEC practices so that "nuisance" proposals could be removed more easily.

Congressional Republicans targeted shareholder proposals in a broad deregulation bill, known as the Financial CHOICE Act, that passed the House in June. But that legislation has failed to gain traction in the Senate.

Still, investors are concerned that the SEC will act on its own to embrace the business groups' proposals.

Hester Peirce, Trump's nominee to join the SEC as a Republican commissioner, said in April that she was open to raising shareholder proposal thresholds.

"It is time to revisit those thresholds," she said at a House hearing. "It seems to make sense to take a look."

SEC Chairman Jay Clayton has promised to tailor the agency's rules to encourage more

companies to go public. He is scheduled to speak at the Chamber on Wednesday.

The SEC "could do everything the CHOICE Act asks for," said Timothy Smith, an official at Walden Asset Management, which offers socially conscious mutual funds and frequently files shareholder proposals.

The Chamber and Business Roundtable "smell blood in the water," Smith said. "They see it as a special time to lean in and change the rules for shareholder resolutions. We think this is a time when the attack is more significant than before."

White House under pressure to drop Export-Import Bank nominee Back

By Zachary Warmbrodt and Andrew Restuccia | 07/17/2017 04:56 PM EDT

President Donald Trump is standing behind former Rep. Scott Garrett, his choice to head the Export-Import Bank, amid escalating pressure from business groups to pull the plug on the nomination.

"Scott Garrett is imminently [sic] qualified to lead the Ex-Im Bank," White House spokeswoman Natalie Strom said in a statement to POLITICO. "The President stands behind his nomination and is looking forward to his confirmation."

Trump's defense of the New Jersey Republican comes as rumors swirl that Garrett may withdraw amid fears that his nomination will not win enough votes to clear the Senate. Lawmakers from both parties have raised concerns about him, largely because he strongly opposed the bank while serving in Congress. The Senate Banking Committee, which will be responsible for vetting his nomination, has not yet received his paperwork.

Administration officials said Garrett's nomination has been a topic of conversation among senior Trump aides in recent days. Aides have pointed to intensifying blowback from influential business associations that are allied with the president, including an op-ed published in The Wall Street Journal last week by National Association of Manufacturers President Jay Timmons that blasted Garrett.

Trump has sought to cultivate close ties with business groups and powerful CEOs. He has met with more than 330 corporate executives since taking office, often relying on them to drive his policy agenda. The president also set up a manufacturing advisory council packed with NAM members.

An administration official and other people tracking the issue said Garrett could be summoned to the White House to talk with Trump about his nomination as soon as this week. Strom, the White

House spokeswoman, did not respond to inquiries about the potential meeting. Garrett did not respond to repeated requests for comment.

During his career in Congress, Garrett was one of the most outspoken critics of the bank, which guarantees loans for foreign buyers of U.S. exports. In 2015, he said the agency "embodies the corruption of the free enterprise system."

His record has driven businesses that rely on the agency to try to stop his nomination, even though they also want the Senate to confirm nominees who would fill out its board. The bank has been unable to approve deals worth more than $10 million because of a lack of a quorum.

Further complicating Garrett's nomination is controversy around his views on homosexuality, which contributed to his failed reelection bid in 2016 after major corporate donors declined to continue backing him.

As POLITICO first reported in 2015, Garrett told lawmakers in a closed-door meeting that he refused to pay National Republican Congressional Committee dues because the group recruited gay candidates. He later denied that he opposed gay candidates and said his problem was with support for same-sex marriage.

The White House has said that under prior leadership, the bank had become "another form of corporate welfare" and that Garrett would "refocus Ex-Im on its original mission of providing support for the businesses that truly need it while protecting taxpayers."

Though the White House first announced his nomination in April, lobbyists waited until recently to begin publicly mounting an aggressive opposition effort.

Timmons said in the Journal op-ed that the nomination should be withdrawn because it represented "a terrible trade deal for our country."

The South Carolina Chamber of Commerce then called on Palmetto State GOP Sens. Tim Scott and Lindsey Graham, who could be key to Garrett's confirmation, to oppose him.

Graham later told Bloomberg Television that he would "try to get the administration to give us a better nominee." Scott is a member of the Banking Committee, where Republicans will have a one-vote margin to approve Garrett's nomination if Democrats withhold support.

South Carolina is home to plants operated by Boeing and General Electric, two of the most prominent beneficiaries of the agency. Tim Keating, Boeing's senior vice president of government operations, said the company found it difficult to support anyone "who has not supported the bank and made public statements to that effect."

"We don't have any explanation as to why now he wants to lead the entity that he said he wanted to shut down," said Neil Bradley, chief policy officer at the U.S. Chamber of Commerce, in an interview Friday. "Nor do we have any sense that he's committed to using the position as chairman to ensuring the bank does its work."

Veronique de Rugy, who has fought to close the bank as a senior research fellow at George Mason University's Mercatus Center, said Garrett's opponents wanted someone "who will say yes to everything, who will change nothing, who will make no reforms, who will guarantee it's the same business as usual."

"I'm curious to see if he will be as anti-Ex-Im or even as reform-minded once he's the president of Ex-Im as he was when he was in Congress," she said. "It's a big 'if.'"

EPA/TCEQ HARVEY UPDATE: AIR QUALITY IMPROVING, MORE WATER SYSTEMS OPERATIONAL

Dallas (September 6, 2017) - Working together, the U.S. Environmental Protection Agency (EPA) and the Texas Commission on Environmental Quality (TCEQ) continue to coordinate with local, state and federal officials to address the human health and environmental impacts of Hurricane Harvey and its aftermath, especially the water systems in the affected areas. TCEQ has 500 people assisting in response to this natural disaster and EPA has 185.

EPA has begun mobilizing Community Liaisons to the designated disaster counties for Hurricane Harvey. The liaisons will assist the county emergency operation centers in disseminating pertinent information on post flood hazards to municipalities, school districts, and citizens. EPA has now been deployed to the FEMA JFO Joint Information Center in Austin and additional EPA response personnel are being assigned to Beaumont/Port Arthur. This area was previously inaccessible due to lack of facilities. EPA has begun coordination with environmental justice advocates from Texas and Louisiana to provide an update on the impacted areas. EPA has been closely coordinating with the U.S. Coast Guard on a large oil spill in the Houston area, and with city and county officials on a benzene plume identified near the Manchester neighborhood.

As of Sunday, Sept. 3, the following information is available:

Drinking Water: To date, about 2,800 drinking water systems are potentially affected by Harvey have been contacted. Of those: 1,920 systems are fully operational, 168 have boil-water notices, and 50 are shut down. Both EPA and the TCEQ are contacting remaining systems to gather updated information of their status. EPA and the TCEQ are working closely with the Texas National Guard, including the 6th Civil Support Team (supporting TCEQ in Corpus Christi), Arkansas National Guard, 61st Civil Support Team (supporting TCEQ in Houston), and the Texas State Guard Engineering Group, and other local and state agencies to continuously monitor water systems. Assistance teams are in the field working directly with system operators to expedite getting systems back to operational status.

Waste Water and Sewage: Currently, 903 of approximately 1,219 wastewater treatment plants are fully operational and 34 are inoperable in the affected counties. The agencies are aware that releases of wastewater from sanitary sewers are occurring, due to the historic flooding and are actively working to monitor facilities that have reported spills, conduct outreach and provide technical guidance to all other wastewater facilities in flood-impacted areas. EPA and TCEQ are working closely with the Texas National Guard, including the 6th Civil Support Team (supporting TCEQ in Corpus Christi), Arkansas National Guard, 61st Civil Support Team (supporting TCEQ in Houston), and the Texas State Guard Engineering Group, and other local and state agencies to continuously monitor wastewater systems. Assistance teams will be deployed to work directly with system operators to expedite getting systems back to operational status.

Flood Water: Water quality sampling will be focused on industrial facilities and hazardous waste sites. Floodwaters contain many hazards, including bacteria and other contaminants. Precautions should be taken by anyone involved in cleanup activities or any others who may be exposed to flood waters. These precautions include heeding all warnings from local and state authorities regarding safety advisories. In addition to the drowning hazards of wading, swimming, or driving in swift floodwaters, these waters can carry large objects that are not always readily visible that can cause injuries to those in the water. Other potential hazards include downed power lines and possible injuries inflicted by animals displaced by the floodwaters.

Critical Water Infrastructure: The agencies are continuing to work closely with dams. The larger dams are full in many cases and may be releasing water; the structures are secure at this time. There are 340 high- and significant-hazard dams in the impacted areas, and TCEQ has been able to make contact with 200 of these dam owners. Of these 200, only five dams have been damaged or have failed. We have also been notified that three low-hazard dams have damage. TCEQ is continuing to contact dams to get status updates.

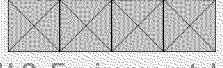
Additional EPA/TCEQ updates include:

Superfund Sites: EPA and TCEQ continue to get updates about the status of specific sites from the parties responsible for ongoing cleanup of the sites. So far, TCEQ staff have assessed 12 of the 17 State Superfund sits in the affected areas. TCEQ anticipates completing the remaining 5 assessments by the end of the week depending on accessibility of those remaining sites.

EPA completed site assessments at 13 Superfund sites that have been flooded and/or experience possible damage to the storm. Of these sites, two (San Jacinto and U.S. Oil Recovery) require additional assessment efforts. Assessments of these sites will take several days to complete. The San Jacinto Waste Pits site has a temporary armored cap designed to prevent migration of hazardous material; some areas that rock been displaced and liner is exposed. The potential responsible party has mobilized heavy equipment and is placing rock on different places on the armored cap to repair the defensive surface. The liner is in place and functional so we don't have any indication that the underlying waste materials have been exposed. If we find a breach in the exposed liner, we direct the responsible party to collect samples to determine if any materials have been released. Crews continue to surveying portions of the cap that are submerged and the EPA dive teams will survey the cap underwater when conditions allow. EPA is making plans for longer-term assessments at 41 Superfund sites in the impacted areas as the projects return to their normal remedial cleanups.

Air Quality Monitoring: One of the many preparations for Hurricane Harvey included EPA, TCEQ, and other monitoring entities temporarily shutting down several air monitoring stations from the greater Houston, Corpus Christi, and Beaumont areas. Since then, state and local authorities have been working to get the systems up and running again. As of Tuesday September 5, TCEQ air monitoring network is 100 percent operational in Corpus Christi, 88 percent in Houston, and 71 percent in Beaumont. The network is expected to be fully operational again by next week. Of the available air monitoring data collected from Aug. 24-Sept. 2, all measured concentrations were well below levels of health concern. Monitors are showing that air quality at this time is not concerning, and residents should not be concerned about air quality issues related to the effects of the storm.

An assessment by EPA of the Valero Refinery on Monday, September 5, 2017, confirmed that a tank at the facility did have a leak which occurred on August 26, 2017 from the Hurricane Harvey storm and flooding. EPA also confirmed Valero had taken action to respond to and repair the leak.



Based on current site conditions including weather, repair actions by Valero, and air monitoring results, EPA's assessment could not confirm the tank was the source of the air release that led to complaints in the area immediately after the storm. EPA's air monitoring performed onsite and around the facility on September 5 does not indicate levels of concern for the community. EPA will continue air monitoring for additional sources in the area.

Fires at Arkema Facility in Crosby: The TCEQ has an open investigation into the Arkema incident that will include an evaluation of any impacts due to the fires at the site. Additionally, after the final notifications are received, the TCEQ will evaluate the reported emissions events to determine compliance with applicable rules, permit provisions, and notification and reporting requirements. The TCEQ and Harris County Pollution Control are coordinating post-event monitoring, sampling, and complaint response activities. The U.S. Chemical Safety Board has initiated an investigation, and law enforcement continues to limit access to the Arkema plant in Crosby. For more information regarding Arkema, please visit https://www.tceq.texas.gov/news/statement/statement-on-arkema-investigation

Refineries/Fuel Waivers: In addition to gasoline waivers for 38 states and D.C. and diesel waivers for Texas, EPA signed three No Action Assurance letters on Sept. 1 to help address fuel shortages. NAA will help expedite the distribution of existing gasoline supplies to both Texas and Louisiana, while the refineries work to re-start and resume normal operations. The waivers and NAA letters are effective until Sept. 15 and should allow for the distribution in Texas of 10 million or more gallons of fuel to consumers. TCEQ is working with EPA to consider an extension to the gasoline waivers through October 1st.

For additional information please visit the TCEQ's hurricane response page.

Subject: POLITICO's Morning Transportation, presented by American Public Transportation Association: Thought we had a deal — Here we go on DOT approps — ATC ping pong

By Lauren Gardner and Stephanie Beasley | 07/27/2017 10:02 AM EDT

With help from Tanya Snyder and Brianna Gurciullo

THOUGHT WE HAD A DEAL: New York Gov. Andrew Cuomo stormed Washington Wednesday to deliver an urgent message to Transportation Secretary Elaine Chao: that "there is no backup plan" for New York and New Jersey to come up with the money the Obama administration pledged for the Gateway program. Our Brianna Gurciullo was there when Cuomo emerged from a morning meeting with New York's Democratic congressional delegation and told reporters what he wanted to get out of his forthcoming meeting with Chao: "I want to hear that we're actually going to fund the tunnel, you know. All the planning is nice, but we don't have a funding agreement in place. And here's the fear: If you said today, 'Ok, let's go build the tunnel' - by the time you do the [environmental impact statement], by the time you do the contract, by the time you deal with all the bureaucracy, you're talking 10 years. ... And these tunnels are not in a position, or I wouldn't want to be relying on these tunnels for 10 years."

So how did it go? Good question - neither Chao's nor Cuomo's offices provided details or statements on the meeting, despite our requests. But as a quick refresher, the Trump administration has proposed phasing out a popular transit grant program that was expected to fund significant portions of Gateway, such as the Portal North Bridge project that proponents had expected would be accounted for in the fiscal 2018 budget (it wasn't). Now, they're hoping a sense of hometown pride hits Trump and compels him to find a way to get the project funded.

HERE WE GO: The full Senate Appropriations Committee will mark up its fiscal 2018 transportation spending bill today. Airports are anticipating that the legislation would push up the cap on the Passenger Facility Charge, but subcommittee Chairwoman Susan Collins (R-Maine) wouldn't confirm that to MT on Wednesday. "We haven't released the entire bill - we can't before the markup under the committee rules," Collins said. Still, when asked whether she would support increasing the cap, Collins said: "I believe that it has to be very carefully done. You certainly can't do it at every stage of the flight, for example, because that would really add up. I think it's important to remember that it's up to the individual airport and community - it's not a fee or tax that is assessed or collected by the federal government. But there certainly is a backlog in airport development."

IT'S THURSDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren and Steph are at the wheel, so please send along tips, feedback and lyrics to lgardner@politico.com or @Gardner_LM and sbeasley@politico.com or @Steph_Beasley.

Truckin' up to Buffalo/Been thinking you got to mellow slow/Takes time, you pick a place to go/Just keep truckin' on

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

ATC PING PONG: Administration officials, including Deputy Secretary of Defense Patrick Shanahan, visited Capitol Hill Wednesday to address some lawmakers' concerns about the effects House Transportation Chairman Bill Shuster's FAA bill (H.R. 2997 (115)) would have on national security and DOD's use of airspace - and to reiterate the department's support. "We feel like we answered everybody's questions," Jeff Denham (R-Calif.) said, adding that they're "picking up votes." But GOP members agitating against the legislation have indicated that not everyone in DOD is happy about the bill's air traffic control overhaul. "We've got guys that are talking to members about it," Rep. Todd Rokita (R-Ind.) said. Rep. Peter DeFazio (D-Ore.) told MT he's seen a recent DOD document outlining concerns with the proposal, but wouldn't elaborate on what exactly they were.

ON SECOND THOUGHT: The Congressional Research Service issued a report suggesting parts of Shuster's air traffic control spin-off proposal could be unconstitutional. The report posits that it could be difficult for a court to determine if the new ATC organization created by the bill would be a government or non-government entity. And, if it is not a government entity, then allowing it to set and adjust user fees without federal oversight could be "improper delegation of legislative authority under the nondelegation doctrine," Mary Lee writes . Shuster was quick to slam the CRS report for not being definitive in its assessment of whether or not his plan would be unconstitutional.

SHELL GAMES: The House Energy and Commerce Committee will consider a bill on driverless cars that, before Wednesday night, was just a "shell" awaiting final language. As Tanya Snyder reported for Pros, bipartisan language, even on thorny subjects like balancing the roles of federal and state governments and granting exemptions from federal motor vehicle safety standards, was close to a done deal in advance of Thursday's markup. Lo and behold, a substitute amendment dropped late last night. On introduction, the shell bill (H.R. 3388 (115)) contained only a non-controversial provision to require vehicle manufacturers to provide consumers with clear information on new cars' self-driving capabilities and limitations.

Us, too! Sen. Gary Peters (D-Mich.) said Wednesday that the Senate will release its bill imminently. "We are just about ready to move as well on the bill," Peters said. "I think there'll be an announcement coming out shortly. Very soon. Extremely soon."

** **A message from American Public Transportation Association:** Public transportation is a vital part of an integrated transportation network that drives our economy forward, creating 50,000 jobs for every $1 billion invested. Without public transit, America simply can't move forward. And in order to improve our public transportation systems, states and localities need continued federal investment. Learn more at APTA.com/InvestNow. **

OUT OF TIME: Commuter railroads hoping lawmakers might give them more breathing room on the 2018 positive train control deadline should think again, Senate Commerce Chairman John Thune said Wednesday. "I want to be clear - any railroad that fails to meet the revised

framework should not expect any further extension from this committee," he said during a nominations hearing featuring the Trump administration's pick to head FRA, Ron Batory. Remember that commuter railroad representatives met with congressional staff and American Public Transportation Association officials in June to discuss implementation issues.

Please hold: While Batory vowed to continue FRA's work to promote progress on PTC, he was more reticent on issues like long-distance Amtrak lines (for which Trump has proposed eliminating funding) and electronically controlled pneumatic braking systems for trains. But he did get personal on the issue of grade-crossing safety, describing an accident years ago where a train he was riding on collided with a school bus stalled on the tracks (thankfully, no one was killed or hurt). "After experiencing that, I have become a very strong proponent of good rail-highway crossing innovation, improvement and capitalizing on something that we always talk about within the industry ... and that being best engineering we can come up with at the time, continuous education - it can never stop," Batory said.

Coming soon: The Commerce Committee announced late Wednesday that it will mark up a number of bills and nominations Aug. 2, including the nominations of Batory and NTSB member Robert Sumwalt.

IT AIN'T OVER: DHS is advising airlines to continue complying with an U.S-EU agreement to share airline passengers' names, despite a European court decision that called the legality of a similar agreement with Canada into question. The European Court of Justice issued a legal opinion Wednesday saying EU lawmakers should not continue with an agreement with Canada that information about travelers between the two countries be collected, shared and stored because it infringed on privacy rights. DHS is reviewing the court's opinion and assessing whether it will impact the U.S.-EU Passenger Name Record agreement, a DHS spokesman said.

What's it all mean? Former DHS Deputy General Counsel Jonathan Meyer told MT that it could be "problematic" if the EU adopted some of the court's suggestions. For example, the court took issue with Canada and EU agencies being allowed to store passenger data for up to five years, saying that was a "particularly long period of time." The court also recommended that travelers be notified whenever either country used their information or disclosed it to law enforcement. "Notifying the individual is problematic when law enforcement is conducting an investigation and does not want the subject or target to know," Meyer said. "The time limitation will be objectionable to some authorities because they like to use the data over time in their analyses."

SAFETY FIRST: The House Homeland Security Committee approved a slew of bills on Wednesday, including a measure (H.R. 3328 (115)) that would require TSA officials to take a closer look at who's working at Cuban airports and what safety measures are in place. The committee also approved legislation (H.R. 3359 (115)) that would establish a new agency within DHS dedicated to cybersecurity and infrastructure security. The new office would also include an emergency communications division.

BIN THERE, DONE THAT: As if taking off your shoes, measuring your liquids and separating your laptop weren't enough, travelers will soon have to start putting all electronics

larger than a cell phone in bins for screening. TSA announced Wednesday that the new procedure, already piloted at 10 airports, will spread to all U.S. airports "during the weeks and months ahead." That means putting tablets, e-readers and handheld game consoles in a bin with nothing on top of or beneath it, the way laptops are handled. PreCheck travelers will be exempt.

LOBBYING UPDATE: Uber hired two firms - Peck Madigan Jones and Chambers, Conlon and Hartwell - to lobby for the company on self-driving car issues and FAA reauthorization, Pro Technology's Li Zhou reports.

ARRIVALS AND DEPARTURES: Joe McAndrew, former aide to Sen. Brian Schatz on transportation and housing issues, has started as the transportation policy director for the Greater Washington Partnership, a new coalition of CEOs seeking to economically revitalize the Greater Washington region from Baltimore to Richmond. Kate Geldaker will step down as deputy director of congressional affairs at the National Telecommunications and Information Administration to join Alaska Airlines' government affairs office in D.C.

THE AUTOBAHN:

- "Top Metro Officials Tried to Stem Excessive Overtime, Months Before Fraud Investigation." WAMU.

- "New Ethics Chief Has Fought to Roll Back Restrictions." The New York Times.

- "Britain to ban sale of new diesel and gasoline cars by 2040." Los Angeles Times.

- "A different kind of car factory is opening up in Los Angeles." Bloomberg.

- "Tech's most dubious promises, from Bill Gates to Elon Musk." Wired.

THE COUNTDOWN: DOT appropriations run out in 65 days. The FAA reauthorization expires in 65 days. Highway and transit policy is up for renewal in 1,161 days.

** **A message from American Public Transportation Association:** Our nation's public transit systems do more than carry Americans to work-they're a critical part of an integrated transportation network that drives our economy forward. That's why states and localities have partnered with the federal government for more than 35 years to repair and expand services. But President Trump's budget would eliminate funding for vital public transportation projects-and put 800,000 jobs at risk, including more than 500,000 construction-related jobs. Communities can't improve public transportation alone. To protect our future, we need continued federal investment in public transportation. Congress: Fully fund the FAST Act, and include public transportation in any infrastructure bill. Visit APTA.com/InvestNow to learn more. **

What happens on campus doesn't stay there

Rebecca Burgess | The American Interest

Campuses across the country kicked off Sexual Assault Awareness Month (SAAM) this April to the tune of several hundreds of thousands of dollars. An increasing number of federal mandates have encouraged colleges to up the ante on such awareness programming — and enforced punitive measures should they fail to do so. But the headlines of the past few months are enough to give one pause about throwing more regulations, more lawyers, and more courts at campuses' sex-related problems.

Reuters

On defense, the party of Lincoln and Reagan is MIA

Thomas Donnelly | The Weekly Standard

White House Budget Director Mick Mulvaney seems to have pulled a fast one on the Pentagon. From the draft budget outline produced in March, it was already apparent that there would be no Trump defense buildup. Now Mulvaney has welded shut the one safety valve Congress had to mitigate the damage, which it had used following 2011's Budget Control Act. In addition to preventing a budgetary train wreck, now is the opportunity to reaffirm fundamental principles within Republican ranks. It's time for a deal.

Report: The US needs a better understanding of Iran at war

J. Matthew McInnis | AEI

When the Syrian opposition stronghold of Aleppo fell in late 2016, Iran was the central player in a coalition that bombed marketplaces, targeted aid workers, besieged the city, and killed more than 31,000 civilians. The Islamic Republic of Iran's major role in the battle was in fact more significant than even the Syrian Army presence. The US spent the past four decades often befuddled by Iran's security policies. As a result, Tehran operates with relative freedom and impunity across the region.

Reuters

Most undergrads will come out ahead under the Trump plan

Jason D. Delisle and Alexander Holt | US News &

World Report

The press coverage of President Trump's proposed changes to the federal student loan program has been nearly unanimous: The budget is a bad deal for college students. Advocates for low-income borrowers claim that students will have even more trouble affording college if the Trump budget is enacted. In reality, these advocates seem more interested in propping up existing benefits for privileged undergraduates and graduate students.

Interior May Restore Pre-2015 Federal Fracking Regulations

Posted June 27, 2017, 03:16 P.M. ET

By Alan Kovski

The Interior Department appears poised to rescind its 2015 rule on hydraulic fracturing outright, after which it may simply revert to the pre-existing status quo on federal regulations for fracking on federal and Indian lands.

But, defenders of the Obama-era rule will have to wait and see exactly what the Trump administration does before they can formulate a legal strategy in response, Earthjustice attorney Michael Freeman told Bloomberg BNA June 26.

Oil and gas companies, routinely using fracking to enhance the flow of subsurface hydrocarbons, also are waiting, but with more hope for the outcome. Two of their trade groups, the Independent Petroleum Association of America and Western Energy Alliance, joined in litigation against the 2015 rule.

Interior asked a federal appeals court to hold the litigation in abeyance while the Bureau of Land Management (BLM) works to rescind the rule and considers what to put in its place.

The most recent federal brief filed at the U.S. Court of Appeal for the Tenth Circuit said BLM anticipates it will repeal the 2015 rule and revert to federal regulations for fracking that have existed for decades (Wyoming v. Zinke, 10th Cir., No. 16-8068, 6/20/17).

Looking to Pre-2015 Code

"It certainly looks like they are just going to rescind the rule outright" rather than replace it with a revised rule, Freeman said. But as for a legal challenge, he said, "I think we'll have to see what they say and how they try to do it."

The federal brief filed June 20 said, "BLM expects to seek comment on a proposal to rescind the 2015 hydraulic fracturing rule and to restore the affected sections of the Code of Federal Regulations to their pre-2015 language."

A BLM notice of proposed rulemaking is under review at the White House Office of Management

and Budget, but its contents are not publicly disclosed.

The agency will provide for a public comment period of 60 days before a final decision, the government told the appeals court.

Authority to Regulate in Question

Wyoming, supported by three other states and the Ute Indian tribe, challenged the legal authority of the BLM to regulate fracking and won in the U.S. District Court for the District of Wyoming, vacating the 2015 rule. The Obama administration appealed, and the Trump administration has continued the appeal, hoping to defend its authority if not the details in the 2015 rule.

Environmental groups intervening in the case have asked the appeals court to continue the case, not hold it in abeyance, to rule on federal authority over fracking. In the June 20 brief, the government said the question of authority need not be decided in the current case.

"If BLM restores the earlier regulations, as it anticipates, BLM's statutory authority could be decided at that time within the context of a rule that BLM chooses to implement," Interior said.

The phrase "as it anticipates" was another indication of where the government was headed.

Federal Explanation Wanted

Freeman, whose Earthjustice law firm represents Earthworks, the Wilderness Society and other environmental intervenors in the case, said the federal government has not provided an adequate explanation to the appeals court of the rationale for the government's course of action.

He described the administration's moves as an "abdication of responsibility" to protect public lands. Like the Obama administration, he said the older federal regulations for fracking were out of date.

The government has indicated the 2015 regulations impose regulatory burdens that may be unjustified, but it has not spelled out the details. It also has cited President Donald Trump's March 28 executive order directing Interior Secretary Ryan Zinke to publish a proposed rule for "suspending, revising, or rescinding" the 2015 rule.

Oil and gas industry groups have been emphatic about what they see as the unjustified burden of additional reporting and approval requirements imposed by the Obama administration regulations.

State regulations have been adequate to govern fracking on federal as well as other lands, the industry groups have said. To them, the 2015 fracking rule was a solution in search of a problem.

Energy Secretary Supports Nuclear, but Funding Cut Proposed

Posted June 26, 2017, 09:00 P.M. ET

By Rebecca Kern

Energy Secretary Rick Perry called domestic nuclear energy development a "game changer" at the start of White House "Energy Week," but the department's proposed budget would cut funding for its nuclear office.

Perry's June 26 comments to reporters came during the announcement of Energy Week events including some focused on American energy dominance—bringing together state, tribal, business, labor leaders in Washington. The week will culminate with an announcement on American energy policy by President Donald Trump at the Energy Department headquarters June 29.

Perry called U.S. nuclear policy "an important player in the development of our clean energy portfolio globally."

"I believe we can achieve this by focusing on the development of technology like advanced nuclear reactors, and small modular reactors," he added.

Advanced reactors are still decades away from commercialization and materials other than water, such as sodium and gas, to cool the reactors. Meanwhile, small modular reactors—smaller-scale and purportedly safer water-cooled reactors—could be on the market by the mid-2020s, with NuScale Power LLC's application under review by the Nuclear Regulatory Commission.

But the proposed fiscal year 2018 budget request for the Energy Department includes a 28 percent cut to the Office of Nuclear Energy from $984 million in the fiscal year 2017 annualized continuing resolution to $703 million. The office is responsible of nuclear technology research and development.

Analyst Skeptical

Chris Gadomski, the lead nuclear analyst at Bloomberg New Energy Finance, is skeptical of Perry's backing.

"Perry says there is support for the U.S. nuclear energy industry, but he says nothing about financial support for the industry," he told Bloomberg BNA June 26.

"Commercializing an advanced reactor will cost between $1.5 billion to $3.5 billion and represents a very risky venture given low natural gas prices, no carbon price, and policy preferences for renewables," he said. "That is a huge challenge for the U.S. industry even with government support. Trump's budget cuts rather than increases support for nuclear."

The Nuclear Energy Institute's Neal Cohen, the senior vice president of external affairs, told Bloomberg BNA that he was "heartened to see Secretary Perry recognize ... the fact that nuclear is essential and can't be taken for granted." But the trade group, which represents the nuclear power industry, has lamented the proposed funding cuts to nuclear.

"Unfortunately, the proposed budget does not support the actions necessary for the U.S. nuclear energy industry to thrive. Now is not the time to back away from federal investment that has played such a pivotal role in making the United States a world leader in this technology," Maria Korsnick, NEI's president and CEO, said in May when the budget was released.

Defining Energy Dominance

The Energy Week is part of a month-long series of policy-themed weeks, including infrastructure week. The week will focus on American jobs utilizing U.S. domestic energy resources. Perry defined energy dominance as "using domestic resources for the good here at home and abroad."

"An energy-dominant America means a self reliant, a secure nation, free from geopolitical turmoil of

other nations who seek to use energy as an economic weapon," he said.

"An energy-dominant America will export to markets around the world, increasing our global leadership and influence. Becoming energy dominant means that we are getting government out of the way so that we can share our energy wealth with developing nations," he added.

$1 Billion Coal Mine Cleanup Bill Begins Moving in House

Posted April 05, 2017, 04:29 P.M. ET

By Stephen Lee

A bill that would deliver $1 billion to coal states for abandoned mine cleanup got a new start in the House April 5.

One tweak to the measure, known as the RECLAIM Act (H.R. 1731, S. 728) and first introduced in the previous Congress, prompted questions about how states would actually use the money.

The new language allows the money, which would be drawn from the federal Abandoned Mine Land fund, to be spent cleaning up a state's most polluted or dangerous sites even if those projects don't offer any economic potential going forward.

The original version of the bill limited the spending to projects that would not only clean up the land but also create economic activity, such as tourist destinations or wind farms.

Straying Too Far?

Rep. Alan Lowenthal (D-Calif.), top Democrat on the House Natural Resources Subcommittee on Energy and Mineral Resources, said the bill "strays a bit far from the economic development goals that are the genesis of this program."

Lowenthal's concerns were compounded by a report issued by the Interior Department's Office of Inspector General, which found that some states are spending their Abandoned Mine Land funds on projects other than coal mine reclamation, even though they have coal-related hazards.

Under the bill's new language, "it's easier for the money to be funneled to other programs or pet projects by state governments," the Sierra Club said in a statement.

Concerns From Wyoming

Also during the hearing, Rep. Liz Cheney (R-Wyo.) raised questions about whether the bill would leave her state "on the hook" financially.

The AML fund comes from fees on coal production, and Wyoming is the largest coal producer in the nation. The state is also home to $1.5 billion of unfunded AML liabilities. Only Pennsylvania, with $5 billion, has more.

"It looks like an extremely expensive program that would cost states like mine a lot of money," Cheney said.

Robert Scott, director of the Kentucky Department of Natural Resources' Division of Abandoned

Mine Lands, testified that the AML's fee collection authority must be reauthorized when it expires in 2021.

The RECLAIM Act stalled in the last Congress when no senator offered a companion version. This year, however, a companion bill has been introduced by Senate Majority Leader Mitch McConnell (R-Ky.), and proponents on both sides of the aisle say they're optimistic it will pass.

Pumped Hydropower Storage Bill Passes House

Posted June 27, 2017, 03:34 P.M. ET

By Brian Dabbs

A bill designed to eliminate regulatory uncertainty in hydropower storage at federal reservoirs passed the House June 27.

The legislation (H.R. 1967) would tap the Bureau of Reclamation as the lead regulator for pump storage at the agency's facilities. The Federal Energy Regulatory Commission sometimes requires permits for that activity, and the legislation would remove FERC from the regulatory process, the bill's supporters said.

A House Natural Resources Committee spokeswoman previously told Bloomberg BNA that the bill could be part of a broad infrastructure package in the future. Its status in the Senate remains uncertain.

Pump storage is similar to a battery, and proponents said it's a useful way to extend the period of time that hydroelectric power is available. Water is pumped from a lower reservoir to a higher reservoir and later used to generate electricity.

Rep. Doug Lamborn (R-Colo.) sponsored the bill, and Rep. Cathy McMorris Rodgers (R-Wash.), a member of the Republican leadership and founder of the Hydropower Caucus, joined on the bill.

EPA Nitrogen Dioxide Air Standards Up For White House Review

Posted June 27, 2017, 02:03 P.M. ET

By David Schultz

The EPA's review of its nitrogen dioxide air pollution standards is nearly complete with the agency sending its proposal for how to proceed to the White House Office of Management and Budget.

OMB is reviewing the agency's proposed decision, according to a June 26 posting on its website.

The Clean Air Act requires the Environmental Protection Agency to review its nitrogen dioxide standards at least once every five years to determine whether they should be revised. Earlier this year, the agency's air pollution science advisers said the EPA should leave the current standards in place. The agency also indicated it was leaning toward keeping the current standards in place in a draft version of its review that it released last year.

Nitrogen dioxide air pollution is primarily a byproduct of vehicle fumes that can cause serious respiratory problems. Regions that exceed the agency's standards for nitrogen dioxide levels, which

are currently between 53 and 100 parts per billion, could face mandatory pollution control measures, including stricter permitting requirements for industrial facilities.

An OMB review is typically the final stage of the rule making process before an agency decision is made public.

Perry Seeks Energy Pact with Mexico, Canada as NAFTA Talks Near

Posted June 27, 2017, 8:09 A.M. ET

By Josh Wingrove and Jennifer A. Dlouhy

The U.S. has a unique opportunity to develop a "North American energy strategy" with Canada and Mexico, Energy Secretary Rick Perry said, striking a conciliatory tone with the other members of the North American Free Trade Agreement.

While President Donald Trump has blasted NAFTA and moved to renegotiate it, Perry referred to the upcoming talks as a "massage" of the 1994 NAFTA deal, saying it presents an opportunity to bolster energy ties, not enact new trade barriers.

"That relationship I don't think has ever been more important than it is today, particularly from an energy perspective," he told reporters at the White House June 26, while stressing his close ties with his counterparts in Ottawa and Mexico City. "Energy is going to play a very important role."

His comments come at the outset of so-called "Energy Week" from the White House, as Trump works to reduce regulations on energy producers and jump-start energy exports. Perry's comments are nonetheless the latest signal Trump's cabinet is warming to trade ties with Canada and Mexico—whether it's lauding NAFTA and its impact on farmers or saying any revisions of the pact will be good for the U.S. neighbors, as well.

"Energy is an ideal area for the Trump administration to move forward with the relationship," Duncan Wood, director of the Mexico Institute at the Woodrow Wilson Intentional Center for Scholars, said in a telephone interview.

Trump has long advocated for American energy dominance, Wood said: "But everybody knows that for the United States to do that on its own is a pipe dream in the short term at least—but for North America working together, it becomes feasible."

Canada Trade

Perry likened NAFTA renegotiation to the "need to renegotiate a contract from time to time," saying the president wants to "massage" and "rework" the deal, with energy playing an important role. When NAFTA was negotiated, the U.S. was reliant on oil imports from Canada and Mexico; it's now both a major exporter and importer of oil and natural gas with both nations.

"I think we have a unique opportunity in this country to develop a North American energy strategy that will pay great dividends for Canadians, for Mexicans, for Americans, as we go forward," he said, adding he has good working relationships with Canada Natural Resources Minister Jim Carr and Mexican Energy Secretary Pedro Joaquin Coldwell.

Carr echoed the comments, saying in a June 26 interview that Perry has championed North

American energy cooperation since his first days on the job.

"We both understand the importance of that integrated market," Carr said in an interview. "We understand we have to keep goods flowing, that we can establish North America as a world leader in the production of conventional and clean energy."

Oil Trade

Energy is a pillar of North American trade. Imported crude from Canada and Mexico now accounts for a larger percentage of total U.S. imports, growing to 49 percent in 2016, from 34 percent in 2010, according to the American Petroleum Institute.

North American energy trade acts to balance regional supply and demand needs. In 2016, the U.S. exported 2.1 trillion cubic feet of natural gas by pipeline to Canada and Mexico, while also importing 2.9 trillion cubic feet from the countries, according to the U.S. Energy Information Administration. The U.S. exported 1.6 billion barrels of crude oil and petroleum products to Canada and Mexico that year, while importing 1.4 billion barrels from the two countries, the EIA reported.

North American energy markets are already highly integrated, at least in oil, gas and petroleum products. Electricity is the outlier; while there are grid connections across the U.S.-Canada border, similar transmission does not occur between the U.S. and Mexico.

Trade Disputes

Already, a plurality of shipments of liquefied natural gas—20 percent, Bloomberg data show—from Cheniere Energy Inc.'s Sabine Pass export facility ultimately have been sold to Mexico since that site began shipping LNG in early 2016.

"If you would have asked me to think about where these volumes would go a year, year and a half ago, I wouldn't have guessed our neighbors to the south of the border would be the single largest market to date," Cheniere Executive Vice President Anatol Feygin said at an EIA conference in Washington June 26.

To be sure, the trade disputes between the countries go beyond NAFTA and energy. The U.S. and Mexico hope to sign a final deal on sugar imports this month, settling a long-standing irritant.

The U.S. imposed a second-round of duties on Canadian softwood lumber on June 26—a move widely expected even before Trump's election. The U.S. is also reviewing steel rules, though Canadian Prime Minister Justin Trudeau is confident his country will be spared by any new measures. The U.S. and Canada are also at odds over aerospace.

Energy, Keystone

There's more room for the conversation now, too, since the Trump administration authorized construction of TransCanada Corp.'s proposed Keystone XL pipeline to deliver oil sands crude from Alberta across the border, ultimately going to Gulf Coast refineries. For years as the Obama administration skeptically weighed the project and environmentalists battled the pipeline, it overshadowed trilateral talks.

That's no longer the case.

"Mexico and the United States could talk about pipelines for natural gas, but ultimately on a trilateral basis, it was all stymied by that issue of Keystone," Wood said. Without the Keystone decision hanging over discussions, "it liberates the agenda a little more."

Navajo Vote to Extend Large Coal-Fired Power Plant's Lease

Posted June 27, 2017, 9:00 A.M. ET

By Stephen Lee

The massive coal-fired Navajo Generating Station can continue to operate through 2019 after the Navajo Nation Council approved legislation allowing it more time to shut down.

The passage of Legislation No. 0194-17 June 26 gives the operators of the 2,250-megawatt Navajo Generating Station in Page, Ariz.—the biggest coal plant in the West—five years to decommission and remediate the facility starting Dec. 23, 2019, when the current 50-year lease expires.

Had the measure failed, the plant's operators would have had to close it in a matter of days to give themselves enough time to decommission the plant by the 2019 expiration date. The plant's owners said earlier that decommissioning would take roughly two years.

The extension also means the large Kayenta Mine 80 miles away, which solely provides coal to the Navajo Generating Station, will stay open through 2019. If and when the power plant closes, however, the mine will also close because it doesn't have a rail link connecting it to any other customers.

Peabody Energy, which operates the mine, has taken out a $235 million bond to reclaim the land. Some environmental advocates, however, question whether the bond amount is enough to reclaim the 35.8 square miles that have been mined at Kayenta.

Navajo leaders, fearful of what the plant's closure would mean for their economy, had supported the extension. The plant employs roughly 400 workers, and the mine employs another 243, according to the Institute for Energy Economics and Financial Analysis.

Grim Outlook Beyond 2019

The chances of the plant remaining open beyond 2019 appear murky at best. No outside buyers have stepped forward to take over the plant when the current lease expires, but several players, including the Navajo Nation and Peabody Energy, are actively looking for a buyer.

Andy Tobin, commissioner of the Arizona Corporation Commission—the state's public utilities commission, told Bloomberg BNA before the vote that the plant plays a central role in Arizona's economy.

"It's the only coal plant in Arizona that burns Arizona coal," Tobin said. "Without it, Arizona will become a full-time energy importer, which is something that bothers me as a whole."

Tobin also said he thinks it's possible to build a rail link to the Kayenta Mine, so Peabody can sell the coal to other customers.

Energy Regulator to Retire June 30 Leaving One Commissioner

Posted June 27, 2017, 9:23 A.M. ET

By Rebecca Kern

Federal Energy Regulatory Commissioner Colette Honorable announced on Twitter last night that Friday, June 30 will be her last day in that role. Her departure will leave the commission, an independent agency that regulates natural gas pipelines, liquefied natural gas terminals and hydropower projects, with only one member—Acting Chairman Cheryl LaFleur. The agency has been without the quorum it needs to make major decisions since February.

Two nominees to fill vacancies on the commission—Neil Chatterjee and Robert Powelson—are still awaiting Senate confirmation after their nominations were reported favorably out of a Senate committee.

Subject: EIA: Wind, solar provided 10 percent of total U.S. power in March

By Esther Whieldon

06/14/2017 10:40 AM EDT

The wind and solar power installations provided about 10 percent of total U.S. electricity generation in March and likely exceeded that level in April, the U.S. Energy Information Administration said today.

However, that share will likely fall below those levels in the summer, largely because output fluctuates based on seasonal changes, EIA said.

Of the total March output from the two renewable sources, wind power provided about 80 percent of the electricity, EIA said.

ENDANGERED SPECIES
Gulf of Maine Distinct Population Segment of Atlantic Salmon/Five-Year Review
ENDANGERED SPECIES

Notice of the National Oceanic and Atmospheric Administration, National Marine Fisheries Service, announces the initiation of a five-year status review for the Gulf of Maine distinct population segment of Atlantic salmon to determine if the current endangered listing classification is still accurate. The agency is requesting information on the status, threats, and recovery of the species that has become available since the final listing decision in June 2009. Comments are due July 20, 2017. Contact: Dan Kircheis; NOAA; 207-866-7320; Dan.Kircheis@noaa.gov

Regulatory Update

FOOD SAFETY
Food Canning Establishments/Acidified Foods and Thermally Processed Low-Acid Foods
FOOD SAFETY

Notice announces the intention of the Food and Drug Administration to seek OMB approval for a continuing information collection request regarding food canning establishment registration, process filing, and recordkeeping for acidified foods and thermally processed low-acid foods in hermetically sealed containers (21 CFR 108.25 and 108.35). The collection addresses registration requirements (FDA 2541) for firms that manufacture, process, or pack the specified foods for introduction into interstate commerce. The collection also addresses data on food processing (FDA 2541a) and for aseptic processing of low-acid foods in hermetically sealed containers (FDA 2541c). Comments are due Aug. 21, 2017. Contact: JonnaLynn Capezzuto; FDA, Office of Operations; 301-796-3794; PRAStaff@fda.hhs.gov

Virginia/Municipal Hydroelectric Project
GENERAL ENVIRONMENT AND SAFETY

Notice of the Federal Energy Regulatory Commission announces the filing of a hydroelectric application by the City of Radford, Va., for a subsequent minor license for the Municipal Hydroelectric Project on the Little River in Montgomery and Pulaski counties in Virginia. The existing project consists of a reinforced concrete slab and buttress dam, an impoundment, an intake section, a penstock, a powerhouse with a 1,185 kilowatt turbine generator, transmission lines, and appurtenant facilities. The notice specifies that the applicant operates the project in both run-of-river and peaking modes with an annual average generation of approximately 4,550 megawatt-hours. The proposed revision would include transmission facilities composed of only three 4.16 kilovolt overhead conductors that transmit power to a switched disconnect/interconnection with the local distribution grid. The notice also specifies that a formerly licensed transmission line now serves to distribute power to other sources and is no longer part of the project. The notice includes a preliminary licensing procedural schedule. Study requests are due July 29, 2017. Contact: Allyson Conner; FERC; 202-502-6082; allyson.conner@ferc.gov

HAZARDOUS MATERIALS TRANSPORTATION
Underground Natural Gas Storage Facilities Safety Issues
HAZARDOUS MATERIALS TRANSPORTATION

Notice of the Pipeline and Hazardous Materials Safety Administration announces the receipt of a petition by the American Gas Association, the American Petroleum Institute (API), and the American Public Gas Association for reconsideration of a Dec. 19, 2016, interim final rule (81 FR 91860) that amended regulations under 49 CFR 191 and 192 regarding critical safety issues related to downhole facilities, including wells, wellbore tubing and casing, at underground natural gas storage facilities. The rule incorporated by reference two API recommended practices (API RP 1170 and 1171) as of Jan. 18, 2017. The petitioners seek reconsideration of the interim rule's mandatory application of nonmandatory sections of the RPs. PHMSA plans to issue a final rule by January 2018 to address the petition and comments received on the interim rule. For a period of at least one year following publication of the final rule, PHMSA will not issue any enforcement citations for noncompliance with any provisions that are nonmandatory in the RPs or for noncompliance with the requirement to justify and document deviations from the nonmandatory provisions. PHMSA will enforce other compliance deadlines in the interim rule, including the requirement that operators of existing underground gas storage facilities develop, by Jan. 18, 2018, policies and procedures to implement those sections of the RPs that are identified as mandatory in the actual RPs. OCCUPATIONAL SAFETY AND HEALTH
Miners Representatives, Legal Identity, Commencement of Operations and Closing of Mines
OCCUPATIONAL SAFETY AND HEALTH

Notice of the Mine Safety and Health Administration announces the submission of a continuing information collection request to the OMB regarding miners representatives, notification of legal identity, and notification of commencement of operations and closing of mines. The collection addresses requirements for persons to file information to be identified as a representative of miners, to post a copy of the information upon receipt by the operator on the mine bulletin board and maintain in current status, and to file a statement with the MSHA district manager terminating their designation if the representative is not able to comply with such requirements (30 CFR 40). The collection also addresses requirements for mine operators to notify MSHA (Form 2000-7) of their legal identity and to request (Form 7000-51) a mine identification number for each mine (30 CFR 41). In addition, the collection addresses requirements for operators of metal and nonmetal mines to notify when operation of a mine will commence or close (30 CFR 56.1000 and 57.1000). Comments are due July 20, 2017. Contact: Michel Smyth; Department of Labor; 202-693-8064; DOL_PRA_PUBLIC@dol.gov

House Panel Approves Energy Bills as Pallone Urges Climate Action

Posted June 07, 2017, 01:31 P.M. ET

By Brian Dabbs

A House panel unanimously approved a slew of energy bills June 7, including a measure to increase workforce education and training for energy and manufacturing-related fields.

That bill (H.R. 338), which authorizes no additional spending, directs the Energy Department to prioritize skill strengthening for minority and displaced workers in the fossil fuel, nuclear, utility, pipeline, renewable, petrochemical, manufacturing and electrical construction sectors.

The legislation approved the House Energy and Commerce Committee alongside 10 other energy bills, including a mandate (H.R. 627) for the Energy Department to create a clearinghouse for information on energy efficiency underwriting programs and another measure (H.R. 1109) to increase the size of a public utility merger or sale that necessitates prior Federal Energy Regulatory Commission approval. That threshold would be raised from $50,000 to $10 million.

The hearing marked the committee's first approval of energy bills this Congress, despite exploratory hearings on hydropower approval revamps, funding for the proposed Yucca Mountain nuclear waste repository and brownfields reauthorization.

'Think Bigger'

The committee's ranking member, Rep. Frank Pallone (D-N.J.), lauded those bills but urged more significant action.

Clean energy policy is now the responsibility of Capitol Hill following President Donald Trump's withdrawal from the Paris climate accord, and Congress needs to "think bigger," Pallone said at the hearing.

"We can't just recycle energy proposals from the last Congress which were proposed with the Paris Agreement in place," he said. "This committee should be focusing on modernizing our infrastructure by reducing vulnerabilities to climate change."

Pallone called on Republican leadership to take up a sweeping infrastructure bill that Democrats

proposed in mid-May. That legislation (H.R. 2479) would provide more than $17 billion for school and home retrofitting, solar installations, methane pipeline replacement and other energy initiatives.

If Trump Gets His Way, World May Not Know If U.S. Emissions Rise

Posted June 07, 2017, 10:43 A.M. ET

By Christopher Flavelle

President Donald Trump's critics argue that pulling the U.S. out of the Paris climate accord will lead to an increase in greenhouse gas emissions.

If Trump has his way, the world may never know.

The president's budget request to Congress would eliminate or gut core programs across the federal government that track the heat-trapping gases. If those cuts go ahead, the government may not be able to tell if emissions are rising or falling.

"The first step in any decent regulatory program is a requirement for monitoring," David Doniger, director of the climate and clean air program at the Natural Resources Defense Council, said in an interview. "If you don't know what's there, it's harder for the public or the regulators to do anything about it."

Stephen Cole, a spokesman for NASA, which is slated under the president's proposed budget to lose money for a satellite-based carbon-measuring system, said the cut reflects budget constraints. "NASA remains committed to studying our home planet and the universe, but we are reshaping our focus within the resources available to us," he said in an email.

Whether the cuts happen will depend on Congress, and the degree to which Republicans share Trump's priorities.

Critics of government climate efforts, meanwhile, support the administration's cuts, calling emissions monitoring programs a waste of taxpayers' money. "This doesn't necessarily need to be housed within the federal government," said Nick Loris, a research fellow for the Heritage Foundation. "If the private sector wants to continue to pursue greenhouse gas monitoring, that's fine."

Tools for Tracking

The government has two basic tools for tracking emissions. The Trump administration is proposing to cut or wind down both of them.

The first approach is to measure gases at their source. Every factory or other installation that emits the equivalent of 25,000 tons or more of carbon dioxide, the primary contributor to global warming, must track and report those emissions to the Environmental Protection Agency. The agency makes those emissions public through its annual Greenhouse Gas Inventory.

That inventory makes it possible for the federal government to measure total emissions, and also to see changes in emissions by industry and by region. It also fulfills the U.S. commitment under a 1992 United Nations climate treaty, signed by President George H. W. Bush and ratified by the Senate, to publish "national inventories of anthropogenic emissions by sources."

Trump's budget request would reduce funding for the EPA's greenhouse-gas reporting program by 86 percent, to $14 million in 2018 from $95 million this year. It is not clear how the EPA would be able to continue the inventory with that cut, according to Janet McCabe, who was responsible for it as head of the EPA's Office of Air and Radiation under President Barack Obama.

"Sometimes we find out that certain activities emit LESS than we thought, sometimes more," McCabe said in an email. "As they say, you can't manage what you don't measure."

And rolling back the program would give tacit permission to other countries to make similar changes, according to Bob Perciasepe, deputy EPA administrator from 2009 to 2014.

"Weakening U.S. capacity to report accurately will undermine our ability to push the rest of the world to be transparent," Perciasepe said in an email. "One of the core strengths of the Paris agreement is extending similar requirements to China and other developing countries so they're more accountable to the international community."

The EPA said it can do more with less. "While many in Washington insist on greater spending, EPA is focused on greater value and results," the agency said in an emailed statement.

Satellite Measurement

The second way to measure greenhouse gas emissions is in the atmosphere.

In 2010, NASA created the Global Carbon Monitoring program, which uses satellites to detect the concentration of those gases. Trump's budget request would eliminate that program entirely.

The NASA program provides "long-term, reliable, continuous data series" that can't be matched by other countries, said Gretchen Goldman, research director for the Center for Science and Democracy at the Union of Concerned Scientists. "Without such vital monitoring efforts, we can't understand and prepare for climate change as well."

Democrats say they will try to maintain funding for the programs.

"We know that the Earth is warming, sea ice is disappearing, the glaciers are receding, the oceans are acidifying, and sea levels are rising," Representative Eddie Bernice Johnson, the top Democrat on the House Committee on Science, Space and Technology, said in an email. "We know all of this from climate research and monitoring."

Electric Car Market Goes Zero to 2 Million in Five Years

Posted June 07, 2017, 8:41 A.M. ET

By Jessica Shankleman

The number of electric vehicles on the road rocketed to 2 million in 2016 after being virtually non-existent just five years ago, according to the International Energy Agency.

Registered plug-in and battery-powered vehicles on roads worldwide rose 60 percent from the year before, according to the Global EV Outlook 2017 report from the Paris-based IEA. Despite the rapid

growth, electric vehicles still represent just 0.2 percent of total light-duty vehicles.

"China was by far the largest electric car market, accounting for more than 40 percent of the electric cars sold in the world and more than double the amount sold in the United States," the IEA wrote in the report published June 7. "It is undeniable that the current electric car market uptake is largely influenced by the policy environment."

A multi government program called the Electric Vehicle Initiative on June 8 will set a goal for 30 percent market share for battery power cars, buses, trucks and vans by 2030, according to IEA. The 10 governments in the initiative include China, France, Germany, the U.K. and U.S.

India, which isn't part of the group, said last month that it plans to sell only electric cars by the end of the next decade. Countries and cities are looking to electric vehicles to help tackle their air pollution problems.

In order to limit global warming to below 2 degrees Celsius (3.6 degrees Fahrenheit), the target set by the landmark Paris Agreement on climate change, the world will need 600 million electric vehicles by 2040, according to the IEA.

After struggling for consumer acceptance, Tesla Inc. has made electric vehicles cool and trendy, and is pushing into the mass market with the new Model 3 sedan.

Consumer interest and charging infrastructure, as well as declining demand for diesel cars in the wake of Volkswagen AG's emissions scandal, has spurred massive investments in plug-in cars. An electrical vehicle "cool factor" could spur sales to 450 million by 2035, according to BP Chief Economist Spencer Dale.

Volkswagen, the world's largest automaker, plans to roll out four affordable electric vehicles in the coming years as part of a goal to sell more than 2 million battery-powered vehicles a year by 2025. Mercedes-Benz accelerated the introduction of 10 new electric vehicles by three years to 2022 to take on Tesla as the dominance of the combustion engine gradually fades.

Top German Court Blocks Nuclear Fuel Tax

Posted June 07, 2017, 02:45 P.M. ET

By Tino Andresen and Karin Matussek

Germany's Constitutional Court said June 7 the federal government overstepped its powers when introducing the national nuclear-fuel tax in 2011.

The judges rejected arguments from lawmakers that the levy was a consumption tax, for which the government would have had legislative powers. Reactor operators had to pay 145 euros per gram of nuclear fuel when they exchanged a fuel rod, cutting their profit.

Germany's biggest power producers are set to recover about 6 billion euros ($6.7 billion) after the ruling.

The verdict means RWE AG shareholders could be in line for a special dividend, while EON SE may be able to forgo a sale of hybrid bonds, according to analysts at RBC Europe Ltd. and Independent Research GmbH.

EON expects that it will get 2.85 billion euros plus about 450 million euros in interest, which the company will use to strengthen its balance sheet, the Essen-based utility said after the ruling. RWE had paid about 1.7 billion euros toward the tax, the company said in a statement. The utility hasn't yet decided how it will use the funds.

"RWE has no need for the cash so any payment received may be given back to shareholders in some form of special dividend on enhanced regular dividend," John Musk, an analyst at RBC Europe Ltd., said June 7 in a note to clients.

Hybrid Bonds

The reimbursement would help EON repair a balance sheet hurt by a deal with Chancellor Angela Merkel's government on funding the nation's exit from nuclear power by 2022 as well as the billions of euros it wrote down related to the spinoff of its fossil-fuel generation business Uniper SE. The utility was considering as recently as last month a sale of hybrid bonds, securities that combine elements of equity and debt.

Christian Drepper, a spokesman at EON, declined to comment on the utility's bond plans.

The windfall may reduce how much of the hybrid debt EON sells, according to Sven Diermeier, an analyst at Independent Research.

The fuel-tax rebate would also ease EON's need for asset disposals and capital expenditure cuts in its plans to reduce net debt by about 24 percent to 20 billion euros, said RBC's Musk. "More importantly, it may allow EON to move to a more appropriate payout ratio on dividends" from 40 percent to 60 percent of adjusted net income, he said.

The constitutional court issued its ruling as guidance in a case in Hamburg. As the ruling is "clear cut," finance authorities will most likely reimburse the funds, ending the case, said Matthias Tiemann, spokesman for the lower court. The tax had expired in 2016.

"We have taken note of the judgment of the Federal Constitutional Court on the nuclear fuel tax," Finance Ministry spokesman Juerg Weissgerber told reporters at a regular government press conference in Berlin. "We would have expected the Federal Constitutional Court to endorse our argument that the nuclear fuel tax is constitutional."

Germany's switch to renewables forced traditional utilities to reinvent themselves through reorganizations as power prices slid to a decade-low. The ruling is the second time in six months, however, that the companies have won some relief from the top court as judges in December said they should be compensated for power-production rights lost related to nuclear power.

Dark Clouds Hang Over Nuclear Town Torpedoed by Green Energy

Posted June 07, 2017, 10:45 A.M. ET

By Jesper Starn

In an eerily quiet nuclear reactor hall in southern Sweden, new copper and steel machinery stretching 50 meters and weighing hundreds of tons is just sitting idle.

Bought from France and Germany as part of a $450 million upgrade at the now defunct Oskarshamn-2 facility, the turbines, steam pipes and feed-water pumps were supposed to help supply cheap electricity to the Nordic market for decades to come. Instead, they will probably be sold as scrap metal. The junk pile may grow even bigger as another reactor at the site will produce its last megawatt by the end of June.

The plant is yet another victim of an unprecedented surge in renewable energy that has sent margins at traditional power stations plunging, leaving thousands of old-school energy workers across Europe unemployed. Oskarshamn also houses a third reactor and its fate will be decided later this year by owners Uniper SE and Fortum Oyj, a decision seen as a bellwether for future investment in other Swedish atomic stations.

For the town of Oskarshamn, the utilities' decision later this year on whether to pour another one-billion kronor ($114 million) into the region's biggest reactor to keep it humming until 2045 couldn't be more significant.

With job cuts also looming at other local factories from a nuclear subcontractor to truck maker Scania AB, halting power production permanently would be another big knock to the town after the shipyard closed in the 1970s, its largest employer at the time.

"It's a scenario I do not even dare to fully consider," Peter Wretlund, Oskarshamn's mayor, said in his office overlooking the town's port on the Baltic Sea. "It would have grave consequences for the population."

While governments in Germany, France and Switzerland are deciding on when to shut down reactors, Sweden will let market conditions be the judge on the life of its remaining six units. Even after a nuclear tax was abolished, conditions remain harsh for operators as they compete with subsidized renewable energy flowing across the European grids.

Local politicians are worried about the town's future. One of the main obstacles for growth is its remote location on the southeast coast, far from any of Sweden's major cities. The closest large international airport is in Copenhagen, another flight or a 4.5-hour train ride away.

"So many highly skilled workers are leaving the city," Eva-Marie Hansson, a local politician for the opposition Moderate Party, said in an interview. "People here do not have the opportunity to stay and easily commute to other big cities."

To combat the brain drain, Oskarshamn bid to host a 4 billion-euro ($4.5 billion) large-scale battery factory earlier this year for Northvolt AB. The plan was to build the factory on the nuclear site, with existing security and access to high-voltage grid connections as main selling points.

The project didn't make the short-list, said Wretlund. Northvolt listed good transport links as one of the main criteria for its location.

For now, the nuclear plant's biggest challenge is to cut its operating costs. It plans to cut staff by 32 percent to 600 by 2019 compared with last year.

Uniper had sold half of its 2019 Swedish production in advance at between 19 euros and 23 euros per megawatt-hour in May, a level that also includes the company's hydro power production. That compares with plant costs of 40 euros before tax cuts in 2014, the latest available figure.

Attracting new tenants in the mode of Northvolt seem logical and others have done it before. Google Inc. bought the Summa paper mill in Finland from Stora Enso Oyj in 2009 and converted it to a data center using existing grid connections. The project employed 2,000 people during construction.

"Our assessment is that we can reach long-term profitability," Johan Svenningsson, Uniper's chief executive officer, said in a phone interview. "But we still need to see that costs can be brought down to the levels we require before making a decision."

Subject: Playbook Power Briefing, presented by Postmates: TRUMP calls SISI from Air Force One -- Rep. CLAY HIGGINS criticized for Auschwitz selfie video -- CHRIS CHRISTIE sand sculpture spotted on Jersey beach

View online version | Add politicoplaybook@politico.com to your address book.

Today's Playbook Power Briefing presented by Postmates

Happy Wednesday afternoon. THE PRESIDENT called Egyptian President Abdel Fattah el-Sisi from Air Force One "to address the ongoing dispute between Qatar and its Arab neighbors," the White House said. "The two presidents also discussed the threat from North Korea. President Trump stressed the need for all countries to fully implement U.N. Security Council resolutions on North Korea, stop hosting North Korean guest workers, and stop providing economic or military benefits to North Korea."

BULLETIN at 11:47 a.m.: "CAIRO (AP) - Four Arab nations seeking to isolate Qatar say Doha's response to their demands to end crisis was 'not serious'"

AN INTERESTING NUGGET from an AP story by Vivian Salama and Ken Thomas: "According to Polish media reports, Poland's government promised the White House a reception of cheering crowds as part of its invitation. To make good on that pledge, ruling party lawmakers and pro-government activists plan to bus in groups from the provinces to hear Trump's speech. The White House didn't respond to a request for comment on those reports." http://bit.ly/2uJBaZ3

MICHAEL MCFAUL, the former U.S. ambassador to Russia, (**@mcfaul): "**With other experts, I spent 2 hrs with President Bush before his 1st meeting with Putin & obviously briefed Obama before his 1st Putin mtg".

WHITE HOUSE STATEMENTS -- @realDonaldTrump at 6:51 a.m.: "Getting ready to leave for Poland, after which I will travel to Germany for the G-20. Will be back on Saturday." ... **at 7:14 a.m.:** "The United States made some of the worst Trade Deals in world history.Why should we continue these deals with countries that do not help us?" ... **at 7:21 a.m.:** "Trade between China and North Korea grew almost 40% in the first quarter. So much for China working with us - but we had to give it a try!"

WRONG PLACE ALERT -- "Louisiana congressman criticized for selfie video inside Auschwitz gas chamber," by Louis Nelson: "A U.S. congressman's video taken inside a gas chamber at the Nazi concentration camp Auschwitz has drawn criticism from the museum and memorial that oversees the site where hundreds of thousands of people were murdered during the Holocaust. During a trip to the concentration camp, Rep. Clay Higgins (R-La.) shot a roughly five-minute video of his visit, filming and narrating as he viewed the train tracks that carried prisoners to the camp and piles of

shoes left by prisoners.

"Midway through the video, Higgins films himself inside an Auschwitz gas chamber, explaining how Nazi guards would murder their victims by dropping poisonous gas through a hatch in the ceiling as he turned his camera towards the hatch. He then moved in front of the nearby ovens, explaining how the camp's guards would force other prisoners to load the dead bodies for cremation. That portion of the video prompted a response from the Auschwitz Memorial and Museum, which wrote on Twitter that 'everyone has the right to personal reflections. However, inside a former gas chamber, there should be mournful silence. It's not a stage.'" http://politi.co/2sLQLpG

THE LATEST ON NORTH KOREA -- "U.S.: North Korea launched new kind of missile," by CNN's Barbara Starr and Jeremy Herb: "The two-stage missile launched Tuesday by North Korea will be classified by U.S. intelligence as a brand-new missile that has not been seen before, US officials told CNN. The first stage of the missile is believed to be a KN-17 liquid fueled missile, which is well-known to U.S. intelligence and has been previously launched by North Korea.

"Ahead of Tuesday's missile test, U.S. satellites had seen evidence the KN-17 missile was being prepared for launch. But at some point prior to launch, the North Koreans attached a second stage atop that missile. The focus now is on the capability of that second stage, and how it technically contributed to making Pyongyang's latest test its first ever intercontinental ballistic missile (ICBM) launch. CNN has reported that the second stage had a separate 30-second burn cycle, which allowed the missile to travel the extra distance to classify it as an ICBM." http://cnn.it/2tLWAHI

WHAT JESSE RODRIGUEZ IS READING -- AP: "MSNBC's 'Morning Joe' sets viewership mark after tweets": "Joe Scarborough and Mika Brzezinski reached their biggest audience ever when they talked Friday about President Donald Trump's tweets about their show. The Nielsen company said Wednesday that 1.66 million people watched the MSNBC morning show the day after the tweets. That narrowly beat the show's previous record, which came the day after Trump was elected last year." http://bit.ly/2tR92Xy

STICKING AROUND -- " Rep. Markwayne Mullin flips stance, announces run for 4th term in Congress," by KTUL's Clayton Youngman: "Rep. Markwayne Mullin has announced that he will seek re-election for his seat in Oklahoma's second congressional

district, flipping on a campaign promise he made to only serve six years in Congress. Mullin announced the decision in a video posted to his Facebook page Tuesday. He said he and his family originally decided to stick to their decision to only serve three terms, but they just didn't feel it was the right decision.

"'**People are [going to] be upset,** and we get that. We understand it,' Mullin said in the 11-minute video. 'I'm not hiding from that because we did say we're going to serve six years, and it was out of true concerns.' The businessman said he originally made the promise because his family had concerns about the effects working in Congress would have on them and on their business. Now, he says he says he has a better understanding of politics in Washington and believes he can continue to make a difference under President Donald Trump's administration.

"'**I don't think there's one person that's never changed** their mind six years apart from each other or how they would approach things,' Mullin said." http://bit.ly/2th1lsi

-- SO MANY PEOPLE who make these pledges back off. It's one of those sounds-better-in-theory type things.

WHOA -- "Amelia Earhart May Have Survived Crash-Landing, Newly Discovered Photo Suggests," by NBC News' Tom Costello and Daniel Arkin: "A newly discovered photograph suggests legendary aviator Amelia Earhart, who vanished 80 years ago on a round-the-world flight, survived a crash-landing in the Marshall Islands. The photo, found in a long-forgotten file in the National Archives, shows a woman who resembles Earhart and a man who appears to be her navigator, Fred Noonan, on a dock. The discovery is featured in a new History channel special, 'Amelia Earhart: The Lost Evidence,' that airs Sunday. Independent analysts told History the photo appears legitimate and undoctored. Shawn Henry, former executive assistant director for the FBI and an NBC News analyst, has studied the photo and feels confident it shows the famed pilot and her navigator." http://nbcnews.to/2tMeg69 ... ***More on the special, which airs on Sunday at 9 p.m.*** http://bit.ly/2tLvmRt

Subject: Morning Media: Donald Trump, David Pecker, Time Inc. — Preet podcast — Facebook goes Hollywood

By Joe Pompeo | 06/26/2017 05:35 AM EDT

With Alex Weprin

BIG DAVID PECKER PROFILE IN THIS WEEK'S NEW YORKER - Jeffrey Toobin reports on the longtime Trump pal and head of National Enquirer parent company American Media Inc. Scene: "As the meeting wound down ... Someone suggested a story about a video from Donald and Melania Trump's first overseas trip. ... When Donald reached for Melania's hand, she slapped it away with a sharp flick of her wrist. 'I didn't see that,' Pecker said, on the speakerphone. The half-dozen or so men in the room exchanged looks. One then noted that the footage of Melania's slap had received a good deal of attention. 'I didn't see that,' Pecker repeated, and the subject was dropped. ...

"Pecker and Trump have been friends for decades ... and Pecker acknowledges that his tabloids' coverage of Trump has a personal dimension. All Presidents seek to influence the media, but Trump enjoys unusual advantages in this regard. ... Unlike [Rupert] Murdoch, Pecker heads a fading and vaguely comic archetype of Americana ...But the impact of the tabloids, particularly their covers, remains substantial."

CONFIRMED: PECKER IS EYEING TIME INC. - I first reported this back in March, when Time Inc. was still entertaining several unsolicited bids for the company. A source familiar with the matter told me at the time that Pecker had asked his people to crunch some numbers to see what a potential acquisition of certain titles might look like. (Time Inc. stalwarts People, Entertainment Weekly and InStyle would add some firepower to Pecker's celebrity media empire, which also now includes Us Weekly.) As someone familiar with Pecker's thinking put it to me: "He's always had a hard-on for Time Inc."

Now, Toobin reports that "Pecker is ... considering expanding his business: he may bid to take over the financially strapped magazines of Time, Inc. ... Based on his stewardship of his own publications, Pecker would almost certainly direct those magazines, and the journalists who work for them, to advance the interests of the President and to damage those of his opponents --- which makes the story of the Enquirer and its chief executive a little more important and a little less funny."

No, seriously: "[T]he idea of Pecker as the leader of Time, Inc., like that of Trump as the President of the United States, has gone from preposterous to more than possible ... Pecker remains interested in running Time, Inc., with its stable of weeklies, including Time, Sports Illustrated, and the great prize, People. ... [T]hough it's not officially on the market, these sorts of auctions generally end, sooner or later, with a sale. ... Pecker couldn't buy Time, Inc., on his own, however. He would need ... a deep-pocketed partner, and he's looking to find one. 'I think that there's a huge opportunity,' Pecker said. ... Time and the other magazines would survive, as

the Enquirer does, as vehicles for Pecker's cultivation of his friend, the President."

I got in touch with Time Inc. last night, but they declined to comment. More: "FEEDING THE BEAST: David Pecker's reign at the National Enquirer and the rise of Trump."

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima**. (clima@politico.com / @ludacristiano). **Archives**. **Subscribe.**

PREET BHARARA'S NEXT ACT - Four months after the Manhattan-based U.S. Attorney was fired by President Trump, "Mr. Bharara is becoming something of a media Renaissance man," The New York times reports . "On Monday, he will officially announce that he is joining his younger brother's media company, Some Spider Studios. ... Mr. Bharara will become an executive vice president at Some Spider, which Vinit Bharara started in 2014. ... The podcast, which is scheduled to begin airing in the coming months, will explore justice and fairness issues and provide in-depth analysis on legal cases. Mr. Bharara also expects to write articles for Some Spider's news and entertainment website, Cafe, and he and Vinit Bharara plan to introduce a conference, Cafe Con, next year."

CNN'S NEW RUSSIA RULES - BuzzFeed Reports : "CNN is imposing strict new publishing restrictions for online articles involving Russia after the network deleted a story and then issued a retraction late Friday, according to an internal email obtained by BuzzFeed News. The email went out at 11:21 a.m. on Saturday from Rich Barbieri, the CNNMoney executive editor, saying ' No one should publish any content involving Russia without coming to me and Jason,' a CNN vice president. 'This applied to social, video, editorial, and MoneyStream. No exceptions' ... The new restrictions also apply to other areas of the network -- not just CNNMoney, which wasn't involved with the article that was deleted and retracted."

REMINDER: AUSTIN TICE REMAINS MISSING IN SYRIA - From Adam Goldman's story in Saturday's New York Times : "In the early days of the Trump administration, national security officials began exploring ways to free Austin Tice, an American journalist and a former Marine officer believed to be held by the Syrian government. His case has frustrated investigators and diplomats since he disappeared while on assignment nearly five years ago. White House officials decided, because of the delicacy of the situation, to set up a back channel.

... [I]n early February, Mike Pompeo, the C.I.A. director, spoke on the phone with Ali Mamlouk, the head of Syria's National Security Bureau intelligence service ... Though Mr. Pompeo's discussion with Mr. Mamlouk prompted further communications that renewed hope that Mr. Tice would be freed, the operation fizzled out after the Syrian government's nerve gas attack in rebel-held northern Syria in April and the American missile strike in response."

REVOLVING DOOR: ProPublica's latest hire is Ken Armstrong, who joins as a senior reporter from fellow nonprofit outlet The Marshall Project. A collaboration he did with ProPublica's T. Christian Miller, about the hunt for a serial rapist, won the 2016 Pulitzer Prize for explanatory reporting. Armstrong also won a Pulitzer Prize for investigative reporting in 2012 when he was at The Seattle Times.

EHS State Regulatory Alert

July 25, 2017 - Number 141

You can create a report customized by topic, jurisdiction, and date range by using the Regulatory Summaries Report Tool. The report can be generated in Excel, Word, or PDF.

California

OIL AND GAS INDUSTRY
Hazardous Liquid Pipelines
California OIL AND GAS INDUSTRY

Final rule of the Office of the State Fire Marshal amends regulations under 19 CCR 2021 regarding hazardous liquid pipelines. The rule updates incorporated instructions for the intrastate pipeline operator annual report (Form PSD-101) to reflect an updated federal web address concerning earthquake faults. The rule is effective July 6, 2017. Contact: Diane Arend; OSFM; 916-324-9592; diane.arend@fire.ca.gov

Regulatory Update

PESTICIDES
Copper-Based Antifouling Paint and Coating Products
California PESTICIDES

Final rule of the Department of Pesticide Regulation adopts regulations under 3 CCR 6190 to require registrants of all new copper-based antifouling paint and coating products to submit estimated daily mean copper release rate (leach rate) data. The rule also establishes a maximum allowable copper leach rate for antifouling paint and coating products registered for use on recreational vessels of 9.5 micrograms per square centimeter per day. In addition, the rule specifies that currently registered products exceeding the leach rate will be subject to cancellation. Finally, the rule adds definitions of recreational vessel and commercial vessel. The rule is effective Jan. 1, 2018. Contact: Linda Irokawa-Otani; DPR; 916-445-3991

Regulatory Update

SOLID WASTE

Minimum Standards for Solid Waste Handling and Disposal/Glass Container Processing

California SOLID WASTE

Notice of the Department of Resources Recycling and Recovery announces the second readoption of an Oct. 14, 2016, emergency rule that amended regulations under 14 CCR 17402, 17403.0, and 17405.0 and adopted regulations under 14 CCR 17403.3.1 to set forth minimum standards for glass container processing operations. The rule also placed such operations within the enforcement agency notification tier rather than requiring a full solid waste facility permit. The readoption is effective July 18, 2017, and expires Oct. 17, 2017. Contact: Harllee Branch; DRRR, Waste Permitting, Compliance and Mitigation Division; 916-341-6056; Harllee.Branch@calrecycle.ca.gov

Regulatory Update

TOXIC SUBSTANCES

Safe Drinking Water and Toxic Enforcement Act/Arsenic Levels in Rice

California TOXIC SUBSTANCES

Proposed rule of the Office of Environmental Health Hazard Assessment adopts regulations under 27 CCR 25501.1 to establish safe harbor concentrations for natural background levels of inorganic arsenic in rice under the Safe Drinking Water and Toxic Enforcement Act (Proposition 65). The rule specifies safe harbor arsenic concentrations of 80 parts per billion (ppb) for white rice and 170 ppb for brown rice. Hearing requests are due Aug. 23, 2017. Comments are due Sept. 7, 2017. —California Regulatory Notice Register (07/21/2017)

Regulatory Update

TOXIC SUBSTANCES

Safe Drinking Water and Toxic Enforcement Act/Clear and Reasonable Warnings

California TOXIC SUBSTANCES

Proposed rule of the Office of Environmental Health Hazard Assessment amends regulations under 27 CCR 25600.1 through 25607.17 (nonconsecutive) regarding clear and reasonable warnings under the Safe Drinking Water and Toxic Enforcement Act (Proposition 65). The rule clarifies requirements established under a Sept. 9, 2016, final rule that expanded right-to-know provisions and provided specific guidance on the content of safe harbor warnings for a variety of exposure situations and corresponding methods for providing such warnings, effective Aug. 30, 2018. The current rule revises definitions; clarifies the required format and location of product labels; and clarifies specific exposure warning requirements for restaurant food and beverages, prescription drugs and emergency medical and dental care, furniture products, diesel engines, and vehicles. Hearing requests are due Aug. 23, 2017. Comments are due Sept. 7, 2017. Contact: Monet Vela; OEHHA; 916-323-2517; monet.vela@oehha.ca.gov

Regulatory Update

TOXIC SUBSTANCES

Safe Drinking Water and Toxic Enforcement Act/Hotel Exposure Warnings

California TOXIC SUBSTANCES

Proposed rule of the Office of Environmental Health Hazard Assessment adopts regulations under 27 CCR 25607.32 and 25607.33 to establish tailored warnings for exposures to chemicals listed under the Safe Drinking Water and Toxic Enforcement Act (Proposition 65) that can occur at hotels and other transient lodging establishments. The rule sets forth content requirements for safe harbor warnings for such exposures and corresponding methods for providing the warnings. Hearing requests are due Aug. 23, 2017. Comments are due Sept. 7, 2017. Contact: Monet Vela; OEHHA; 916-323-2517; monet.vela@oehha.ca.gov

Regulatory Update

WATER

Surface Water Augmentation

California WATER

Proposed rule of the State Water Resources Control Board amends regulations under 22 CCR 60301.851 and adopts regulations under 22 CCR 60301.120 through 60320.330 (nonconsecutive) and 64668.05 through 64668.30 regarding water recycling criteria and surface water treatment requirements related to surface water augmentation. The rule establishes minimum uniform water recycling criteria for water recycling agencies for the planned placement of recycled water into a surface water reservoir used as a source of domestic drinking water supply. The rule also establishes requirements for public water systems that use a reservoir augmented with recycled water. A hearing is scheduled for Sept. 7, 2017, in Sacramento. Comments are due Sept. 12, 2017. Contact: Michael McKibben; SWRCB; 619-525-4023; michael.mckibben@waterboards.ca.gov

Regulatory Update

Colorado

AIR

Control of Ozone, Ozone Precursors, and Hydrocarbons/Oil and Gas Emissions

Colorado AIR

Proposed rule of the Department of Public Health and Environment, Air Quality Control Commission, amends regulations under 5 CCR 1001-9, Regulation 7, regarding the control of emissions of ozone, ozone precursors, and hydrocarbons from oil and gas operations. The rule addresses reasonably available control technology requirements for categories of sources covered by the EPA's oil and gas control techniques guidelines, including requirements for pneumatic pumps, components at well production facilities and natural gas compressor stations, compressors, pneumatic controllers, condensate tank controls, equipment leaks at natural gas processing plants, and compressors and leak detection and repair for components at well production facilities and natural gas compressor stations. The rule also addresses state-only

requirements for continuous bleed pneumatic controllers and for the inspection and maintenance of natural gas-driven pneumatic controllers. The rule is issued in response to the EPA's reclassification of the Denver Metro North Front Range area as a moderate eight-hour ozone nonattainment area and if adopted, the provisions will be submitted to the EPA for inclusion in the ozone SIP. A hearing is scheduled for Oct. 19-20, 2017, in Denver. Comments are due Oct. 2, 2017. Contact: Leah Martland; DPHE; 303-692-6269; leah.martland@state.co.us

Regulatory Update

HAZARDOUS MATERIALS TRANSPORTATION
Radiation Control/Transportation of Radioactive Material
Colorado HAZARDOUS MATERIALS TRANSPORTATION

Proposed rule of the Department of Public Health and Environment, Hazardous Materials and Waste Management Division, amends regulations under 6 CCR 1007-1, Parts 1 and 17, regarding the transportation of radioactive material. The rule expands exemptions for transportation of certain low-level radioactive materials, clarifies that the state is responsible for review of certain package-related quality assurance programs for use of Type B packages under a general license, and incorporates federal requirements for package quality assurance. The rule also expands recordkeeping requirements for irradiated fissile material shipments, adds package and conveyance equations used for calculating limits for mixtures or unknown quantities of radioactive materials, and revises and adds package limits for certain isotopes. In addition, the rule revises definitions and updates contact information for notifications for shipments of nuclear waste. A hearing is scheduled for Sept. 20, 2017, in Denver. Comments are due Sept. 14, 2017. Contact: James Jarvis; DPHE; 303-692-3454; james.jarvis@state.co.us

Pennsylvania

WATER
NPDES General Permit for Pesticide Discharges
Pennsylvania WATER

Notice of the Department of Environmental Protection announces the availability of draft revisions to the National Pollutant Discharge Elimination System (NPDES) general permit (PAG-15) for discharges from the application of pesticides. The permit, which is currently scheduled to expire Oct. 28, 2017, authorizes point source discharges to waters of the commonwealth from the application of pesticides. The revisions include the removal of a requirement to submit annual notices of intent for renewal, an increase of annual fees to $500, and modifications to and the extension of annual reports to March 1. Comments and hearing requests are due Aug. 21, 2017. Contact: DEP; 717-783-2300; ecomment@pa.gov

Driving the Day

Good Thursday morning. THE NEW NARRATIVE: At 9:26 p.m. last night, the New York Times alerted a story with this headline: "Top Republicans, long resistant to gun regulations, said they may be open to banning a rapid-fire device used by the Las Vegas gunman." (The Times story http://nyti.ms/2hOWdbA) The Times is spot on. This is a major topic of conversation on the Hill. **WHY?** Many lawmakers privately tell us they know have to do something this time around. Most every Republican aligns with the NRA. But a device that allows anyone to mow down dozens of people is a different story. Anna was saying yesterday on the way to the Capitol that this would be the biggest gun control measure in years, and it would be tough for the NRA to stand in the way. **Check out these quotes:**

-- SENATE MAJORITY WHIP JOHN CORNYN (R-TEXAS) to the NYT: "'I own a lot of guns, and as a hunter and sportsman, I think that's our right as Americans, but I don't understand the use of this bump stock. It seems like it's an obvious area we ought to explore and see if it's something Congress needs to act on."

-- SENATE HOMELAND SECURITY CHAIRMAN RON JOHNSON (R-WIS.) in a good story by John Bresnahan, Seung Min Kim and Burgess Everett: "Automatic weapons are illegal. If that facilitates that, to me it would be subject to the same ban. If that actually gets on the Senate floor, I'd vote for it."

-- SEN. JOHN THUNE (R-S.D.) to Bres, Burgess and SMK: "I think it's something we ought to look into. I don't know a lot about them, and I'm somebody who, I'd like to think, is fairly familiar with a lot of firearms and you know, the use of those. And that incident out there is something that I think we need to take a look at." http://politi.co/2y2t9TI

-- REP. BILL FLORES (R-TEXAS) to the Hill: "I think they should be banned. There's no reason for a typical gun owner to own anything that converts a semiautomatic to something that behaves like an automatic."

-- SEN. JAMES LANKFORD (R-OKLA.) told CBSN he is open to the possibility of bump stock legislation. http://cbsn.ws/2yZz9e8

-- REP. TOM ROONEY (R-FLA.) pinged us yesterday and said: "Trump needs to take the lead on this bump stock issue. He's the only one that can."

MIGHT THIS FALL FLAT? Sure, the details are very, very important. And betting against the NRA on Capitol Hill in recent years hasn't been a good bet. The group has a massive war chest and an active membership that it has employed on multiple occasions.

-- WSJ EDITORIAL: "The Gun Control Mirage: More gun laws won't stop mass shootings by determined killers": "Ah, but what about so-called bump stocks, which Paddock used to simulate quick, automatic-style fire? Outright modification of a firearm into an automatic is already a federal felony punishable by 10 years in prison. Congress could outlaw bump stocks, but how does it outlaw a technique? The practice of quickly 'bumping' a trigger with one's finger to engage in rapid fire long predates bump stocks or other accessories." http://on.wsj.com/2z0kzTF

ALERT -- THE HOUSE will vote on their budget today. It's expected to pass, and it paves the way for tax reform. ***Read AP's Andy Taylor for the details*** http://bit.ly/2wyPyV8

NEW -- DCCC NATIONAL AD CAMPAIGN -- "Never Stop" -- featuring Paul Ryan as the Democrats' 2018 punching bag ... ***30-second spot*** https://youtu.be/LTmx1hfEwWk

SCOOP -- ALEX ISENSTADT and **GABE DEBENEDETTI: "Angry GOP donors close their wallets":** "Republicans are confronting a growing revolt from their top donors, who are cutting off the party in protest over its inability to get anything done. Tensions reached a boiling point at a recent dinner at the home of Los Angeles billionaire Robert Day. In full view of around two dozen guests, Thomas Wachtell, a retired oil and gas investor and party contributor, delivered an urgent message to the night's headliner, Senate Majority Leader Mitch McConnell: Just do something.

"Wachtell, who has given tens of thousands of dollars over the years to Senate Republicans, recalled that McConnell responded defensively. Passing legislation takes time, the Republican leader responded, and President Donald Trump didn't seem to understand how long it required. 'Anybody who was there knew that I was not happy. And I don't think anybody was happy. How could you be?' said Wachtell, who has previously given over $2,000 to McConnell but recently stopped donating to Senate GOP causes. 'You're never going to get a more sympathetic Republican than I am. But I'm sick and tired of nothing happening.'

"With the GOP's agenda at a virtual standstill on Capitol Hill, the party is contending with a hard reality. Some of the party's most elite and influential donors, who spent the past eight years plowing cash into the party's coffers in hopes of accomplishing a sweeping conservative agenda and undoing Barack Obama's legislative accomplishments, are closing their wallets. The backlash is threatening to deprive Republicans of resources just as they're gearing up for the 2018 midterms.

"Party officials are so alarmed that North Carolina Sen. Thom Tillis, who oversees fundraising for the National Republican Senatorial Committee, told his colleagues at a recent conference meeting that donations had fallen off a cliff after the Obamacare flop. The committee's haul plummeted to just $2 million in July and August, less than half of what it raised in June." http://politi.co/2fSLQ5W

-- THIS TRACKS what we have been hearing for weeks. GOP lawmakers are increasingly nervous about their chances for keeping their Congressional majorities. Behind the scenes, aides and operatives regularly say that if Republicans can't pass tax reform, they will likely lose the House.

-- NEXT UP: "Roy Moore's disruption of Washington has already begun, and more is on the way," by WaPo's Sean Sullivan: http://wapo.st/2yqcdb7

THE LATEST IN LAS VEGAS ... -- "Clues few and elusive for motive of Las Vegas gunman," by AP's Ken Ritter and Michael Balsamo in Las Vegas and Sadie Gurman in D.C.: "Those seeking to know the motive of Las Vegas gunman Stephen Paddock have had little more to chase than hints and shadows. Paddock led such a low-key, private life that no one seemed to know him well, and those who did had no sense he was capable of the deadliest mass shooting in modern American history.

"Where other mass killers have left behind a trail of plain-sight clues that help investigators quickly understand what drove them to violence, Paddock, 64, had nearly no close friends, social media presence or other clear connections to the broader world. Even the No. 2 official in the FBI said Wednesday he was surprised investigators have not uncovered more about why a man with no obvious criminal record would cause so much bloodshed.

'There's all kinds of things that surprise us in each one of these events. That's the one in this one, and we are not there yet,' FBI Deputy Director Andrew McCabe said. 'We have a lot of work to do.'" http://bit.ly/2hOXjEf

NYT FRONT PAGE includes a reconstruction of the shooter's room, stitching together photos http://nyti.ms/2yZrpZM

-- "Girlfriend of Las Vegas gunman says she had no idea he was planning attack," by WaPo's Mark Berman and Matt Zapotosky: "The girlfriend of Stephen Paddock, the gunman who opened fire on a country music festival in Las Vegas earlier this week, said

Wednesday she had no warning about his plans to carry out the massacre and pledged to cooperate with authorities struggling to determine what sparked the deadliest mass shooting in modern American history. 'I knew Stephen Paddock as a kind, caring, quiet man,' Marilou Danley, Paddock's girlfriend, said in a statement read by her attorney. 'He never said anything to me or took any action that I was aware of that I understood in any way to be a warning that something horrible like this was going to happen.'" http://wapo.st/2hNC6u7

-- "Las Vegas Gunman Chased Gambling's Payouts and Perks," by NYT's John Branch, Serge Kovaleski and Sabrina Tavernise: "The video poker machines that Stephen Paddock liked were the ones that did not draw attention. They had few look-at-me flashing lights or listen-to-me bells. He would sit in front of them for hours, often wagering more than $100 a hand. The way he played -- instinctually, decisively, calculatingly, silently, with little movement beyond his shifting eyes and nimble fingers -- meant he could play several hundred hands an hour. Casino hosts knew him well.

"'Not a lot of smiles and friendliness,' said John Weinreich, who was an executive casino host at the Atlantis Casino Resort Spa in Reno, Nev., where Mr. Paddock was once a regular and where he met his girlfriend. ... His methodical style and his skill level allowed him to gamble, and occasionally win, tens of thousands of dollars in one sitting, collecting payouts and hotel perks in big bunches. Last week, as a reward for his loyalty and gambling, Mr. Paddock stayed free of charge on the 32nd floor in one of the elite suites of the Mandalay Bay Resort and Casino." http://nyti.ms/2xiiUvJ

****** **A message from Koch Industries:** Koch has been the Environmental Protection Agency's (EPA) first- or second-ranked company for pollution prevention initiatives since 2012. What's more, since 2012, we have implemented more than 1,000 pollution prevention activities across the United States. See how at ChallengeAccepted.com. ******

IF YOU CLICK ONE THING - "How Las Vegas Police Scrambled to Find the Gunman" -- WSJ: "The following recordings are selected police radio communications from when the shooting started on Sunday shortly after 10:00 p.m. through 11:30 p.m. when police entered the sole shooter's hotel room. This audio reveals the chaos and confusion officers faced while tracking the gunman's location." http://on.wsj.com/2kq9s3e

PIC DU JOUR -- @colincampbell: "Air Force One departs Las Vegas past the broken windows on the Mandalay Bay hotel. (Photo: Mike Blake/Reuters)" http://bit.ly/2y1aSGc

FOR YOUR RADAR -- "OPEC Pushes Russia to Continue Helping on Oil Prices," by WSJ's Benoit Faucon and Summer Said: "Saudi Arabia and OPEC are lobbying Russia to stay on board with their efforts to raise oil prices, amid signals that Moscow wants to end its participation in costly petroleum-production cuts. The efforts culminate Thursday with a meeting between Saudi King Salman and Russian President Vladimir Putin, in the first-ever visit by a Saudi monarch to Moscow. According to people familiar

with the matter, the king will ask Mr. Putin to remain for longer than planned in a coalition led by the Organization of the Petroleum Exporting Countries that has withheld almost 2% of global oil supply from the market in 2017." http://on.wsj.com/2wzp6Lr

-- "3 Special Forces Troops Killed and 2 Are Wounded in an Ambush in Niger," by NYT's Eric Schmitt: "Three United States Army Special Forces were killed and two were wounded on Wednesday in an ambush in Niger while on a training mission with troops from that nation in northwestern Africa, American military officials said. ... All five American soldiers were Green Berets, said two United States military officials. The attack took place 120 miles north of Niamey, the capital of Niger, near the border with Mali, where militants with Al Qaeda in the Islamic Maghreb, an affiliate of Al Qaeda, have conducted cross-border raids. ... The deaths represent the first American casualties under hostile fire in a mission in which United States Special Forces have provided training and security assistance to the Nigerien armed forces." http://nyti.ms/2wyslCD

MORE TRAVEL QUESTIONS FOR ZINKE -- "Interior secretary draws flak for mixing politics, official travel," by Ben Lefebvre and Esther Whieldon: "Republican donors paid up to $5,000 per couple for a photo with Interior Secretary Ryan Zinke at a fundraiser held during a taxpayer-funded trip to the U.S. Virgin Islands, according to documents reviewed by POLITICO - raising questions about his habit of mixing official government business with political activism.

"The new details about Zinke's March trip to the Caribbean, including the previously undisclosed invitation to the Virgin Islands Republican Party fundraiser, emerged after weeks of scrutiny of the former Montana GOP congressman's travels. The nearly two-hour event was one of more than a half-dozen times Zinke has met with big donors or political groups while on department-paid trips, Interior travel records and other documents show.

"Ethics watchdogs say Zinke is combining politics with his Interior duties so frequently that he risks tripping over the prohibitions against using government resources for partisan activity, even though his appearance at the Virgin Islands event seems to have been legal. Democrats have also seized on the issue, including 26 House members who wrote in a letter Tuesday that Zinke's travels 'give the appearance that you are mixing political gatherings and personal destinations with official business.' Zinke has said all his actions have obeyed the law, dismissing concerns about his travel as 'a little B.S.'" http://politi.co/2xVbknA

FOGGY BOTTOM WATCH -- "'Death spiral': Tillerson makes nice but may not last long with Trump," by WaPo's Anne Gearan, Philip Rucker and Ashley Parker: "But Tillerson's move on Wednesday to reassure Trump of his convictions may well be too little and too late for the long term, according to the accounts of 19 current and former senior administration officials and Capitol Hill aides ... The already tense relationship between the two headstrong men - one a billionaire former real estate developer, the other a former captain of the global oil industry -- has ruptured into what some White

House officials call an irreparable breach that will inevitably lead to Tillerson's departure, whether immediately or not. Tillerson's dwindling cohort of allies say he has been given an impossible job and is doing his best with it." http://wapo.st/2yJhAhE

-- NYT's Peter Baker, Maggie Haberman and Glenn Thrush: "[T]he deliberate, slow-talking oil executive has little personal chemistry with the quick-talking, impulsive Mr. Trump. Mr. Tillerson has avoided expressing his pique to the president. But aides and Trump associates who have been in the room with them said Mr. Tillerson's body language, eye rolling and terse expressions left little doubt that he disapproves of Mr. Trump's approach. Mr. Trump, they said, has noticed how Mr. Tillerson slouches in his presence, particularly when he disagrees with a decision. When overruled, Mr. Tillerson often says, 'It's your deal,' to the president's irritation, according to two former administration officials." http://nyti.ms/2yJGQUV

RICH LOWRY, "Why Tillerson Can't Stay: If he believes what he said about his boss's goals, his best move is to step aside": "Even before his unusual apology speech Wednesday morning, he had become the nation's least influential top diplomat in recent memory. His relationship with the president of the United States is strained at best, he has no philosophy or signature initiative, he has barely staffed his own department, and he's alienated the foreign service. The former CEO of ExxonMobil has taken one of the power positions in the U.S. government and made it an afterthought. ...

"The secretary of state dodged questions about whether he had, indeed, as NBC reported, called Trump a 'moron' - almost certainly the first time in U.S. history a Cabinet official has been asked about personally insulting the president he works for and apparently not been able, in good conscience, to deny it. At his appearance, Tillerson issued a stilted endorsement of the president's 'America First' agenda that felt as if it had been written by someone else or was the product of an internal negotiation." http://politi.co/2wz8OCa

--@cspan: ".@SenBobCorker: 'I think Sec. Tillerson, Sec. Mattis and Chief of Staff Kelly are those people that help separate our country from chaos.'" http://bit.ly/2yJSajl

ANOTHER ONE BITES THE DUST -- "Embattled GOP Rep. Tim Murphy to retire," by Rachael Bade, Elena Schneider, and John Bresnahan: "Rep. Tim Murphy of Pennsylvania announced Wednesday that he will retire at the end of his term, after allegations that the married lawmaker, who opposes abortion rights, asked his mistress to terminate a pregnancy. Murphy (R-Pa.) admitted several weeks ago to an affair with forensic psychologist Shannon Edwards - news that came to light during the woman's divorce proceedings with her husband.

"'After discussions with my family and staff, I have come to the decision that I will not seek reelection to Congress at the end of my current term,' Murphy said in his statement. 'I plan to spend my remaining months in office continuing my work as the national leader on mental health care reform, as well as issues affecting working families in southwestern Pennsylvania.' Murphy added: 'In the coming weeks I will take

personal time to seek help as my family and I continue to work through our personal difficulties and seek healing. I ask you to respect our privacy during this time.'

"Murphy met privately with Speaker Paul Ryan (R-Wis.) before his retirement announcement, as well as Pennsylvania GOP Reps. Bill Shuster and Charlie Dent. A number of top Republicans said privately that Murphy should retire or resign in light of the scandal." http://politi.co/2y18U99

DRIP, DRIP, DRIP -- "IRS defends Equifax contract amid Hill outcry," by Nancy Scola and Steven Overly: "The IRS on Wednesday sought to justify its new $7.2 million, no-bid contract with the credit reporting company Equifax, describing it as a short-term arrangement needed to keep vital tools for taxpayers from going offline during a dispute with the firm.

"But its explanations didn't appear to satisfy either Democrats or Republicans in Congress, who continued to express astonishment at the agency's decision to continue partnering with a troubled company that recently suffered a massive breach of sensitive consumer data on as many as 145 million Americans. The IRS quietly awarded the contract Friday afternoon and posted notice of it the next day, as POLITICO first reported Tuesday.

"'You can't make this stuff up,' Sen. Elizabeth Warren (D-Mass.) told reporters Wednesday after a hearing about Equifax's data breach. 'This is like a bad movie. I am stunned that in the middle of this crisis the IRS would decide that it wants to trust Equifax as a business partner. It makes no sense to me. I want to find out what's going on here.'" http://politi.co/2xVjYTd

-- **"Liberal groups got IRS scrutiny, too, inspector general suggests,"** by WaPo's Mike DeBonis: "A federal watchdog has identified scores of cases in which the Internal Revenue Service may have targeted liberal-leaning groups for extra scrutiny based on their names or political leanings, a finding that could undermine claims that conservatives were unfairly targeted under President Barack Obama. The Treasury Inspector General for Tax Administration (TIGTA) reviewed cases between 2004 and 2013, which includes the period TIGTA previously examined in a 2013 report that faulted the IRS for using inappropriate political criteria to select groups for heightened scrutiny." http://wapo.st/2fMlrTr

He will also be briefed by senior military leaders. Trump and the First Lady will have dinner with senior military leaders and their spouses.

HAPPENING TOMORROW -- "Trump to resume tax cut push in Oval Office meeting with W. Va company - but not Manchin," by Heidi Przybyla in USA Today: "President Trump will resume his push for tax cuts on Friday with an Oval Office meeting designed to highlight the manufacturing industry, including in the state of a

vulnerable incumbent Democratic senator: Joe Manchin of West Virginia. Trump will host more than a dozen manufacturing industry employees and executives and issue a proclamation making Oct. 6 'National Manufacturing Day,' according to a White House statement provided to USA TODAY.

"One key person who won't be there: Manchin. Manchin, who met with White House legislative affairs director Marc Short on Tuesday, can't support the plan outlined last week by GOP congressional negotiators, according to a Manchin aide not authorized to speak publicly. The senator believes the proposed plan differs from the one Trump described during a dinner earlier this month with moderate Democrats and Republicans at the White House, the aide said. The current plan, Manchin believes, benefits the wealthy more than the middle class." https://usat.ly/2xilFMc

BANNON'S NEW GUY -- MICHAEL GRIMM http://politi.co/2xj7lj1. Grimm is coming off an eight-month term in federal prison.

YIKES -- "NKorean workers prep seafood going to US stores, restaurants," by AP's Tim Sullivan and Hyung-Jin Kim in Hunchun, China and Martha Mendoza in California: "The workers wake up each morning on metal bunk beds in fluorescent-lit Chinese dormitories, North Koreans outsourced by their government to process seafood that ends up in American stores and homes. Privacy is forbidden. They cannot leave their compounds without permission. ... And they are paid a fraction of their salaries, while the rest - as much as 70 percent - is taken by North Korea's government.

"This means Americans buying salmon for dinner at Walmart or ALDI may inadvertently have subsidized the North Korean government as it builds its nuclear

weapons program, an AP investigation has found. Their purchases may also have supported what the United States calls 'modern day slavery' - even if the jobs are highly coveted by North Koreans." http://bit.ly/2xUmmMl

RUSSIA WATCH -- "Sally Yates, Preet Bharara Stress High Bar for Criminal Charges in Russia Probe," by WSJ's Erica Orden: "'I know a lot of people are sort of putting all their hopes into Bob Mueller. And I've got tremendous confidence in Bob Mueller,' said Ms. Yates [at the Vanity Fair New Establishment Summit], in one of the few public interviews she has given since she was fired in January ... 'But the fact of the matter is, he's going to determine whether there's proof beyond a reasonable doubt that felonies were committed, that crimes were committed that can be used for prosecution or impeachment,' she said of Mr. Mueller. That, she suggested, is but one standard by which to judge the president's conduct, drawing a distinction between criminal behavior and otherwise objectionable conduct." http://on.wsj.com/2gcGuzp

FIRST PERSON -- DAN DIAMOND and **RACHANA PRADHAN** in Politico Magazine, **"How We Found Tom Price's Private Jets:** A tantalizing tip, followed by months of painstaking reporting, revealed the HHS secretary's extravagant travel habits": "[I]n September, we received an official notice from HHS that Price would be traveling to the Philadelphia area to meet with people affected by addiction to opioid painkillers. By the morning of Sept. 15 - when Price took a private jet to travel between Washington and Philadelphia, a distance of roughly 125 miles - we had figured out that Price was using the private jet terminal at Dulles International Airport, 28 miles outside of Washington.

"That Friday morning, we camped out at the Dulles charter terminal. A little after 8 a.m., we saw two SUVs and a police escort roll directly onto the tarmac, as the cars discharged passengers who then boarded a distinctive 30-seat charter plane with a golden belly.

"By 8:30 a.m., we watched the charter jet take off, heading directly north, and tracked it to Philadelphia using FlightAware, an airline tracking website. It was strong, but it wasn't enough. We hadn't seen the faces of Price or the other passengers - including White House counselor Kellyanne Conway, who went on that opioid trip. Using social media and help from sources, we kept tabs on the movements of Price and Conway in Philadelphia, tracing when they wrapped up the event and headed to the airport. By the time Price boarded the private jet at Philadelphia International Airport for the return trip to Dulles in early afternoon, we had figured out how to get the best view of the Dulles tarmac:

"Rachana drove by the charter jet terminal, timing her approach so she could best see the jet field, while Dan stood in the airport's main terminal, tracking the plane through his phone and counting down its arrival to Rachana, before hustling out to a patch of concrete that offered a view of the tarmac, too. It was enough. We saw the distinctive golden plane taxi around to the private-jet terminal. We saw a man with Price's build and shock of white hair walking across the tarmac. We saw the SUVs and police escort come out to greet him and the other passengers before speeding them

away." http://politi.co/2xVV9GK

****** **A message from Koch Industries:** It's one thing to say we're committed to environmental responsibility. But quite another to demonstrate it. This year, Koch was named the EPA's ENERGY STAR® Partner of the Year. The award recognizes organizations that have made outstanding contributions to protecting the environment through energy efficiency. To-date we've invested $600 million into energy saving initiatives. And over the last five years, we've saved enough energy to power 360,000 households for an entire year. See our contributions at ChallengeAccepted.com. ******

HOLLYWOODLAND - "Harvey Weinstein Lawyers Up for Bombshell New York Times, New Yorker Stories," by Variety's Brent Lang, Gene Maddaus and Ramin Setoodeh: "Harvey Weinstein has hired a high-powered team of attorneys to push back on soon-to-be-published bombshell stories from the New York Times and the New Yorker detailing sexual allegations and improper workplace behavior against him. Some women making the charges are believed to be on the record. Weinstein, the indie mogul and founder of the Weinstein Company, has retained star litigator David Boies, as well as attorneys Lisa Bloom and Charles Harder in an effort to rebut the claims. Jodi Kantor, an investigative reporter who wrote about harsh working conditions at Amazon, is working on the story for the Times, along with Megan Twohey ...

"Ronan Farrow, the former MSNBC host, is doing the story for the New Yorker, according to multiple individuals with knowledge of the situation. One individual said that at least one of the stories could be published as early as this week. In a brief interview on Wednesday, Weinstein declined to comment on the charges. ... 'Why don't I get, since I must have these high-priced lawyers, let me get them back to talk to you," said Weinstein. Weinstein later issued a statement through a spokesperson, as did Bloom. 'The story sounds so good I want to buy the movie rights,' said Weinstein." http://bit.ly/2yJXUKx

Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: Trump to talk roads, rails, regs — Chao hits some turbulence — Transportation nominees sail on

By Lauren Gardner and Tanya Snyder | 06/09/2017 10:00 AM EDT

With help from Brianna Gurciullo

THE DONALD @ DOT: President Donald Trump heads over to Navy Yard Friday for a roundtable DOT Secretary Elaine Chao is hosting with federal and state DOT officials. It will focus on "roads, rails, and regulatory reform," according to White House spokesperson Sarah Huckabee Sanders. "They'll discuss how the current maze of federal regulation leads to an uncertain and prolonged permitting process," she said Thursday. The state DOT leaders will speak to issues they encounter when getting permits for infrastructure projects, a White House spokesman said. Trump will then deliver remarks in the department's atrium before lawmakers, DOT staff and other transportation-world folks.

New numbers, but what do they mean? While you were watching the James Comey hearing Thursday (admit it, you were) the White House quietly posted a new infographic on their infrastructure plan. A small new tidbit: One slide breaks down the $200 billion in federal infrastructure funding as: $15 billion for "transformative projects," $100 billion for "local prioritization of infrastructure needs" and $25 billion for rural infrastructure. The infographic also calls for a million "apprentices" in two years, something the administration has never mentioned before as an element of its infrastructure plan.

'Take off like a rocket ship': Trump hosted eight governors, 10 mayors and a smattering of other local and tribal officials Thursday afternoon at what was called "the White House Infrastructure Summit." Trump promised infrastructure revitalization was "going to take off like a rocket ship," and "together, we're going to rebuild America." On the discussion agenda: his administration's efforts to eliminate regulations and speed up project permitting.

Earlier, in the East Wing ... : Vice President Mike Pence got his turn to preside at lunchtime, promising the assembled local, state and tribal leaders that the administration will be "full partners" in the effort to rebuild the nation's infrastructure. He echoed the administration's new promise to shrink project permitting time from "10 years to two years" and said seeing America take 12th place in the world for infrastructure is "not just unacceptable, that's downright un-American. And it's going to change." He promised to listen to state and local partners, saying that when he was Indiana governor he wanted an administration in Washington that would listen to him, not "lecture" him.

"Up and down the road in our worn down shoes / talking about good things and singing the

blues."

Want to keep up with MT's song picks? Follow our Spotify playlist.

EASY, BREEZY, BEAUTIFUL: Trump's nominee to be No. 3 at DOT, Derek Kan, sailed through his Senate Commerce Committee nominations hearing. As is typical, senators covered pet issues ranging from safety, funding for transportation infrastructure projects and streamlining permitting to Open Skies, Essential Air Service and new vehicle technology during the 80-minute hearing. Robert Sumwalt, selected for another stint on the NTSB, appeared as well and faced questions about investigations in several states, but also gave his responses without any major snags. MT's prediction: The committee will approve both nominees with few, if any, "no" votes.

SOME TURBULENCE: Meanwhile, the House Transportation Committee's hearing on the FAA reauthorization was a bit bumpier as Chao navigated Democrats' charge that airlines would dominate the board of directors the administration has proposed to govern the formation of a non-profit air traffic control corporation, your MT co-pilot reports. "If there's one thing that I can emerge from this hearing: they do not control the air traffic control system" under the proposal, she said, interrupting a sharp line of questioning by Rep. Mike Capuano (D-Mass.). "They will not."

Engine roar: But when it came to detailed questions about the policy specifics envisioned by the administration's principles for an overhaul, Chao stumbled at times. Democrats questioned whether the FAA would still retain the ability to intervene on local noise issues if a flight path's volume doesn't exceed the threshold triggering an environmental review; Chao said the nonprofit body wouldn't be subject to the National Environmental Policy Act, but then indicated FAA may still retain some oversight.

Delta, call your office: Chao also added to the intrigue around whether Delta Air Lines' position on an air traffic control overhaul has evolved, given the airline's fuzzy-at-best statements as of late. She told one Democrat who brought up a study the airline released last year claiming that passengers would pay higher costs under the new system that she should check in with the company again, "because it seems as though Delta's position on this is changing." A Delta spokeswoman didn't respond when we asked whether the carrier disputes Chao's characterization, beyond pointing to a previous statement that didn't directly answer the question.

And Graves, too: Rep. Sam Graves (R-Mo.) didn't ask Chao any questions Thursday but did note that he thought there was "a lot of misunderstanding" around the issue. He later clarified to MT that he meant confusion surrounding the differences between what the White House proposed and what the House will eventually consider, plus statements by Chao contradicting the administration principles outlining their ideal representation on the board. On whether he's any closer to a yes, he said: "It just depends. I've got specific things that I have to have to protect GA and we're definitely talking, and if I can get to those things and be able to protect general aviation - and protect the skies is the biggest thing."

** **A message from Delta Air Lines:** Our daily briefing: At Delta we're constantly innovating to

make your travel smoother. We tapped RFID technology to keep your bags in check at all times. Giving you more peace of mind from check-in to baggage claim. Learn more: delta.com/dca **

SENATE THERMOSTAT READ: House Democrats also voiced concerns about essentially giving away the nation's air navigation assets for free (there were a lot of metaphors about giving away homes with paid-off mortgages, yet no Oprah references). But the chairman of the Senate Commerce aviation panel told MT he believes there are bigger issues to consider. "A number of other countries, like Canada, run their system like President Trump is proposing. So I don't think that's particularly troublesome," Sen. Roy Blunt (R-Mo.) said. "I think there's enough other countries that have done this the same way and enough safeguards you can put in that not-for-profit structure that you wouldn't have to worry about that." Still, he added: "That doesn't mean it would be easy to get this done in the Senate."

To that point: The other half of your MT duo caught up with Senate Finance Chairman Orrin Hatch on the issue Thursday, and he said he's "worried" and "concerned" about the proposed changes. "There are all kinds of small airports all over the country that I'm not sure the private sector can handle," he said. Count Sen. Pat Roberts (R-Kan.) skeptical, as well. "I think it's probably going to split down exactly the way it was before," he said when asked whether Trump's backing could change the political dynamics on the issue.

MINDING THE STORE: Democrats during both the House and Senate FAA hearings this week asked Chao about recent reports (like one from our colleagues) that the White House has ordered agencies to ignore minority party oversight requests. Chao said Thursday that she always aims to cross the aisle - "That's always been my history" - but said it's the administration's call to make. She did say she has "not personally" been instructed not to respond to Democratic inquiries.

Coast Guard weighs in: The Coast Guard was also asked about the Trump administration's order at a House Transportation subcommittee hearing Wednesday. Vice Admiral Charles Ray, the service's deputy commandant for operations, said he wasn't "familiar with the policy" from the administration, but at the Coast Guard, "we pride ourselves on being responsive" to questions from all lawmakers. "I'm not aware of any way that we separate the questions depending on the origin. If they come from the Congress, we make every attempt to answer it," Ray said.

LOBBYING UPDATE: The U.S. Travel Association has retained Chris McCannell of the Eris Group to lobby on Open Skies. Recently, U.S. Travel's lobbying on the issue has become the subject of some controversy.

ARRIVALS AND DEPARTURES: John Drake, a DOT official in the Obama administration, is leaving the American Trucking Associations for a new gig at Amazon starting next week. He'll be senior manager of public policy.

THE AUTOBAHN:

- "Automatic train operation won't return to D.C.-area Metro anytime soon." The Washington Post.

- "First black chief pilot at a major airline retires." The Associated Press.

- "This could be the first airbag of the self-driving car era." Wired.

- "Uber in Talks to Acquire Team of Car-Parking Startup Luxe." The Wall Street Journal.

- "Men on public transportation around the world just won't close their legs." Newsweek.

THE COUNTDOWN: DOT appropriations run out in 114 days. The FAA reauthorization expires in 114 days. Highway and transit policy is up for renewal in 1,210 days.

** **A message from Delta Air Lines:** Our daily briefing: At Delta we're constantly innovating to make your travel smoother. We tapped into RFID technology to keep your bags in check at all times. Giving you more peace of mind from check-in to baggage claim.

Our pursuit of constantly solving problems doesn't stop there. Turbulence is notoriously difficult to predict. That's why we developed our industry-leading Flight Weather Viewer app. It helps our pilots better spot and avoid unexpected turbulence with real-time graphics of observations and forecasts on the flight deck. Making your journey smoother while also reducing our carbon footprint.

Energy and Climate Report

Afternoon Briefing - Your Preview of Today's News

The following news provides a snapshot of what Bloomberg BNA is working on today. Read the full version of all the stories in the final issue, published each night.

EPA Stuck in Neutral on Car Emissions, Official Says

Posted June 02, 2017, 11:31 A.M. ET

By David Schultz

The EPA has made little to no progress on determining whether to relax greenhouse gas standards for cars, according to one of its senior career staffers, raising doubts that it will be able to act before a deadline next year locks in the current standards through 2025.

Additionally, the agency has made little effort to reach out to environmental regulators in California, which has the authority to set its own state vehicle standards. A California air regulator told Bloomberg BNA that the state has little desire to roll back its standards, potentially setting up a scenario in which car makers will need to manufacture different models for different states.

President Donald Trump announced at a March 15 rally in Detroit that his administration would reopen an Obama administration decision that maintained current automobile standards at a companywide average of 54.5 miles per gallon, or its equivalent, through 2025. The auto industry is seeking relaxed standards, arguing that the miles per gallon target is too difficult to achieve and would ultimately inflate the prices of their vehicles.

But in the nearly three months since then, the Environmental Protection Agency has taken few if any actions to begin formally reconsidering the decision, according to Chris Grundler, director of the EPA's Office of Transportation and Air Quality. Grundler told reporters at a May 31 EPA advisory council meeting that he hasn't briefed his agency's administrator, Scott Pruitt, on the issue and that his office has had no interaction with California officials or with the Department of Transportation, which has authority to regulate fuel efficiency.

April Deadline

The Obama administration surprised many when it announced in January, weeks before Trump's inauguration, that the EPA would not alter its current greenhouse gas standards. The regulations on vehicle emissions only required a decision on that by April 2018.

After the Trump administration took office, the auto industry began lobbying the EPA to revisit its decision before the April 2018 deadline, which would lock the standards in place. The Alliance of Automobile Manufacturers, which counts Ford Motor Corp., General Motors Corp. and Volkswagen

of America among its members, in February formally asked Pruitt to rescind the Obama-era determination to leave the standards in place.

With Trump's announcement in Detroit, the industry got its wish. And Gloria Bergquist, head of public affairs with the Alliance of Automobile Manufacturers, said she's still optimistic the EPA can meet its deadline.

"There is surely time to complete a robust evaluation by April 2018, which is important to automakers because of their long lead time in developing products," she told Bloomberg BNA.

EPA spokeswoman Amy Graham said the agency is committed to meeting this deadline and is currently working to process new information that the auto industry is providing it.

Complex Process

But there is much to be done before then if the agency does plan on relaxing the automobile standards.

Janet McCabe, head of the EPA's air office during the Obama administration, said that when her team was making its decision to maintain the current standards it compiled voluminous data showing that car makers could achieve the target. If the current EPA wants to change the standards, it will need to compile equally compelling data that contradicts that determination, she told Bloomberg BNA.

"These are very detailed documents and reports and studies," McCabe said. "Technical staff at EPA would need to look at them. ... It's not a quick matter."

Additionally, the agency will need to budget time to allow the public to comment on its decision and then process and respond to those comments, all before the April 2018 deadline.

California

Then there's the matter of California.

Because the state began regulating air pollution before the EPA was even created, its authority to set fuel efficiency standards for cars was grandfathered in to the Clean Air Act. The auto industry had asked federal authorities to work with the state to set a single, harmonized standard—something they accomplished back in 2012 when the current standards were first agreed to.

However, with the Trump administration now indicating it may want to diverge from that 2012 agreement, California has drawn a line in the sand. Alberto Ayala, deputy executive officer of the California Air Resources Board, said California would be happy to sit down with the EPA and DOT to discuss setting standards for 2026 and beyond.

"We're more than interested in that," he told Bloomberg BNA. "[But] if it's all about rolling back the current standards, we're not interested in that."

Ayala said, aside from a letter Pruitt sent responding to the concerns of Gov. Jerry Brown (D), the EPA's political leadership has not reached out to his state on this issue in any way.

Grundler said that it wouldn't be in anyone's interest for the EPA, DOT and California to each go their own way on the vehicle standards.

"Chaos is not an option," Grundler said. "It's not good for business, not good for breathers."

CEOs, Politicians Unite on Paris Accord, Climate Change

Posted June 02, 2017, 10:36 A.M. ET

By Jessica Shankleman and Joe Ryan

Donald Trump's plan to scrap U.S. involvement in the world's broadest deal on global warming may actually have the opposite effect, galvanizing countries, businesses and even U.S. states, to double down on stopping pollution.

The U.S. president June 1 sided with the interests of coal miners, who dig up the dirtiest fossil fuel, as he sought to make good on his election campaign promise to quit the landmark Paris Agreement on climate change.

That put him at odds both with world leaders and chief executive officers of almost every industry on the planet, including oil majors Exxon Mobil Corp. and Total SA; airline owner Sir Richard Branson; and financiers led by BlackRock Inc.'s Laurence D. Fink and Goldman Sachs Group Inc.'s Lloyd Blankfein. With Trump working to boost fossil fuels, the rest said they're determined to keep investing in clean energy regardless of U.S. policies.

"The anger and concern over Trump's withdrawal could soon give way to global resolve," said Jonathan Pershing, a veteran climate negotiator who served as special envoy for climate change at the U.S. Department of State until Trump's election last November. "The goad of disagreement sometimes can drive coalitions more strongly."

Even as Trump branded the Paris deal "unfair," state governors took to social media to confirm their support for the accord. The mayor of Pittsburgh—a Pennsylvania city Trump highlighted as a beneficiary of his decision to turn his back on the global pact—vowed to abide by the Paris Agreement.

California Opposition

California Gov. Jerry Brown departs June 2 for China, where he will urge the world's most populous country and largest car market to take environmental cues from Sacramento instead of Washington. While the Trump administration is seeking to relax fuel-mileage standards for 2022–2025, California is maintaining stricter rules.

"California will resist," Brown said on a call with reporters. "This is an insane move by this president."

Even Russia's Energy Minister said he was confident Trump couldn't topple the Paris deal, which seeks to limit global warming well below 2 degrees Celsius (3.6 degrees Fahrenheit). Russia hasn't yet ratified the Paris Agreement, and many in the government in Moscow view the deal as a threat to their oil and natural gas exports.

"Many countries have confirmed their commitment to the accord," Alexander Novak, Russia's

energy minister, said June 2 at the St. Petersburg International Economic Forum. "Six G-7 countries maintain the commitment, and so does China. So I think in this case we don't see significant risks of other countries dropping their commitment in a domino effect."

Solar vs. Coal

While the Paris climate deal was seen as crucial to stopping catastrophic climate change, market forces play a key role in what technologies get new investment. Solar power is already cheaper than coal in some parts of the world. In less than a decade, it's likely to be the lowest cost option almost everywhere, according to Bloomberg New Energy Finance.

European oil majors BP and Total said the transition to lower carbon fuel is inevitable regardless of Trump's decision. Both called for a global carbon price to shift the world away from the dirtiest energy sources and are pursuing more investments in natural gas, which has lower carbon emissions than oil or coal.

"In 20 years, we will not be known as oil and gas companies, but as gas and oil companies," Total Chief Executive Officer Patrick Pouyanne said at the St. Petersburg forum June 2. "If we want to have the gas, despite the position of president Trump, we need to go to carbon pricing one way or another."

EU, China Show Common Climate Front After U.S. Shuns Global Pact

Posted June 02, 2017, 11:10 A.M. ET

By Jonathan Stearns

The European Union and China displayed a united front over the need to fight climate change while revealing nagging differences over the path to deeper trade and investment ties.

Jean-Claude Juncker, president of the European Commission, the EU's executive arm, said Europe and China must lead the global transition to clean-energy technologies after the U.S. decided to withdraw from the landmark climate-protection accord reached by almost 200 countries in Paris two years ago.

"There is no backsliding on the Paris agreement," Juncker told an EU-China business conference June 2 in Brussels. Chinese Premier Li Keqiang told the same audience that EU-China ties help to counter "the growing uncertainties in the world."

The two leaders spoke less than 24 hours after U.S. President Donald Trump provoked worldwide disappointment and anger by announcing plans to withdraw from the Paris pact, which curbs fossil-fuel production. Juncker said fighting climate change is "more important today than yesterday."

Trump's Paris Exit Leaves Him Isolated From C-Suites to Capitals

Posted June 02, 2017, 9:49 A.M. ET

By Jennifer A. Dlouhy

The response to President Donald Trump's announcement he was exiting the Paris climate accord and wanted to renegotiate on his terms was immediate: The leaders of France, Germany and Italy said no.

On Wall Street, corporate executives pilloried the businessman president. Goldman Sachs' CEO tweeted for the first time, calling the move a setback for the environment and U.S. leadership. Tesla Inc.'s Elon Musk and Bob Iger of Walt Disney Co. quit a White House advisory council in protest.

Even the mayor of Pittsburgh, Pennsylvania -- a city Trump highlighted as a beneficiary of his decision to turn his back on the global pact -- vowed to abide by the Paris agreement.

Trump's decision leaves him more alienated than ever, isolated on the world stage and increasingly embattled at home.

Coming against the backdrop of sprawling probes into ties between Russia and Trump's campaign, the backlash threatens to sap the president's power when he needs it most to advance domestic priorities such as tax reform and a health care overhaul while confronting an increasingly bellicose North Korea.

It's a dramatic change in fortunes for the president after just 133 days in office. Business leaders no longer seem to fear Trump's tweets; foreign leaders have moved from attempts to find rapport to direct confrontation.

Consider that in earlier days, a tweet about Ford Motor Co. shipping U.S. jobs to Mexico prompted the automaker to announce it was abandoning plans to build a $1.6 billion plant there.

Days after his election, Trump called the top executive of United Technologies Corp. and told him not to move jobs from a Carrier factory in Indianapolis to Mexico. Carrier partially relented, agreeing to keep 1,100 jobs in the U.S. in exchange for $7 million in tax breaks and incentives from the state. Even so, 1,300 jobs are still going to Mexico.

And in her first visit with Trump in Washington, German Chancellor Angela Merkel gamely tried to shake Trump's hand during a photo opportunity, offering an optimistic assessment of the meeting despite the president's persistent criticisms of her country.

"I've always said it's much, much better to talk to one another and not about one another, and I think our conversation proved this," she said afterwards.

There is none of that fear and trembling now.

After Trump's announcement on Paris, Ford issued a statement asserting that "we believe climate change is real and remain deeply committed to reducing greenhouse gas emissions." Company chairman Bill Ford, the man Trump once described as "my friend," broke with the president over his executive order on immigration. And Ford still employs more than 7,000 workers in Mexico.

Although Carrier hasn't announced a change to its plans, other companies are moving production south. And foreign leaders now game out how to try to one-up the president.

In his first meeting with Trump, French President Emmanuel Macron squeezed Trump's hand so hard that the American's knuckles turned white. And when the two chatted before cameras, Macron spoke only French. He switched to English for his remarks with U.K. Prime Minister Theresa May.

After Trump's announcement on Paris, Macron tweeted, "Make our planet great again," and assured American scientists, engineers, entrepreneurs and "responsible citizens" they could find "a second homeland" in France.

Trump's first foreign trip as president left fellow members of the North Atlantic Treaty Organization unsettled and wary, as well. Trump omitted any clear commitment to the alliance's pledge of collective defense, leaving allies uncertain whether the U.S. would come to their aid if attacked.

Afterwards, unlike her White House visit, Merkel didn't extol the benefits of discussion.

She told a beer-hall rally in Munich that Europe "really must take our fate into our own hands," adding "this is what I have experienced in the last few days."

Former Defense Secretary Leon Panetta said the combined weight of Trump's NATO speech and his decision to leave the Paris agreement mark "the sad demise of a 70-year era of American global leadership."

"'America First' policies are threatening our strategic interests and eroding our moral standing in the world," Panetta said in a statement.

To be sure, the Republican voters that elected Trump to the White House have not turned away from the president. Among Republicans, 87 percent say they approve of the job Trump is doing, according to Gallup's most recent weekly poll. Trump's job approval has fallen just slightly, from 45 percent just after his inauguration to 41 percent.

And congressional leaders upon whom Trump depends to advance his agenda endorsed his action. House Speaker Paul Ryan (R-Wis.) called the Paris agreement "a raw deal for America" and commended the decision. And Senate Majority Leader Mitch McConnell (R-Ky.) was more blunt: "I applaud President Trump and his administration for dealing yet another significant blow to the Obama administration's assault on domestic energy production and jobs."

The tone of Trump's Rose Garden speech Thursday was unapologetic, evoking the inaugural address in which the president angrily lashed out at other countries playing the U.S. for a fool and vowed that "from this day forward, it's going to be only America first."

"The Paris agreement handicaps the United States economy in order to win praise from the very foreign capitals and global activists that have long sought to gain wealth at our country's expense," Trump said. "We don't want other leaders and other countries laughing at us anymore."

Trump did make an offer to renegotiate the Paris accord, but that was quickly rejected. Merkel, Macron and Italian President Sergio Mattarella issued a statement insisting that the agreement was "irreversible" and "cannot be renegotiated."

And after the president said he was taking action to put the interests of Youngstown, Ohio; Detroit, Michigan; and Pittsburgh above those of Paris, Bill Peduto, Pittsburgh's mayor, shot back that the city needed no such help: "I can assure you that we will follow the guidelines of the Paris agreement

for our people, our economy and future."

Exxon Citizen Suit With Record Penalty Difficult to Repeat

Posted June 02, 2017, 7:01 A.M. ET

By Renee Schoof

The $20 million fine recently levied against ExxonMobil Corp. is a record penalty for an air pollution lawsuit brought by a citizens' group, but attorneys say bringing other big cases like it will be difficult.

There are few targets as large as Exxon's Baytown Complex in Texas, one of the largest integrated refining and petrochemical facilities in the world. And environmental groups opposed to the Trump administration's policies are preparing to devote more of their time to defending Environmental Protection Agency regulations, sapping resources they might have used to sue industrial polluters.

While citizen suits in general are expected to increase, Clean Air Act cases like the Exxon suit are so complex that they stretch the bounds of what the groups can do, attorneys told Bloomberg BNA.

"We're not the federal government," Joshua Kratka, a senior attorney at the non-profit National Environmental Law Center who argued the case against the Baytown refinery, said. "There's no way we have those resources. There's really no substitute for a strong and effective EPA."

A U.S. District Court for the Southern District of Texas judge in April assessed penalties of more than $21 million for violations of Exxon's Clean Air Act permits based on self-reported "emissions events," or unauthorized pollution caused by equipment malfunctions or startup and shutdown. Since the company already had paid more than $1.4 million in state and local penalties, the net penalty was about $19.9 million. It appeared to be by far the largest citizen suit penalty based on records going back about 10 years, according to the Justice Department.

Exxon on May 24 filed a motion to alter the judgment, challenging the basis for the penalty and arguing that it should be eliminated. Kratka said plaintiffs would file a response arguing that Exxon's case was without merit.

Resource-Intensive Cases

The Clean Air Act allows citizens groups, such as environmental advocates, to bring enforcement challenges to industrial facilities believed to be violating federal air pollution standards. But the cases are expensive and time-consuming, attorneys said.

"There aren't that many Clean Air Act citizen suits in any given year," Eric Schaeffer, executive director of the Environmental Integrity Project and a former director of EPA's Office of Civil Enforcement, said. "They're difficult to bring."

Environmental groups will increasingly use their resources for suits against the federal government over rollbacks of environmental regulations on the fossil fuel industry, Kratka said. And "the more times citizen and environmental groups have to sue the government, the less capacity they have to

sue the violators."

The Baytown lawsuit succeeded because the environmental attorneys did a careful job of researching the facts of the violations, attorneys said. They had a boost because air emissions reports must be made available online in Texas, and the groups used those reports as evidence that Exxon had violated federal pollution limits. They also got four people who lived near the complex to testify.

Environment Texas Citizen Lobby Inc. and the Sierra Club sued Exxon in 2010. The Sierra Club has received funding from Bloomberg Philanthropies, the charitable organization founded by Michael Bloomberg, founder of Bloomberg L.P. Bloomberg BNA is an affiliate of Bloomberg L.P.

The suit claimed there were unauthorized air emissions of benzene, sulfur dioxide and other pollutants from Exxon's Baytown refining and petrochemical complex between October 2005 and September 2013. It cited State of Texas Environmental Electronic Reporting System (STEERS) reports to the Texas Commission on Environmental Quality documenting emissions of pollutants.

'Too Big to Comply'

Despite the hefty fine, Seth D. Jaffe, a partner at Foley Hoag LLP in Boston and coordinator of the firm's environmental practice group, who was not involved in the case, said the decision could be viewed as a victory for Exxon because the penalty covered years of violations and was small in comparison to the roughly $500 million the company spends on maintenance every year.

The maximum penalty could have reached $500 million, Jaffe wrote in a blog. Moreover, the federal judge denied the plaintiffs' request for injunctive relief.

"I think it's a win for Exxon because the law does not make any exceptions for facilities that are too big to comply," Jaffe told Bloomberg BNA. "The fact that it's impossible to comply doesn't mean you don't have to pay something if you're in violation."

Exxon Already Fined by Texas Regulator

An ExxonMobil spokesman said Texas regulators handled the case when the Texas Commission on Environmental Quality imposed the $1.4 million penalty on the basis of an agreed upon order. The state regulator also ordered Exxon to take corrective actions to reduce emissions. Exxon and the TCEQ agreed on the enforcement order in February 2012, two years after the environmental groups sued.

The spokesman, Todd Spitler, told Bloomberg BNA that aggregating volumes from emissions events over time, as the environmental groups did, "does not appropriately or accurately reflect the nature of the events or indicate an underlying issue at our integrated Baytown complex."

That's because the company reports emissions to federal and state regulators in a timely and consistent manner, complies with "all laws, regulations and permits, and has a robust compliance assurance system that enables workers to identify and report potential deviations from the company's Clean Air Act permit requirements, Spitler said.

"Baytown personnel dedicate thousands of hours every year monitoring, validating and documenting our compliance to these regulations and our permits," he said.

Spitler also said the Baytown complex had spent more than $1.3 billion since 2003 on environmental projects aimed at improving air quality and energy efficiency. Since 2005, the Baytown complex has reduced emissions from malfunctions and maintenance reported to the TCEQ by 90 percent, he said. Court records showed Exxon spent between $464 million and $685 million per year on maintenance of equipment at the complex.

Successful But Rare

The Baytown case is the third successful Clean Air Act citizen lawsuit filed by advocates against facilities in the Houston area over the past decade. During the trial, the Texas Oil & Gas Association raised fears that if the court validated the advocates' approach, it could lead to a "a cascade of citizen suits, seeking to relitigate years of past administrative enforcement."

But Environment Texas, one of the advocacy organizations involved in the Baytown litigation, can only handle one citizen lawsuit at a time, Luke Metzger, founding director of the group, told Bloomberg BNA.

Environment Texas is already involved in another Clean Air Act suit, this one against Pasadena Refining System Inc., which is owned by Petroleo Brasileiro S.A. (Petrobras). The lawsuit, filed in March, alleged the Houston-area refinery violated emissions limits thousands of times over the past five years.

Environment Texas and the Sierra Club filed two others since 2008—one against Chevron Phillips Chemical Co. and another against Shell Oil Co. Both were resolved with consent agreements. The groups said that the companies reduced emissions from their Gulf Coast plants by about 95 percent, or more than was required by their settlements.

Those cases, like the Exxon citizen suit, involved mainly "upset events," such as equipment breakdowns and malfunctions.

"The goal is to get plants to put money into maintenance and better design and training, so they don't break down and flare pollution into the community," Kratka said.

Texas has an affirmative defense for such upset emissions, meaning that if a company can prove that it satisfied conditions such as the events being unavoidable or not recurring, it has a defense against penalty.

Kratka, who argued the appeal before the Fifth Circuit, said that ExxonMobil said all the violations met those criteria.

"We challenged every one, and the judge this time said it was the defendant's burden to come up with proof," Kratka said.

N.Y. Says Exxon's Climate Change Proxy Costs May Be 'Sham'

Posted June 02, 2017, 12:27 P.M. ET

By Erik Larson

New York's top cop told a judge that his probe into Exxon Mobil Corp. uncovered "significant evidence" the oil giant may have misled investors about how it calculates the impact of climate

change on assets and project decisions.

New York Attorney General Eric Schneiderman said in a court filing June 2 that the investigation into Exxon's public statements about climate change revealed that for the last decade it may not have been pricing in the future impact of greenhouse gas emissions as it claimed.

"That evidence suggests not only that Exxon's public statements about its risk management practices were false and misleading, but also that Exxon may still be in the midst of perpetrating an ongoing fraudulent scheme on investors and the public," Schneiderman said.

If true, the allegations risk inflaming investors who this week backed a non-binding resolution urging the Irving, Texas-based company to consider whether it can prosper under strict greenhouse gas limits. While Exxon opposed the vote, it has accepted climate-change science and opposed President Donald Trump's decision to pull the U.S. out of the 2015 Paris Climate Accord.

Alan Jeffers, an Exxon spokesman, didn't immediately return a call for comment before regular business hours June 2. A message left with the company's media line wasn't immediately returned.

Proxy Costs

The allegations center on Exxon's claim that it applies so-called proxy costs to greenhouse gas emissions, which the company says "reasonably approximates the range of potential future government actions with respect to climate change," according to the filing. The attorney general said Exxon regularly cites the proxy costs to "assure investors that none of Exxon's projects or assets will be materially affected by future climate change-related regulations."

That claim may be vastly exaggerated, Schneiderman said in his filing in state court in New York.

"Exxon has identified only a single, anomalous instance in which a proxy cost was actually applied," the attorney general said. "Exxon's documents reveal a widespread lack of awareness among employees of the proxy cost policy, or how it should be applied."

The use of proxy costs "may be a sham," and Exxon also has "secret internal versions of proxy costs," Schneiderman alleged. The company told an employee from its majority-owned Imperial Oil Ltd. not to apply it to its Canadian oil sands projects, according to the filing.

Exxon has refused to make the employee available to testify, "contending for the first time that it lacks control over its majority-owned subsidiary from which it has been producing documents for months," he said.

Exxon has repeatedly denied wrongdoing and claims the state probe was started in "bad faith" because the outcome had been predetermined based on ideological coordination with environmental groups and even former Vice President Al Gore, an outspoken opponent of climate change.

Schneiderman and his Massachusetts counterpart, Maura Healey, have been investigating since 2015 whether Exxon misled the public and investors by withholding information about how climate change could impact the company's finances. Exxon sued to block their subpoenas for millions of pages of documents, while Republicans in Washington have sought to derail the investigations from Capitol Hill.

Schneiderman also referenced for the first time the existence of a second alias email account that was discovered in the course of the investigation, months after he accused Exxon of failing to disclose former Chief Executive Officer Rex Tillerson's secondary email account. He used the alias Wayne Tracker to discuss sensitive topics with the board.

The identity of the owner of the new alias account, which has the name "J.E. Gray," wasn't disclosed in the June 2 filing.

Sworn testimony of Exxon's lawyers suggested the company may have withheld the existence of the alias accounts as a "test of whether the Attorney General's office is reading the documents," according to Schneiderman.

Schneiderman filed the additional material in support of his May 8 subpoena to Exxon. The case was transferred to Manhattan by a federal judge in Dallas who said it belonged in New York, effectively restarting the litigation from scratch. Schneiderman has used the opportunity to make fresh allegations.

Subject: POLITICO's Morning Transportation, presented by Airlines for America: Senate Commerce makes quick work of FAA markup — AOPA rallies the troops — FASTLANE in the slow lane

By Tanya Snyder | 06/30/2017 10:00 AM EDT

With help from Stephanie Beasley

PROGRAMMING NOTE - Due to the July Fourth holiday, Morning Transportation will not publish on Monday, July 3 and Tuesday, July 4. Our next Morning Transportation will publish on Wednesday, July 5.

QUICK AND EASY: What the House took nearly 10 hours to do on Tuesday, the Senate managed in just under an hour. The Senate Commerce Committee approved its FAA reauthorization bill (S. 1405) Thursday morning with 56 amendments, setting up a showdown with the House's dramatically different bill (H.R. 2997) - assuming both bills make it off the floor in their respective chambers.

MEANWHILE, IN THE HOUSE: House Transportation Committee Chairman Rep. Bill Shuster (R-Pa.) said Thursday that he's still trying to drum up enough Republican votes to get through a floor vote, which he's hoping will happen in mid-July. Meanwhile, Sen. John Thune (R-S.D.) admitted that the uncertainty around a health care vote in the Senate complicates the prospect of scheduling floor time for the FAA bill. But what looks like suspended animation over the next week and half masks a lot of high-level brokering, and it's anyone's guess what deals will emerge. But even if Shuster wins over taxwriters and appropriators and Thune grabs some floor time, it's hard to see a Senate so deeply skeptical of Shuster's plan to separate air traffic control from the FAA just going along with it in conference - and it's one of those issues where there's not much halfway ground to occupy.

Senate's got problems, too: Despite Thursday's smooth markup, senators inserted some drama into the proceedings by adopting a controversial amendment by Thune to allow other kinds of flight training to qualify for the rule requiring commercial airline co-pilots to have 1,500 hours of flight time before they're certified to fly. "Regional airlines have lobbied lawmakers for years to relax the 1,500 hour rule, while the families of those who died in a 2009 plane crash that spurred the rule have fiercely opposed any changes," reports our Lauren Gardner. It's a highly emotionally charged issue that isn't going away anytime before the bill hits the floor.

SPEAKING OF THE FLOOR: Senate Minority Leader Chuck Schumer (D-N.Y.) pledged Thursday to "continue to do everything I can to ensure that any effort to water down these rules never becomes law." The plane crash that spurred the rule occurred in his state, outside of Buffalo.

IT'S FRIDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Send your tips, feedback and lyrics to lgardner@politico.com or @Gardner_LM and tsnyder@politico.com or @TSnyderDC

"It won't be a stylish marriage / I can't afford the carriage / But you look sweet upon the street / On a bicycle built for two."

Want to keep up with MT's song picks? Our Spotify playlist has over 100 followers - you can get listening, too!

More controversy: Commerce voted along party lines to narrowly adopt an amendment by Sen. Deb Fischer (R-Neb.) to prevent states from imposing their own meal and rest break requirements for interstate truck drivers. The Teamsters oppose this provision, saying it robs their drivers of the more generous breaks that some states want to offer.

AOPA rallies the troops: The Aircraft Owners and Pilots Association kicked their opposition to the ATC plan up a notch Thursday with an action alert to their nearly 350,000 members and supporters, asking them to ask their representatives to vote against the House FAA bill on the floor. Rep. Kenny Marchant (R-Texas) sure took notice. "I hadn't heard from any owners" before the alert, Marchant said Thursday, noting that he has a lot of aircraft owners in his district and expected an inbox full of messages about the bill. Marchant had previously expressed that he leaned in favor of the proposal.

PSA FROM YOUR FRIENDS AT MT: Be careful out there this weekend. The Fourth of July is historically the deadliest day of the year on U.S. roads. The National Safety Council estimates that 582 people could be killed in traffic crashes during this four-day weekend, with 66,900 more seriously injured.

** **A message from Airlines for America:** America invented aviation, yet our global leadership is at risk. Passing FAA reauthorization and modernizing our air traffic control system will bring us into the 21st century. We need reforms without increasing costs for travelers. Ask Congress to support ATC Reform and reject an unnecessary Airport Tax increase. - www.stopairtaxnow.com **

FASTLANE IN THE SLOW LANE: Just DOT formally announced its new INFRA grant program Thursday, Illinois' Democratic Sens. Dick Durbin and Tammy Duckworth called on the Trump administration to use the full 2017 allocation for FASTLANE grants under the old criteria. DOT announced yesterday it would hold the vast majority of the funds for a new round of grants under the updated criteria, forcing applicants to re-apply. "President Trump promised a trillion dollar infrastructure package, but instead his budget slashed transportation investments and his Administration continues to delay funding," said Durbin in a statement.

MCCASKILL URGES DHS TO LISTEN TO AIRLINES: Sen. Claire McCaskill (D-Mo.) said DHS should listen to airline complaints about the "onerous" implementation timeline for new security measures at 280 point-of-departure airports for flights to the U.S. The ranking member of the Senate Homeland and Governmental Affairs Committee said DHS should give airlines enough time to "try to work this out in a way that's not going to be really obtrusive" for travelers. But Rep. John Katko (R-N.Y.) said airlines will need to make do. "I know it's going to be an inconvenience," Katko said Thursday. "I know it's going to be some expense to the

airlines, but I don't think we can let our guard down." POLITICO obtained a document sent to airlines on Wednesday ordering them to adopt the new security measures within 21 to 120 days. Explosive trace detection technology would need to be in place in the first 21 days, Stephanie Beasley reports . Airlines that do not comply face penalties that include a ban on all electronics on flights to the U.S.

FROM IRAQ TO I-95: Another bill approved Thursday by the Commerce Committee would streamline the process for active-duty military and reservists to apply for commercial driver's licenses. "Many servicemen and women have been uniquely trained to drive large military vehicles and want to carry over that expertise into their civilian careers," said Sen. John Cornyn (R-Texas), one of the sponsors of the bipartisan bill, which expands on a similar provision in the FAST Act that only applied to veterans.

ANOTHER ONE IN AT DOT: The Senate Commerce also found time during their markup to approve three Trump administration nominees for transportation-related posts: David Pekoske for TSA administrator, Derek Kan for undersecretary of Transportation for policy and Robert Sumwalt to be a board member of the NTSB.

C-B-Oh-No: In case you've forgotten, the CBO does more than just give bad news about health care bills. Thursday, the CBO updated their projections of when the Highway Trust Fund will go bust using the information that underlies CBO's June baseline. They predict that the trust fund will stay solvent through the end of the FAST Act, which expires September 30, 2020 - but both the highway and transit accounts would go into the red in 2021, even if FAST Act revenue levels stayed in place.

NAFTA: DO WE HAFTA? NAFTA needs a major overhaul to increase wages for workers in all three countries and reduce the "enormous trade deficit" with Mexico as Trump promised on the campaign trail, said Josh Nassar, the United Auto Workers' legislative director. At an interagency hearing on the trade deal Thursday, Nassar "specifically called for stronger rules of origin for autos to qualify for U.S. duty reductions under the pact - a change automakers warned could make North America a less competitive region to make cars," Doug Palmer reports for Pros. Meanwhile, trucking industry officials pushed to eliminate a NAFTA provision allowing Mexican truck drivers to transport goods in the U.S.

THE AUTOBAHN:

- "Shark patrol drones in Australia fitted with danger sirens." Geo.tv.

- "Study: UAS as a new source of disturbance for wildlife." sUAS News.

- "'State of Emergency': Cuomo to send $1B to MTA." POLITICO New York.

- "Robocalypse Now? Central Bankers Argue Whether Automation Will Kill Jobs." The New York Times.

- "Analysis: Trump's travel ban a far cry from original." The Associated Press.

- Secretary Chao defends Trump in the wake of Mika Brzezinski tweets. The Atlantic.

- "Facebook's Aquila drone completed a second flight without breaking anything." The Verge.

THE COUNTDOWN: DOT appropriations run out in 93 days. The FAA reauthorization expires in 93 days. Highway and transit policy is up for renewal in 1,189 days.

** **A message from Airlines for America:** Modernizing our nation's air traffic control system and bringing it into the 21st century is one of our most important infrastructure priorities. Congress now has the opportunity to enhance America's world-leading safety record while reducing flight delays and cancellations. And we must reform our air traffic control system and secure our position as the global leader in aviation without increasing, or uncapping, the Airport Tax. This would further burden consumers with unnecessary levies. Flyers today spend $63 in taxes on a typical $300 airline ticket. Isn't that enough? We can't have a system in which individual airports raise taxes on passengers whenever they want by however much they want. Airports enjoy a variety of funding sources for improvement projects, including nearly $7 billion that is sitting dormant in the airport trust fund. To tell your Members of Congress that we need ATC Reform without a tax hike on passengers, visit www.stopairtaxnow.com. **

Subject: POLITICO's Morning Score: Strange attacks Brooks on pro-Trump credentials — Morrisey 'major announcement' coming in West Virginia — Obama to headline redistricting group fundraiser

By Scott Bland | 07/10/2017 10:00 AM EDT

With Daniel Strauss, Maggie Severns and Elena Schneider

The following newsletter is an abridged version of Campaign Pro's Morning Score. For an earlier morning read on exponentially more races - and for a more comprehensive aggregation of the day's most important campaign news - sign up for Campaign Pro today. (http://www.politicopro.com/proinfo)

SIX WEEKS OUT - Strange mailer attacks Brooks as Alabama Senate primary draws near: GOP Sen. Luther Strange is starting to scrap with Rep. Mo Brooks, one of his most prominent Republican primary opponents, ahead of the special primary for Strange's seat on Aug. 15. The first shot: a mailer, paid for by Strange for Senate, hitting Brooks for not supporting President Donald Trump during the 2016 presidential primary and continuing to criticize him afterward. Brooks, Strange and former state Supreme Court Justice Roy Moore are the best-known candidates in a crowded primary, and they are competing for two slots in a September runoff, assuming no one unexpectedly breaks 50 percent in August.

- The Strange mailer quotes Brooks saying "Trump voters are going to regret their votes" on MSNBC in February and then, after Trump secured the nomination in May, that "voters sure are facing some tough choices in November, aren't they?" (In the same Montgomery Advertiser story, Brooks said he would vote for Trump in November.) "Luther Strange strongly supported our President from Day 1," the mailer trumpets next to the Brooks quotes, adding: "This was never a 'tough choice' for Luther Strange." (See the front and back of the mailer here.)

SENATE CANDIDATE WATCH - Morrisey announcement coming Monday night in West Virginia: Republican Attorney General Patrick Morrisey has a 5 p.m. "major announcement" scheduled in Harpers Ferry "about his political plans." Morrisey already has a super PAC sparring with Rep. Evan Jenkins, the main Republican candidate currently in the race against Democratic Sen. Joe Manchin.

- Barletta Senate decision "hopefully" coming in several weeks: GOP Rep. Lou Barletta said he's getting closer to deciding whether he'll run against Democratic Sen. Bob Casey, in an interview for the "Face the State" program on CBS21 in Harrisburg. "I'm giving it serious thought. I've been talking to my family, I've been talking to folks around the state. And, hopefully, in the next couple of weeks, I'll have a decision whether I'm going to run or not," Barletta said, via John Micek on PennLive. **Full story.**

- "GOP state lawmaker planning bid for McCaskill seat," by the St. Louis Post-Dispatch's Kurt Erickson and Chuck Raasch: "GOP state Rep. Paul Curtman "is expected to announce the formation of an exploratory committee for a Senate run" this week. "... [A]llies said he had

been mulling a run for Wagner's congressional seat, but nixed that idea when Wagner pulled out of the Senate sweepstakes and said she would run for re-election." **Full story.**

Q2 FUNDRAISING - FIRST IN SCORE - TX-07: Democrat Alex Triantaphyllis, the director of Immigration and Economic Opportunity at Neighborhood Centers Inc., a Houston nonprofit, raised more than $450,000 since entering the race to challenge GOP Rep. John Culberson. Triantaphyllis finished the second quarter with $400,000 in cash on hand, per a statement from his campaign.

- FL-13: SaintPetersBlog reported that Democratic Rep. Charlie Crist raised over $550,000 in the second quarter.

- **KS-03:** GOP Rep. Kevin Yoder raised close to $470,000 in the second quarter, his campaign announced Friday. Democrat Andrea Ramsey, who jumped into the race in June, announced raising over $200,000 by the end of the quarter.

- VA-10: Democrat Alison Kiehl Friedman raised over $400,000, while Democrat Lindsay Davis Stover raised over $300,000 in the second quarter, the Washington Post reported. They are part of the crowded Democratic field opposing GOP Rep. Barbara Comstock.

- **South Carolina governor:** "Republican Catherine Templeton ... raised $750,701 from April through June in her bid to upset S.C. Gov. Henry McMaster," The State's Jamie Self reports. "... The haul tops her first-quarter numbers, which just crested $700,000, and brings her total donations to more than $1.4 million - positioning her even more firmly as McMaster's biggest threat in next year's June primary. **Full story.**

Days until the 2017 election: 120.

Days until the 2018 election: 484.

ALWAYS OPEN - "Rosen leaves House Democrats hunting for Nevada candidates again," by Campaign Pro's Elena Schneider: "Democrats had to beg candidates to run in Nevada's competitive 3rd District in 2016 - and that was before Donald Trump won the district on his way to the presidency. Now, Rep. Jacky Rosen's swift departure for a 2018 Senate campaign leaves House Democrats, once again, searching for a candidate who can appeal to Nevada's prototypical battleground district, which has flipped between parties four times in a decade." **Full story.**

PRIMARY PREP - "Coburn will work to oust Mullin after congressman breaks term limit pledge," by the Oklahoman's Justin Wingerter: "Rep. Markwayne Mullin is facing opposition from some conservatives after breaking a term limit pledge Tuesday. ... Whether

Mullin's decision to break his pledge will hurt him in 2018 remains an open question. He dominated in 2016, defeating fellow Republican Jarrin Jackson in the June primary by 27 percentage points and defeating Democrat Joshua Harris-Till by 67 percentage points in November. [Former Sen. Tom] Coburn vowed this week to campaign for Jackson if he runs again in 2018." **Full story.**

REDISTRICTING WATCH - "Obama returns to politics with redistricting group fundraiser," by POLITICO's Edward-Isaac Dovere: "Barack Obama will make the first official political move of his post-presidency on Thursday, headlining a private fundraiser for the National Democratic Redistricting Committee at a private home in Washington." **Full story.**

MILESTONE - CLF knocks on 1 million doors: The Congressional Leadership Fund, a super PAC closely aligned with GOP House leadership, announced Monday that they've knocked on 1 million doors and placed 700,000 phone calls in 13 congressional districts over the last six months. CLF is operating a dozen field offices in districts across the country ahead of the 2018 midterms.

HOUSE CAMPAIGN KICKOFFS - MN-08: St. Louis County Commissioner Pete Stauber is set to become the first Republican to jump into the race against Democratic Rep. Rick Nolan, the Duluth News Tribune reports. "Stauber, 51, has served on the county board since 2013 and earlier was a member of the Hermantown City Council. He has been a Duluth police officer for more than 23 years, currently holding the rank of lieutenant." Nolan won reelection by a half point in 2016 as Trump carried the district by 15.

- MI-08: Democrat Elissa Slotkin, former acting Assistant Secretary of Defense, launched her campaign to challenge GOP Rep. Mike Bishop, per a statement on Monday.

- FL-27: Florida's first openly gay state representative, Democrat David Richardson, announced his bid for the now-vacant seat held by GOP Rep. Ileana Ros-Lehtinen, per a statement from his campaign.

- FIRST IN SCORE - NC-02: Democrat Sam Searcy, a distillery owner, launched his bid to challenge GOP Rep. George Holding, who took out GOP Rep. Renee Ellmers in a redistricting primary battle last year. **Watch his launch video here.**

- VA-07: Democrat Abigail Spanberger, a former CIA operations officer, announced her bid to challenge Republican Rep. Dave Brat on Monday, per a statement from her campaign.

FEC WATCH - Good government groups file FEC complaint on Price: The Campaign Legal Center and Democracy 21 filed a Federal Election Commission complaint on Friday alleging Health and Human Services Secretary Tom Price illegally used campaign funds to support his confirmation. Read the complaint **here**.

- "Duncan spends campaign funds freely on family," by the Nashville Post's Cari Wade Gervin: "For U.S. Rep. John J. 'Jimmy' Duncan Jr., keeping it all in the family includes his campaign funds. Over the past decade Rep. Duncan has doled out hundreds of thousands of

dollars to his two sons, his niece, his son-in-law, his daughter-in-law and his sister for campaign work, raising both ethical and legal questions for the senior statesman. In fact, the only non-family member paid a regular salary for campaign work in recent years has been Duncan's chief of staff, Bob Griffitts ... since 2013, Rep. Duncan has paid his son $316,500 in salary alone. The campaign also pays for his son's cellphone and reimburses his mileage, many meals and multiple other expenses." **Full story.**

STAFF TURNOVER - "Two top staffers leave Gillum campaign," by POLITICO Florida's Daniel Ducassi: "Following a series of rough news cycles and a fundraising drought, Democrat Andrew Gillum's 2018 campaign for governor announced on Friday the departure of two top campaign staffers. Stepping down are campaign manager Phillip Thompson and the campaign's finance director and deputy campaign manager, Brice Barnes, according to a statement describing the moves as 'staff transitions' and as part of the 'next phase' in the campaign." **Full story.**

COMMISSION REACTION - "Hundreds withdraw Colorado voter registrations in response to compliance with commission request," by KMGH's Blair Miller: "At least two Colorado county clerks say they've seen a large increase in the number of people who have withdrawn their state voter registration since Colorado Secretary of State Wayne Williams said he would send the Trump administration's election integrity commission some voter-roll information in accordance with state law. Alton Dillard, a spokesperson for the Denver Elections Division, said 180 people have withdrawn their registration in the county since July 3. When compared to the eight people who withdrew their registration from June 26-29, it marks a 2,150 percent increase, according to Dillard. Haley McKean, a spokeswoman with the Arapahoe County Clerk and Recorders Office said at least 160 people had withdrawn their registrations since July 1. She added that 'dozens' of others had made their voter registration confidential." **Full story.**

CODA - QUOTE OF THE DAY: "The president once told me that the most important lesson he learned from Roy Cohn was loyalty." - Newsmax chief and Trump friend Christopher Ruddy, regarding Trump's long memory of Republicans who turned from him during the campaign in 2016, via POLITICO.

Subject: Morning Media: Conservative media breaks with Trump over Sessions -- IJR splits from IMGE -- N.Y. Times departure lounge

By Hadas Gold | 07/26/2017 05:39 AM EDT

With Alex Weprin and Cristiano Lima

FOR KEEN OBSERVERS OF THE RIGHT WING/CONSERVATIVE MEDIA LANDSCAPE the past couple of days have been notable. Notable, because many on the right are unhappy with President Donald Trump's latest attacks on Attorney General Jeff Sessions. In his most recent interview with The Wall Street Journal (where editor-in-chief Gerard Baker is the lead byline), Trump declined to offer a vote of confidence in Sessions, who was the first Senator to endorse Trump during the campaign. He even said Sessions probably only endorsed him because of his big rally crowds, "So it's not like a great loyal thing about the endorsement."

-- The likes of Breitbart and Rush Limbaugh, among others, did not take well to such criticisms. Sessions, with his tough talk on sanctuary cities, the border wall and immigration has been a favorite of the right leaning media for a long time. It was jarring in a way to see several stories on Breitbart blasting Trump for attacking sessions, with one article saying the "Attack on Sessions over Clinton Prosecution Highlights [Trump's] Own 'Weak' Stance," another article noting that "[Pat] Buchanan, [Ann] Coulter, Other Voices of the Right Cry Out in Dismay as Trump Steps Up Attacks on Sessions." Another piece by Washington editor Matt Boyle called Sessions "A Man Who Embodies the Movement That Elected Donald Trump President," noted that Sessions "burned his own bridges" to help Trump's campaign and that Sessions "stood by Trump through it all."

"Losing Sessions could endanger the administration and the split the critical coalition that helped Trump to the presidency," Boyle warned.

Now we're also learning from the New York Times that Coulter stopped by the Oval office and railed to Trump that he needed to focus more on his supporters. And Sessions is due to announce "a number of criminal leak investigations based on news accounts of sensitive intelligence information," the Washington Post reports.

THERE'S ALREADY ONE CASUALTY OF THE ANTHONY SCARAMUCCI ERA at the White House: Assistant Press Secretary Marc Short. My colleague Tara Palmeri scooped on Tuesday morning that Scaramucci planned to fire Short at the morning meeting. But the move was delayed and Scaramucci confusingly told reporters he was "upset" that Short would find out about any changes to his employment through the media (though Scaramucci himself told POLITICO that was the plan). Short resigned by Tuesday afternoon. Scaramucci told reporters on Air Force One on Tuesday evening that he'll spend next few weeks reviewing and possibly restructuring the White House press office, adding "if the leaks continue then I've got to let everybody go."

Good morning and welcome to Morning Media! I always want to hear from you -- hgold@politico.com / @Hadas_Gold. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima**. (clima@politico.com / @ludacristiano). Archives. Subscribe.

INDEPENDENT JOURNAL REVIEW'S PARENT COMPANY MEDIA GROUP OF AMERICA HAS OFFICIALLY SPLIT FROM IMGE, the Republican digital media and ad firm. The relationship between the two has always put a damper on IJR's ideals that it was editorially independent, especially when people who are so closely aligned to Republican politics and the Trump administration were investors and directly involved in IMGE. But now the site says they're free and completely divested, with IJR founder Alex Skatell staying with Media Group of America, which will focus only on media companies, most notably IJR. Meanwhile Axios notes that IMGE has now hired Bryan Sanders, husband of White House Press Secretary Sarah Huckabee Sanders.

COMEDY CENTRAL SHOW TO TAKE ON THE 'ALT-RIGHT,' by Alex Weprin: Comedy Central has announced details about its new 11:30 p.m. program, which will follow "The Daily Show." While "The Colbert Report" parodied cable news pundits like Bill O'Reilly and Sean Hannity, the new program hosted by Jordan Klepper, "The Opposition," will mock alt-right figures such as Alex Jones. "I think we were inspired by those points of view. I'm a midwesterner. I would like to see my [character] as an Alex Jones meets Garrison Keillor," Klepper told reporters at the Television Critics Association summer press tour in Los Angeles. His show will follow "The Daily Show" starting Sept. 25.

-In other Comedy Central news, the channel has ordered more episodes of "The President Show," which currently airs once per week at 11:30 p.m. The show, hosted by comedian Anthony Atamanuik as "Donald Trump," will move to midnight once Klepper's show starts.

SOUNDBITE: "Stop listening to the bombastic loudmouths on the radio, television and the Internet. To hell with them." [John McCain]

AT&T-TIME WARNER TIE UP ON TRACK, by Alex Weprin: Despite concern that President Trump might try to torpedo the deal, AT&T told its shareholders on Tuesday that it is on track to close its acquisition of CNN and HBO parent company Time Warner by the end of this year. The company added that the "merger planning process [is] approaching completion," meaning that the company now has a good idea of how it will be organized and what staffing changes would need to occur once the deal is approved.

NEW YORK TIMES DEPARTURE LOUNGE: A slew of Times stalwarts have taken buyouts. Among them: Bruce Headlam, an editor in the opinion section (Headlam was also featured in the documentary film "Page One" when he was media editor), Charles Duhigg, who's been in charge or live events, former Jerusalem bureau chief Ian Fisher and defense reporter Chris Drew.

-- Headlam told me after he leaves he'll be working on a new project with Malcolm Gladwell, a company that will be "doing digital journalism in a lot of different forms," "an

empty vessel for interesting things" including some writing, visual and audio journalism. There's no name just yet.

REVOLVING DOOR:

-- After just three months as Washington Bureau Chief for the New York Post, **Gabby Morronogiello** is returning to the Washington Examiner as a White House reporter. **Steve Nelson** is also joining the Examiner's White House team, he comes from U.S. News & World Report. More here.

TIL: You will soon be able to seamlessly incorporate a Taco Bell run into your Lyft ride via their app and this is genius because I am obsessed with Taco Bell. [The Verge]

CORRECTION: In yesterday's edition I wrote that Jason Leopold is with Vice. He's been with BuzzFeed now for months. Apologies!

EXTRAS:

-- ABC News and digital media company ATTN are partnering up to co-produce original social media video content. [ATTN]

-- **MSNBC had its first weekday primetime ratings victory,** but Fox News still won the total week. [The Wrap]

-- Ok, who wants to buy Gawker.com? The domain and all the old articles from the defunct website are going up for sale. [WSJ]

-- Time Inc. is putting three of its magazines up for sale: Golf, Coastal Living and Sunset. [Bloomberg]

-- Nielsen is adding data from Hulu and Youtube TV into its TV ratings measurement system. [Variety]

-- Fox was hit with another big lawsuit, this time by one of the execs accused of harassment. [The Hollywood Reporter]

-- People are mad that Olympic swimmer Michael Phelps didn't actually race a great white shark during Discovery Channel's Shark Week. [Variety]

-- Twitter faces congressional backlash after reportedly blocking users from posting an article critical of U.S. net neutrality laws -- they say it was a tlich [Recode]

-- "Guardian and News Corp to press ahead with ad alliance talks" [Financial Times]

--Viacom is said to be offering an all cash bid to acquire Scripps Networks, the owner of Food Network and HGTV. [Reuters]

Subject: POLITICO's Morning Transportation, presented by Delta Air Lines: House FAA bill up in the air — House Appropriations to mark up THUD spending bill tonight — Norwegian U.K. gets tentative OK from DOT

By Stephanie Beasley and Brianna Gurciullo | 07/17/2017 10:00 AM EDT

With help from Lauren Gardner and Tanya Snyder

HOUSE FAA BILL UP IN THE AIR: House Majority Leader Kevin McCarthy's floor schedule for this week left out Transportation Chairman Bill Shuster's FAA reauthorization bill. The million-dollar question, of course, is why. It's likely some combination of not enough votes - as our friends at POLITICO Playbook reported : "The whip count was close to a few dozen votes short as of the time lawmakers left town Friday afternoon" - and efforts to accelerate appropriations adding pressure on floor time.

But wait: The bill, H.R. 2997 (115), could be added quickly to the floor schedule if there's an opening or if the whip count changes.

MARK IT UP NOW, Y'ALL: The full House Appropriations Committee will mark up the fiscal 2018 spending bill for transportation and HUD tonight. The subcommittee held a less than 20-minute markup for the legislation last week, but expect this one to go longer. Remember, the bill includes $900 million targeted at projects like Gateway but would scrap the TIGER grant program.

HAPPY MONDAY: Thanks for tuning in to POLITICO's Morning Transportation, your daily tipsheet on all things trains, planes, automobiles and ports. Lauren will be back at the helm with Steph, so send along your tips, feedback and lyrics: lgardner@politico.com or @Gardner_LM and sbeasley@politico.com or @Steph_Beasley.

"Well, I got one foot on the platform / The other foot on the train / I'm goin' back to New Orleans / To wear that ball and chain." (h/t Zach Montellaro)

GET LISTENING: Follow MT's playlist on Spotify. What better way to start your day than with tunes (picked by us and readers) that are all about flying, driving, commuting and sailing?

NASAO SAYS NO: The National Association of State Aviation Officials came out against Shuster's bill on Friday, saying there are "unnecessary, controversial risks" to divorcing air traffic control operations from the FAA. In particular, the group opposes a stipulation to shrink the Airport and Airway Trust Fund, whose source of revenue is mostly excise taxes. "This provision completely dismantles a system of taxes that is nearly self-sufficient in favor of a haphazard tax scheme that cannot even support the authorized [Airport Improvement Program] increases contained in the bill reported out of Committee," said Mark Kimberling, NASAO's president.

WELL THAT'S AN INTERESTING ANALOGY: Rep. Steve Russell (R-Okla.) held forth on the floor of the House for 40 minutes Friday about what he described as the dangers of spinning air traffic control operations away off from the FAA. "We're all in agreement on modernization," he said. "But privatization? I'm afraid, Mr. Speaker, that a lot of us are like a pack of dogs lapping up antifreeze. It smells good. It might even taste good. But it's not without drastic consequence."

NORWEGIAN U.K. GETS TENTATIVE OK: DOT preliminarily decided that Norwegian U.K. should receive a foreign air carrier permit, according to an order issued Friday. The Norwegian Air Shuttle subsidiary applied for the permit to fly to the United States in late 2015. DOT said arguments against Norwegian U.K.'s bid reiterated those that had been "made by essentially the same opposing parties in the context of their objections" to the application for a foreign air carrier permit by Norwegian Air International, Norwegian Air Shuttle's Irish subsidiary. But DOT "has already thoroughly considered, and rejected, these arguments," Friday's order says. "We tentatively see no persuasive basis on the record of the present proceeding to reach a different conclusion here." Pros can read the full order here.

ICYMI: The Congressional Budget Office took a look at Trump's proposal to spend $200 billion on infrastructure over the course of a decade. Here's what the CBO had to say : "When considering the entire set of proposals in the budget, though, overall spending on infrastructure would not increase by $200 billion. The president's proposals for discretionary spending would reduce appropriations for other accounts that provide funding for infrastructure, such as those for ground transportation and water resources. Those reductions would largely offset the proposed increase in mandatory spending on infrastructure over the 2018-2027 period." Many a Democratic lawmaker has pointed this out. (h/t Jeff Davis at the Eno Center for Transportation, who spotted the CBO analysis.)

LAPTOP BAN UPDATE: The Department of Homeland Security issued a revised directive late last week clarifying aviation security updates that must be in place at 280 point-of-departure airports beginning Wednesday. Airlines requested the additional language clarifying the directive DHS initially issued on June 28 outlining measures that must be implemented to avoid electronics restrictions on flights to the United States, according to TSA spokesman James Gregory. He said the revised directive includes "technical adjustments that allow for the airlines to implement the measures to the full extent required." Reuters reported the directive would specifically give airlines more time to obtain explosive trace detection equipment.

Let's work together: A DHS spokesman told reporters last week that the department was offering technical assistance to airlines and airports and would be willing to provide interim alternative measures. "As we have said since the beginning of this process, DHS and TSA are committed to working alongside our aviation partners to ensure the enhanced security measures are implemented effectively and efficiently," Gregory said in a statement to MT.

** **A message from Delta Air Lines:** Delta's new direct flight from DCA to LAX offers the exclusive Delta One® experience. With Delta One, customers can go straight from Capitol Hill to the Hollywood Hills in an 180 degree flat-bed seat. Learn more at delta.com/dca **

VISA REQUIREMENTS THEY ARE A-CHANGIN': The Trump administration is preparing new visa procedures that will include "extreme vetting" measures that would require applicants to "demonstrate the paperwork and background information that we need to appropriately demonstrate that they have or don't have a security past that would concern us," White House Homeland Security Adviser Tom Bossert said during a gaggle with reporters Friday. Homeland Security chief John Kelly has also said DHS could require visa applicants to share their social media passwords. "I would say that Secretary Kelly owns and is responsible for that portion of the policy, and for implementing it," Bossert said. The new visa procedures, which are expected to replace the administration's current ban on travel from six Muslim-majority countries, could be applied worldwide.

THIS WEEK:

Tuesday - The House Transportation Highways and Transit Subcommittee holds a hearing on implementing the FAST Act and road safety. The House Appropriations Committee marks up the fiscal 2018 spending bill for DHS.

Wednesday - The Senate Homeland Security and Governmental Affairs Committee marks up David Pekoske's nomination to be TSA administrator. The House Agriculture Committee holds a hearing on infrastructure in rural areas. The House Transportation Water Resources and Environment Subcommittee holds a hearing on implementing WRDA. The Air Line Pilots Association begins its public "Air Safety Forum."

Friday - The Drone Advisory Committee holds a virtual meeting.

GO SLOW: The NTSB will release a study on speeding-related car crashes later this month. NTSB said that speeding is responsible for as many highway crashes as alcohol. Despite speeding being one of the most common factors in vehicle crashes, contributing to about 10,000 highway deaths each year, it remains an "underappreciated problem," the agency said. NTSB officials will discuss findings from the new study on passenger vehicle speeding on July 25.

NOT NOW, NOT EVER: Paul Wiedefeld, the general manager and CEO for the Washington Metropolitan Transit Authority, announced Friday that he had fired a track department supervisor after discovering the supervisor had misused overtime and claimed earnings for times when he wasn't working. Wiedefeld called the incident "disturbing and disappointing." Metro employees "must hold ourselves to a standard of conduct that is above suspicion and reproach," he said in a statement.

BY THE NUMBERS: U.S. airlines disclosed that they had 27 domestic flight delays on tarmacs that lasted over three hours in May, the overwhelming majority of which happened at Philadelphia International Airport amid a thunderstorm, DOT said Friday. Another figure worth noting: DOT fielded 1,262 complaints related to U.S. air carrier service in May, a 54 percent increase from the same month of last year.

AMTRAK UPDATE ON 'SUMMER OF HELL' REPAIRS: Amtrak said its repair work at New York's Penn Station is running on schedule. In its most recent progress report, Amtrak said

it has even accelerated some of its scheduled work on tracks and switches for Penn Station and along the Northeast Corridor. Amtrak is expected to complete the project by Sept. 1, ahead of the Labor Day weekend.

GET YOUR MOTOR RUNNING: Washington state has launched its first self-driving car pilot. Gov. Jay Inslee's office announced the state would partner with Torc Robotics to pilot a vehicle in Seattle. Inslee issued an executive order last month allowing for the testing and operation of autonomous cars as well as pilot programs.

MT MAILBAG: Safety advocates fired off a letter Friday to House Appropriations Committee leaders asking them to fight anything in the fiscal 2018 DOT spending bill (or amendments to the bill) that would loosen federal restrictions on truck weight and size, preempt state rules for trucker rest breaks or create exemptions for electronic logging device regulations. The Truckload Carriers Association also wrote in last week, asking appropriators to reject any amendments that would allow twin-33 trailers across the country.

LOBBYING UPDATE: Jim Burnley, who was DOT secretary in the late 1980s and now is a partner at Venable, is lobbying for Mobile Barriers, a Colorado-based company that makes movable barriers for highway construction areas.

THE AUTOBAHN:

- "Here's what you need to know now about U.S. Customs searches of your phone." Quartz.

- "New jets threaten Airbus and Boeing duopoly." The Wall Street Journal.

- "Fiat Chrysler recalls 1.33 million vehicles over fire, air bag risks." Reuters.

- "Qatar Airways offers a glimpse of the new laptop security regime." USA Today.

- "Cities look to business (not Washington) to build sustainability." POLITICO Magazine.

- "No more napping on the railroad, says new CSX boss." The Wall Street Journal.

- "Trump badly lagging Obama, Bush, Clinton in political appointees." POLITICO.

THE COUNTDOWN: DOT appropriations run out in 76 days. The FAA reauthorization expires in 76 days. Highway and transit policy is up for renewal in 1,172 days.

** **A message from Delta Air Lines:** Delta offers the only flat-bed seats direct from DCA to LAX in Delta One®. Enjoy seasonal meals, a dedicated flight attendant, outlets at every seat, and noise canceling headsets while you watch your favorite feature on Delta Studio®. Learn more at delta.com/dca **

From: Joe Pompeo - POLITICO Media
Sent: Wed 5/31/2017 10:03:38 AM
Subject: Morning Media: A source close to Kushner — Pelley peaces 'Evening News' — The new Megyn Kelly — The anti-Media Matters

By Joe Pompeo | 05/31/2017 06:01 AM EDT

With Cristiano Lima and Alex Weprin

WAS RUPERT MURDOCH THE SOURCE IN THAT UN-BYLINED FOX NEWS STORY about Jared Kushner? His rep didn't have anything to say about that when Morning Media got in touch. But there sure was a lot of speculation yesterday that FNC's "source familiar with the matter" was the 21st Century Fox chief and Kushner pal himself. The May 29 article, "Jared Kushner didn't suggest Russian communications channel in meeting, source says ," got a second wind yesterday when President Trump retweeted a link to it, and media gossips were quick to point out that "Rupert Murdoch regularly talks to Jared Kushner and now this curiously unbylined story turns up on Fox News," as the FT's Matthew Garrahan put it. Our colleague Jack Shafer: "What if the source for that Fox story--which has no byline--is Rupert Murdoch?"

NPR media correspondent and Murdoch Kremlinologist David Folkenflik has an insightful run-down: "Fox News' Refet Kaplan tells NPR that Catherine Herridge, listed at bottom was lead reporter & after vetting, others wrote from her notes ... Fox report, sympathetic to Kushner & relying on sole source, cut agst NYT WaPo etc ... Given her past record, Herridge's involvement as central reporter gives the item more credence as a journalistic exercise; But.... Herridge moments ago on Shep Smith's show attributed story to 'a source who has talked to Kushner tells Fox News...' You know who talks to Kushner as well as Trump? Fox News acting CEO & effective owner Rupert Murdoch. Murdoch loves gathering and disseminating political gossip to editors et al. One of his delights as a newspaper proprietor."

TIPS AND COMMENTS: jpompeo@politico.com / @joepompeo. **Morning Media** is edited by **Alex Weprin** (@alexweprin / aweprin@politico.com) and produced with writing/reporting help from **Cristiano Lima** (clima@politico.com / @ludacristiano). **Archives**. **Subscribe.**

MEGYN KELLY GAVE SOME INTERVIEWS AHEAD OF HER NBC DEBUT THIS SUNDAY - "I was not born to be a political news anchor," the former Fox News host told POLITICO's Hadas Gold . "I'm not going to miss the crazy news cycle. The audience enjoyed the show and I'm grateful for it. But it wasn't who I was and it isn't who I am . . . While I will cover politics ... I don't want to do only that. It's not enough for me personally." The new Megyn Kelly? "I want to foster more human connections and make people feel something better than the constant outrage." That said, the premiere of "Sunday Night with Megyn Kelly" will kick off with an interview that's about as political and "crazy news cycle" and "constant outrage" as it gets: Vladimir Putin.

REVOLVING DOOR: **SCOTT PELLEY OUT AT 'CBS EVENING NEWS'** - The New York Post's Page Six scooped last night and we confirmed independently that the anchor is leaving the program, and is expected to be shifted to "60 Minutes" full-time. A CBS source said

of Pelley's office being cleaned out yesterday, "Scott arranged to have his office moved out on his own. No one asked him to do that." Gotta love the Page Six attitude here: "We reported in December that Pelley was on his way out of the anchor chair on the flagship news show ... At the time, the network denied the story, telling us, 'There's no truth to this.' But now, there is a lot of truth to it." An official announcement about the change is expected today. Guest anchors will fill in for Pelley until a permanent replacement is named, and as of late last night it was unclear who that will be. Dylan Byers : "Sources now say that while Pelley has moved out of CBS News, he will anchor show again / have chance to say goodbye."

Elsewhere....

-- **The BBC's Ian Pannell is joining ABC News** as a senior foreign correspondent based in London, after more than 20 years with the U.K. news giant.

-- **NPR has hired Pallavi Gogoi**, a veteran of CNN and the Associated Press, as chief business editor.

-- **Longtime Pitchfork president Chris Kaskie** is leaving the influential music publication after 14 years, and less than two years after Pitchfork was acquired by Condé Nast. Billboard has more.

WHAT BETTER PLACE FOR A P.R. ROLLOUT OF THE RIGHT'S ANSWER TO MEDIA MATTERS than Sean Hannity's Fox News show? That's where conservative commentators Brian Maloney and Melanie Morgan last night introduced their new organization, the Media Equality Project, which has kicked off "Operation Fight With Fire" as part of "#StoptheScalpings" campaign calling for an end to the advertiser boycotts of right-wing media folk. Hannity's been on a jihad lately about what he sees as a left-wing plot to get rid of figures like himself and Bill O'Reilly, who was ousted from Fox News recently amid an explosive sexual harassment scandal, after Media Matters and other groups encouraged advertisers to pull out of his show. Morgan said backing Hannity was a "simple choice between good and evil," while Maloney promised to give liberal groups "a taste of their own medicine." Their first target? MSNBC's Rachel Maddow: "We want to call attention that Maddow has gotten away with being a conspiracy wacko for years and years."

More details in yesterday's announcement: "As long as Media Matters continues to attack conservatives, we will return them the same kindness. We begin with Rachel Maddow who has been the biggest purveyor of lies and propaganda in the media today. Like Media Matters, we will now inform the public and the advertisers about who they are financing."

Related, via the AP: "The USAA financial services firm is reinstating its advertising on Sean Hannity's Fox News Channel program after receiving heavy criticism for its initial decision from many of the military members and veterans that it serves."

MEANWHILE, HERE'S CNN'S STATEMENT ON KATHY GRIFFIN'S TRUMP BEHEADING - "We found what she did disgusting and offensive. We are pleased to see she has apologized and asked that the photos be taken down. We are evaluating New Year's Eve and

have made no decisions at this point."

HEAT STREET EDITOR HEADED TO FOXNEWS.COM? Sister outlet The Wall Street Journal reports: "21st Century Fox FOX is looking to revamp Fox News's digital news operation, and part of the solution could come from sister company News Corp. Discussions are under way for Noah Kotch, the editor of News Corp's right-leaning news site Heat Street, to take the reins of FoxNews.com, people familiar with the matter say. The interest in Mr. Kotch comes after months of stop-and-go talks in which Fox explored acquiring Heat Street, the people say. Such a deal now appears unlikely." Lukas Alpert has more.

BILL O'REILLY'S NEXT BOOK - It's a juicy tell-all about the scandal that ended his two-decade career at Fox. KIDDING!!! It's a Revolutionary War-era non-fiction narrative and the latest in O'Reilly's "Killing" series. The AP has the details : "'Killing England: The Brutal Struggle for American Independence' will be published Sept. 19, Henry Holt and Co. ... The book will be co-written by O'Reilly's longtime collaborator, Martin Dugard. The six previous 'Killing' books, which include 'Killing Lincoln,' 'Killing Reagan' and 'Killing Kennedy,' have consistently sold more than 1 million copies each in hardcover ... O'Reilly said he chose the American Revolution because he had never read a book that explained it 'top to bottom' ... O'Reilly ... said he wasn't worried that sales would fall off without having his show to promote his books."

NEW POPULIST FOX NEWS SHOW PREMIERES SUNDAY - "The Next Revolution" -- announced in March and hosted by FNC contributor, British Conservative Party figure and Brexit backer Steve Hilton -- will lift off with "interviews with employees from the Silicon Valley who have not opened up about their political views for fear of backlash," the network said yesterday. "Additionally, a segment ... 'SwampWatch' will provide opinion and analysis on which industries, agencies and political groups in Washington D.C. and beyond are having an effect on President Trump's pledge to 'drain the swamp.'" Press release.

SOUND BITES:

-- "Since he walked out after condemning unnamed sources, here's a question for @PressSec: How many times has White House briefed anonymously?" [Peter Baker]

-- "Why doesn't Jared Kushner hold a news conference? Is there some law that says he never has

to speak in public or give an interview?" [Jeffrey Toobin]

-- "Is there any job besides 'newspaper columnist' that is so hard to get and yet has zero performance standards" [Hamilton Nolan]

DETAILS ABOUT NYT'S NEW 'READER CENTER' - It was announced a few months ago, and some Times watchers were scratching their heads about how this thing would function differently than the public editor. Now we have a clearer picture, via Times deputy managing editor Cliff Levy, who explained in a memo yesterday : "Hanna" Ingber, formerly of the international desk, "will head a team that will partner with reporters, columnists and editors in the newsroom and in opinion on a range of projects, including: "Improving how we respond directly to tips, feedback, questions, concerns ... Helping to make sure that we are as transparent as possible in how we explain our coverage ... Broadening our efforts to allow readers to make their voices heard on our digital platforms ... [and] Overseeing our Facebook Live initiative."

In other Times news: The company says its newsletter subscriptions "have more than doubled to over 13 million in April 2017, from 6 million newsletter subscriptions in April 2014."

IF 'OBSERVER' WERE OFFERED UP FOR SALE, WHAT EXACTLY WOULD BE LEFT TO SELL? WWD reports: "A significant number of the Observer's skeleton staff has been let go less than a week after Ken Kurson resigned as editor in chief of Observer Media. The onetime salmon colored weekly newspaper, which Jared Kushner acquired in 2006, has been struggling to find its footing. ... On Tuesday morning, four staffers were laid off ... It could not be determined if any of the remaining editorial staffers, which total around 12, will be let go."

MORE CUTS COMING TO CONDE NAST? "No," business chief Jim Norton told WWD in an interview. And what about the rumor that Norton was brought in to get the company ready for a sale? "I mean I can't address it but I can tell you, it has never come across my desk." More: "Meet Jim Norton: The Man Behind Condé Nast's Restructuring"

Interior May Restore Pre-2015 Federal Fracking Regulations

Posted June 27, 2017, 03:16 P.M. ET

By Alan Kovski

The Interior Department appears poised to rescind its 2015 rule on hydraulic fracturing outright, after which it may simply revert to the pre-existing status quo on federal regulations for fracking on federal and Indian lands.

But, defenders of the Obama-era rule will have to wait and see exactly what the Trump administration does before they can formulate a legal strategy in response, Earthjustice attorney Michael Freeman told Bloomberg BNA June 26.

Oil and gas companies, routinely using fracking to enhance the flow of subsurface hydrocarbons, also are waiting, but with more hope for the outcome. Two of their trade groups, the Independent Petroleum Association of America and Western Energy Alliance, joined in litigation against the 2015 rule.

Interior asked a federal appeals court to hold the litigation in abeyance while the Bureau of Land Management (BLM) works to rescind the rule and considers what to put in its place.

The most recent federal brief filed at the U.S. Court of Appeal for the Tenth Circuit said BLM anticipates it will repeal the 2015 rule and revert to federal regulations for fracking that have existed for decades (Wyoming v. Zinke, 10th Cir., No. 16-8068, 6/20/17).

Looking to Pre-2015 Code

"It certainly looks like they are just going to rescind the rule outright" rather than replace it with a revised rule, Freeman said. But as for a legal challenge, he said, "I think we'll have to see what they say and how they try to do it."

The federal brief filed June 20 said, "BLM expects to seek comment on a proposal to rescind the

2015 hydraulic fracturing rule and to restore the affected sections of the Code of Federal Regulations to their pre-2015 language."

A BLM notice of proposed rulemaking is under review at the White House Office of Management and Budget, but its contents are not publicly disclosed.

The agency will provide for a public comment period of 60 days before a final decision, the government told the appeals court.

Authority to Regulate in Question

Wyoming, supported by three other states and the Ute Indian tribe, challenged the legal authority of the BLM to regulate fracking and won in the U.S. District Court for the District of Wyoming, vacating the 2015 rule. The Obama administration appealed, and the Trump administration has continued the appeal, hoping to defend its authority if not the details in the 2015 rule.

Environmental groups intervening in the case have asked the appeals court to continue the case, not hold it in abeyance, to rule on federal authority over fracking. In the June 20 brief, the government said the question of authority need not be decided in the current case.

"If BLM restores the earlier regulations, as it anticipates, BLM's statutory authority could be decided at that time within the context of a rule that BLM chooses to implement," Interior said.

The phrase "as it anticipates" was another indication of where the government was headed.

Federal Explanation Wanted

Freeman, whose Earthjustice law firm represents Earthworks, the Wilderness Society and other environmental intervenors in the case, said the federal government has not provided an adequate explanation to the appeals court of the rationale for the government's course of action.

He described the administration's moves as an "abdication of responsibility" to protect public lands. Like the Obama administration, he said the older federal regulations for fracking were out of date.

The government has indicated the 2015 regulations impose regulatory burdens that may be unjustified, but it has not spelled out the details. It also has cited President Donald Trump's March 28 executive order directing Interior Secretary Ryan Zinke to publish a proposed rule for "suspending, revising, or rescinding" the 2015 rule.

Oil and gas industry groups have been emphatic about what they see as the unjustified burden of additional reporting and approval requirements imposed by the Obama administration regulations.

State regulations have been adequate to govern fracking on federal as well as other lands, the industry groups have said. To them, the 2015 fracking rule was a solution in search of a problem.

EPA Nitrogen Dioxide Air Standards Up For White House Review

Posted June 27, 2017, 02:03 P.M. ET

By David Schultz

The EPA's review of its nitrogen dioxide air pollution standards is nearly complete with the agency sending its proposal for how to proceed to the White House Office of Management and Budget.

OMB is reviewing the agency's proposed decision, according to a June 26 posting on its website.

The Clean Air Act requires the Environmental Protection Agency to review its nitrogen dioxide standards at least once every five years to determine whether they should be revised. Earlier this year, the agency's air pollution science advisers said the EPA should leave the current standards in place. The agency also indicated it was leaning toward keeping the current standards in place in a draft version of its review that it released last year.

Nitrogen dioxide air pollution is primarily a byproduct of vehicle fumes that can cause serious respiratory problems. Regions that exceed the agency's standards for nitrogen dioxide levels, which are currently between 53 and 100 parts per billion, could face mandatory pollution control measures, including stricter permitting requirements for industrial facilities.

An OMB review is typically the final stage of the rule making process before an agency decision is made public.

$1 Billion Mine Cleanup Bill Moves to Full House

Posted June 27, 2017, 12:52 P.M. ET

By Stephen Lee

A bill that would speed the delivery of $1 billion to states grappling with old, unreclaimed mine sites passed a House committee June 27.

The Revitalizing the Economy of Coal Communities by Leveraging Local Activities and Investing More (RECLAIM) Act (H.R. 1731) passed the House Natural Resources Committee on a voice vote and now moves to the full House.

Under the bill, $1 billion would be drawn from the federal Abandoned Mine Land fund and delivered to states so they can clean up their most polluted or dangerous old mines. Money in the fund comes from a tax on coal production.

The committee adopted three amendments during the markup. One, offered by Rep. Don Beyer (D-Va.), lets states request funding for mine cleanup projects that aren't connected to future economic development. Previously, the bill required states to show an "economic nexus" for all projects at abandoned mines that pose a threat to health, safety and the general welfare of the public.

Another from Rep. Liz Cheney (R-Wyo.) would protect Wyoming—which alone pays more than half of the total AML fees because it's the biggest coal-producing state— from being affected by accelerated payments out of the fund. The third amendment, offered by Rep. Glenn Thompson (R-Pa.), would bar states that don't use the money for reclamation from receiving further funding authorized by the bill.

Two Senate Companion Bills

Rep. Donald McEachin (D-Va.) introduced but withdrew an amendment that would have struck a section from the bill moving the headquarters of the Appalachian Regional Commission out of

Washington, D.C., to a "more affordable location" in Appalachia. In McEachin's view, that move will only weaken the ARC, a $146 million federal-state partnership intended to create economic opportunities in the 13 Appalachian states and is consistent with President Donald Trump's intent, stated in his budget request, to eliminate the commission altogether.

The RECLAIM Act stalled in the last Congress when no senator offered a companion version. This year, however, two companion bills have been introduced—one by Senate Majority Leader Mitch McConnell (R-Ky.) and another by Sen. Joe Manchin (D-W.Va.)—and proponents on both sides of the aisle say they're optimistic it will pass.

During the House markup, the panel also passed the Community Reclamations Partnerships Act (H.R. 2937), which lets states assume the liability for good samaritans who want to clean up old mine lands.

Other bills advanced to the full House include the Resilient Federal Forests Act (H.R. 2936), which seeks to reduce the risk of catastrophic wildfires through active forest management, according to its sponsor, Rep. Bruce Westerman (R-Ark.). The bill passed on a 23-12 vote.

The Water Rights Protection Act (H.R. 2939), which bars the Departments of the Interior and Agriculture from requiring private citizens to hand over their water rights to the federal government in order to keep operating on federal lands, passed on a 24-14 vote.

Pumped Hydropower Storage Bill Passes House

Posted June 27, 2017, 03:34 P.M. ET

By Brian Dabbs

A bill designed to eliminate regulatory uncertainty in hydropower storage at federal reservoirs passed the House June 27.

The legislation (H.R. 1967) would tap the Bureau of Reclamation as the lead regulator for pump storage at the agency's facilities. The Federal Energy Regulatory Commission sometimes requires permits for that activity, and the legislation would remove FERC from the regulatory process, the bill's supporters said.

A House Natural Resources Committee spokeswoman previously told Bloomberg BNA that the bill could be part of a broad infrastructure package in the future. Its status in the Senate remains uncertain.

Pump storage is similar to a battery, and proponents said it's a useful way to extend the period of time that hydroelectric power is available. Water is pumped from a lower reservoir to a higher reservoir and later used to generate electricity.

Rep. Doug Lamborn (R-Colo.) sponsored the bill, and Rep. Cathy McMorris Rodgers (R-Wash.), a member of the Republican leadership and founder of the Hydropower Caucus, joined on the bill.

Perry: Renewables Affect Grid Reliability; FERC Member Refutes

Posted June 27, 2017, 02:47 P.M. ET

By Rebecca Kern

Energy Secretary Rick Perry said previous policies benefiting renewable resources threaten baseload resources and lead to a less reliable electric grid, but Federal Energy Regulatory Commissioner Colette Honorable refuted his claim.

"These politically-driven policies, driven primarily by the hostility to coal, threaten the reliability and stability of the greatest electrical grid in the world," Perry said June 27 at the Energy Information Administration's annual conference in Washington.

"We'll also ensure our grid reliability and that our baseload capacity that is needed to power the economy is not tossed aside in the name of some political favorite," Perry said, referring to the tax subsidies Congress passed during the Obama administration for wind and solar technologies.

Honorable: 'Bring on' Renewables

But FERC's Honorable refuted the assertion that wind and solar resources threaten reliability. Baseload generators include nuclear power plants and coal plants, many of which are closing due to low natural gas prices, energy analysts and grid market operators said.

"Do I believe [renewables] have impacted grid reliability? Absolutely not," she said a session following Perry's presentation at the EIA conference. FERC is an independent agency that orders and approves standards to ensure the reliable operation for the electric grid.

"Do we recognize that renewables have different attributes? Yes. Do we recognize that we must ensure the proper support for renewables? Yes," she said.

But no reliability problems have occurred in the regional grids operated in the Midwest and Texas, where large amounts of wind have been integrated onto the system, according to Honorable.

"I don't see any problems with reliability, and I say, 'Bring on more renewables,'" she added.

Honorable announced late June 26 that Friday, June 30, will be her last day as a commissioner.

Department Grid Study

Perry has questioned the impact of renewable subsidies and taxes on baseload resources and whether adding more renewables would affect the grid's reliability, and directed the Energy Department to conduct an internal study of reliability of the electric grid.

"I've asked the staff to undertake a critical review of the regulatory burdens placed by the previous administration on baseload generators," he said. The study is expected to be issued to the public in July.

The renewable industry is on the defensive, however, saying intermittent resources such as wind and solar add more resiliency, diversity, and reliability to the electric grid.

A June 26 report from the Natural Resources Defense Council concluded that today's grid planners are increasingly valuing resource flexibility to make it easier to balance supply and demand in real time. It found that baseload plants are limited in providing this flexibility because they can't be turned on and off without incurring significant cost.

A white paper that the Advanced Energy Economy Institute issued in May highlighted the flexibility that renewable resources offer. The Solar Energy Industries Association and the American Wind Energy Association sent similar briefing papers to the Energy Department.

Energy Secretary Supports Nuclear, but Funding Cut Proposed

Posted June 26, 2017, 09:00 P.M. ET

By Rebecca Kern

Energy Secretary Rick Perry called domestic nuclear energy development a "game changer" at the start of White House "Energy Week," but the department's proposed budget would cut funding for its nuclear office.

Perry's June 26 comments to reporters came during the announcement of Energy Week events including some focused on American energy dominance—bringing together state, tribal, business, labor leaders in Washington. The week will culminate with an announcement on American energy policy by President Donald Trump at the Energy Department headquarters June 29.

Perry called U.S. nuclear policy "an important player in the development of our clean energy portfolio globally."

"I believe we can achieve this by focusing on the development of technology like advanced nuclear reactors, and small modular reactors," he added.

Advanced reactors are still decades away from commercialization and materials other than water, such as sodium and gas, to cool the reactors. Meanwhile, small modular reactors—smaller-scale and purportedly safer water-cooled reactors—could be on the market by the mid-2020s, with NuScale Power LLC's application under review by the Nuclear Regulatory Commission.

But the proposed fiscal year 2018 budget request for the Energy Department includes a 28 percent cut to the Office of Nuclear Energy from $984 million in the fiscal year 2017 annualized continuing resolution to $703 million. The office is responsible of nuclear technology research and development.

Analyst Skeptical

Chris Gadomski, the lead nuclear analyst at Bloomberg New Energy Finance, is skeptical of Perry's backing.

"Perry says there is support for the U.S. nuclear energy industry, but he says nothing about financial support for the industry," he told Bloomberg BNA June 26.

"Commercializing an advanced reactor will cost between $1.5 billion to $3.5 billion and represents a very risky venture given low natural gas prices, no carbon price, and policy preferences for renewables," he said. "That is a huge challenge for the U.S. industry even with government support. Trump's budget cuts rather than increases support for nuclear."

The Nuclear Energy Institute's Neal Cohen, the senior vice president of external affairs, told Bloomberg BNA that he was "heartened to see Secretary Perry recognize ... the fact that nuclear is

essential and can't be taken for granted." But the trade group, which represents the nuclear power industry, has lamented the proposed funding cuts to nuclear.

"Unfortunately, the proposed budget does not support the actions necessary for the U.S. nuclear energy industry to thrive. Now is not the time to back away from federal investment that has played such a pivotal role in making the United States a world leader in this technology," Maria Korsnick, NEI's president and CEO, said in May when the budget was released.

Defining Energy Dominance

The Energy Week is part of a month-long series of policy-themed weeks, including infrastructure week. The week will focus on American jobs utilizing U.S. domestic energy resources. Perry defined energy dominance as "using domestic resources for the good here at home and abroad."

"An energy-dominant America means a self reliant, a secure nation, free from geopolitical turmoil of other nations who seek to use energy as an economic weapon," he said.

"An energy-dominant America will export to markets around the world, increasing our global leadership and influence. Becoming energy dominant means that we are getting government out of the way so that we can share our energy wealth with developing nations," he added.

Perry Seeks Energy Pact with Mexico, Canada as NAFTA Talks Near

Posted June 27, 2017, 8:09 A.M. ET

By Josh Wingrove and Jennifer A. Dlouhy

The U.S. has a unique opportunity to develop a "North American energy strategy" with Canada and Mexico, Energy Secretary Rick Perry said, striking a conciliatory tone with the other members of the North American Free Trade Agreement.

While President Donald Trump has blasted NAFTA and moved to renegotiate it, Perry referred to the upcoming talks as a "massage" of the 1994 NAFTA deal, saying it presents an opportunity to bolster energy ties, not enact new trade barriers.

"That relationship I don't think has ever been more important than it is today, particularly from an energy perspective," he told reporters at the White House June 26, while stressing his close ties with his counterparts in Ottawa and Mexico City. "Energy is going to play a very important role."

His comments come at the outset of so-called "Energy Week" from the White House, as Trump works to reduce regulations on energy producers and jump-start energy exports. Perry's comments are nonetheless the latest signal Trump's cabinet is warming to trade ties with Canada and Mexico—whether it's lauding NAFTA and its impact on farmers or saying any revisions of the pact will be good for the U.S. neighbors, as well.

"Energy is an ideal area for the Trump administration to move forward with the relationship," Duncan Wood, director of the Mexico Institute at the Woodrow Wilson Intentional Center for Scholars, said in a telephone interview.

Trump has long advocated for American energy dominance, Wood said: "But everybody knows that for the United States to do that on its own is a pipe dream in the short term at least—but for North

America working together, it becomes feasible."

Canada Trade

Perry likened NAFTA renegotiation to the "need to renegotiate a contract from time to time," saying the president wants to "massage" and "rework" the deal, with energy playing an important role. When NAFTA was negotiated, the U.S. was reliant on oil imports from Canada and Mexico; it's now both a major exporter and importer of oil and natural gas with both nations.

"I think we have a unique opportunity in this country to develop a North American energy strategy that will pay great dividends for Canadians, for Mexicans, for Americans, as we go forward," he said, adding he has good working relationships with Canada Natural Resources Minister Jim Carr and Mexican Energy Secretary Pedro Joaquin Coldwell.

Carr echoed the comments, saying in a June 26 interview that Perry has championed North American energy cooperation since his first days on the job.

"We both understand the importance of that integrated market," Carr said in an interview. "We understand we have to keep goods flowing, that we can establish North America as a world leader in the production of conventional and clean energy."

Oil Trade

Energy is a pillar of North American trade. Imported crude from Canada and Mexico now accounts for a larger percentage of total U.S. imports, growing to 49 percent in 2016, from 34 percent in 2010, according to the American Petroleum Institute.

North American energy trade acts to balance regional supply and demand needs. In 2016, the U.S. exported 2.1 trillion cubic feet of natural gas by pipeline to Canada and Mexico, while also importing 2.9 trillion cubic feet from the countries, according to the U.S. Energy Information Administration. The U.S. exported 1.6 billion barrels of crude oil and petroleum products to Canada and Mexico that year, while importing 1.4 billion barrels from the two countries, the EIA reported.

North American energy markets are already highly integrated, at least in oil, gas and petroleum products. Electricity is the outlier; while there are grid connections across the U.S.-Canada border, similar transmission does not occur between the U.S. and Mexico.

Trade Disputes

Already, a plurality of shipments of liquefied natural gas—20 percent, Bloomberg data show—from Cheniere Energy Inc.'s Sabine Pass export facility ultimately have been sold to Mexico since that site began shipping LNG in early 2016.

"If you would have asked me to think about where these volumes would go a year, year and a half ago, I wouldn't have guessed our neighbors to the south of the border would be the single largest market to date," Cheniere Executive Vice President Anatol Feygin said at an EIA conference in Washington June 26.

To be sure, the trade disputes between the countries go beyond NAFTA and energy. The U.S. and Mexico hope to sign a final deal on sugar imports this month, settling a long-standing irritant.

The U.S. imposed a second-round of duties on Canadian softwood lumber on June 26—a move widely expected even before Trump's election. The U.S. is also reviewing steel rules, though Canadian Prime Minister Justin Trudeau is confident his country will be spared by any new measures. The U.S. and Canada are also at odds over aerospace.

Energy, Keystone

There's more room for the conversation now, too, since the Trump administration authorized construction of TransCanada Corp.'s proposed Keystone XL pipeline to deliver oil sands crude from Alberta across the border, ultimately going to Gulf Coast refineries. For years as the Obama administration skeptically weighed the project and environmentalists battled the pipeline, it overshadowed trilateral talks.

That's no longer the case.

"Mexico and the United States could talk about pipelines for natural gas, but ultimately on a trilateral basis, it was all stymied by that issue of Keystone," Wood said. Without the Keystone decision hanging over discussions, "it liberates the agenda a little more."

Navajo Vote to Extend Large Coal-Fired Power Plant's Lease

Posted June 27, 2017, 9:00 A.M. ET

By Stephen Lee

The massive coal-fired Navajo Generating Station can continue to operate through 2019 after the Navajo Nation Council approved legislation allowing it more time to shut down.

The passage of Legislation No. 0194-17 June 26 gives the operators of the 2,250-megawatt Navajo Generating Station in Page, Ariz.—the biggest coal plant in the West—five years to decommission and remediate the facility starting Dec. 23, 2019, when the current 50-year lease expires.

Had the measure failed, the plant's operators would have had to close it in a matter of days to give themselves enough time to decommission the plant by the 2019 expiration date. The plant's owners said earlier that decommissioning would take roughly two years.

The extension also means the large Kayenta Mine 80 miles away, which solely provides coal to the Navajo Generating Station, will stay open through 2019. If and when the power plant closes, however, the mine will also close because it doesn't have a rail link connecting it to any other customers.

Peabody Energy, which operates the mine, has taken out a $235 million bond to reclaim the land. Some environmental advocates, however, question whether the bond amount is enough to reclaim the 35.8 square miles that have been mined at Kayenta.

Navajo leaders, fearful of what the plant's closure would mean for their economy, had supported the extension. The plant employs roughly 400 workers, and the mine employs another 243, according to

the Institute for Energy Economics and Financial Analysis.

Grim Outlook Beyond 2019

The chances of the plant remaining open beyond 2019 appear murky at best. No outside buyers have stepped forward to take over the plant when the current lease expires, but several players, including the Navajo Nation and Peabody Energy, are actively looking for a buyer.

Andy Tobin, commissioner of the Arizona Corporation Commission—the state's public utilities commission, told Bloomberg BNA before the vote that the plant plays a central role in Arizona's economy.

"It's the only coal plant in Arizona that burns Arizona coal," Tobin said. "Without it, Arizona will become a full-time energy importer, which is something that bothers me as a whole."

Tobin also said he thinks it's possible to build a rail link to the Kayenta Mine, so Peabody can sell the coal to other customers.

Monsanto's Foes Are Branching Out

Posted June 27, 2017, 7:00 A.M. ET

By Tiffany Stecker

Call it the anti-Roundup dream team. A coalition of attorneys, invigorated by their lawsuit representing cancer victims against Monsanto Co., is tackling the world's most popular weedkiller on multiple fronts. They are veteran environmental attorney and political scion Robert F. Kennedy, Jr.; Aimee Wagstaff of Andrus Wagstaff LP in Lakewood, Colo.; Michael Miller of the Miller Firm LLC in Orange, Va.; Michael Baum and Brent Wisner of Baum Hedlund Aristei Goldman PC in Los Angeles; and Robin Greenwald of Weitz & Luxenberg PC in New York. Their weapon? A glimpse at decades of Monsanto's internal deliberations on glyphosate, the main ingredient in Roundup herbicide. The attorneys have spent the last several months poring over hundreds of confidential documents they say show that the company actively worked to downplay the cancer risk for glyphosate. The plaintiffs in the high profile multi-district litigation (MDL), being heard in the U.S. District Court for the Northern District of California, allege that Monsanto's Roundup caused their non-Hodgkins lymphoma, a relatively common cancer of the blood.

They are now extending to another legal challenge. On June 20, they joined other attorneys in filing a complaint that accuses the company of falsely advertising that glyphosate works by targeting an enzyme that is not found in people or pets. They are teaming up with another law firm that is building a name on suing food companies for making such claims.

The attorneys have also weighed in on California's decision to list glyphosate as a carcinogen under the state's Proposition 65 law, which goes into effect July 7, and provided information to members of the European Parliament to sway decision-making on the herbicide. The zeal with which the firms are taking on Monsanto—fueled, Kennedy said, by the troubling information culled from the documents—is rare in private practice, he told Bloomberg BNA. "I've never seen private attorneys so energized against a defendant," Kennedy, whose Hurley, N.Y.-based firm Kennedy & Madonna LLP is working with Baum Hedlund on the litigation, said. "Everybody is cooperating so well, we've created a team." Since March, the lawyers have successfully unsealed a trove of emails, letters and studies intended to inject doubt into the process by which Roundup earned its Environmental Protection Agency approval. They suggest that Monsanto's scientists ghost-wrote studies that

cleared glyphosate of its cancer-causing potential; that the company tried to enlist EPA staff to shut down an investigation into the herbicide; and that officials hired a scientist in 1985 to persuade EPA regulators to change its decision on its cancer classification for glyphosate.

Monsanto has denied these allegations, and the judge presiding in the case also has panned the attorneys for trying to unseal documents not directly relevant to the case, calling the move a "PR campaign" at a May 11 hearing.

Injury Lawyers as 'Private AGs'?

People seeking to sue over Roundup exposure may now be more inclined to approach the firms, Wisner of Baum Hedlund told Bloomberg BNA. "We've all had a chance to see what's behind the curtain," he said. "We bring a lot of institutional knowledge to the litigation."

Since its introduction to consumers in 1974, Roundup has helped revolutionize farming practices, allowing growers to control weeds more efficiently and boost agricultural productivity. But concerns over use with genetically-engineered crops, the chemical's presence in foods, and its role in fostering glyphosate-resistant weeds have left environmentalists skeptical.

Nonprofits have been suing the EPA and other federal agencies for failing to properly regulate glyphosate since the 1990s.

"The problem is so big, it's creating opportunities left and right," Adam Keats, a senior attorney with the Center for Food Safety, told Bloomberg BNA.

Regulatory bodies around the world, including the EPA, have backed findings showing that Roundup has low toxicity. But a contested 2015 finding from the International Agency for Research on Cancer that glyphosate is a "probable" carcinogen created an upwelling of cases from consumer protection and personal injury firms, many of which have been consolidated in the Northern District of California MDL.

These firms have deeper pockets—and less to lose—than environmental nonprofits fighting an agricultural giant, Keats said.

"We don't have the same resources that law firms have; therefore, we pick and choose what we challenge," he said. In seeking to reform the regulatory process, "we're less subject to litigation tactics that would bleed us dry."

When government agencies are reluctant to change their practice, consumer protection lawyers serve as vigilantes against weak regulation, Wisner said.

"I think that these [attorneys for] consumer fraud cases, for better or worse, were effectively becoming private attorney generals," he said.

Suit Is Frivolous, Says Monsanto

The attorneys' latest complaint, filed in the U.S. District Court for the Western District of Wisconsin, pushes back against one of the company's claims.

Glyphosate kills weeds by inhibiting an enzyme essential for keeping plants alive. The chemical disrupts the pathway that the enzyme, 5- enolpyruvylshikimate-3-phosphate (EPSP), takes to

process amino acids, the building blocks of proteins.

Animals don't process amino acids through the same pathway as plants. But bacteria, including the microbes that populate mammals' guts, do. Recent research has found that human intestinal flora can affect the immune system, allergies, and even behavior. Therefore, Monsanto cannot declare that "glyphosate targets an enzyme found in plants but not people or pets," the plaintiffs say.

SImilar "enzymatic pathway" arguments against Monsanto have failed in the past. Federal courts in New York and California dismissed cases when plaintiffs sought relief in the form of court-ordered label changes. The cases were thrown out because one of the nation's pesticides laws, the Federal Insecticide, Fungicide and Rodenticide Act, dictates what information makes it on pesticide labels and pre-empts any injunctive relief claims.

The current action does not seek label changes. Instead, it seeks to compensate consumers who bought Roundup under the representation that the product does not affect human health, Kim Richman, an attorney with the Brooklyn, N.Y.-based Richman Law Group, told Bloomberg BNA.

The Richman Law Group has sued several food and tobacco companies for making false and deceptive claims on their products. They have gone after General Mills for calling Nature Valley granola bars "natural" despite the presence of glyphosate residues, and RJ Reynolds Co. for implying that their brand of American Spirit cigarettes are healthier and safer than other brands.

In the Monsanto challenge, Richman said he wants to draw attention to glyphosate's "real and most pervasive effect — weakening the human gut biome."

"The public has been misled on this point, and it must be addressed," he said.

Monsanto is confident the challenge will go nowhere.

"These are frivolous lawsuits without any merit. We will defend the Company vigorously, and we are confident we will prevail," spokesman Sam Murphey said in an emailed statement.

The match between Richman and the lawyers in the Non-Hodgkins lymphoma MDL is a natural one for the anti-glyphosate crusaders.

"We're bringing the science, he's bringing his world class knowledge of consumer fraud," Kennedy said.

David v. Goliath

Richman has also sued Monsanto in D.C. District Court, as well as in Illinois federal court, over the company's claims that Roundup doesn't affect humans. In the latest complaint, the attorneys represent plaintiffs from Illinois, New York, Wisconsin, California, New Jersey and Florida, kicking off a nationwide class-action suit to recover monetary damages.

It's Richman's latest "big tent" approach in bringing together firms and groups taking on glyphosate from different angles: from consumer deception to public health.

Rather than having competing actions filed in different corners of the U.S., Richman said, his law group is coordinating attorneys across the country and across various practice areas.

This is "all in an effort to file together against a Goliath and bypass an otherwise complicated MDL process, which can often waste valuable judicial resources and delay available relief," he said. The group used a similar tactic in lawsuits against Quaker Oats and General Mills.

The MDL process is triggered by the Judicial Panel on Multi-District Litigation (JPML), a panel of judges that meet six times a year to consolidate complaints across the country into a single court, allowing the process of collecting evidence to play out in that court before a trial begins in the jurisdiction of origin. The judges centralize these cases to avoid duplication, prevent inconsistent pretrial rulings, and save money.

But the MDL process can also be complicated, delaying relief and inviting some firms to take advantage of the system in a way that does not serve the lead plaintiffs or classes they seek to represent. The JPML may unwittingly disenfranchise the plaintiffs or classes by centralizing the cases far from their chosen jurisdiction, Richman said.

Instead of triggering an MDL, he said, the attorneys are able to self-organize and create a "mini" MDL. Avoiding the traditional process, when possible, reflects an emphasis to place plaintiffs and classes "before control and power," Richman said.

The choice of the Wisconsin court is a deliberate one. The court has a reputation for quickly moving cases off the docket, Kennedy said.

Although these mini MDLs generally benefit plaintiffs, they also sidestep the neutral decision-maker in the MDL panel, said Andrew Bradt, an assistant professor at the University of California, Berkeley School of Law who studies the MDL process. Both plaintiffs and defendants like to "shop" for the best court, which can lead to gamesmanship and inefficiency in the legal system. "This is forum shopping on steroids," he said.

Chemical Makers Can Ask, Pay For Part of EPA Risk Analysis

Posted June 27, 2017, 03:14 P.M. ET

By Pat Rizzuto

Chemical manufacturers can request and foot the bill for the EPA to review the risks of some chemical uses without triggering an obligation to cover the cost of a more comprehensive examination, a senior agency official said.

A 2016 update to the nation's chemical safety law allows chemical manufacturers to ask the Environmental Protection Agency to evaluate the risks of chemicals they make—provided the companies pay for the review, which can cost more than $1 million. Between 25 and 50 percent of the chemical risk evaluations the agency conducts can be carried out at the requests of chemical manufacturers who also foot the bill.

A recently issued regulation allows chemical manufacturers that want the EPA to evaluate the risks of some—but not all—uses of a chemical to request and pay for the narrower evaluation, according to Wendy Cleland-Hamnett, acting assistant administrator for chemical safety and pollution prevention. That is a change from the proposed version of the rule that would have required the companies to pay the costs of evaluating the risks of all the chemical's uses—even if the company didn't make the chemical for those other applications.

There are many reasons chemical manufacturers may want the EPA to assess the risks of a

chemical they make. For example, one or more manufacturers may think the chemical they make—or certain uses of it—pose little risk. Having a formal EPA conclusion that agreed with them could benefit them in the marketplace.

The EPA, however, will examine all the uses of that chemical that it thinks warrant review, Cleland-Hamnett said June 27 at a forum on the revised chemicals law held at the George Washington University School of Public Health in Washington, D.C. She discussed changes the EPA made to a trio of chemical regulations issued June 22, the one-year anniversary of the Toxic Substances Control Act amendments of 2016.

EPA Starts Water Rule Repeal, Fulfills Trump Campaign Pledge

Posted June 27, 2017, 02:23 P.M. ET

By Amena H. Saiyid

EPA Administrator Scott Pruitt June 27 initiated the repeal of an Obama-era water jurisdiction regulation by issuing a proposal that would reinstate prior policies on what waters are subject to federal protections, the agency announced.

The proposed repeal, once in final form, will be the first step the Trump administration takes in a two-step process to undo the 2015 Clean Water Rule, also known as the Waters of the U.S. rule (WOTUS). The second step, which Pruitt has said will be completed by as soon as the end of the year, will involve a rewrite of the 2015 regulation.

"We are taking significant action to return power to the states and provide regulatory certainty to our nation's farmers and businesses," Pruitt said in a June 27 news release announcing the proposal. "This is the first step in the two-step process to redefine 'waters of the U.S.' and we are committed to moving through this re-evaluation to quickly provide regulatory certainty, in a way that is thoughtful, transparent and collaborative with other agencies and the public."

Waters and wetlands that fall under Clean Water Act jurisdiction are protected from pollution by federal discharge and dredge-and-fill permits, oil spill prevention requirements, water quality standards, and state water quality certifications, among other programs.

The Obama-era water rule is facing dozens of lawsuits from various business, agriculture and manufacturing groups, including Murray Energy Corp., who argued the federal government improperly expanded its regulatory reach over waters. Environmental groups also have challenged the rule to make it more protective than its current form.

The significance of this first step (RIN:2040-AF74) is that it will take the 2015 Obama water rule off the books, rendering moot all outstanding federal legal challenges against the regulation, attorneys said.

Trump Promised Rollback

The EPA's action moves Trump closer to fulfilling the pledge he made during his presidential campaign and in a February executive order that directed the EPA to undo the regulation that he and other Republicans have termed a "federal land grab."

Trump ordered the EPA and the U.S. Army Corps of Engineers to craft the new jurisdiction rule with states, their co-regulators in implementing the Clean Water Act. States are eagerly looking forward

to that and have encouraged the administration to share more than just an outline of its plans to rewrite the jurisdictional rule.

The undoing of the Obama-era water rule will involve the reinstatement of a 1986 jurisdiction rule and related guidance that the EPA said was in place "prior to the issuance of the Clean Water Rule and that is being implemented now under the U.S. Court of Appeals for the Sixth Circuit's stay of that rule."

A Sixth Circuit panel issued a nationwide stay of the WOTUS rule in 2015 after determining that there was a good chance that groups challenging the rule would prevail.

Reed Hopper, principal attorney with Pacific Legal Foundation's environmental law practice, told Bloomberg BNA in an email that the proposed repeal of the Clean Water Rule would end that Sixth Circuit litigation. However, Hopper said it would not end proceedings before the U.S. Supreme Court, which has been asked to decide which federal court should hear challenges to a water jurisdiction rule.

"The justices know they need to address the issue before a new WOTUS rule is issued," Hopper said.

California Mounts Lobbying Blitz for EPA Water Loans

Posted June 27, 2017, 7:30 A.M. ET

By David Schultz

The Golden State is making a strong lobbying push to try to win new federal loans for water infrastructure projects, according to data and documents reviewed by Bloomberg BNA.

The EPA has received applications from water systems across the country for these loans in 2017, the first year the agency will dole them out. But California is head and shoulders above its peers in trying to persuade the agency to send the loans its way.

Officials in California's water utility industry told Bloomberg BNA that their state's thirst for these infrastructure loans is the result of a desperate need for more efficient water delivery amid a population boom and a crippling drought. But the state may also be trying to give itself a leg up in what will likely be a highly competitive EPA approval process.

Though the agency only has funding to subsidize $1.5 billion in loans this year, water systems are asking it to back 43 different infrastructure projects that would add up to a total of $6 billion.

"It's going to be super competitive," Dan Child, the general manager of Silicon Valley Clean Water, told Bloomberg BNA.

Of the 43 loan applications, 19 come from California. No other state submitted more than three.

Low-Cost Loans

The loans were established by the Water Infrastructure Finance and Innovation Act, also known as WIFIA. Unlike some other federal grant programs, WIFIA doesn't provide municipalities with all of the money they need to complete an infrastructure project. Instead, the program subsidizes the

municipalities' borrowing costs, which allows them to finance a project at much lower rates.

The EPA in fiscal year 2017 will allocate almost $25 million in subsidies, which it says will allow water systems to take out a total of $1.5 billion in low-cost loans. These loans can then be combined with other sources of funding to complete projects worth up to $3 billion, according to the agency.

Child's organization, which runs a Bay Area sewer system, is applying for nearly $200 million in WIFIA loans to replace an 8-mile long pipe that carries untreated sewage to its treatment plant in Redwood City. Like many of his fellow Californians who applied for these loans, Child enlisted the help of lobbyists in Washington.

A Bloomberg BNA review of lobbying filings from the first quarter of 2017 found that more than a dozen municipalities in the state deployed lobbyists to the Environmental Protection Agency and to Capitol Hill to discuss the new water loan program, far more than any other state.

Drought Driven?

The firm Child's organization employed, The Ferguson Group, also represented water systems in San Diego and Monterey.

Its CEO, Roger Gwinn, said that interest has been high from California because the state's water systems are facing huge problems that can't be solved by issuing more bonds or raising water rates.

As recently as April of 2016, more than half of the state was facing extreme drought conditions, according to federal drought monitoring data. Meanwhile, the state's population has increased by more than five percent since 2010, according to Census Bureau estimates.

"They've got tremendous challenges," Gwinn told Bloomberg BNA. WIFIA "saves a tremendous amount of money for the borrowers."

He said many of the applications that have come from the state would address its water shortages by funding desalinization projects or water reuse technology.

Lawmakers Enlisted to Help

Gwinn said he reached out to numerous California lawmakers to ask them to support his clients. Ultimately, five sent letters to the EPA this spring about WIFIA applications from their districts: Sen. Dianne Feinstein (D-Calif.) and Reps. Jackie Speier (D-Calif.), Lou Correa (D-Calif.), Ed Royce (R-Calif.), and Dana Rohrabacher (R-Calif.). That's according to documents obtained by Bloomberg BNA through an open records request.

Sen. Bill Nelson (D-Fla.) sent a letter to the EPA as well regarding a WIFIA application submitted by Osceola County in Florida.

Adam Russell, a Feinstein spokesman, said it's common across Capitol Hill for a constituent to ask their lawmaker to weigh in on an application they have pending with a federal agency.

"Senator Feinstein takes these requests seriously and, when appropriate, weighs in with her support in order to ensure that federal dollars are spent wisely," Russell told Bloomberg BNA.

A spokesman with Rep. Correa echoed these comments, telling Bloomberg BNA that Correa

"supports improving infrastructure in his district."

Criteria for EPA Awards

It's unclear how effective the lobbying push can be given the way the law is written.

In the WIFIA law, there is language that spells out the criteria the agency must follow when determining which loan applications to grant, according to EPA spokeswoman Amy Graham. One of those criteria, she told Bloomberg BNA in an email, requires the agency to consider the geographic diversity of the program's borrowers.

That means that while more than 40 percent of this year's applications come from California, the state likely won't receive 40 percent of the loans.

Dan Hartnett, the head of legislative affairs with the Association of Metropolitan Water Agencies, said there are enough safeguards built into WIFIA to prevent lobbying or political influence from swaying the outcome of the process.

"I'd be skeptical that [lobbying] would make any difference from the sense I've gotten from EPA staff," Hartnett told Bloomberg BNA. "It seems that Congress wrote the law not to make it pork."

Infrastructure Funding Gap

But should it be?

Timothy Quinn, head of the Association of California Water Agencies, said lawmakers should be using their clout to advocate for infrastructure projects in their districts. Weighing in on a WIFIA loan application is one way they can do that now that earmark funding has been banned in Congress.

"In the old rules, you got an earmark and that's how you helped your district," Quinn told Bloomberg BNA. "Now you get a low-cost loan. I don't see anything wrong with that at all."

And it's not as though upgrading water infrastructure is a frivolous pursuit, he said. The EPA estimated in 2011 that the country's drinking water systems needed more than $380 billion in upgrades, an estimate that didn't include wastewater needs. Meanwhile, other than WIFIA's $1.5 billion in loans, the only other significant sources of federal funding for water infrastructure comes from the EPA's State Revolving Fund program, which the president is proposing to fund at just over $2 billion for the next fiscal year.

The gap between federal funds and infrastructure needs ultimately falls on states, cities and, in the end, water bill payers.

Quinn said that, with the needs so high and the federal funding so scarce, water systems have a right to do all they can to bring home any dollars that are available. This is especially the case in California, where demand for water is rising while its supply is falling.

"We've been pursuing expensive local resources to make ends meet," Quinn said. "WIFIA fit with what we've been doing in California like a glove. It's a new tool and a good tool."

Germany Prepares Fund to Encourage Pension-Pot Climate Spending

Posted June 27, 2017, 8:46 A.M. ET

By Mathew Carr and Brian Parkin

Germany's environment ministry is to start its first fund aimed at reducing the risk of financing clean-energy projects in emerging nations.

The facility will link institutional investors such as pension funds with "bankable" climate-friendly ventures, according to Norbert Gorissen, the ministry's head of international climate finance. The fund, which may be ready by year-end, will offer a range of services from investment in ready-packaged projects to consultancy and currency hedging.

"Institutional investors are not interested in the highest returns," Gorissen said last month in an interview. "They're interested in long-term, stable conditions, which require investing in a green energy and infrastructure system."

The world needs to spend almost $7 trillion a year through 2030 on basic infrastructure that could include "smart," energy-efficient projects to meet the emission-reduction targets in 2015's Paris climate deal, the Organization for Economic Cooperation and Development said in May. The Group of 20 nations meets next month with policies to boost spending on environmentally-friendly projects set to be one of the key topics at the summit in Hamburg.

Encouraging private-sector financing for climate programs can be difficult as institutional investors don't want to work with the "nitty gritty" of many small deals, Gorissen said. Germany's fund would bring those together into one package.

"It's a facility that will help a whole pipeline of projects to be better prepared," he said. "So it provides consultancy and due diligence so project developers can get across the barriers from an infant stage to the stage where you can start talking to the banks."

Germany won't be the first country to do this. Denmark established the $200 million Danish Climate Investment Fund in 2014, which received about 58 percent of its money from the private sector. It provides advisory services from the initial idea through to when the project is economically viable.

"Public-private partnerships are the way forward if you want to mobilize private capital on a large scale," said Torben Moeger Pedersen, chief executive officer of PensionDanmark A/S, which invested in DCIF.

Gorissen, who will oversee climate spending of about 386 million euros ($432 million) this year, declined to comment on the potential size of the new facility.

"We're just talking about millions at the moment, but I'm hoping I can make the case that this is possible."

Subject: Michigan health official indicted in Flint water crisis

By Annie Snider

06/14/2017 10:12 AM EDT

The head of Michigan's Department of Health has been charged with involuntary manslaughter related to the city of Flint's drinking water crisis, according to the Associated Press.

Charges were read in court this morning against health chief Nick Lyon, the highest-ranking member of GOP Gov. Rick Snyder's administration to be caught in the criminal probe of the impoverished city's lead contamination crisis.

Lyon is accused of failing to alert the public about an outbreak of Legionnaire's disease that some experts have linked to the switch in the city's water supply and resulting poor water quality.

Emergency managers appointed by Snyder switched Flint's water supply in 2014 from treated water supplied by Detroit to water from the Flint River that the city treated itself. However, officials failed to include corrosion controls in that treatment, causing dangerous lead to leach from service lines into tap water.

Michigan Attorney General Bill Schuette, who is widely expected to run for the GOP nomination in the 2018 governor's race, is leading the criminal probe, which has previously filed charges against 11 lower level state and local officials and two former emergency managers.

Subject: SEIA: Suniva trade case threatens 88K U.S. solar jobs

By Esther Whieldon

06/15/2017 01:49 PM EDT

The Solar Energy Industries Association says the U.S. solar sector would lose 88,000 jobs, or about one-third of the workforce, if President Donald Trump grants Suniva's request to impose trade tariffs on solar equipment imports.

The U.S. International Trade Commission is investigating a complaint by Suniva and SolarWorld Americas that an influx of cheap solar cells and modules largely from Asian countries is harming the U.S. manufacturing market and putting the companies out of business.

SEIA, which has opposed the petition, said the utility-scale market would be hit the hardest and see employment shrink by 60 percent, while residential solar jobs would decline by about 44 percent and commercial sector positions would drop about 46 percent.

California would be hurt the most, SEIA said, with about 15,800 jobs lost. South Carolina would lose about 7,000 jobs and Texas would see about 6,300 jobs vanish, SEIA said.

"Rather than help the industry, the action would kill many thousands of American jobs and put a stop to billions of dollars in private investment," Abigail Ross Hopper, SEIA president and CEO, said in a statement.

WHAT'S NEXT: The commission expects to determine the extent to which the cheaper solar panels are causing injury by Sept. 22. If it finds there is injury, would send its recommendations to Trump by Nov. 13.

Subject: Bipartisan Environmental Leaders Praise Susan Bodine's EPA Nomination

WHAT THEY ARE SAYING

Bipartisan Environmental Leaders Praise Susan Bodine's EPA Nomination

WASHINGTON – (June 12, 2017) Prior to Susan Bodine's confirmation hearing in the Senate Environment and Public Works Committee tomorrow, environmental leaders, including former DOJ and EPA officials who served in both Republican and Democrat administrations, are offering praise for Bodine's nomination to serve as EPA's Assistant Administrator for Enforcement and Compliance Assurance. Bodine currently serves as Chief Counsel for the Senate Environment and Public Works (EPW) committee. She previously served as EPA's Assistant Administrator of the Office of Solid Waste and Emergency Response in the George W. Bush Administration, and possesses nearly 29 years of environmental law experience.

What They're Saying About Susan Bodine's Nomination ...

Senate EPW Chairman John Barrasso: "She has extensive experience working both on Capitol Hill and previously in leadership at the EPA. Susan is committed to finding commonsense ways to protect America's land, air, and water. In this new role, I know that she will work to help communities and small businesses comply with the law, while holding polluters accountable."

John Cruden, President-Elect of the American College of Environmental Lawyers and Assistant Attorney General, Environment and Natural Resources Division, U.S. Department of Justice (12/2014-1/2017): "I have worked with Susan over a number of years as she has had significant leadership positions in environmental law and practice. Susan is dedicated to the rule of law, a lawyer with great integrity, and she understands the critical importance of effective and timely enforcement."

Marcus Peacock, EPA Deputy Administrator (08/2005 – 01/2009): "I have known Susan for over 20 years. I can think of no better person to lead the enforcement office at EPA. She understands the mission of the agency and the office and how important it is to protecting human health and the environment. A perfect pick."

Scott Fulton, President of The Environmental Law Institute and EPA General Counsel (08/2009-01/2013): "During the Obama Administration, when I served as EPA's General Counsel, Susan and I worked collaboratively on matters of shared concern to the Administration and the Congress. … Through these various intersections, I have found Susan to be fair minded, clear thinking, and strategic in her approach, as well as effective in her leadership. She has a deep understanding of EPA and the EPA-State relationship, which will equip her well to lead OECA."

Avi Garbow, EPA General Counsel (08/2013-01/2017) and Deputy General Counsel, EPA (09/2014-08/2013): "Based on my experience, Ms. Bodine possesses a strong intellect, a keen understanding of environmental law and policy, and is respectful and responsive. She is a seasoned environmental lawyer and a skilled advocate. It is also my view that Ms. Bodine's prior service at EPA is an important – though not indispensable – factor to be considered in her nomination. Her familiarity with the Agency and its talented staff would be of service to OECA and Administrator Pruitt, should she be confirmed."

Roger Martella, EPA General Counsel (08/2006-04/2008): "Susan epitomizes all the best character and traits we can ask of public servants: tireless and unflappable commitment to the mission of environmental protection and promoting human health, protective of transparency and process in her decision making, objective and apolitical approach to leadership, and empowerment of career decision makers in government."

Granta Nakayama, EPA Assistant Administrator, Office of Enforcement and Compliance Assurance (07/2005-01/2009): [Bodine is a] "fine environmental attorney" who "reads the statutes and parses the words and does the hard work. She's . . . rigorous in that sense." "[She is also] "an experienced hand in Washington and knows how to get things done. She is very practical and looks for solutions that are going to be workable for everybody."

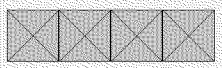
Mathy Stanislaus, EPA Assistant Administrator, Office of Land and Emergency Management (06/2009-01/2017): "[Susan] understands both the internal side of the agency and the proper balance of enforcement."

Marianne Horinko, EPA Acting Administrator (07/2013-11/2013) and EPA Assistant Administrator, Office of Solid Waste and Emergency Response (10/2001-06/2004): "Susan Bodine is extremely qualified to run EPA's enforcement office. As a dedicated public servant with years of experience in environmental policy, she brings a vast understanding of both the agency and the community it regulates. Susan is well suited to carry out the mission of the Administration, and to protect clean air, land and water for the American people."

Elliot Laws, EPA Assistant Administrator, Office of Solid Waste and Emergency Response (1993-1997): "While I don't envy her challenge, I think bringing Susan back to the agency is an excellent idea." "Having a familiar face back at EPA in a senior role is a plus for staff morale. Bringing in someone with her knowledge of the agency and the issues facing it can only be a positive."

Ben Grumbles, Secretary, Maryland Department of the Environment (03/2016-present), EPA Assistant Administrator, Office of Water (11/2004-01/2009): "She's tough and fair and committed to public service. [Bodine] embodies a compliance-first approach, but also will bring enforcement actions when needed."

G. Tracy Mehan, III, EPA Assistant Administrator, Office of Water (08/2001-12/2003) "Susan Bodine brings a commanding intellect and a vast reservoir of experience in environmental policy to the job of running EPA's enforcement office. The Agency and the American people will benefit tremendously from her legislative, executive and legal expertise across the spectrum of air, land and water. The Administration has made an outstanding selection."



Cliff Rothenstein, EPA Deputy Assistant Administrator, Office of Solid Waste and Emergency Response (04/1997-06/2000): "I have known Ms. Bodine for almost 20 years where she served as committee counsel to the House Transportation and Infrastructure and the Senate Environment and Public Works committees, and as Assistant administrator for the EPA's Office of Solid Waste and Emergency Response. She is a dedicated public servant and is well-qualified to lead EPA's office of

Enforcement and Compliance Assistance. Ms. Bodine has proved herself time and again to be fair, competent, professional and well respected by those who have had the pleasure to work with her. As an added benefit, Ms. Bodine knows EPA well and is known and respected by EPA employees."

Tom Cochran, CEO and Executive Director, U.S. Conference of Mayors" "Many Mayors, as well as my senior staff, have worked with Ms. Susan Bodine over the past 20 plus years. … Throughout these years, working with Ms. Bodine has been a real pleasure and she has been an asset in every job she has done. She is extremely thoughtful, knowledgeable and professional and has an understanding of the importance of protecting the environment and public health and to do so in an economically responsible way. Her common sense approach to environmental protection and infrastructure investment is widely respected among her peers and my Mayors. While we are sorry to lose her in her current role, she would be a welcome asset at the EPA."

Zippy Duvall, President, American Farm Bureau Federation: "Susan Bodine's breadth and depth of experience in environmental protection make her an outstanding nominee to lead OECA. … In her decades of experience in private practice, for Congress and EPA, Susan Bodine has proven her leadership skills and her deep understanding of our nation's environmental laws and how they affect ordinary citizens and small businesses. She has shown leadership in working toward solutions with groups on all sides of the many controversies that entangle environmental protection. We believe she will strictly enforce our nation's environmental laws, using the hammer when necessary. We also believe she will bring back an effective yet underutilized tool in EPA's toolbox – compliance assistance. Farmers and ranchers across the nation look forward to a new era of firm, but fair enforcement."

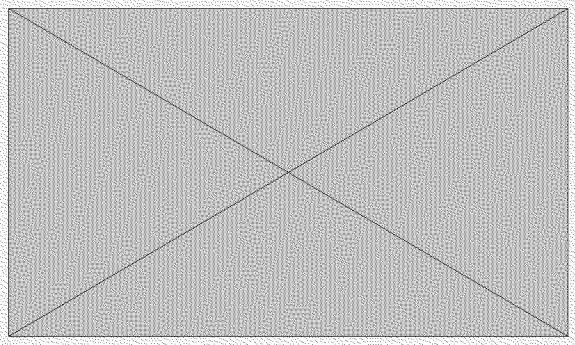
Subject: AEI Today: Mr. President, it really is time to touch Social Security

For years, headlines have blared that Americans are facing a "retirement crisis." During last year's presidential campaign, the candidates promised not to cut Social Security benefits (Donald Trump) and even to increase them.

AEI's daily publication of independent research, insightful analysis, and scholarly debate



Reuters

Mr. President, it really is time to touch Social Security

Andrew G. Biggs | The Wall Street Journal

During last year's campaign, Donald Trump promised not to cut Social Security benefits, while Hillary Clinton pledged to increase them. But despite panicky rhetoric to the contrary, retirees have become less dependent on Social Security, not more. The program should be protected for the poor — even expanded to reduce the number of

retirees in poverty. But providing adequate retirement incomes does not require Scandinavian-level tax rates or multitrillion-dollar, unfunded entitlement liabilities.

Twenty20

Why a temporary tax cut could make things worse for companies

Alan D. Viard | The Hill

Republicans are eager to cut the 35 percent corporate tax rate. Permanently cutting the rate — one of the highest in the world — would be a good way to grow the economy. Regrettably, some Republicans are talking about making the rate cut temporary. A temporary rate cut would be worse than no rate cut at all. Not only would a temporary cut do nothing to lower long-run tax burdens, but it would actually raise taxes on some investments while it is in effect. The GOP must go permanent or go home.

House Panel Approves Energy Bills as Pallone Urges Climate Action

Posted June 07, 2017, 01:31 P.M. ET

By Brian Dabbs

A House panel unanimously approved a slew of energy bills June 7, including a measure to increase workforce education and training for energy and manufacturing-related fields.

That bill (H.R. 338), which authorizes no additional spending, directs the Energy Department to prioritize skill strengthening for minority and displaced workers in the fossil fuel, nuclear, utility, pipeline, renewable, petrochemical, manufacturing and electrical construction sectors.

The legislation approved the House Energy and Commerce Committee alongside 10 other energy bills, including a mandate (H.R. 627) for the Energy Department to create a clearinghouse for information on energy efficiency underwriting programs and another measure (H.R. 1109) to increase the size of a public utility merger or sale that necessitates prior Federal Energy Regulatory Commission approval. That threshold would be raised from $50,000 to $10 million.

The hearing marked the committee's first approval of energy bills this Congress, despite exploratory hearings on hydropower approval revamps, funding for the proposed Yucca Mountain nuclear waste repository and brownfields reauthorization.

'Think Bigger'

The committee's ranking member, Rep. Frank Pallone (D-N.J.), lauded those bills but urged more significant action.

Clean energy policy is now the responsibility of Capitol Hill following President Donald Trump's withdrawal from the Paris climate accord, and Congress needs to "think bigger," Pallone said at the hearing.

"We can't just recycle energy proposals from the last Congress which were proposed with the Paris

Agreement in place," he said. "This committee should be focusing on modernizing our infrastructure by reducing vulnerabilities to climate change."

Pallone called on Republican leadership to take up a sweeping infrastructure bill that Democrats proposed in mid-May. That legislation (H.R. 2479) would provide more than $17 billion for school and home retrofitting, solar installations, methane pipeline replacement and other energy initiatives.

Senators Troubled by Proposed Cuts to Forest Service Budget

Posted June 07, 2017, 02:45 P.M. ET

By Alan Kovski

U.S. Forest Service Chief Tom Tidwell is pinning some of his budget hopes on the prospect of a wide-ranging federal infrastructure spending plan that could address many issues—including some shortfalls in the Trump administration's budget request for his agency.

Both Republicans and Democrats on the Senate Appropriations Subcommittee on Interior, Environment and Related Agencies were skeptical June 7 about elements of the administration's fiscal 2018 budget request, including the proposal to cut Forest Service spending on roads, trails and facilities by 84 percent to $99.7 million.

Tidwell told the committee he hoped a federal package of infrastructure spending would include roads on Forest Service land. Sen. Jeff Merkley (D-Ore.) expressed doubt about using a one-time special spending plan to plug holes in an annual budget request.

"I believe this budget is dead on arrival," said Sen. Tom Udall (D-N.M.), ranking member of the subcommittee, while Sen. Jon Tester (D-Mont.) called the budget request "a wreck."

Sen. Lisa Murkowski (R-Alaska), chairman of the subcommittee, noted that road maintenance is essential to basic activities in national forests, including timber harvesting, recreation and wildfire fighting.

Worries Over Wildfires

Murkowski contrasted the Obama and Trump administration requests. The last administration was offering wish lists, she said, while the new administration is offering proposed cuts that in some cases are troubling and in many ways contradicted other elements of the spending proposal.

The overall request for the Forest Service was nearly $5.2 billion, including both discretionary and mandatory funding. The total was a sharp drop from $6.17 billion estimated for fiscal 2017.

Senators were skeptical that the $1.057 billion requested for suppression would be enough, but said they were glad to hear Tidwell say the administration wanted to work with Congress on some sort of legislative change to allow disaster funding for the largest wildfires.

Murkowski, noting several consecutive years of repeated discussion without resolution of the wildfire funding problem, said, "This is Groundhog Day on this issue."

Murkowski, Udall and Sen. Maria Cantwell (D-Wash.) met with Agriculture Secretary Sonny Perdue earlier in the morning to discuss the Forest Service, a part of the Agriculture Department. Udall said

Murkowski and Cantwell were educating Perdue on the wildfire funding problem.

Spending on wildfire suppression has swallowed up more than half of the Forest Service budget. Toward the end of a fiscal year, the service often must borrow money from other programs to help with firefighting, a process that disrupts the work of the other programs.

Preparations for Timber Sales

Tidwell said the Forest Service is making progress on improving the appraisal process it uses to prepare for timber sales. The process is essential for determining whether a sale will be profitable, a requirement for a sale to go forward.

The appraisal process is driving people "nutso," Murkowski said.

Tidwell said he thought improvements in the appraisal process would allow more sales. The service is not only reviewing its own process, but working with states to learn from how they do it, he said.

Timber sales often are opposed by environmental activists, who have had some notable successes in court. Tidwell said the Forest Service also hopes to see Congress go through with some form of legislation to reduce the litigation.

The Obama administration, too, wanted to work with Congress on efforts to reduce litigation, Sen. Steve Daines (R-Mont.) said. Daines and Tester have teamed up for one such bill, in response to a 2015 decision by the U.S. Court of Appeals for the Ninth Circuit that put the Forest Service in the position of having to consult with the U.S. Fish and Wildlife Service when new information comes along on endangered species (Cottonwood Envtl. Law Ctr. v. U.S. Forest Serv., 789 F.3d 1075, 9th Cir. 2015).

The ruling means the Forest Service can never be done with such consultations, because new information is always coming along, Tidwell said. Tidwell said the Forest Service supported Daines and Tester's effort.

Bathtub Refinishers' Deaths Renew Debate: Label Products or Ban?

Posted June 07, 2017, 11:27 A.M. ET

By Pat Rizzuto

Federal and state agencies have attributed the deaths of at least 17 bathtub refinishers since 2000 to the workers' exposure to the paint stripper methylene chloride, prompting government actions.

The recent death of yet another bathtub refinisher is being investigated by a Tennessee labor agency.

"Investigators from the Tennessee Occupational Safety and Health Administration continue to look into the events surrounding the workplace fatality of Kevin Hartley in April of this year," Chris Cannon, communications director for the agency, told Bloomberg BNA June 6.

Cannon referred to the April 28 death of 21-year-old Kevin Hartley of Ashland City, Tenn. His family attributed his death to his exposure to chemicals used during his bathtub refinishing work.

The most recent worker's death—and additional details Bloomberg BNA uncovered on the deaths in 2012 and 2015 of other refinishers—comes as two federal agencies work to protect consumers and workers exposed to methylene chloride in paint and coating stripping products.

Labels Versus Ban

The Consumer Product Safety Commission voted June 2 to include stronger language on household products containing methylene chloride (CAS No. 75–09–2), so consumers would know the products can be deadly and shouldn't be used in small, unventilated spaces.

And the Environmental Protection Agency has proposed a ban of paint and coating strippers containing methylene chloride along with restrictions on n-methylpyrrolidone (NMP; CAS No. 872-50 4), which can substitute for methylene chloride.

But, industry representatives say they are concerned about government overreach in regulating the chemicals.

The EPA's proposed ban is a "blatant and raw power grab" of consumer protection authority that Congress gave the commission, W. Caffey Norman, a partner in the Washington office of Squire Patton Boggs, said. Norman represents the Halogenated Solvents Industry Alliance, Inc., which includes companies that have made products federal and state health agencies have associated with bathtub refinishers' deaths.

Section 9 in the 2016 overhaul of the Toxic Substances Control Act bars the EPA from regulating a chemical already sufficiently managed by another agency, he said.

But the Environmental Defense Fund says the most recent and previous workers' deaths are further proof the EPA must use its chemical authorities to ban the paint and coating removal uses of the solvent.

Life and Death?

"In our view, a ban on methylene chloride in paint stripping products is long overdue," Lindsay McCormick, chemicals and health project manager for EDF told Bloomberg BNA. "It is literally a matter of life and death. Dozens of workers have died on the job from exposure to this extremely toxic chemical over the past few decades."

"EPA should take swift action to finalize its proposed ban to meet the agency's mission of protecting public health," she said. The EPA issued its proposed rule Jan. 19 (RIN:2070-AK07; 82 Fed. Reg. 7464).

Meanwhile companies, such as Benco Sales, Inc., Besway Systems, Inc., the Savogran Co., and the W.M. Barr & Co., Inc., which make methylene chloride-containing strippers for aircraft, furniture, and other products and materials, and the Halogenated Solvents Industry Alliance had already asked the Consumer Product Safety Commission to support stronger label warnings.

Explicit warnings, label language directing users not to work with products in bathrooms or other small enclosed spaces, and increased customer outreach is a better approach than the EPA's proposed ban, they say.

W.M. Barr's comments on the EPA's proposal "implore" the agency not to proceed with its proposed

rule "that would require formulators to discontinue products that have been in use for generations in favor of alternative formulations that are less safe, or less effective and more expensive than the high-quality products we offer today."

Industry Sought Stronger Label

The new label language the alliance asked the commission to approve would warn consumers about methylene chloride's acute hazards. Since 1987, labels must warn consumers about the potential for longer-term chronic exposure to cause cancer.

Technically, the commission's June 2 vote directs its staff to develop the final language in guidance.

Commission staff already told the alliance, however, that they would make very few revisions to the industry-proposed language. The staff's recommendations are included in a May 26 briefing package prepared prior to the commission's vote. The label language the staff supported would say the solvent's vapors are extremely harmful and may be fatal in enclosed, unventilated spaces.

Product labels also should say "do not use in areas where vapors can accumulate and concentrate, such as basements, bathrooms, bathtubs, closets or other small enclosed areas," commission staff said.

Substitute for EPA Ban?

W.M. Barr, which makes products such as Klean-Strip® Premium Stripper, which federal and state agencies have associated with bathtub refinishers' deaths, told the Office of Management and Budget last December that new labels with the recommended language would be on all products by the end of 2016.

A W.M. Barr attorney and a product compliance director could not be reached for comment. Bloomberg BNA reviewed several product labels posted June 6 and found variations in the precise language, but those labels were consistent with the company's pledge.

Some of its labels include a small HSIA-recommended pictogram showing a bathtub with a red slash and a warning "Do Not Use to Strip Bathtubs."

Norman, the attorney representing the alliance, told Bloomberg BNA: "The labeling approved by CPSC staff is sufficient to address the safety concerns."

"The commission's action should replace the EPA's proposed ban, because it addresses the problem the EPA initially was concerned about," Norman said.

CPSC Staff: Not a Substitute

However, the briefing package the commission staff prepared did not support that conclusion.

"Any action taken by the CPSC would not replace the EPA's rulemaking and instead, would be an interim measure until the EPA may issue a regulation," the staff paper said.

TSCA gives the EPA the ability to address both occupational and consumer uses of methylene chloride, CPSC staff said. Thus, the EPA may address risks associated with the solvent and products containing it "in a more cohesive and coordinated manner," it said.

The EPA's proposed ban is the right approach, according to the Environmental Defense Fund. The agency can prevent tragic deaths from happening again, it said in a June 5 blog.

Details on 15 Deaths

The EPA's proposed rule referenced information the Centers for Disease Control and Prevention published in 2012 summarizing details on 13 bathtub refinishers' deaths. Bloomberg BNA obtained additional details on two more deaths from the National Institute of Occupational Safety and Health and federal OSHA. A 2016 OSHA FatalFacts notice said the agency knew of 17 bathtub refinishers' deaths, but Bloomberg BNA was unable to immediately obtain details on the additional two individuals.

Any action short of a full prohibition on these paint and coating stripper uses of methylene chloride and NMP "would be insufficient to mitigate the clearly unreasonable risks identified by EPA," the Environmental Defense Fund said in May 19 comments to the agency. The organization urged the agency to implement its ban and other proposed restrictions "as expeditiously as possible in order to safeguard human health."

Washington state's Local Hazardous Waste Management Program in King County "strongly supported" the EPA's proposed ban on methylene chloride-based paint and coating strippers.

"Washington Poison Center's 2015 data shows multiple cases of exposure to methylene chloride. In our state, serious illness and death have been associated with using methylene chloride to strip paint and refinish bathtubs," the waste management program wrote in comments to EPA.

Small Businesses

As the EPA prepares its final rule, the agency should "please consider providing financial assistance for small businesses that would need to transition away from methylene chloride," the King County agency wrote.

"Many small business owners, often in underserved communities, continue to use known hazardous materials simply because they lack the financial ability to invest in upgrades to new machines, processes, and chemicals. A ban without assistance for small businesses could pose a severe burden, potentially resulting in business closure and job losses, especially in less wealthy communities."

The U.S. Small Business Administration's Office of Advocacy opposes the EPA's proposal.

The EPA's exposure estimates were unrealistic, the advocacy office said in comments to the agency.For example, the EPA's estimates were based on exposures before federal OSHA lowered its eight-hour time weighted average permissible exposure limit for methylene chloride from 500 parts per million (ppm) to 25 ppm. OSHA issued that rule Jan. 10, 1997 (62 Fed. Reg. 1494).

PODCAST: What Happens When Empty Desks Run the Government

Posted June 07, 2017, 6:01 A.M. ET

By Marissa Horn

President Donald Trump blamed Democrats June 5 for "taking forever" to approve his administration's appointees in a tweet, saying that "They are nothing but OBSTRUCTIONISTS!" But, Trump hasn't moved the quickest of the last few presidents on vetting and getting appointees through the confirmation process—in fact, he is the slowest of the last four presidents, according to data collected by the Partnership for Public Service. Of the 559 key positions requiring Senate confirmation, Trump has pushed 40 through the Senate to full confirmation, formally nominated 63 and name dropped another 25—however, without a formal nomination.

As of June 6, there are still 431 key positions that haven't been filled throughout his administration. So, how can agencies answer Trump's calls for deregulation when they have little to no authority or manpower to do so?

In the latest episode of Parts Per Billion, we sit down with Mallory Barg Bulman, an expert on government efficiency at the Partnership for Public Service in Washington, and ask what agencies expecting major overhaul, such as the Environmental Protection Agency and Department of Energy, can expect when few political appointees are in office to implement the president's policies.

Cancer Study Finds No Link to PFOA Exposure in N.Y. Town

Posted June 07, 2017, 03:51 P.M. ET

By Gerald B. Silverman

A study of Hoosick Falls, N.Y. residents by the New York State Health Department found no statistically significant incidents of cancers normally associated with exposure to perfluorooctanoic acid (PFOA).

The study, which was released June 6, looked at the incidence of 21 cancers in residents from 1995 to 2014. The only incidents of cancer that were significantly higher were for lung cancer and that's not associated with PFOA exposure, the study said.

Hoosick Falls became ground zero for the PFOA story when it was discovered in drinking water last year. Liz Moran, water and natural resources associate for Environmental Advocates of New York, said the study was misleading and inadequate because exposure to PFOA started long before 1995.

Butter Flavoring, Solvent Hazards Mulled in Draft Reports

Posted June 07, 2017, 02:16 P.M. ET

By Pat Rizzuto

A butter-flavoring agent blamed for causing lung disease in workers and a solvent are summarized in draft technical reports the National Toxicology Program released for public comment and peer review.

The butter-flavoring agent, 2,3-butanedione (CAS NO. 431-03-8) is commonly used by the flavor manufacturing industry in cake mixes, flour, beer, wine, bakery products, and other foods and beverages, the National Toxicology Program's (NTP) draft report said.

The United Food and Commercial Workers Union asked the NTP to study carcinogenic and other health effects of the chemical in laboratory animals that inhaled it, because of workers that have inhaled the chemical's vapors have contracted a lung disease called bronchiolitis obliterans. At least one worker died.

The solvent, p-chloro-α-α-α-trifluorotoluene (CAS NO. 98-56-6), is used in paints and coatings. It also is used by chemical, pesticide and pharmaceutical manufacturers to make other chemicals such as dyes, herbicides, and medicines, NTP's draft report says. The National Cancer Institute and Kowa American Corp., which inports chemicals from Japan, China, India and Southeast Asia, asked the NTP to study the solvent because of its high import volume and lack of occupational exposure limits.

Public comments on NTP's draft reports are invited through July 6. The reports will be peer reviewed on July 13. Details are available in the NTP's Federal Register notice.

If Trump Gets His Way, World May Not Know If U.S. Emissions Rise

Posted June 07, 2017, 10:43 A.M. ET

By Christopher Flavelle

President Donald Trump's critics argue that pulling the U.S. out of the Paris climate accord will lead to an increase in greenhouse gas emissions.

If Trump has his way, the world may never know.

The president's budget request to Congress would eliminate or gut core programs across the federal government that track the heat-trapping gases. If those cuts go ahead, the government may not be able to tell if emissions are rising or falling.

"The first step in any decent regulatory program is a requirement for monitoring," David Doniger, director of the climate and clean air program at the Natural Resources Defense Council, said in an interview. "If you don't know what's there, it's harder for the public or the regulators to do anything about it."

Stephen Cole, a spokesman for NASA, which is slated under the president's proposed budget to lose money for a satellite-based carbon-measuring system, said the cut reflects budget constraints. "NASA remains committed to studying our home planet and the universe, but we are reshaping our focus within the resources available to us," he said in an email.

Whether the cuts happen will depend on Congress, and the degree to which Republicans share Trump's priorities.

Critics of government climate efforts, meanwhile, support the administration's cuts, calling emissions monitoring programs a waste of taxpayers' money. "This doesn't necessarily need to be housed within the federal government," said Nick Loris, a research fellow for the Heritage Foundation. "If the private sector wants to continue to pursue greenhouse gas monitoring, that's fine."

Tools for Tracking

The government has two basic tools for tracking emissions. The Trump administration is proposing to cut or wind down both of them.

The first approach is to measure gases at their source. Every factory or other installation that emits the equivalent of 25,000 tons or more of carbon dioxide, the primary contributor to global warming, must track and report those emissions to the Environmental Protection Agency. The agency makes those emissions public through its annual Greenhouse Gas Inventory.

That inventory makes it possible for the federal government to measure total emissions, and also to see changes in emissions by industry and by region. It also fulfills the U.S. commitment under a 1992 United Nations climate treaty, signed by President George H. W. Bush and ratified by the Senate, to publish "national inventories of anthropogenic emissions by sources."

Trump's budget request would reduce funding for the EPA's greenhouse-gas reporting program by 86 percent, to $14 million in 2018 from $95 million this year. It is not clear how the EPA would be able to continue the inventory with that cut, according to Janet McCabe, who was responsible for it as head of the EPA's Office of Air and Radiation under President Barack Obama.

"Sometimes we find out that certain activities emit LESS than we thought, sometimes more," McCabe said in an email. "As they say, you can't manage what you don't measure."

And rolling back the program would give tacit permission to other countries to make similar changes, according to Bob Perciasepe, deputy EPA administrator from 2009 to 2014.

"Weakening U.S. capacity to report accurately will undermine our ability to push the rest of the world to be transparent," Perciasepe said in an email. "One of the core strengths of the Paris agreement is extending similar requirements to China and other developing countries so they're more accountable to the international community."

The EPA said it can do more with less. "While many in Washington insist on greater spending, EPA is focused on greater value and results," the agency said in an emailed statement.

Satellite Measurement

The second way to measure greenhouse gas emissions is in the atmosphere.

In 2010, NASA created the Global Carbon Monitoring program, which uses satellites to detect the concentration of those gases. Trump's budget request would eliminate that program entirely.

The NASA program provides "long-term, reliable, continuous data series" that can't be matched by other countries, said Gretchen Goldman, research director for the Center for Science and Democracy at the Union of Concerned Scientists. "Without such vital monitoring efforts, we can't understand and prepare for climate change as well."

Democrats say they will try to maintain funding for the programs.

"We know that the Earth is warming, sea ice is disappearing, the glaciers are receding, the oceans are acidifying, and sea levels are rising," Representative Eddie Bernice Johnson, the top Democrat on the House Committee on Science, Space and Technology, said in an email. "We know all of this from climate research and monitoring."

Electric Car Market Goes Zero to 2 Million in Five Years

Posted June 07, 2017, 8:41 A.M. ET

By Jessica Shankleman

The number of electric vehicles on the road rocketed to 2 million in 2016 after being virtually non-existent just five years ago, according to the International Energy Agency.

Registered plug-in and battery-powered vehicles on roads worldwide rose 60 percent from the year before, according to the Global EV Outlook 2017 report from the Paris-based IEA. Despite the rapid growth, electric vehicles still represent just 0.2 percent of total light-duty vehicles.

"China was by far the largest electric car market, accounting for more than 40 percent of the electric cars sold in the world and more than double the amount sold in the United States," the IEA wrote in the report published June 7. "It is undeniable that the current electric car market uptake is largely influenced by the policy environment."

A multi government program called the Electric Vehicle Initiative on June 8 will set a goal for 30 percent market share for battery power cars, buses, trucks and vans by 2030, according to IEA. The 10 governments in the initiative include China, France, Germany, the U.K. and U.S.

India, which isn't part of the group, said last month that it plans to sell only electric cars by the end of the next decade. Countries and cities are looking to electric vehicles to help tackle their air pollution problems.

In order to limit global warming to below 2 degrees Celsius (3.6 degrees Fahrenheit), the target set by the landmark Paris Agreement on climate change, the world will need 600 million electric vehicles by 2040, according to the IEA.

After struggling for consumer acceptance, Tesla Inc. has made electric vehicles cool and trendy, and is pushing into the mass market with the new Model 3 sedan.

Consumer interest and charging infrastructure, as well as declining demand for diesel cars in the wake of Volkswagen AG's emissions scandal, has spurred massive investments in plug-in cars. An electrical vehicle "cool factor" could spur sales to 450 million by 2035, according to BP Chief Economist Spencer Dale.

Volkswagen, the world's largest automaker, plans to roll out four affordable electric vehicles in the coming years as part of a goal to sell more than 2 million battery-powered vehicles a year by 2025. Mercedes-Benz accelerated the introduction of 10 new electric vehicles by three years to 2022 to take on Tesla as the dominance of the combustion engine gradually fades.

How Australia Survived a Climate Policy Reversal

Posted June 07, 2017, 11:40 A.M. ET

By Murray Griffin

Australian businesses and organizations say they know firsthand the damage that can be done if a national government retreats from climate commitments—and they have some suggestions for U.S. companies on how to respond.

The Liberal-National Party, led by Tony Abbott, swept into office in 2013 and famously repealed a national carbon tax, becoming the first nation to both adopt and then revoke a price on carbon dioxide emissions.

Abbott's government also abolished a climate-change commission, drastically weakened the former government's 2020 greenhouse gas emissions targets, and tried to abolish several agencies. Less than two years later, with his poll numbers plunging, Abbott's own party dumped him as its leader. His replacement is current Prime Minister Malcolm Turnbull, who accepts climate change science.

Abbott portrayed his policies with a message that was similar to what President Donald Trump said last week when he announced that the U.S. would withdraw from the international Paris Agreement on climate change: These policies will hurt our businesses and our economy.

Some industry groups applauded Abbott's efforts, including the Minerals Council of Australia, which represents major mining companies and continues to express concern about subsidies for renewable energy.

But others in Australia involved in climate-related matters contend the Abbott-era repeal of climate change policies "did no favors for business," said Peter Castellas, head of the Carbon Market Institute, which helps Australian companies take advantage of opportunities in carbon markets. It counts large greenhouse gas emitters and carbon offset providers among its members.

"When you have inward-looking, divisive political approach to addressing climate change, it doesn't help business position and navigate the transition to a low- or net-zero carbon economy," Castellas told Bloomberg BNA.

That's a big problem, Castellas said, "because that transition is on."

Quantifying Risk

Under Abbott, clean energy jobs were lost in Australia, renewable energy investment stalled, and large emitters could discharge greenhouse gases without meaningful penalty or restraint. Many governments and organizations outside Australia appeared to watch in disbelief and made it clear that climate change was a crucial concern.

In a 2014 speech in Brisbane coinciding with an Australia-hosted G-20 summit, then-U.S. President Barack Obama said climate change threatened "the incredible natural glory" of the Great Barrier Reef.

The remark irked the Abbott government, with one minister saying that others shouldn't be "coming and lecturing us on climate change." But Obama's assertion also proved prescient, with the world's largest coral reef suffering unprecedented back-to-back major coral bleaching events over the past two years.

According to Castellas, the toxic political environment and policy uncertainty in Australia made it near-impossible for businesses to quantify their long-term carbon risk and "make the appropriate future-proofing decisions."

As a result, Australian businesses have become much louder in demanding a mature approach to climate policy as something that is "in the economic interest of the nation," he said.

Major associations such the Australian Industry Group and the Business Council—the latter representing the country's largest companies—are now "back out of the climate closet to articulate the need for long-term certainty and argue against divisive policies," Castellas said.

For example, the Australian Industry Group has been blunt in its appraisal of existing federal policies, telling the government there is "no likelihood" that they will allow Australia to meet its commitment to cut emissions 5 percent below 2000 levels by 2020.

Business Alliances

Businesses have also formed alliances with other parts of society, most notably through the Australian Climate Roundtable. Its members include the Australian Industry Group, the Business Council, environment group WWF, the Australian Council of Trade Unions, and industry associations representing the aluminum industry and energy companies.

The Climate Roundtable has criticized politicians for failing to implement effective climate and energy policies. After Trump announced he would withdraw the U.S. from the Paris Agreement, the roundtable issued an endorsement of the accord, describing it as "firmly in Australia's interests."

When it comes to climate policy chaos and disappointment, "Australia has been there," said carbon consultant Erwin Jackson, former deputy chief executive of the Climate Institute.

The policy uncertainty has unnecessarily cost the Australian economy "billions of dollars," Jackson told Bloomberg BNA, because the disruption to energy investment decision-making has triggered large rises in electricity prices. However, he noted the energy sectors in the U.S. and Australia operate very differently.

State Activities

Sensible, stable federal policy action on energy and climate is essential, but in its absence Australian states have stepped up their activities, Jackson added. Several states either already have or are in the midst of introducing or strengthening schemes that encourage new renewable energy generation or result in energy efficiency improvements.

They have also teamed up with mayors of cities including Sydney, Melbourne, and Adelaide to form their own climate action roundtable, while South Australia, Victoria state, and the Australian Capital Territory are also members of the international Under2 Coalition, which includes 170 jurisdictions representing 33 countries and six continents seeking to reduce carbon emissions.

Australia's experience was that attempts to undo climate policy don't succeed and don't last, said Emma Herd, chief executive of the Investor Group on Climate Change.

Many had expected the abrupt policy reversal of 2012 would lead to a five- or 10-year delay in

action, but that has not proved to be the case, she told Bloomberg BNA. Instead, within 18 months the pendulum started to swing back the other way, she said.

Herd added that the Abbott government's attempted "frenzy of undoing" climate policy had proved only partially successful.

"The first thing that happened was that you began to see organizations strategically rename themselves to carry on," she said, with strategies referring to issues such as energy efficiency or disaster resilience instead of climate change.

"There was a lot of hiding things in plain sight," she said.

In addition, there was a growing recognition that some forms of regulation had become quite important for other reasons, and that organizations such as the Clean Energy Finance Corporation "were doing quite a decent job," she said.

Herd added that she had often quoted former U.N. Framework Convention on Climate Change Executive Secretary Christiana Figueres, when she was asked during a visit to Australia how organizations and businesses should respond to policy chaos. The response from Figueres was "not to look at how high the waves are, but at which way the current is flowing," Herd said.

Abbott's Actions

The first public act of Abbott's environment minister Greg Hunt was to abolish the Climate Commission, which provided expert advice to the public on climate change.

Abbott dumped the former government's target of a 5 percent to 25 percent emissions cut below 2000 levels, depending on international developments, instead aiming only for a 5 percent reduction. His government repealed a national carbon price scheme that applied to facilities emitting more than 25,000 metric tons of greenhouse gases annually, which had been introduced by the former Labor government.

Abbott's government weakened a national Renewable Energy Target regime that provided incentives for the installation of new clean energy generation. And it tried to abolish several agencies, including Australia's equivalent of the UK Green Bank (known as the Clean Energy Finance Corporation), although its efforts were stymied in the Senate.

The Minerals Council, which spearheaded a business campaign against the former national carbon price scheme, argues that the solution to Australia's energy problems lies largely in new more efficient coal-fired power plants, possibly coupled with carbon capture and storage.

The Minerals Council is not a participant in the Australian Climate Roundtable, and has not put its support behind the roundtable's statements that the country must aim for net-zero emissions.

Abbott remains in Parliament. along with a small but influential group of politicians within Turnbull's ruling Liberal-National Party Coalition, and he continues to criticize climate change policies, particularly anything that would involve a carbon price.

Clean Energy Boom

In Australia, the era of dismantling policy is now over, though the task of reestablishing a full suite of

effective climate policies is far from complete.

Australia's clean energy industry is experienced an unprecedented boom thanks to falling renewable technology prices, state action, and support from the funding bodies that Abbott tried and failed to abolish.

The country has retained and developed a thriving carbon offsets industry, thanks largely to the efforts of Hunt, even though he was Abbott's key tactician in the campaign to demolish carbon pricing and all climate agencies.

And there is a growing view that the federal government must soon, in some way, bow to the widespread calls for a lasting energy and climate policy that can put the country on track towards net-zero emissions.

Australia Bills Would Overhaul Chemical Assessments, Ban Animal Testing

Posted June 07, 2017, 01:51 P.M. ET

By Murray Griffin

Six bills introduced to Australia's Parliament would recast the country's assessment regime for industrial chemicals and ban animal testing for cosmetics.

The Industrial Chemicals Bill 2017, the main bill of the six, would establish the Australian Industrial Chemicals Introduction Scheme (AICIS). The AICIS would replace the existing National Industrial Chemicals Notification and Assessment Scheme (NICNAS).

Under the bill, most new chemicals not already listed for use in Australia would be classified into one of three introduction categories—exempted, reported, or assessed—based on the level of risk they are likely to present.

There also would be a commercial evaluation category for chemicals undergoing appraisal and an exceptional circumstances category that would allow government to quickly approve a new chemical to deal with significant risks to human health or the environment.

Chemical importers and manufacturers would decide for themselves whether a chemical falls into the exempted, reported, or assessed category, based on a procedure specified in the regulations, which would then determine whether the substance is very low risk, low risk, or medium to high risk.

Very low-risk chemicals would fall into the exempted category and could be imported or manufactured without any pre-introduction contact with AICIS, although there would be record-keeping requirements.

Low-risk new chemicals would be under the reported category and would require only that AICIS be notified before they are imported or manufactured.

Medium- to high-risk chemicals would likely require assessment. They could be imported or manufactured via the international pathway, however, if they have undergone assessment by agencies in the European Union, Canada, or the U.S.

The international pathway would allow the import or manufacture of medium- to high-risk chemicals

on the basis of notification to AICIS, without requiring further assessment.

Assistant Health Minister David Gillespie introduced the bills June 1 into the House of Representatives, where their passage is assured, as members of the ruling Liberal-National Party Coalition led by Malcolm Turnbull have the majority and will support them.

The Coalition does not have a majority in the Senate, however, and the Labor opposition party and minor parties could refuse to pass the bills.

The bills already have been referred to the Senate Community Affairs Legislation Committee for a brief inquiry, which is a standard procedure for most bills. Submissions to the inquiry close June 12 and the committee will publicly release its report by June 13, ahead of the Senate's debate and vote on the bills.

Chemistry Australia, which represents the Australian chemicals industry, welcomed the introduction of the bills, but declined to comment further until parliamentary processes are completed.

Cancer Council Director of Advocacy Paul Grogan told Bloomberg BNA by phone June 7 that his organization was still studying the bills and would be making a submission to the Senate committee inquiry.

The council is keen to ensure that efforts to improve efficiency don't "come at the risk of health outcomes," he said.

News on Nanomaterials

The government simultaneously released a consultation paper on supporting regulations on matters including nanomaterials and the use of assessments conducted by trusted foreign agencies.

Nanomaterials are used in a range of products, including paints, dyes, surface coatings, plastics, cosmetics, and consumer goods.

The paper says nanomaterials should usually be treated as medium- to high-risk chemicals that require assessment.

Assessment or notification would not be required for nanomaterials introduced in amounts of less than 10 kilograms a year for research and development,however, or if they are imported into Australia and subsequently exported without any opening of packaging or treatment or processing.

Nanomaterials introduced in amounts of between 10 kilograms and 100 kilograms a year for the purposes of research and development would fall into the reported category.

Banning Animal Testing

The discussion paper also explains that animal test data produced after July 1, 2018, cannot be used to categorize or assess new chemicals for cosmetics, except in limited circumstances.

The ban on animal testing will fulfill a commitment that the Turnbull-led Coalition supported in the July 2016 federal election.

Besides the ban proposed in the bills introduced in Parliament, the Coalition government together

with states and territories will incorporate a testing ban through their respective legislation, triggered by changes to the National Health and Medical Research Council Australian code for the care and use of animals for scientific purposes.

Together with the cosmetics industry, and in consultation with key animal welfare stakeholders, it also will develop a voluntary code of practice on the sale of cosmetic products.

Based on historical data, the government estimates that the ban will prohibit the use of animal testing for more than 99 percent of the cosmetics introduced into Australia.

The less than 1 percent that remains will involve circumstances where the chemicals are also used in other industries and the information is critical to ensure the protection of consumers, the public, and the environment.

Key Shale-Boom Booster Threatened by Trump's Spending-Cut Plans

Posted June 07, 2017, 10:40 A.M. ET

By Catherine Traywick

An agency instrumental to America's surge in energy production would lose half its funding in President Donald Trump's proposed federal budget.

The Energy Department's Office of Fossil Energy, whose research helped push the U.S. closer to self-sufficiency, is slated for a 58 percent cut for next year, to $280 million. The shale innovations the office develops are available to any company that can use them, including industry giants that keep results of their own studies, but they're most beneficial to independent drillers that might otherwise find it tough to compete with behemoths such as Exxon Mobil Corp. and its $1.06 billion annual research-and-development budget.

"What the federal government, at times, has done very well is they help get experiments run that many companies may not be able to afford on their own, or wouldn't have the moxie to pull off," said Greg Leveille, chief technology officer for ConocoPhillips, one of the country's biggest producers.

Many in Congress, even Republicans who favor cutting programs, have balked at the cuts. Senate appropriators defended the Energy Department's research program, citing the agency's work on shale gas development.

The U.S. government has had a hand in virtually every major energy innovation in the past half century, from nuclear power to carbon capture. The shale revolution is a descendant of federal research, and agency dollars have supported the development of biofuels, flying wind turbines and the lithium ion batteries that power electric cars. Most of the research budget today is dedicated to nuclear and renewable energies. The share that focuses on oil and gas aims to reduce the environmental harm of fossil-fuel production, which can have the added benefit of boosting a company's bottom line.

Directional Wells

In 1975, in the Appalachian Basin, the federal agency drilled the first directional wells to tap shale gas. Over the next two decades the agency invested $137 million to help demonstrate and commercialize many of the shale-drilling technologies used today.

"Small producers were able to take some of that data and say, 'Hey, there's something here, we can start risking private capital,'" said Chris Smith, former chief of the Fossil Energy office. "The shale gas revolution certainly wouldn't have occurred on the timescale it had if it weren't for the Department of Energy." U.S. natural gas output has increased 30 percent since 2008.

Among other projects, the Fossil Energy office is funding a study that's already improving the efficiency of hydraulic fracturing. Laredo Petroleum Inc., a Tulsa, Oklahoma-based explorer with market capitalization of $3 billion, said it's already benefiting from the research, which cost $7 million.

"Without the seed funding, it probably couldn't get done," Laredo Chief Executive Officer Randy Foutch said in an interview. This way, "it becomes part of the public database, and will help the entire industry. Instead of one company keeping it proprietary, this is public."

Young Tech

Given the far-reaching impact of hydraulic fracturing, it's easy to forget how young the technology is. The fractures, tucked thousands of feet below ground, remain a mystery, their dimensions only inferred through seismic measures and mathematical modeling. Explorers still don't know how many fracture stages are optimal, or why some stages are more productive than others. The process has gotten better, but is far from efficient.

The Laredo study aims to answer some of those questions. In the Wolfcamp shale in West Texas, the company partnered with the Gas Technology Institute to drill 11 horizontal wells running 10,000 feet long. Then they fracked those wells -- pumping each with a slurry of sand, water and chemicals that creates fissures in the surrounding rock. The cracks unlock the trapped resource by allowing oil and gas to flow into the well. Researchers tested the wells to determine which produced more oil and gas, and why.

They then drilled a 600-foot core through the fractured shale. That core enables the researchers to study actual physical fractures for the first time, giving them new insights into how they form and which are most productive.

Game Changer

Laredo said it's reluctant to detail its findings before the official release date late next year. But based on the core sample, the Energy Department predicts that "the fundamental understanding of hydraulic fracture propagation, modeling and effectiveness is about to undergo a game-changing alteration." Laredo is building more efficient wells without having spent a dollar on R&D.

Under Trump's budget proposal, released last month, the Fossil Energy office's carbon sequestration and clean-coal programs would be cut even more deeply than its oil and gas programs.

The shale research has environmental benefits, too, said Jordan Ciezobka, a principal investigator on the Laredo project and a research manager at the Gas Technology Institute. By increasing productivity and efficiency, explorers can squeeze more oil out of fewer wells, with less water and a smaller footprint.

"Big companies have internal resources at their disposal," said Hugh Daigle, an assistant professor of petroleum engineering at The University of Texas at Austin. "For the smaller producers, the small

independent companies, this is a really important way for them to do research and development, or just basic stuff that they don't have the resources to do in-house."

Top German Court Blocks Nuclear Fuel Tax

Posted June 07, 2017, 02:45 P.M. ET

By Tino Andresen and Karin Matussek

Germany's Constitutional Court said June 7 the federal government overstepped its powers when introducing the national nuclear-fuel tax in 2011.

The judges rejected arguments from lawmakers that the levy was a consumption tax, for which the government would have had legislative powers. Reactor operators had to pay 145 euros per gram of nuclear fuel when they exchanged a fuel rod, cutting their profit.

Germany's biggest power producers are set to recover about 6 billion euros ($6.7 billion) after the ruling.

The verdict means RWE AG shareholders could be in line for a special dividend, while EON SE may be able to forgo a sale of hybrid bonds, according to analysts at RBC Europe Ltd. and Independent Research GmbH.

EON expects that it will get 2.85 billion euros plus about 450 million euros in interest, which the company will use to strengthen its balance sheet, the Essen-based utility said after the ruling. RWE had paid about 1.7 billion euros toward the tax, the company said in a statement. The utility hasn't yet decided how it will use the funds.

"RWE has no need for the cash so any payment received may be given back to shareholders in some form of special dividend on enhanced regular dividend," John Musk, an analyst at RBC Europe Ltd., said June 7 in a note to clients.

Hybrid Bonds

The reimbursement would help EON repair a balance sheet hurt by a deal with Chancellor Angela Merkel's government on funding the nation's exit from nuclear power by 2022 as well as the billions of euros it wrote down related to the spinoff of its fossil-fuel generation business Uniper SE. The utility was considering as recently as last month a sale of hybrid bonds, securities that combine elements of equity and debt.

Christian Drepper, a spokesman at EON, declined to comment on the utility's bond plans.

The windfall may reduce how much of the hybrid debt EON sells, according to Sven Diermeier, an analyst at Independent Research.

The fuel-tax rebate would also ease EON's need for asset disposals and capital expenditure cuts in its plans to reduce net debt by about 24 percent to 20 billion euros, said RBC's Musk. "More importantly, it may allow EON to move to a more appropriate payout ratio on dividends" from 40 percent to 60 percent of adjusted net income, he said.

The constitutional court issued its ruling as guidance in a case in Hamburg. As the ruling is "clear cut," finance authorities will most likely reimburse the funds, ending the case, said Matthias Tiemann, spokesman for the lower court. The tax had expired in 2016.

"We have taken note of the judgment of the Federal Constitutional Court on the nuclear fuel tax," Finance Ministry spokesman Juerg Weissgerber told reporters at a regular government press conference in Berlin. "We would have expected the Federal Constitutional Court to endorse our argument that the nuclear fuel tax is constitutional."

Germany's switch to renewables forced traditional utilities to reinvent themselves through reorganizations as power prices slid to a decade-low. The ruling is the second time in six months, however, that the companies have won some relief from the top court as judges in December said they should be compensated for power-production rights lost related to nuclear power.

Dark Clouds Hang Over Nuclear Town Torpedoed by Green Energy

Posted June 07, 2017, 10:45 A.M. ET

By Jesper Starn

In an eerily quiet nuclear reactor hall in southern Sweden, new copper and steel machinery stretching 50 meters and weighing hundreds of tons is just sitting idle.

Bought from France and Germany as part of a $450 million upgrade at the now defunct Oskarshamn-2 facility, the turbines, steam pipes and feed-water pumps were supposed to help supply cheap electricity to the Nordic market for decades to come. Instead, they will probably be sold as scrap metal. The junk pile may grow even bigger as another reactor at the site will produce its last megawatt by the end of June.

The plant is yet another victim of an unprecedented surge in renewable energy that has sent margins at traditional power stations plunging, leaving thousands of old-school energy workers across Europe unemployed. Oskarshamn also houses a third reactor and its fate will be decided later this year by owners Uniper SE and Fortum Oyj, a decision seen as a bellwether for future investment in other Swedish atomic stations.

For the town of Oskarshamn, the utilities' decision later this year on whether to pour another one-billion kronor ($114 million) into the region's biggest reactor to keep it humming until 2045 couldn't be more significant.

With job cuts also looming at other local factories from a nuclear subcontractor to truck maker Scania AB, halting power production permanently would be another big knock to the town after the shipyard closed in the 1970s, its largest employer at the time.

"It's a scenario I do not even dare to fully consider," Peter Wretlund, Oskarshamn's mayor, said in his office overlooking the town's port on the Baltic Sea. "It would have grave consequences for the population."

While governments in Germany, France and Switzerland are deciding on when to shut down reactors, Sweden will let market conditions be the judge on the life of its remaining six units. Even after a nuclear tax was abolished, conditions remain harsh for operators as they compete with subsidized renewable energy flowing across the European grids.

Local politicians are worried about the town's future. One of the main obstacles for growth is its remote location on the southeast coast, far from any of Sweden's major cities. The closest large international airport is in Copenhagen, another flight or a 4.5-hour train ride away.

"So many highly skilled workers are leaving the city," Eva-Marie Hansson, a local politician for the opposition Moderate Party, said in an interview. "People here do not have the opportunity to stay and easily commute to other big cities."

To combat the brain drain, Oskarshamn bid to host a 4 billion-euro ($4.5 billion) large-scale battery factory earlier this year for Northvolt AB. The plan was to build the factory on the nuclear site, with existing security and access to high-voltage grid connections as main selling points.

The project didn't make the short-list, said Wretlund. Northvolt listed good transport links as one of the main criteria for its location.

For now, the nuclear plant's biggest challenge is to cut its operating costs. It plans to cut staff by 32 percent to 600 by 2019 compared with last year.

Uniper had sold half of its 2019 Swedish production in advance at between 19 euros and 23 euros per megawatt-hour in May, a level that also includes the company's hydro power production. That compares with plant costs of 40 euros before tax cuts in 2014, the latest available figure.

Attracting new tenants in the mode of Northvolt seem logical and others have done it before. Google Inc. bought the Summa paper mill in Finland from Stora Enso Oyj in 2009 and converted it to a data center using existing grid connections. The project employed 2,000 people during construction.

"Our assessment is that we can reach long-term profitability," Johan Svenningsson, Uniper's chief executive officer, said in a phone interview. "But we still need to see that costs can be brought down to the levels we require before making a decision."

EPA Marks Chemical Safety Milestone on 1st Anniversary of Lautenberg Chemical Safety Act

Agency Meeting Statutory Responsibilities and Deadlines

WASHINGTON – (June 22, 2017) Today, on the one-year anniversary of the *Frank R. Lautenberg Chemical Safety for the 21st Century Act*, Administrator Scott Pruitt announced that EPA has met its first-year statutory responsibilities under the law. This includes issuing three new rules, providing a guidance document for external parties, and releasing the scoping documents for the first 10 risk evaluations that will be conducted.

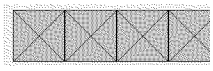
"The activities we are announcing today demonstrate this Administration's commitment to providing regulatory certainty to American businesses, while protecting human health and the environment," said Administrator Pruitt. **"The new process for evaluating existing chemicals outlined in these rules will increase public confidence in chemical safety without stifling innovation."**

EPA Administrator Scott Pruitt signs new TSCA rules surrounded by staff from EPA's Office of Chemical Safety and Pollution Prevention.

The *Act* amends the nation's primary chemicals management law known as the *Toxic Substances Control Act (TSCA)*. The legislation received bipartisan support in the U.S. House of Representatives and the Senate, and provides significant new responsibilities and authorities to EPA to advance chemical safety.

EPA has completed the following implementation activities at this one-year anniversary:

- Finalized a rule to establish EPA's process and criteria for identifying high priority chemicals for risk evaluation and low priority chemicals for which risk evaluation is not needed. In response to public comments, this final rule affirms EPA's commitment to following the best available science, engaging stakeholders in the prioritization process, and recognizing the value of designating chemicals as low priority when appropriate. Read more: http://www.epa.gov/assessing-and-managing-chemicals-under-tsca/prioritizing-existing-chemicals-risk-evaluation



- Finalized a rule to establish EPA's process for evaluating high priority chemicals to determine whether or not they present an unreasonable risk to health or the environment. In response to public comments, this final rule clearly defines important scientific terms to ensure transparency and confidence in the risk evaluation process while retaining flexibility to allow for new scientific approaches to be incorporated as they are developed. Additionally, the final rule clarifies EPA's authority to determine what uses of a chemical are appropriate for risk evaluation, ensuring that the Agency's resources are focused on those uses that may pose the greatest risk. Read more: https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/risk-evaluations-chemicals-under-tsca

- **Finalized a rule to require industry reporting of chemicals manufactured or processed in the U.S. over the past 10 years. This reporting will be used to identify which chemical substances on the TSCA Inventory are active in U.S. commerce and will help inform the chemicals EPA prioritizes for risk evaluation. In response to public comments, EPA streamlined the reporting requirements for manufacturers and processors in the final rule to help reduce regulatory burden. Read more: https://www.epa.gov/tsca-inventory/tsca-inventory-notification-active-inactive-rule**

- **Released scope documents for the initial ten chemicals for risk evaluation under the amended law. These documents identify what uses of the chemicals will be evaluated and how the evaluation will be conducted. Read more: https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/risk-evaluations-chemicals-under-tsca#ten**

- **Released guidance for external parties interested in submitting draft risk evaluations to the EPA for consideration. Read more: https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/guidance-assist-interested-persons-developing-and**

This past year has been marked by many EPA accomplishments to implement the amended law. More information on EPA's progress to date and a full list of all the TSCA implementation activities can be found here*:* https://www.epa.gov/assessing-and-managing-chemicals-under-tsca/frank-r-lautenberg-chemical-safety-21st-century-act-5

EPA Stuck in Neutral on Car Emissions, Official Says

Posted June 02, 2017, 11:31 A.M. ET

By David Schultz

The EPA has made little to no progress on determining whether to relax greenhouse gas standards for cars, according to one of its senior career staffers, raising doubts that it will be able to act before a deadline next year locks in the current standards through 2025.

Additionally, the agency has made little effort to reach out to environmental regulators in California, which has the authority to set its own state vehicle standards. A California air regulator told Bloomberg BNA that the state has little desire to roll back its standards, potentially setting up a scenario in which car makers will need to manufacture different models for different states.

President Donald Trump announced at a March 15 rally in Detroit that his administration would reopen an Obama administration decision that maintained current automobile standards at a companywide average of 54.5 miles per gallon, or its equivalent, through 2025. The auto industry is seeking relaxed standards, arguing that the miles per gallon target is too difficult to achieve and would ultimately inflate the prices of their vehicles.

But in the nearly three months since then, the Environmental Protection Agency has taken few if any actions to begin formally reconsidering the decision, according to Chris Grundler, director of the EPA's Office of Transportation and Air Quality. Grundler told reporters at a May 31 EPA advisory council meeting that he hasn't briefed his agency's administrator, Scott Pruitt, on the issue and that his office has had no interaction with California officials or with the Department of Transportation, which has authority to regulate fuel efficiency.

April Deadline

The Obama administration surprised many when it announced in January, weeks before Trump's inauguration, that the EPA would not alter its current greenhouse gas standards. The regulations on vehicle emissions only required a decision on that by April 2018.

After the Trump administration took office, the auto industry began lobbying the EPA to revisit its decision before the April 2018 deadline, which would lock the standards in place. The Alliance of Automobile Manufacturers, which counts Ford Motor Corp., General Motors Corp. and Volkswagen of America among its members, in February formally asked Pruitt to rescind the Obama-era determination to leave the standards in place.

With Trump's announcement in Detroit, the industry got its wish. And Gloria Bergquist, head of public affairs with the Alliance of Automobile Manufacturers, said she's still optimistic the EPA can meet its deadline.

"There is surely time to complete a robust evaluation by April 2018, which is important to automakers because of their long lead time in developing products," she told Bloomberg BNA.
